At heart the British working-man is sound, and he is not a fool. The war, however, has taught him how rich the world really is, and he will take a lot of convincing that our available wealth—that is to say, our capital—is nearly exhausted. He will have made a note of the statement in Parliament last week that, even now—three months after the Armistice—we are spending daily within £1,000,000 of what the war was costing us; that is to say, we are finding in one way and another £6,000,000 or £7,000,000 every day in the way of abnormal expenditure. And the miners, and the railwaymen, and the transport workers, have an idea that a few shillings more on their wages and a few hours more off their work really won't make a very great difference in the end to anybody. And who shall blame them? On the other hand, who shall enlighten them?

How shall they be made to understand that, having spent, since the beginning of the war, ten thousand millions of money, and raised only two thousand five hundred millions, there is a little matter of seven thousand five hundred millions to be put right? Of that sum, we have lent our Allies and Dominions, and Russia, about two thousand millions—most of which we shall never see again—but assuming it all comes back, there is still what the financiers call a dead-weight debt of over five thousand millions—and *that debt is a first charge upon industry;* that is to say, upon both Capital and Labor.

Oh, yes, my working-class friend, we mustn't forget Capital—without which, your labor is useless. Cripple Capital, and you kill Labor. And that is just what is happening to-day. The nation has been suffering from the consuming fever of war, and for nearly five years we have been living on ourselves devouring our own flesh. And there are two ways only of putting things right.

Here they are: First, we must try to get back those ten thousand millions from Germany—not necessarily in money, but in kind. If we can do that, prices will come down to such an extent at home that your wages will buy twice as much as they do to-day. But here you have to reckon with the Politicians and the Idealists—who don't want to "crush Germany." Well, we must ginger them up!

And here is the other way—and it concerns you. *We must increase production and output to the uttermost limit*—in order to replace the lost wealth of the nation. That is where you—*and the capitalist*—come in. And if you will do it—but only *if* you will—then you can have your increase in pay and your decrease in hours.

But there is no middle course. Nor is there any time for hesitation. The Bolshies and the Yanks are watching!

A Valuable Tourist Trade

Japan receives from visitors to her shores a sum exceeding the value of her exports of coal. The Mikado's Empire is estimated to have received more than 30,000,000 yen from the influx of foreigners in 1918, or $2,000,000 more than the total exports of coal made by Japan. Japanese coal dominates the fuel situation in this part of the world.

"LABOR PRODUCES ALL WEALTH"

Fallacy of the oft-repeated claim is disclosed. Labor alone does not produce wealth, but labor plus directing ability does. One is just as necessary as the other, and one cannot do anything without the other. Without leadership there can be no programme.

By F. C. O'Meara.

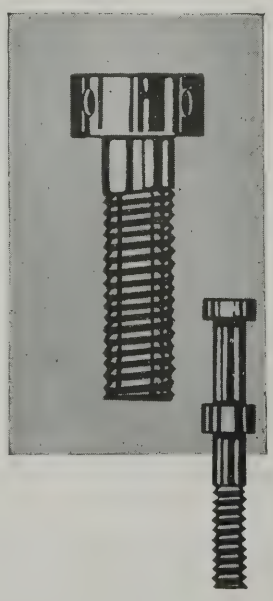
(From the "Michigan Manufacturer.")

I was making a speech, the other day, to a little group of workmen in a factory out in the state, when an earnest young man spoke up. I had been talking about the cares and worries of the employer. The young man said:

"What you say about the bosses' putting in long hours over their desks after the rest of us have gone home, and getting grey-headed wondering how they are going to keep wages up in spite of lower prices for the things we turn out in the factories, gives me a pain. Don't you know that labor produces everything? Don't you know that most bosses, when they sit up at night in their offices, sit up figuring on how they can make more money out of us?"

I started to reply to him, but he had a little more to say and would not let me go on. He continued:

"We are taking the boss's money only until we get ready to take charge of the factories ourselves. One of these fine days you capitalists are going to wake up to find your businesses in the hands of the proletariat. That's where the control of industry belongs, and that's where it's going to be, ten years from now. The workingman is going to get what belongs to him—if not peacefully, then we're going to get rough. We're only biding our time."



"My dear young man," I said to him, after he had sat down, "you have fallen into one of the two or three fundamental errors that lie at the bottom of socialism. You believe that labor produces everything, which is not true. I think you believe, too, that all men are equal as regards capabilities, and that in place of our present economic system, we should substitute another under which all men would be reduced to a dead level—where every man would receive the same wages, and where there would be no incentive for men to try to get ahead. A good many well-meaning people who don't take the time to think the thing through have been misled just as you have been. Now let's reason a little.

A Case In Point

"You have been told that labor produces all wealth, and you believe it. Suppose we take the case of an industry that you all know about, and see how the theory that labor produces everything would work out. Suppose that to-morrow morning we could order all the executives out of the offices of the Ford Motor Company. We would take away the president and the secretary and the treasurer and the sales manager and the production manager and the advertising manager and all the rest of the men who direct the policies and activities of the company. The only people we would leave would be the men who run the machines out in the factory. How many automobiles do you suppose would be turned out of the Ford plant from that time on, and how many would be sold? I predict, and I think every reasonable man will agree with me, that the Ford plant would close up inside of a week.

"More than that, before the first day was over 10,000 men in the Ford plant would be trying out 10,000 different ways to do the operations they had been taught to do in the only

way that long practice had shown to be correct. Nine of our every ten departments would be tied up tighter than a drum.

"One man, for example, has for a long time been cocksure that different gears ought to be made of bronze instead of steel. Of course, he never had had a chance to try it out because the 'capitalists' in the 'front office' had ruled that differential gears should be made of steel—and, what is more to the point, had provided supplies of steel only for the differential gear department. But now that there are no more 'bosses,' says this particular workman, we'll make the gears out of bronze. He happens to be a good talker, so he gets up and makes a speech about the advantages of making gears out of bronze. Being a convincing talker, he finds a few hundred other workmen to agree with him. If the men in the other departments balk, why, the bronze gear man and his adherents will go out on strike.

Cars Without Piston Rings

"Another man has never had any particular liking for piston rings—and besides, he has always argued, the people who make the piston rings haven't treated their men right. So he'll make a speech in favor of throwing the piston rings on the scrap pile. He and his followers would make cars without piston rings. If the rest won't agree, we'll walk out. To hell with the others.

"Or suppose these two men won over the whole force—and the plant began turning out differential gears made of bronze and pistons without piston rings. How many Ford cars would be sold—even if by some miracle the workmen could maintain the sales organization?

"And so it would go on down the line.

"What would be the result for all parties concerned? What of the workmen themselves? Certainly, with the plant tied up, they would be out of jobs. How about the grocers and the butchers and the clothiers who depend on these workmen for their livelihood? Certainly without work there could not long be wages—unless, of course, the workmen began commandeering wealth. And what would become of the other manufacturers and the farmers, with their employees, who depend on the grocers and the clothing merchants? What would become of the whole fabric of our material existence? If what I have just outlined as happening in the Ford plant happened to all industry—and that is just what would happen if the directing brain power were removed from industry—America and the rest of the world as well would be reduced to chaos in no time.

The Result in Russia

"We see the thing working out in Russia. The working people arose and took matters into their own hands. What has been the result? Absolute stagnation of industry, poverty, want, bloodshed, starvation and death. Lenine and Trotzky were sure it would work, but now, after many weary months of outrages and pillage the like of which the world never before witnessed, the two of them at last have become convinced that it will not work. They have opened negotiations with the rest of the world to come back into the fold.

"No labor does not produce wealth. Labor PLUS DIRECTING ABILITY produces wealth. One is just as necessary as the other; one cannot do anything without the other. The first rule of civilization is the necessity of leadership. Without leadership there can be no progress.

"Now because of the very nature of the possession of the qualities that make for leadership, leadership begets jealousy on the part of those not possessed of these qualities. It is only human nature that one should envy the attainments of

SELLING The Consumer Seventy-two Years EXPERIENCE

THAT is what you do when you sell McClary's Goods. Seventy-two years ago McClary's began to manufacture and sell good goods. To four separate generations the same quality has been supplied. Each generation has told to its children the worth of McClary's goods. To-day, the fourth, is receiving its McClary's education through consumer satisfaction, National and Local advertising. This force of publicity is forever flowing strongly and creating sales. Dealers should take full advantage of our co-operative business methods. his more fortunate fellows—the divine injunction to the contrary notwithstanding. For leadership implies authority, and possession of a somewhat larger share of this world's goods. And the envious men and the men who lack the ambition to try to develop their own qualities which would give them leadership, would take possession of the other fellow's possessions by force. Which, whether it be organized, legalized robbery or not, is still robbery. And civilization has never subsisted on robbery. As civilization advanced, robbery grew more and more unpopular, because its devotees found it increasingly difficult to remain at liberty.

"We cannot countenance robbery to-day any more than we could in medieval times. We cannot countenance it because, in the first place, it is contrary to human ideals; and again, because it would tear down all that civilization has built up throughout the ages.

"Instead of robbery, we must have the individual desire to excel. And if that desire is to be translated into accomplishment, we must have coupled with it the willingness to pay the price of effort to attain. We must be willing to study, to develop ourselves, to spend unstintingly of our energy, mental and physical, but particularly mental. Individual attainment is the only answer to socialism.

"And as to your belief that all men are equal in ability, and could be held down to a level, I have only to say to you that human nature is not so constituted. The few would promptly rise again from the mass and we should once more have our present industrial order."

"I'll think it over,' the workman replied to me.

Workmen's Compensation

Results Are Announced Under the Fourth Year of Operation of the Ontario Act

According to the annual report of the Ontario Workmen's Compensation Board, covering the fourth year's operation of the Act, $3,514,648 was awarded last year for compensation and $369,346 for medical aid, the number of cheques issued per day being 248 for compensation and 139 for medical aid. Payment was made for 40,930 accidents, 382 of these being death cases, 2,549 causing some degree of permanent disability, 25,446 causing only temporary disability, and 12,553 involving only medical aid. It is estimated that over 500,000 workmen are covered by the provisions of the Act.

As the disability in serious accidents often continues into and sometimes beyond the following year, complete statistics can only be given for the prior year. These show that about 75 per cent. of the injured workmen were British subjects and 25 per cent. foreign—6½ per cent. being Austrians, 6 per cent. Italians, 5½ per cent. Russians, and 2½ per cent. citizens of the United States.

The average weekly wage of injured workmen was $19.06, and the average age 34.07 years. The total time loss from accidents during the year was 565,526 days; the average length of temporary disability was 21 days.

Machinery caused about 32 per cent. of all the accidents; the handling or moving of objects, 28 per cent., and falls of the workmen, 10 per cent. The most prolific individual causes were saws, which caused 892 accidents; lathes, 891; presses, 813; hoisting apparatus, 785; abrasive wheels, 781; belts, pulleys, chains and sprockets, 390, of which 7 were fatal; planers, jointers, and edgers, 260; shapers, moulders and headers, 121; shafting, couplings, and set screws, 75, of which 6 were fatal. Falls from vehicles caused 260; collapse of support, 276. Hot and inflammable substances caused 1,018 accidents; falling objects caused 1,256, and runaway animals, 98.

THE AUSTRALIAN ATTITUDE

Influential trade organ in Australia voices the opinion that certain precautions should be taken to prevent German goods from getting back into the domestic market. The consumer should know what and whence he buys. Manufacturers' agents should be registered.

(From "Australian Hardware & Machinery.")

That a strong feeling exists throughout Australia against the resumption of business with those from whose arrogance and inhumanity the world has suffered so much during the past four years becomes more evident every day. Certain firms have publicly declared their intention to have nothing to do with Germany, especially, until she has purged herself of her rank offences. Stinging refusals were recently sent by two Australian firms of wholesale chemists to a German firm in New York, who had written to advise their readiness to supply certain chemicals. "None of us here want your products, your countrymen, or your communications" was the emphatic declaration with which one of the letters closed. A previous paragraph of a personal character helps to explain the emphasis. "The writer of this is the senior of our firm. His eldest son was a wounded prisoner in your hands, and we know at first hand to what depths of inhuman methods in that direction you can go. The writer's second son, a medical student doing his humane work in the Army Medical in Gallipoli, was killed in the field by your associates, the Turks, who were, until you showed yourselves the bloodiest murderers of Europe, your very fit associates."

Country of Origin Should be Indicated

The question is how it can or should be left to individual preference or patriotism to decide whether they shall buy or sell German goods. No doubt the League of Nations when it comes will lay down broad principles for the guidance of all its members. But even then we shall be free to choose, to prefer, or disparage any goods. Certain precautions are obviously the right and duty of every British community. On every package of goods sold to the consuming public, for one thing, the country or origin should be clearly indicated. The recent amendment of the Sale of Goods Act in Victoria permits of the same regulation being applied to every sale made within that State. In no other part of Australia, nor in New Zealand, is this at present possible. But every Government should introduce such a law. The regulations should provide that the source or country of origin—British, Swiss, German, or Australian—must be clearly shown on every article or parcel sold to a consumer, and (as in the Victorian Act) anything which obliterates or obscures this statement should be made an offence. In other words, the consumer should know what and whence he buys.

Every person (or firm), again, who trades in Australia or New Zealand as the resident or visiting agent of outside manufacturers should be required to disclose his own nationality and the constitution and source of the capital of the firms he represents. This was suggested in our columns some time ago, and the suggestion has been very widely endorsed by representative bodies.

A note printed elsewhere shows that Switzerland recognizes that a commercial invasion is taking place of Germans who are purchasing Swiss businesses, Germanizing them in everything but name, and hoping by this means to avoid the commercial isolation which might otherwise be experienced. Two years ago Germans had purchased 62 per cent. of the water power of Switzerland. A few months ago

it was indicated that in Spain also attempts were being made by Germans to establish business houses for the purpose of recovering their foreign relations. Another illustration of this sort of thing is a letter in *The Ironmonger*, London, of December 28th last, where a catalogue of high-class machine tools of the Danish Machine Co., Copenhagen, printed in English, is shown by a correspondent to reproduce photographs of machines which before the war were in the catalogue of Alfred Schmahl, of Wotanhaus, Hamburg.

Where Two Countries Are Concerned

In the case of goods which are partly manufactured in one country and partly in another some difficulties arise. Razors forged in Sheffield used to be sent over to Germany to be hollowground, and there were similar cases of manufacturing operations begun in one country and finished or carried a step further in another. Some clear indication of the course to be followed in such cases should be given, but whatever the course the facts should be disclosed. Little hardship should accrue if it were required that such razors, for example, should be labelled: "Manufactured in England; ground and polished in Germany." What possible reason can there be for concealing the actual industrial history of every article unless it it hoped that thereby SOMEONE MAY BE DECEIVED and therefore be more ready to buy?

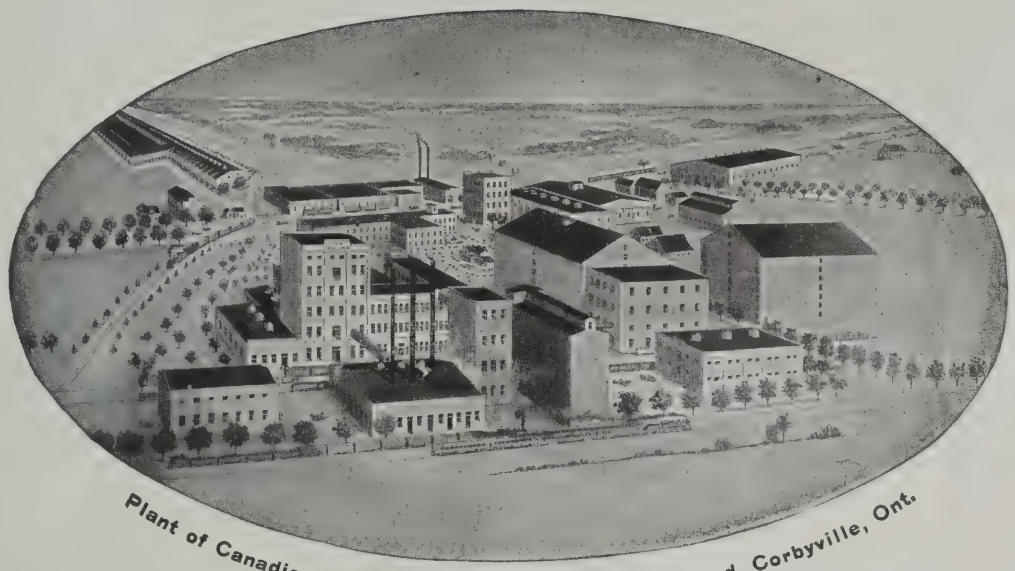
National Waste

Deterioration and Decay of Property Through Lack of Paint Causes More Loss Than Fire

It is undoubtedly a fact that there is more actual money lost in Canada every year through deterioration and decay in buildings, due to failure to protect property properly and preserve with paint, than accrues from losses by fire.

When it is remembered that fire losses during 1918 amounted to $33,623,000 it will begin to be realized what an appalling loss property deterioration brings and the necessity of grappling with this problem without delay.

The property owner who fails to protect his buildings with fire insurance is considered very shortsighted, and there are few owners who fail to pay their bill for fire insurance premiums regularly. When the property owner pays for protection against fire, he is providing against a possible loss, but if he fails to pay for painting and repainting his property with sufficient frequency to preserve it from decay, he fails to protect himself against certain loss.



Professor H. H. King, of the State Agricultural College of Kansas, in a letter written April 17, 1916, makes this statement:

"The losses ensuing in this State through lack of paint are much greater than the losses sustained by fire. Paint serves more than the mere purpose of decorating. Its principal value lies in the fact that it prolongs the life of the surface that is painted. Wood and iron exposed to air undergo a slow process of oxidation, which just as surely destroys them as though they were set on fire, the difference being the speed at which the reaction comes."

Obviously—it is most desirable that some definite effort should be made to bring about a condition in the minds of property owners which will insure the application of paint coatings to their buildings with sufficient frequency to protect and preserve them indefinitely from the action of the elements.

Property owners should face the fact that the first and most important purpose of paint is to protect and preserve, while the decorative feature, important and desirable as it is, is nevertheless, secondary.

ALCOHOL

Plant of Canadian Industrial Alcohol Company Limited, Corbyville, Ont.

With a capacity of 450,000 (proof) gallons per month we are the largest producers of Alcohol in Canada.

Manufacturers of vinegar, perfumes, essences, pharmaceutical preparations, etc., are invited to write us for prices of Alcohol suitable for their particular line of business.

We make a special feature of contracting for the requirements of manufacturers for the year or season, thus providing not only a uniform cost but also a steady supply as needed.

Those who are using Duty Paid Alcohol in their manufacturing processes would do well to consult us with a view to using it "In Bond," thus avoiding the use of two-year-old Alcohol. Under the rules and regulations of the Department of Inland Revenue, newly made Alcohol may be used "In Bond." This Alcohol is much cheaper than two-year-old.

METHYLATED SPIRITS or Denatured Alcohol is sold only by the Department of Inland Revenue, Ottawa, Ont., but any other kind of Alcohol may be secured from us.

A SUCCESSFUL CAFETERIA

The cafeteria described, that of Henry Disston & Sons, Inc., was opened last April, and has proved a remarkable success from the start. Cafeterias are now admitted to be practically indispensable adjuncts to modern industrial establishments, and the following description of the Disston cafeteria should prove of value.

By Arthur N. Blum, M.E.

(From "Safety Engineering.")

The British Ministry of Munitions, under Lloyd George, appointed a committee which made a thorough investigation as to the necessity of and advantages derived from industrial restaurants. The report of this committee (*Health of the Munition Worker*, London, 1917) was summed up in the following:

DIRECT BENEFITS

1. Marked improvement in health of worker.
2. Less sickness.
3. Less absence and broken time.
4. Less tendency to alcoholism.
5. Increased efficiency and output.

INDIRECT BENEFITS

1. Saving time of worker.
2. Salutary change from workshop.
3. Greater contentment of worker.
4. Better midday ventilation of workshop.
5. Increase of recreation and games in spare time.

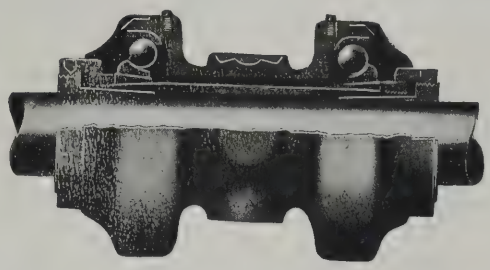
The Government of the United States has followed up these investigations and the consensus of opinion of both private owned companies and Government establishments has emphasized the benefits stated above.

Especially in places more or less distant from town centres, where public restaurants are poor or not available at all, industrial restaurants are regarded at the present time as an absolute necessity and have been actually installed by most factories of repute in this country.

Beneficial Under War Conditions

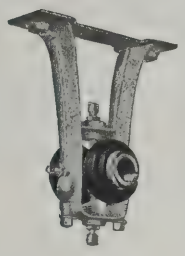
To characterize further the conditions under which we ourselves approached the subject last year, it suffices to remember that the country was at war and an unparalleled labor shortage, coupled with a ruinous labor turnover, made it imperative to seek means to check both in order not only to reduce the waste in money and energy, but to fill the urgently needed war orders. As shown above, no other welfare undertaking could, under the prevailing conditions, be more beneficial and attractive to the men (and at the same time without any suggestion of charity, which, of course, the men do not want), than a modern factory restaurant. Consequently, the officers of this company decided in October, 1918, to build a restaurant for our men, and instructed the writer to go ahead with the proposition.

A lot, conveniently located to the saw, file and steel works, 200 x 300 feet, fronting Wissinoming Street, Tacony, was dedicated by the company for the purpose.



As the first step, we sent out a considerable number of specially prepared questionnaires to factories having modern restaurants in operation, covering details of the building, equipment, and type of service. Coincidently, several special restaurant outfitting firms were invited to quote, and quite a few of the largest restaurants of this character were visited and investigated.

Based on this data we found:



1. That the best type suitable for quick service of large numbers (in fact the only type possible) is the Cafeteria type of restaurant, in which the men serve themselves in

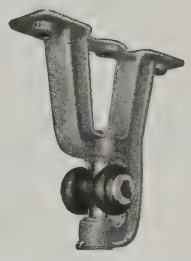
"Yes, They May Be Good, But What Do They Save Me?"

Answer:—There is no "may be" about it.



CHAPMAN DOUBLE BALL BEARINGS on your line shafting will save from 15% to 40% of your total power cost; 95% less lubrication; absolute freedom from oil drip and hot boxes. No upkeep or attention costs whatever.

That is their record of performance in over 4,000 plants in Canada and the United States.

THEY WILL FIT YOUR PRESENT HANGER FRAMES

Send for Catalogue No. 3-A and proof of our claims.

Better Lubrication
For Factory Engines

Here is Scientific Refining combined with Scientific Distribution—

Maple Leaf Valve Oil

mixed with the steam and spread in an even, thin *efficient* film in valve and cylinder by the En-ar-co Atomizer.

A guaranteed saving of from twenty-five to fifty per cent in cylinder oil consumption results from the use of Maple Leaf Valve Oil.

That's economical as well as better lubrication.

And the Atomizer is FREE. Write to us.

Canadian Oil Companies, Limited

1296 Excelsior Life Bldg., Toronto, Ont. 141A

passing along a counter on which the food is displayed and choose whatever they desire.

2. It was decided that facilities, to start with, for about 600 people in one sitting should be provided.

3. It was decided to erect a new building with a view to finally accommodating about 900 people and having kitchen facilities to prepare 1,500 meals at one time. (This number could be doubled in two sittings.)

These basic data once settled, the preparation of technical specifications was taken in hand. On the face, the further elaboration of the project seemed to be very simple. It concerns an activity known and followed up in every household daily, wherever meals are prepared and served, but if the condition is added that a large number of men have to be provided with food inside of the very short time available during the noon interval, the whole matter loses the aspect of a primitive undertaking and assumes the character of a manufacturing problem, and as such it has been treated by us.

In the first place, it was necessary to secure a permit for the erection of the new building from the War Industries Board at Washington. This permit was issued in a surprisingly short time, passing all the official bureaus in Washington and Philadelphia in less than one week, which again shows what the Government thought of the necessity of such institutions, especially when compared with another simultaneous application for permit for an urgently needed construction in our steel works, which we had pending for nearly six weeks and finally refused, notwithstanding that the steel works had at least 80 per cent war orders on hand.

However, the War Industries Board made it a condition that no steel for either roof or sash should be used in the building, which in turn, in addition to the existing city building laws, at once determined the type of construction as a slow-burning mill construction with concrete foundations, brick walls, tar and slag roof, wooden sash and concrete floor.

The Design Adopted

The floor plan of the cafeteria and kitchen embodies the finally adopted design which is the result of a careful investigation and comparison of numerous layouts of existing cafeterias from which it was endeavored to incorporate in our plan the most desirable features.

Using the basic data mentioned before, preliminary layouts showed that the building had to be 60 x 160 feet with a lean-to of 60 x 80 feet, altogether 14,400 square feet, and an economical construction under the prevailing conditions has been achieved by using the No. 1 and No. 2 of the Austin Company standards, who were awarded the contract. In this type the span of the main building is divided into three equal sections with about 20 foot centres, resulting in a double row of columns in the main dining-room. Posts 12 x 12 and beams 10 x 14 have been used throughout the entire construction.

The main dining-room has a monitor over the centre 80 feet long and 16 feet wide with 100 per cent ventilated mechanically operated 6 feet high bottom-hinged monitor windows. The height of the main dining-room is 16 feet from the floor to the roof sheathings.

The middle part of the kitchen lean-to is 40 feet wide and 24 feet 5 inches high and has two wings 20 feet wide and 16 feet high and is lighted and ventilated from above with monitor windows similar to the one in the main dining-room.

The southern wing, which is used as private cafeteria and private dining-room, covers a space of 20 x 80, or 1,600 square feet.

The northern wing contains store-rooms and the dish-washing department.

On account of the demands made upon us we were obliged to erect an addition to Plant No. 3, devoted exclusively to the manufacture of

MORROW TWIST DRILLS

MALLEABLE IRON
CASTINGS

HIGH TENSILE STRENGTH

GALT MALLEABLE IRON CO.
LIMITED
GALT ONTARIO

At the western end of the lean-to a mezzanine floor has been erected, used for three independent toilets for the help, with washstands and lockers.

Large windows 14 feet 7 inches wide and 11 feet 5 inches high are provided with double hang sashes covering about 60 per cent of the wall surface with glass.

The kitchen is equipped with all modern labor-saving and sanitary equipments used at the present, and the location of the various departments has been fixed in such a way that the food and provisions follow the shortest possible route from the storeroom, through the preparing departments to the serving counters.

Refrigeration System

A three-compartment refrigerator has been provided in the back of the kitchen—the largest compartment, 8'x8'x11', for meat, and the other two, 6'x8'x11', for dairy products and vegetables. These rooms are cooled by an electrically-driven ice machine. The ice machine is of four-tons capacity "Arctic" and is automatically regulated (Winkler System) assuring uniform temperature in the refrigerator and doing away with the necessity of a special attendant to the ice machine. The machine is started and stopped automatically, controlled by a thermostat placed in the refrigerator.

The refrigerator has the cooling coils placed in overhead bunkers which latter can also be used for ice cooling in case a breakdown of the machine should occur.

Additionally to the cooling rooms, we have provided an ice-making equipment of 600 lbs. capacity per 24 hours. The tank is placed near the refrigerator in order to use the overhead bunkers of the latter as ice storage.

From the refrigerator the meat goes into the opposite butcher room, equipped with an electrically driven Smith meat chopper and an electrically driven Coles meat grinder, and from thence to the adjoining ranges.

Similarly, vegetables from the storeroom are transferred to the vegetable scullery, where an electrically driven Sterling vegetable cleaner is installed, and cooked in an adjoining Morandi-Proctor three-compartment steamer, and V. Clad steam jacketed stock kettles of 40 and 50-gallon capacity.

"Garland" gas ranges have been provided in order to assure cleanliness and do away with the necessity of bringing in coal and removing ashes. In front of the ranges are metal cooks' tables and a large Bain Marie, accessible from both sides, from which rubber-tired trucks on ball-bearings carry cooked food to the serving counters. In this way a consistently short, straight line of motion of the food is maintained from the storeroom to the serving counters.

The pastry bakery, on the south side of the kitchen, is equipped with a Blodgett gas back oven and steam-jacketed copper kettle. The fillings for the pies, as well as the preparing of the dough is done in an electrically driven Day mixer, which also serves as a potato masher, egg beater, and for other various services of the main kitchen and pastry bakery.

A sufficient number of dressing tables are provided inside of the kitchen for the preparation of sandwiches, salads, etc., which are transferred on special trucks to the serving counter. Cutting of meat is done on a U. S. slicer, which in-

Put your locomotive problem up to us.

MONTREAL LOCOMOTIVE WORKS, LIMITED
DOMINION EXPRESS BUILDING MONTREAL, CANADA

sures uniformity of the slices, and decreases considerably the labor and waste.

All of the departments are provided with a generous supply of hot and cold water and sinks at convenient points.

The soiled dishes are washed in an electrically operated dishwashing machine of the latest type (Crescent Type EE) capable of washing 5,000 dishes per hour. Dishes are carried to the dish-washing department on special rubber-tired dish trucks.

A separate dish-washing machine is provided for trays and silver, which also can be used in emergencies as a stand-by to the automatic machine.

Ample storeroom is provided for both provisions, utensils and china, and the storerooms are arranged in such a way that the manager of the cafeteria has them continuously under supervision as well as the entrance and exit to the kitchen, from his office seat.

A potato pit, holding about two carloads of potatoes, is provided under the storeroom and has a loading hatch from the outside.

Kitchen Equipment

The kitchen is provided with high pressure (90 and 40 lbs.) and low pressure (5 lbs.) steam; electric service, 110 and 220 volts A.C. 60 cycles, for lighting and power; gas, and water service. A separate mill supply for the sprinkler system will be installed shortly. The steam and electric supply is carried through a tunnel under Wissinoming street from our factory.

Very important to the success of the cafeteria is the proper arrangement of the dining-room. This will be at once apparent if it is considered that there are practically 24 hours available for the preparation of the food in the kitchen, whereas only about 30 minutes for the distribution of same to the men.

Quick service and absence of confusion are the slogans of the proposition.

As stated above, the most advantageous position for the service counter, admitting the shortest line for the food route, was to place it in front of the kitchen and in the centre of the dining-room. The serving counters, so situated, can be arranged in two ways; either parallel to the long side of the building or across same. The second alternative has the following advantages over the first: It gives a straight run for the food trucks from the kitchen. It allows more space alongside of the building for the waiting line of men and it quite considerably reduces the number of help necessary inside of the service counter, especially after the first rush is over, when both sides can be operated with reduced number of help for both counters. Also, it allows for a single coffee service and a single cash register service after the rush is over. These advantages have decided us to adopt this latter method.

Some Helpful Features

As seen on the plan, the service counter has all steam tables with dish warmers doubled on both sides in order to dispatch the service. The trays and silver are replenished through windows in the walls of the kitchen, which is a helpful feature during the rush period.

Articles like ice cream, milk, cigars, candy and other refreshments which are liable to be taken by the men and women independently, are dispensed over a special counter near the exits. In such a way the main service counter is relieved.

Another question of importance was to decide the method of paying for the food and, after careful investigation, it was

found that the best way is to have a sufficient number of cashiers, patrons to pay as they leave the service counter.

The other possibility, of using checks, received at the service counter and paid at the exits, has disadvantages in our case, as it would necessitate a special kind of checks for the men who buy only at the cigar and ice cream counter, and consequently impair the control.

A further problem was to determine whether chairs, stools or benches were to be used. The stools proved the most advantageous, as they once for all fix the space which the patron can occupy; also take up the least room and do not obstruct the aisles.

To facilitate the service the patrons are required to place their soiled dishes and trays on special trucks conveniently located. These trucks, when filled to capacity, are wheeled to the dishwashing department by the help.

A description of the cafeteria will not be complete if the means and provisions for proper health and sanitation are not mentioned. An industrial restaurant which has to dispense a limited choice of food to a very large number of men must be so arranged that there is a practical certainty that conditions detrimental to health do not occur and that the food be served clean and attractively.

With this object in view, we have provided all practical means to assure sanitation and cleanliness of the restaurant.

The ventilation of both the dining-rooms and kitchen is taken care of by large monitors, 100 per cent. ventilated; also two-thirds of the glass surface of the windows is ventilated. The windows reach up to the ceiling and so eliminate impure air pockets.

A generous net of drainage has been provided, with vents and grease traps where necessary, and the concrete floor will be flushed with water at frequent intervals. A sanitary cove is provided around the walls. All counters are raised 6" above the floor to insure ventilation and easy cleaning, and the walls have been painted with water-proof oil paint, to be flushed at the same time as the floors. The interior is painted with mill white, with dark green wainscoting.

The toilets, lockers and wash facilities are provided in a mezzanine floor, western end of building, away from kitchen.

The drinking water is cooled by the ice machine and dispensed through an improved type of bubbling fountains which have a protected nozzle and an inclined flow of water. Recent bacteriological investigations at the University of Minnesota have shown that the generally used bubbling fountains with vertical water streams are unhygienic and direct propagators of diseases.

Identical principles have prevailed in construction and equipment of the small private cafeteria.

Electrical Precipitation

A booklet illustrating their apparatus for the suppression of dust and fumes and the recovery of waste materials in the operation of many industrial enterprises has been issued by the Canadian Westinghouse Company, Limited. The method adopted is electrical precipitation. This process is now being used successfully in lead and copper smelters to reduce metal losses from the stacks and to eliminate smoke nuisances; in cement plants to collect potash and cement dust; in acid plants to recover acid fumes; and in rock crushers to suppress the dust nuisance. It is also being applied to iron blast furnaces to eliminate the ore dust and to recover potash values; to gas plants for removing the dust, tar and lamp black from the gases; to locomotive roundhouses and power plants, located in centres of population, to remove the soot and cinders from the smoke; and to industrial processes producing fine powders as in the manufacture of lamp black, zinc oxide, desiccated foods, etc. The booklet describes the process in detail and gives a large number of illustrations.

WHAT FRANCE NEEDS TO-DAY

Seven million tons of metals are required for the work of reconstruction, including 1,500,000 tons of iron and steel, 80,000 tons of copper, 40,000 tons of lead, and 90,000 tons of raw cotton for textile plants.

(From the "American Machinist.")

Speaking before a gathering of American business men, Lieut. Raymond d'Aiguy, of the French High Commission to the United States, gave the following information about France's needs and the way to fill them. Said Lieut. d'Aiguy: "The greatest need in France at the present time is food and agricultural implements, and she is looking to America for both of these. The import duty on agricultural implements has been temporarily suspended as an inducement for American manufacturers to ship their products to France. During the war France lost 300,000 agricultural implements.

The speaker sketched quickly and precisely the far-reaching effect of German destruction in France. According to figures he quoted, the destruction includes 27,000 factories, representing an investment of $5,000,000; 440,000 homes, 3,000 miles of railway-track, 1,000 bridges, and 400 tunnels.

To aid in the reconstruction of these, France will have to import quickly 7,000,000 tons of metals. The requirements for the next year are estimated at 1,500,000 tons of iron and steel, 80,000 tons of copper, 40,000 tons of lead, and 90,000 tons of raw cotton for textile-plants.

"France looks to America to help in the reorganization of her industrial life," said Lieutenant d'Aiguy. "We need American engineers to help reconstruct our plants and American business experts to help us reorganize French business. I believe that France will become more of a modern machine-using nation than before the war. America can help in showing French business men the advantages of machine production.

"France is suffering from a shortage of machine tools now, but in order to assure a certain amount of profit for France in any importations, they must be bought through a special government body, which exacts a 16 per cent. profit for France as well as an extra 2 per cent. for the upkeep of this special organization.

"Above all things, France needs ships, and we hope to be able to place orders in American shipyards for about 1,000,000 gross tons of shipping.

"France is not bankrupt, but she has lost much through the war. In making our purchases in America we will be able to pay for about half of the merchandise we buy. American business men will have to extend us credit for the other half.

"American business men who want to do business in France should conduct negotiations through a Frenchman of a French firm,' Lieutenant d'Aiguy insisted. "The French and American people are not at all alike. It takes a Frenchman to understand his own people."

Arthur J. Hayes, former sales manager of the Ford Motor Co., of London, Ont., has resigned to go to Windsor, where he becomes sales manager of the Champion Spark Plug Co. of Canada, Limited. Prior to taking up his new duties, Mr. Hayes spent a few weeks travelling about Canada, getting acquainted with the jobbing trade and familiarizing himself with the sales policy of the company. He will make his headquarters at Windsor, where a new quarter of a million dollar plant is being erected by the Champion Spark Plug concern.

THE INDUSTRIAL AWAKENING OF P.E.I.

Rural depopulation is the worst menace to Prince Edward Island's prosperity and, to offset it, the introduction of industries is advocated. An Industrial Promotion Committee has been formed and investigation is being made of possible industrial development. At present the island has practically no manufacturing industries but it has plenty of raw material.

(From the Montreal "Journal of Commerce.")

According to the last census the population of Prince Edward Island decreased by 15,000 during the previous decade, and we had fewer people then than at Confederation. The great problem is how are we to keep our people at home and save a further loss in population. Agriculture is the chief industry of the island, employing about 85 per cent. of our people. Take a case of the owner of an average-sized farm. If he has a number of sons, only one of these, or perhaps two, can earn a livelihood on it. The others must seek employment in other callings, usually outside the province. Even the farmer, attracted by the lure of the West, sells out and moves away.

Efforts have been made to develop intensive farming through dairying, fruit-growing, etc., and thus increase the sources of employment and maintain at least our population, but the results have not been so satisfactory as desired. Dairying has made good progress, and according to the reports submitted at the annual meeting of the Provincial Association this winter the value of the output was the greatest on record owing to the high prices; but the supply of milk had decreased, and there was a cry of shortage of farm labor. The fishing has been holding its own well, but the lobster catch shows signs of declining, and unless other branches of this industry are more vigorously prosecuted, such as cod-fishing, which is capable of much greater development, there will naturally be a falling off in the number of people engaged in this industry. Fur farming, though hard hit by the war, has passed the feverish speculative stage, and is settling down to a sound business basis, and this will hold a certain number of our population.

Great Need is New Industries

The great need of the province is the introduction of new industries as well as the further development of the existing ones, and a move is now on tending to secure the greatly-to-be-desired indoor industries, such as factories.

Whilst the island is enjoying a good share of prosperity, and agriculture and fishing have proved valuable sources of wealth, our progress has been one-sided from an industrial standpoint. There are a number of anomalies in the situation. For instance, we export about 30,000 raw hides per year, and these are sent abroad to be manufactured into boots and shoes, and to be sold on the island. Eighteen or twenty years ago we had several tanneries operating successfully, but they have all closed down but one, and that one is on the verge of disappearance. Hence tanneries and boot and shoe factories should, in the natural order of things, be established here. There is not now a single one of the last-named factories in operation, although one is proposed to be started here on a small scale.

Import Almost Everything

The island is a regular Mecca for commercial travellers, as we import almost everything in the line of manufactured goods. The manufacture of carriages, furniture, woollen goods and other lines at one time flourished, but one by one they faded away. With the view of recovering at least in a measure some of our lost ground, an organization known as the Industrial Promotion Committee has been found in Charlottetown. Its membership includes the Council of the Board of Trade, the City Council, the Rotary Club, the Retail Merchants' Association, and the Great War Veterans' Association. There are a number of sub-committees, including the Investigation Committee, whose duty is to investigate

and report on existing industries, and the prospects for new enterprises; and a Recommendation Committee, that will receive in confidence the financial report of any enterprise wishing to extend its field of operation or any new industry, and make recommendation as to the proper method of procedure. The Publicity Committee is planning an advertising campaign, and recently conducted a competition in which prizes were awarded for the best articles on the securing of new industries. Although the movement is in its initial stage, good progress has been reported. One firm of machinists and founders, who make a specialty of gasoline engines, propose enlarging their premises, and are preparing to issue additional stock. The prospective establishment of several new industries is announced. The large sums which were taken out of the Savings Banks and invested in the fox industry and the several Victory Loans indicate that there is a large amount of capital which only requires the proper inducement to have loosened up and placed in circulation, and the aim is now to develop a confidence among our own people in home industry.

Manufacturing Conditions Favorable

There are many favorable conditions for manufacturing here. Formerly the island was handicapped by inadequate transportation facilities, especially in winter, but the arrival of the car ferry and the widening of the railway gauge which is now under way will make us virtually a part of the mainland. Although we have no coal, Ontario and Quebec are also without it, and we are within easy reach of the mines of Pictou County and Sydney, so that it can be landed here just as cheaply as in St. John. The island is thickly settled with a well-to-do people, whose wants at present are almost wholly supplied from abroad. Building sites can be had reasonably, and the cost of living will be no higher than in other provinces, whilst the rate of taxation is the lowest of any part of Canada. Quite a flood of suggestions has been placed before the Promotion Committee; for example, making of certain lines of agricultural implements is advocated, the building and starting of woollen mills (already we have a knitting factory in successful operation), the utilization of fish offal for fertilizer, the canning of fruits and vegetables, the bottling of pickles, the manufacture of soap, the building of boats, and making of motors and aeroplanes and other lines. For some years the beet sugar industry was insistently advocated. The scheme finally dropped, but an agitation is on foot to have it revived.

Much emphasis is being laid upon the possibilities of developing industries which are in line with our natural resources. For example, the manufacture of potato starch, which has been carried on for a number of years, might be supplemented with the making of potato flour, dextrine glucose and denatured alcohol. A condensed milk factory has been running for quite a number of years, and the making of powdered milk might be introduced also.

An organization known as the Development Commission, which received support from the Government, undertook some years ago to do work along somewhat similar lines as the Promotion Committee, and it secured considerable amount of data, which can be made use of by the latter organization. The Commission, however, became inactive when the war broke out, but now that conditions are becoming normal again it is hoped that the organization may be revived. The manufacture of bricks and tiles for under-drainage resulted from the efforts of that committee, and it was also found that the island has a large supply of sand suitable for glass making. Other hitherto unknown resources of possible development were revealed, but now that the industrial movement is being revived some practical results may follow the efforts which were previously put forth.

The need of providing employment for the returned soldiers has tended to quicken the interest in the industrial movement, and, with the various forces working together, it is expected that something tangible will result.

GERMANY'S INDUSTRIAL FUTURE

The length of time before Germany can even approach her previous standing is dependent upon many things. There is little doubt, however, but that the German people will exhaust every means and source to re-establish themselves as rapidly as possible. They will doubtless endeavor to regain the respect of the world by new and possibly surprising means.

By Corporal R. D. Zucker.

(From the Journal of "Industrial and Engineering Chemistry.")

Germany's entire industrial position depends largely on her ability to get raw materials. The sources of my information are several, the principal ones being my personal observations of mail censorship reports, of Germany's industrial position, of which I prepared daily summaries for a period of several months, and also my personal observations in various parts of the occupied territory. I have hesitated in making any fast, prophetic statements regarding the future, and have confined myself principally to the various possibilities.

Germany's dependence upon other countries for so much of her raw materials has placed her in a precarious position. She has no important copper, tin or nickel deposits. Whereas before the war she led the world in the production of aluminum, now the United State alone produces over one-half. We and Canada have a natural advantage over her in our large deposits of bauxite. Previously Germany imported vast quantities of it from the Provence district in France. It is doubtful if she will be able to do this in the future, because agitation is already on foot in France for the Government to make stricter export laws on this material. She can obtain lead in fairly large quantities from galena deposits in the Harz mountains, Mechernich and Call, in the Eifel district. Zinc is very plentiful in the Upper Harz, and in Upper Silesia and Aachen. Formerly Sweden exported about three million tons of steel every year to Germany. Naturally this was greatly diminished during the war. Now even the production of Germany's own mines amounts to very little. Cotton, rubber, gums, essential and vegetable oils must also be imported in large quantities. Flax is cultivated to some extent in Germany, but at the present time only about five to six per cent. of the mills of the linen industry are in operation. This year's crop of flax will amount to practically nothing. Seed is difficult to obtain, and the farmers are not planting much because they can see no method of disposal, and in many cases no labor can be had.

Want Raw Materials

I read in one trade journal that, on account of the great oversupply of copper, cotton, rubber, textiles, etc., in the United States, we would be compelled to export them to Germany in order to dispose of them. They evidently expect the exports to commence with the lifting of the blockade, and also look for a big reduction in prices. They particularly mention that they want to import the raw materials and not the manufactured goods. This is so that their idle plants may once again be set in operation and employment given to those out of work.

Transportation difficulties arose from many different sources. The blockade between the occupied and the unoccupied territories, enforced by the Allied armies of occupation, played a big part, especially during the first months of occupation, when it was extremely difficult to obtain permits to export and import necessities, etc., from the left Rhine territory to unoccupied Germany, and *vice versa*. Later on the restrictions on certain raw materials and special classes of goods were made lighter, and it was possible for some plants to keep in operation through these means. For example, at one time a large quantity of raw beet sugar was permitted to be sent from the unoccupied zone to the left Rhine territory, where most of the refineries are located. It was on the

Dull Files Dull Workmen

You cannot get the best out of men working with dull tools.

The personal satisfaction they get out of working with sharp, well-balanced tools makes for contentment.

It is better to throw away a dull file and buy a new one than to "economize" by keeping the dull files in use.

"Famous Five" Files give maximum returns because the steel in them is accurately cut and properly hardened.

Order them. They are:

condition that a certain large per cent. should be kept for distribution in the occupied country. Another factor in the transportation trouble was that of the diminution in the amounts of rolling stock. Owing to the conditions of the armistice, 5,000 locomotives and 150,000 cars had to be turned over to the Allied authorities, and the shortage produced thereby added greatly to the already existent difficulties. It is claimed, however, that after the industrial plants start up again the shortage of locomotives could be alleviated in as short a time as three months by means of spare parts on hand, outstanding contracts, etc. This seems to me a very optimistic statement.

The spread of Bolshevism and Spartacism caused considerable turmoil among the laboring classes. Naturally the leaders of these new parties sought the districts where labor was most concentrated, and therefore the mining regions around the Ruhr River, Upper and Lower Silesia, and other industrial centres suffered the most, thereby further paralyzing the arteries of commerce. The demands for higher wages, better hours and conditions were in some cases just; but the harm done to industry alone by their injudicious methods certainly adds the final touch to their discredit. For many months, in Berlin alone, there have been well over 200,000 unemployed. The Government itself is greatly to blame for this, because, by law, they are compelled to pay those out of work eight marks per day, I believe; and when a man is unable to earn much more than that by working, there is certainly little inducement to make him hunt a job if he can get his living free and by thieving or plundering. A readjustment of these unfavorable conditions can be partially obtained by suppressing the Bolshevist menace by the co-operation of all, and with the course of time. It can be safely said that the majority of the workers are not in favor of the radical methods used, but where intimidated and compelled to adopt them.

Socializing the Industries

Many movements have been on foot for the past months to socialize the different industries. The German Government is making investigations concerning the benefits of it; and some branches of industry, I believe, have already decided to adopt the socialistic administration. Others are putting up a violent opposition to it, so the outcome of it will be interesting to watch. There has been existent in Germany for a long time a type of organization which, until comparatively recently, we have not had to any extent in our own country. Every little branch of industry has its so-called "Verein" or "Verband," which seems to be made up more from the manufacturers themselves than from the laboring classes. They are not similar to our trade unions, but are more along the order of our "chambers of commerce." They aim mainly to standardize commerce regulations, determine prices, establish co-operation with the employees, protest against unfair legislation, and to look out generally for the particular interests of their own branches of industry. They are in a large degree responsible for Germany's previous commercial success. Since the armistice was signed they have also played an important part in endeavoring to keep industry going and in making plans for the future. It might be mentioned here that another feature that played a part in Germany's former success was that of the elimination of "cross shipping," i.e., the shipping of some class of goods from one part of the country to another distant part when it is possible to obtain the same in close proximity. This avoids unnecessary congestion of freight, and affords cheaper prices, quicker delivery, etc. Of course Germany, being of much smaller area than the United States, can more easily practise such a principle; nevertheless, I believe that we should make attempts to eliminate this drawback as much as possible in the United States.

At the present time the immense syndicates and their vast plants are shut down exactly as those of smaller capacity are. Probably among the best generally known is the famous "Kali" syndicate, which controls the potash deposits of the Stassfurt

region. During the first quarter of 1919, on account of coal shortage, transportation troubles and labor difficulties, they were able to deliver only 60,000 tons, compared with 150,000 tons in the same period of 1918. The value of deliveries decreased from 77 million marks to 35 million marks. Now that the United States has become practically independent of large imports of potash, whereas in 1913 it is said that she imported about one million tons of potash salts from Germany, it can be seen that this important branch of Germany's export trade is doomed to suffer. In like manner, through the industrial independence which we have obtained in other lines during the war, especially in medical preparations, dyestuffs, optical glassware, etc., her position is greatly jeopardized. One plant of the Hochst Farbewerke, in French-occupied territory, is now in operation under French supervision. Medicinal products are produced, the stores and production are first used for the purposes of the Allies, and any remainder can be shipped by special permit into the unoccupied territory. Along the Rhine, in the American zone, practically the only factories in operation are those manufacturing "Schwemmstein," a sort of porous concrete building brick made from gravel and clay found in the immediate vicinity. Being on the river, a coal supply is fairly easily obtainable. These plants have been making shipments with fair regularity, especially to Holland, which is also accessible by the water route. It is interesting to note here that after the American army of occupation had been here some time the numbers of unemployed among the Germans in the occupied zone decreased continually until, at the present time, it is very nearly nothing.

Krupp Works Idle

In the hills along the Lahn River, which terminates in French-occupied territory just below the American zone, there are a few silver, lead and iron mines. These have been in operation to some extent, but with no regularity and with only a small production. The great Krupp works at Essen, while having made plans to re-establish themselves on a peace basis, are the present practically idle. It is interesting to note that the Krupp people claim that before the war the proportion of finished war materials (artillery, armor plate, shell cases, etc.) to that of peace materials which they manufactured was only one to twenty. It is not within the scope of this article to argue along these lines, but I have definite proof that the Krupp people cause false statistics to be given to the public, and reserve the correct ones for their own internal administration. The addition that they will soon put on to their 1912 Jubilee Book concerning their experiences, production, etc., during the war will not be the same one that they will distribute to their own officials, and which will contain the true facts, figures, their great errors, etc.

The majority of the plants are in condition to start manufacturing again on short notice if the factors that closed them down are removed, that is, with a regular coal supply, which would, of course, necessitate open lines of transportation, and the labor trouble quieted, Germany will be able to manufacture on a scale in proportion to the supply of her own raw products and the disposal of her goods. Here her total dependence on other countries for such products as rubber, copper, etc., comes into effect. She is also largely dependent upon other countries for the disposal of much of her manufactured goods, and will no doubt make every effort to introduce her wares to the world once again, whether it be by open methods or unscrupulous ones, depending upon whether the former are successful or not. THE BENNETT & WRIGHT CO., Limited

72 QUEEN STREET EAST - TORONTO

smooth business letters, seeking to renew connections and dismiss the "unfortunate occurrences," as they call it, of the past four years. English firms have their representatives in a portion of the occupied territory, where they are aiming to establish business connections. I understand also that a large American exchange company has offices in Berlin, and will handle imports of raw materials and exports of finished products to the States. It is doubtful if the antipathy against Germany will remain strong with many in the commercial world, especially if there is anything to be gained by overlooking it.

The length of time required before Germany can even approach her previous standing is dependent upon many things. If the amount of indemnity that she has to pay should prove to be excessively large, the country would be placed in a condition of economic slavery for many years. If a commercial boycott of any extent should be placed upon her, this will certainly be a tremendous restraint upon her recovery. There is little doubt, however, but what these people will exhaust every means and source to re-establish themselves as rapidly as possible. Being naturally industrious, and making application of science as they have heretofore, they will doubtless endeavor to regain the respect of the world again by new and possibly surprising means, especially if they should be fortunate enough to have the proper kind of leaders to guide them. Plans for the future are already being considered in detail. If attempts to place their goods in the large countries of the world cannot be made directly, they will resort to agencies which they have established in the so-called neutral countries, such as Holland, Switzerland, Sweden, Norway, Denmark, etc. Many firms already have their representatives in these countries, and are making preparations for importing and exporting as soon as the blockade restrictions are lifted.

One thing which Germany fears in a commercial way is the competition of Japan. Since 1913 Japan's exports to Australia alone increased eightfold. There is a bitter feeling against them on account of the strides that Japan has taken in the export of toys, fancy wares, etc., to the United States, South America, Australia and Europe. The fact that Germany, being closely engaged in warfare, gave Japan an excellent opportunity to expand her business connections, now causes Germany to apply the term "yellow peril" to the menace to her toy industries, etc.

A fact which must not be lost sight of in the future is the well-known ease by which a plant manufacturing dyestuffs can be converted, in a very short space of time, into a source for the most powerful explosives that the world knows of. It will be well to watch this formerly highly-developed branch of Germany's industry, and not allow it to reach too extensive proportions.

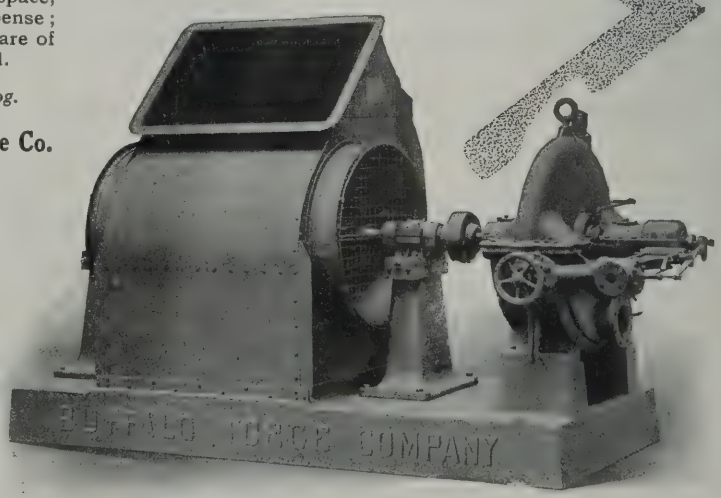
It is perfectly possible, although perhaps difficult for some to understand, for Germany to rebuild herself and become once more a nation of commercial importance and holding the recognition of the great nations of the world. It will take many years and an entirely different type of leaders from what she formerly had, and at the present time it does not appear as if her new leaders had lost sight of their old ideas of world domination in the future. So far as the United States is concerned, we have been very magnanimous to her on the whole, which is entirely in keeping with the principles for which we fought. If Germany, in her strides for recovery, shows herself worthy, I believe it would still be in accordance with our principles to assist her in certain ways; but if, on the contrary, she should show any intent of pursuing her old designs, forces to prevent it cannot be taken too soon. Present internal indications in Germany certainly indicate that she is anxious to re-establish her business connections, start up the factories, feed her people and put herself on a firm basis. Germany's future rests wholly with herself, and, by watching her carefully, the rest of the world will be able to determine what new means to adopt towards her judicially, commercially and, if necessary, physically.

Canadian

Even Poor Coal

With Turbo Conoidal Fans you can use a much lower grade of fuel than is possible with a stack.

Your air supply and pressure are under perfect control and always just right for light or heavy loads.



A stack is inflexible, awkward and expensive. It can never be enlarged to take care of *increased* additions to the plant. There is no control.

Turbo Conoidals occupy small space, require little upkeep or running expense; extra units can be added to take care of growth and there is perfect control.

WOMEN'S AND MEN'S WAGES COMPARED

The subject of the relation of women's to men's wages is dealt with in a report recently submitted by a committee appointed last September of the British War Cabinet. The task imposed upon the committee was to investigate and report on the relation which should be maintained between the wages of women and men having regard to the interests of both as well as to the value of their work.

(Summary in "Manufacturers' News.")

The report contains a mass of historical and statistical information on the employment and wages of women, both before and during the war, with especial reference to the comparative efficiency of women and men, and their comparative earnings. Five out of the six members of the committee signed the majority report, namely, Lord Justice Atkin (the chairman), Dr. Janet Campbell, Sir Lynden Macassey, Sir W. W. Mackenzie, and Sir Matthew Nathan. One dissenting member, Mrs. Sidney Webb, signed a minority report. The work of the committee covers a wide field of detail relating to the question of equal pay for equal work, and has been conducted with a view to striking a fair balance in the scale of justice and fairness regarding the compensation of the vast army of women workers that have joined the industrial forces of Great Britain since the war began. The questions considered are no less important because of the return of peace. They are rather of greater consequence, since the total of women engaging in various kinds of labor heretofore performed almost entirely by men is now far greater than ever before. Following are the recommendations of the British committee:

Relative Value of Men's and Women's Work

Principles that should govern future relation between men's and women's wages:

(1) That women doing similar or the same work as men should receive equal pay for equal work, in the sense that pay should be in proportion to efficient output. This covers the principle that on systems of payment by results equal payment should be made to women as to men for an equal amount of work done.

(2) That the relative value of the work done by women and men on time on the same or similar jobs should be agreed between employers and trades unions, acting through the recognized channels of negotiation, as, for instance, trade boards or joint industrial councils.

(3) That where it is desired to introduce women to do the whole of a man's job, and it is recognized that either immediately, or after a probationary period, they are of efficiency equal to that of the men, they should be paid either immediately, or after a probationary period, the length and condition of which should be definitely laid down, the men's time rate.

(4) That where there has been subdivision of a man's job or work, without any *bona fide* simplification of processes or machine, and a women is put on to do a part only of the job or work, the wages should be regulated so that the labor cost to the employer of the whole job should not be lessened, while the payment to the persons engaged on it should be proportioned to their respective labor contributions.

(5) That where the introduction of women follows on *bona fide* simplification of process or machine, the time rates for the simplified process or simplified machine should be determined as if this was to be allocated to male labor less skilled than the male labor employed before simplification; and women, if their introduction is agreed to, should only

receive less than the unskilled man's rate if and to the extent that their work is of less value.

(6) That in every case in which the employer maintains that a woman's work produces less than a man's, the burden of proof should rest on the employer, who should also have to produce evidence of the lower value of the woman's work to which the fixed sum to be deducted from the man's rate for the particular job throughout the whole of the industry should strictly correspond.

(7) That every job on which women are employed doing the same work as men for less wages should be considered a man's job for the purpose of fixing women's wages, and the wages should be regulated in the manner above recommended.

That (8) the employment of women in commercial and clerical occupations especially requires regulation in accordance with the principle of "equal pay for equal work."

(9) That in order to maintain the principle of "equal pay for equal work" in cases where it is essential to employ men and women of the same grade, capacity, and training, but where equal pay will not attract the same grade of man as of woman, it may be necessary to counteract the difference of attractiveness by the payment of married men of children's allowances, and that this subject should receive careful consideration from his majesty's government in connection with payments to teachers to which the government contributes.

(10) That the principle of "equal pay for equal work" should be early and fully adopted for the manipulative branches of the civil service, and that in the case of post-office duties the question of the men having late hours or night work should be provided for by an extra allowance to persons undertaking common duties under disagreeable conditions.

(11) That this principle with regard to allowances to persons undertaking common duties under disagreeable conditions should be applied also to industry.

Recommendations Looking to the Future

Principles that should govern future employment and wages of women:

(15) That in those trade processes and occupations which the experience of the war has shown to be suitable for the employment of women, employers and trade unions, acting through the recognized channels of negotiation, should make possible the introduction of women by agreements which would insure, in the manner above indicated, that this did not result in the displacement of men by reason of the women's cheapness to the employer.

(16) That with a view to improving the health and so increasing the efficiency of women in industry:

(i) There should be a substantial reform and extension in scope of the factory and workshops acts, with special reference to (*a*) the reduction in the hours of work (including arrangement of spells and pauses, overtime, night work); (*b*) the provision of seats, labor-saving devices, etc., to avoid unnecessary fatigue; (*c*) an improved standard of sanitation (sanitary conveniences, lavatories, checkrooms, etc.), ventilation and general hygiene; (*d*) the provision of canteens, rest rooms and surgeries; (*e*) the general supervision of the health of the workers, individually and collectively; and (*f*) the conditions under which adolescents should be employed;

(ii) The present factory medical department at the home office should at once be strengthened by the appointment of an adequate and suitable staff of women medical inspectors of factories, and that a considerable increase should be made to the present staff of lay women factory inspectors;

(iii) A local factory medical service should be established, with duties of supervision, investigation and research intimately co-ordinated with the school medical service, under the local education authority, the public health service, under the local sanitary authority, and the medical service, under

JAMES P. BYRNE . . . . . Secretary
M. B. ROBINSON . . . . . Asst. Secretary

the national insurance act or ministry of health, when established

(17) That the ministry of labor, with which should rest the duty of ascertaining both nationally and locally the demand for trained persons in any trade or occupation, should, through central and local trade advisory committees, assist local education authorities in determining the technical instruction which should be provided for women:

That (18) in order to secure and maintain physical health and efficiency, no normal woman should be employed for less than a reasonable subsistence wage.

(19) That this wage should be sufficient to provide a single woman over 18 years of age in a typical district, where the cost of living is low, with an adequate dietary, with lodging, to include fuel and light in a respectable house not more than half an hour's journey, including tram or train, from the place of work, with clothing sufficient for warmth, cleanliness, and decent appearance, with money for fares, insurance and trade union subscriptions, and with a reasonable sum for holidays, amusements, etc.

(20) That there should be additions to this wage for women working in the larger towns and in London, to cover the greater cost of living there.

(21) That this wage should be adjusted periodically, to meet variation in the cost of living.

(22) That the determination of the basic subsistence wage should be by a specially constituted authority, which should also determine variations from it to meet the conditions of different districts and of different towns, or, in rare cases, special conditions of trade.

(23) That the subsistence wage so determined should be established by statute, to take effect immediately on the expiry of the Wages (temporary regulation) Act, 1918, or any prolongation of it, and to apply to the employment for gain in all occupations (other than domestic service), for which a minimum wage has not been determined by an industrial council or by a trade board or other statutory authority.

Mothers' Pensions and Employment of Children

That (24) the government should give consideration to the question of adopting a scheme of mothers' pensions for widows and for deserted wives with children, and for the wives with children of men physically or mentally disabled, such pensions to be granted only after investigation where there is need, and subject to supervision, and otherwise to be administered on the lines followed for pensions granted to the widows of men deceased in war.

(25) That the department or departments of government concerned should draw up for the consideration of the government a scheme by which the entire direct costs involved by the lying-in of women, under thoroughly satisfactory conditions, should be provided by the state.

(26) That a scale of wages should be established for girls 50 cents a week less than the women's subsistence wage for each year under 18, and that no girl should be employed for gain at lower rates than those of this scale, unless a duly constituted authority, such as a trade board or industrial council, fixes such lower rate where the employment is of the nature of an apprenticeship. Also that the question of girls and boys under 16, working on piece, should be specially considered by the department or departments of government concerned, with a view to the definite abolition of such working if it is found to be detrimental to health.

(27) That the government should continue to give the strongest possible support to proposals for the international regulation of labor conditions, which should lessen the danger of the foreign trade of this country being injured as a result of the employment of underpaid labor abroad.

Canadian National Railways

VACATION TIME!

Change of air and change of scene are usually all that most vacationists get out of vacation. It is almost impossible to find a place so interesting that the ordinary problems of business do not intrude.

TRAVEL AND LEARN

Every man connected in a responsible way with a manufacturing concern marketing goods in Canada, should know his market. He should know, also, where his raw materials come from and how they are produced.

Get the National Idea!

SOCIALISM OPPOSED TO DEMOCRACY

Democratic government is a government of co-operation, the working together of individuals, the result of individual impulse. Socialism is working together as the result of government and outward direction. That is the difference between Socialism and the co-operation with which men worked together in the Liberty Loans.

By Professor W. S. Myers.
(From "American Industries.")

It is rather interesting and curious to find that a great many of the people who have taken literally President Wilson's declaration that we must make the world safe for democracy are also making it their business to spill a sort of altruism over the entire world. They are so busy attempting to spread democracy that they are not always certain in their own minds, it seems, as to what you mean by democracy. In fact, many of their *confreres* are extremely active just at the present time in trying to so transform their own country that they go to prove that they have very little confidence in the brand of democracy that we usually have known as American. In other words, they are trying to change our government from a democratic government into an autocratic one, from an American government into one modelled on European paternalism. That is, they are trying, whether by fair means or foul, whether openly or secretly, whether in an acknowledged way or tacitly, to put us upon a socialistic basis. And socialism, to my mind, is not only un-American, but it is undemocratic.

Of course, in discussing such a thing as socialism, the first difficulty we have is to get a definition of socialism. I know a great many socialists, and seldom do you find them agreeing upon what socialism is. It is just about as hard as trying to define religion. But, by talking with a number of socialists, we work out a definition which they are willing to accept, and it is this—that socialism is the government ownership of manufacture and distribution of all forms of wealth; and by that they mean the manufacture and distribution, that is, the production and transportation, of all forms of wealth; not merely in the sense of money, but in the sense of anything that is for the economic good of man or his welfare and enjoyment.

If we are going upon that basis, where the State takes over the means of manufacture, distribution, transportation and such, it means inevitably that we are going to substitute a government judgment for the individual emulation and competition, and it will become the duty of the government to decide how people shall be happy and what their measure of happiness shall be. Now it seems to me that just as soon as you undertake to substitute a government judgment for the individual judgment, you are on ground that is anything except American, because if the government is to decide as to the happiness of the individual, of course it first relieves him of all responsibility. In a socialistic State there is not the same responsibility of citizenship as you find in democracy, like America.

It seems to me that after all ambition is not only right, but it is one of the most valuable attributes of the human mind. Because what is ambition? Is not ambition just like any other thing—the greater the value of it the greater is the wrong when it is wrongly used, the greater is the abuse? Is not ambition, after all, the desire for greater service? And, mark you, what is every business man trying to do in order to increase his business? He is trying to appeal to the service of the public, public service, in order that, by serving the public, he may increase his business. Ambition is not only one of the most valuable, but one of the most necessary, human attributes.

What is the object of the American government? It is to give equality of opportunity. As the Declaration of Independence said, men are born free and have equal rights to the pursuit—not to the gift of happiness, but to the pursuit—of happiness. The object of our Government is common equality of opportunity for each individual to work out his own salvation.

HON. FINLAY G. MACDIARMID,
Minister of Public Works

W. A. RIDDELL, M.A., Ph.D.,
Superintendent

TRADES AND LABOUR BRANCH
DEPARTMENT OF PUBLIC WORKS

THE TRADES AND LABOUR BRANCH administers the following:

The Trades and Labour Branch Act
The Bureau of Labour Act
The Stationary and Hoisting Engineers Act
The Building Trades Protection Act
The Factory, Shop and Office Building Act
The Steam Boiler Act
Employment Bureaus
Investigation and Research

Employment offices are in operation in 35 cities and towns of the Province, and are the Ontario units of the recently organized "Employment Service of Canada."

Are you getting your help through the medium of the employment service, which you as a taxpayer are helping to support?

The value of these bureaus will increase in proportion to the extent to which they are used by employers.

NOTICE TO STEAM USERS:

At the last Session of the Legislature, the Act respecting Stationary and Hoisting Engineers was amended, said amendment requires that on and after January the 1st, 1920, all stationary steam plants in the Province of Ontario must be registered with the Board of Stationary and Hoisting Engineers. Application forms for this purpose will be forwarded on request. The boiler horse-power and other information contained in these application forms is to be used for statistical purposes.

A Registration Certificate will be issued to each applicant.

20-year Barrett Specification Roof on Foundry Building of Thos. Davidson Mfg. Co., Ltd., Montreal, Can. Arch.: A. W. Robinson, Montreal; Gen. Con.: A. F. Byers & Co., Montreal; Roofers, Hickey & Aubut, Montreal.

A 20-Year Guaranty Roof protects this Canadian Foundry—

A foundry roof has more than weather to withstand. It must be able to resist the intense heat of the furnaces underneath, and showers of red-hot sparks from above.

When the roof on the foundry building shown above was completed we gave the owners a Surety Bond *guaranteeing* their roof to be free from maintenance expense for *20 years*.

In this case the Surety Bond was hardly necessary, for the Thos. Davidson Mfg. Company, Ltd., knew from experience what service to expect, as the following paragraph from their letter to us shows:

> "You will no doubt be interested to know we have insisted on Barrett Specification Roofs on all our plants, as our experience has proved it to be in every way satisfactory."

Not only are Barrett Specification Roofs "in every way satisfactory," but they cost less per-year-of-service than any other type of permanent roof, and they take the base rate of fire insurance.

20-Year Guaranty

So sure are we of the service Barrett Specification Roofs will give *under the most severe conditions*, that we are prepared to *guarantee them for 20 years*, in all towns of 25,000 or over, and in smaller places where our Inspection Service is available, provided they are 50 squares or more in area. The guarantee costs you nothing. We merely require that our Specification dated May 1, 1916, shall be strictly followed and that we have an opportunity to send inspectors to watch the job during construction. The guaranty is a Surety Bond issued by a well-known fidelity and guaranty company.

Copies of The Barrett Specification, with roofing diagrams, mailed free on request.

Editorial Comment

Employment Management.

AN experiment is being tried by the University of Toronto in establishing a short course on Employment Management during this month. Instruction is being given daily, except on Saturdays. The course falls into three divisions, namely: Personal Management, Industrial Psychology and Economic Principles and Methods. Two of the lecturers are, Lt.-Col. John J. Coss, of Columbia University, and a member of the War Industries Board of the U.S., and Dr. E. K. Strong of the Carnegie Institute of Technology, Pittsburgh, and a member of the Committee on the Classification of Personnel in the United States Army.

If the University authorities find that the results of the present course justify the efforts which have been made, it is probable that similar courses will be instituted in the future.

Justice Masten's Report on Insurance.

THE report on the Insurance Commission by the Honorable Mr. Justice Masten, Commissioner, has just been issued in pamphlet form by the King's Printer for the Legislative Assembly of Ontario. The preliminary copy of the report was fully analyzed by the Association's Insurance Department and was made the subject of comment in the report of the Insurance Committee to the annual meeting. The Insurance Committee is giving further study to the report in order that the Association's position may be maintained before the Parliamentary Committee, which it is understood will be appointed at the coming session to consider the advisability of legislation in regard to certain features of the report.

Inspection of Risks.

THE Dominion Fire Commissioner, Ottawa, has now organized his Department which provides facilities for the inspection of premises throughout Canada. The Department will arrange to send inspectors to any factory in Canada. These experts will go over the plant and make a report as to the possibility of reducing the danger of fire. This service is given free by the Department, which hopes by this means to reduce the appalling fire waste in this country.

A questionnaire has been issued to all factory owners in Canada asking them for certain information in regard to their premises and insurance. As the Dominion Fire Commissioner is acting in conjunction with the Dominion Fire Prevention Association, on which we have several representatives, it is hoped that our members will co-operate to the extent at least of filling in this questionnaire and returning it.

National Industrial Conference.

THE National Industrial Conference which opens in Ottawa on September 15th will undoubtedly be of great importance in Canadian industry. Without going into greater detail concerning the report of the Royal Commission on Industrial Relations, on whose recommendation this Conference has been called, it may be said that the report of the Commissioners is chiefly a series of demands to give the wage earning class more than they have been getting. In other words, unless production can be stimulated all other classes will get less than they are now receiving, in order that the wage earners may get more. But one of the demands is for shorter hours which means, of course, less production. That is, there is to be less to divide than there is now. Consequently, if the wage earners are to get still more than they are receiving, and if production is to be cut down considerably, it must follow that all classes other than wage earners must accept a serious curtailment if all the demands of labor are to be granted.

It would seem reasonable to suppose that with Europe crying out for our products at the highest prices, the first thing that both employers and employees should consider would be how to increase production in order that there might be more to divide.

Specialized Technical Education.

THE plea for better educational opportunities for textile workers, voiced by Professor A. F. Barker, of Leeds University, who has been making a study of conditions in the textile industry in Canada, has an appeal for all manufacturers. Speaking at a convention of leading members of the industry held in Toronto this month, the

professor declared that manufacturers must see to it that the conditions of practice are attained by means of an efficient school equipment and by offering to prospective students opportunities for further practical experience in the mill during the long vacation.

Among the essential requirements of the industry, if it were to progress, he counted well-trained managers and pioneers, intelligent, interested and conscientious operatives, leading a happy life, well-equipped research laboratories and sheds and a conditioning house and a bureau of standardization which would make practicable scientific accuracy.

Given these, he considered that prospective managers and teachers should receive a university education supplemented by post-graduate study and practical experience. Textile classes in either towns and cities, or in the mills themselves, with travelling libraries, would assist in the accomplishment of this, as would the coupling of fundamental research, the training of researchers and standardization of the industry to Canadian conditions.

As to justification for the contemplation of such a comprehensive scheme in this country, the professor pointed out that the very basis of life had been changed during the past few years, and that much depended on the manner in which the changed outlook was to be faced.

Speaking later in the day, Hon. Dr. Cody, Minister of Education for Ontario, asserted that he believed the time had possibly come when it was necessary to have specialized technical schools, just as we now have schools for the teaching of agriculture exclusively. His request for full information, as to the requirements of the technical industry, indicated a willingness on the part of the authorities to consider the needs of the day.

Are You Keeping in Touch with Your Association?

(From "American Industries")

THE problem of how to reach the proper executive officer of manufacturing companies with important, and many times, action-requiring Association information, concerning legislative or other matters of interest, has been one of the oldest and most aggravating features of the work being done by business men's organizations.

Frequent complaint is heard from many members of business organizations that they are not kept properly informed as to the activities of their associations. This is utilized both as an apology as well as the actual reason for failure by members to co-operate with active organization officers. It is this very condition that often greatly discourages or hampers effective work which might otherwise be successfully accomplished by business men's and employers' associations.

The quantities of mail delivered daily to the executive officers of many manufacturing concerns has at times been described as "an avalanche." In some institutions big clothes baskets are used to receive it and permit its being sorted for distribution. For the most part, second class, or "printed matter" mail is sent to the advertising department, or is superficially examined by some office boy or minor officer, who consigns it mainly to the waste basket on the theory that the "boss must not be bothered with it." This condition of mail matter in manufacturing plant offices is so prevalent that it might prove interesting for many executives to investigate and see for themselves, not alone how much actual mail is received every day, but what is done with a good part of the second class, or "printed matter" portion of it.

Judgment or competency among office employees, in such things as assorting or appreciating relative values of mail matter, is about as easy for "the boss" to control as it is for the average man successfully to supersede the control his wife has over home affairs.

The suggestion is, therefore, made for the consideration of N. A. M. members and those of other business associations, that they arrange to have all bulletins, or association information and correspondence, mailed to their homes. This would enable both Association officials and the members to establish more direct and essential contact with each other. It would likewise greatly enhance the value of organization to the manufacturer as well as increase the effectiveness of such bodies.

A Great South African Exhibition.

A CALL to Canadian manufacturers to take advantage of the opportunity afforded by the Great National Exposition of South African Products and Manufactures to be held next March and April in Pretoria, to show their products in the South African market, is made by W. J. Egan, Canadian Trade Commissioner at Cape Town. Mr. Egan declares that this exhibition at Pretoria, on which half a million dollars will be spent, will give Canadian manufacturers a good chance to display their ability to supply the people of South Africa with much of their import requirements. The only restriction on exhibits of overseas British and allied manufactures is on such goods as clash with domestic products. In so far as Mr. Egan can judge, the only line of Canadian goods which would be refused display would be windmills. The committee in charge are most anxious to place space at the disposal of Canadian manufacturers and a special block of buildings will be provided to house overseas exhibits.

The secretary and general manager of the Exposition is Mr. W. J. Laite, who is well-known in Canada in connection with the South African Manufacturers' Association. The thought suggests itself that Canadian firms, which are already represented in South Africa, should immediately take up the question of making an exhibit with their representatives.

Alberta's Industrial Congress.

BECAUSE the industrial congress recently held in Alberta developed some rather significant features, a good deal of space is being devoted in this issue of INDUSTRIAL CANADA to a report of the proceedings. We are apt to regard the prairie provinces as given over entirely to the pursuit of agriculture. That they also possess possibilities, in their wealth of natural resources, of becoming manufacturing as well as agricultural centres, has been brought home by the enlightenment afforded by the recent congress.

The desire on the part of the citizens of Alberta to see manufacturing developed in their province is commendable. Already, as the visitors found when they inspected the factories of Medicine Hat, manufacturing industry has made notable progress. And one effect of any such development will be to create a more sympathetic attitude on the part of the farmer citizens of the West towards manufacturing in general. They will begin to know and appreciate the difficulties which manufacturers have to contend with and they will experience some of the advantages

which flow from the presence of industries in the community.

Speakers at the congress dwelt on this point and made a direct plea to the agriculturalists on behalf of industry. Mr. Riley, of Winnipeg, uttered a pointed truth when he said, "You've either got to establish industries and factories or you will lose your surplus population in exactly the way that Ontario did. You have built up merchandizing centres in this country; you must start manufacturing centres."

Finley P. Mount, an American manufacturer, who also spoke before the congress declared, "Your farmer must learn as ours has long since learned that industrial development is his best friend and his best paying investment. As the market at his door increases, so will the value of his products and his farm increase. As new industries are built up in your communities, new opportunities for profit and enjoyment of life are created. Your foreign market for your agricultural products is now good, and it is reasonable to suppose it will be a good market for some time to come, but eventually your reliance must be on your home market. A home market is always a better market, a higher and a surer market, and for this reason, if no other, you should see to it that industrial enterprises are built up in each of your local communities. This should be done by building the things your communities most need, and the materials for which are nearest at hand."

Lighting Essentials

IN its campaign to conserve the health and accordingly the efficiency of workers in industrial plants, the Commission of Conservation directs attention to the value of proper illumination of buildings. The lighting of buildings, it declares, must be considered from two aspects, (1) the distribution of daylight admitted through windows and (2) artificial lighting.

As regards daylight, the best method is undoubtedly through skylights, so that all parts of the rooms are lighted about evenly and the light is uniformly diffused. For this reason, many modern factories have been built of only one storey. Owing to high land values and other considerations, such buildings are not always possible. But much can still be done by proper arrangement of work-tables, etc., with relation to the windows. The shadow of the worker's body, head or hands should not be thrown upon his work. Often it may be necessary to supplement the daylight by artificial light which is kept burning all day, but this is a wasteful condition to be avoided wherever possible.

Artificial light has this advantage over daylight, that it is absolutely under our control. One should not imagine that mere brightness or quantity of light constitutes good illumination. On the contrary, a glare is unpleasant and injurious to health. For large areas of work, the light should be overhead and as uniformly diffused as possible, direct glare being avoided by the use of frosted globes. For example, such lighting would be suitable for warehouses. But for some operations, the light needs rather to be focused on the work, for example, for office work, where usually all that is necessary is a desk-light which illuminates the paper without shining directly into the eyes of the writer.

An English author gives the following five tests for good illumination:

1. It must furnish the user sufficient light so that he can see;

2. It must be so placed that it does not cause the user's eyes to change the size of the diaphragm when ordinarily using the light;

3. It must be steady;

4. There shall not be any polished surfaces in its vicinity that will reflect an unnecessary bright spot anywhere that can be seen by the eyes of the worker;

5. It must be protected so that it does not shine in the eyes of some other worker.

DECLARATION OF LABOR PRINCIPLES OF THE NATIONAL ASSOCIATION OF MANUFACTURERS OF THE UNITED STATES OF AMERICA

1. Fair dealing is the fundamental and basic principle on which relations between employers and employees should rest.
2. The National Association of Manufacturers is not opposed to organizations of labor as such, but it is unalterably opposed to boycotts, blacklists and other illegal acts of interference with the personal liberty of employer or employee.
3. No person should be refused employment or in any way discriminated against on account of membership or non-membership in any labor organization, and there should be no discriminating against or interference with any employee who is not a member of a labor organization by members of such organization.
4. With due regard to contracts, it is the right of the employee to leave his employment whenever he sees fit, and it is the right of the employer to discharge any employee when he sees fit.
5. Employers must be free to employ their work people at wages mutually satisfactory, without interference or dictation on the part of individuals or organizations not directly parties to such contracts.
6. Employers must be unmolested and unhampered in the management of their business, in determining the amount and quality of their product, and in the use of any methods or systems of pay which are just and equitable.
7. In the interest of employees and employers of the country, no limitation should be placed upon the opportunities of any person to learn any trade to which he or she may be adapted.
8. The National Association of Manufacturers disapproves absolutely of strikes and lockouts, and favors an equitable adjustment of all differences between employers and employees, by any amicable method that will preserve the rights of both parties.
9. Employees have the right to contract for their services in a collective capacity, but any contract that contains a stipulation that employment should be denied to men not parties to the contract is an invasion of the constitutional rights of the American workman, is against public policy and is in violation of the conspiracy laws. This Association declares its unalterable antagonism to the closed shop and insists that the doors of no industry be closed against American workmen because of their membership or non-membership in any labor organization.
10. The National Association of Manufactures pledges itself to oppose any and all legislation not in accord with the foregoing declaration.

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Executive Council Meeting, St. John, N.B.

The President has called a meeting of the Executive Council at the Board of Trade Building, St. John, N.B., Wednesday, October 1st, 1919, 10 a.m.

The semi-annual meeting of the Maritime Division will be held in the Board of Trade Building, St. John, N.B., on the next day, October 2nd, following the meeting of the Executive Council.

Invitations have been issued to all members of the Association in the Maritime Provinces to attend the Executive Council meeting on October 1st. Arrangements have been made, after full discussion with Mr. Angus MacLean, of the Bathurst Lumber Company, Bathurst, N.B., Chairman of the Maritime Division, and Mr. W. S. Fisher, of the Enterprise Foundry Company, Sackville, N.B., 2nd Vice-President of the Association.

In connection with these meetings in St. John, arrangements have been made for certain departmental heads of the Association to make a tour of the Maritime Provinces for the purpose of meeting members and discussing with them certain problems which come within the scope of their department. Meetings will be held at specified points, and members of the Maritime Provinces will be notified when departmental heads will arrive.

The itinerary is as follows:

Sunday, Sept. 28th—Leave Toronto, C.P.R., Union Station, 10.30 p.m.
Monday, Sept. 29th—Arrive Montreal, Windsor Station, 8.00 a.m.
Hold Executive Committee meeting, 10.00 a.m.
Leave Montreal, 7.00 p.m., C.P.R., Windsor Station.
Tuesday, Sept. 30th—Arrive Fredericton, 12.05 p.m.
Meeting in Fredericton.
Leave Fredericton, 8.50 p.m.
Arrive St. John, 11.30 p.m.
Wednesday, Oct. 1st—Executive Council Meeting, Board of Trade Building, St. John, 10.00 a.m.
Thursday, Oct. 2nd—Semi-annual meeting Maritime Division, Board of Trade Building, St. John.
Leave St. John, via Canadian National Railway, 6.10 p.m.
Arrive Moncton, 9.15 p.m.
Friday, October 3rd—Meeting at Moncton.
Leave Moncton 4.30 p.m. via Canadian National Railway.
Arrive Truro, 9.00 p.m.
Saturday, Oct. 4th—Meeting in Truro.
Leave Truro via Canadian National Railway, 1.40 p.m.
Arrive Halifax, 3.40 p.m.
Sunday, October 5th—At Halifax.
Monday, October 6th—Meeting in Halifax.
Leave Halifax, 8.00 p.m. via Canadian National Railway.
Tuesday, October 7th—Arrive Sydney, 9.00 a.m.
Meeting in Sydney.
Leave Sydney, 8.30 p.m. via Canadian National Railway.
Wednesday, Oct. 8th—Arrive New Glasgow, 4.17 a.m.
Meeting in New Glasgow.
Leave New Glasgow via Canadian National Railway, 3.00 p.m.
Arrive Amherst, 8.05 p.m.
Thursday, Oct. 9th—Meeting in Amherst.
Leave Amherst, 12.23 p.m.
Arrive Charlottetown via Sackville and Cape Tormentine, 7.05 p.m.
Friday, October 10th—At Charlottetown.
Leave Charlottetown, 12.50 p.m.
Arrive Sackville, 7.50 p.m.
Leave Sackville, Canadian National Railway, 8.25 p.m.
Saturday, Oct. 11th—Arrive Montreal, 7.55 p.m.
Leave Montreal, Canadian Pacific Railway, 10.00 p.m.
Sunday, October 13th—Arrive Toronto, Canadian Pacific Railway, 8.30 a.m.

The railway fares are as follows:

Toronto to Halifax, going C.P.R. to St. John, thence Canadian National; returning Canadian National to Montreal, thence C.P.R.	$63 95
Montreal to Halifax, going C.P.R., returning Canadian National	43 05
Toronto to St. John, going and returning C.P.R.	50 85
Montreal to St. John, going and returning C.P.R.	29 90

These fares do not include the side trips to Fredericton, Sydney and Charlottetown. Fares for these trips being at follows:

Fredericton Junction to Fredericton and return	$1 50
Sackville to Charlottetown and return	5 70
Truro to Sydney and return	12 85

Members from points west of Toronto may purchase through tickets via G.T.R. to Toronto, thence C.P.R.; and members from points east of Toronto could connect with the party at Montreal.

Local arrangements for the meetings mentioned above are being made by H. R. Thompson, Secretary of the Maritime Division, Amherst, N.S.

National Industrial Conference

Mr. Melville P. White, Canadian General Electric Co., Ltd., Mr. James Merrick, Secretary, Employers' Association of Toronto, and Mr. H. Macdonald, Legal Secretary of the Association, representing our Committee on Industrial Relations, visited Washington recently to study the whole subject of industrial relations in the United States, when valuable information was obtained.

The effect of the forthcoming Conference at Ottawa, and its conclusions will have undoubtedly a very important bearing upon legislative and administrative proposals in this country.

One of the most serious problems confronting industrial management is the competition for the control of its own men by an external force. Management will, therefore, either organize the thought and action of its own men or is likely to have it organized for it. We do not mean by this that in an average establishment management will encourage or permit the organization of an outside Union. On the contrary, it will meet the tendency toward organization by establishing its own form through which it undertakes to develop common interest between men and management in the same enterprise and the same plant.

The test of the legality or morality of any given organization is its purpose and the method by which it seeks to accomplish it. This is the test which is applied to all forms of business. No form of social power should be exercised without corresponding moral and legal responsibility. Therefore, no organization of employers or employees is entitled to social or individual recognition that

refuses to accept responsibility commensurate with its activity. This is fundamental. No form of association, be it that of employers or employees, has a right to exist without willingness to live within the law and under the law.

All agencies can, at this time, perform a distinct public service for Canadian industry by in every possible way bringing to the attention of the public, through the press and otherwise, the importance of sanity and steadiness, of stepping forward in the light of experience and not yielding the future of this country and its present great opportunities to speculative experiment.

Delegates to Industrial Conference

The National Industrial Conference, called by the Government, upon the recommendation of the Royal Commission on Industrial Relations, opens in Ottawa on September 15th. The delegates are divided into three groups: first, those representing employees; second, those representing employers; and third, a group made up of invited delegates from the various other classes in the country, including officials and public men. The delegates are as follows:

Group A—Labour Delegates

Tom Moore, Esq. .....United Bro. of Carpenters and Joiners, Ottawa.
P. M. Draper .....Int. Typographical Union, Ottawa.
Robert Baxter, Esq....United Mine Workers of A., Union Street, Glace Bay, N.S.
Arthur Martel, Esq....United Bro. of Carpenters and Joiners, Montreal.
Tom Izzard, Esq.....Bricklayers, Masons and Plasterers, Toronto.
F. H. Healey, Esq.....Portable and Hoisting Engineers, Niagara Falls, Ont.
Jas. F. Marsh, Esq....United Bro. of Carpenters and Joiners, Niagara Falls, Ont.
Jos. P. Hunter, Esq...Bro. Painters and Decorators and Paperhangers, Niagara Falls, Ont.
Jas. Winning, Esq.....Bricklayers, Masons and Plasterers, Labour Temple, Winnipeg.
Fred Bush, Esq. .....United Garment Workers of America, Toronto.
S. Noldofsky, Esq.....Int. Ladies Garment Workers' Union, Toronto.
J. H. Kennedy, Esq...Amalgamated Sheet Metal Workers, Toronto.
W. G. Hunter.....Pattern Makers' Association, Toronto.
J. T. Foster, Esq.....Int. Association Machinists, Montreal.
W. G. Powlesland, Esq..Int. Bro. of Blacksmiths and Helpers, Toronto.
A. C. Hay, Esq.....Bro. Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, St. Vital, Winnipeg.
A. R. Mosher, Esq.....Canadian Bro. of Railroad Employees, Ottawa.
Fred Welsh, Esq.....United Association Plumbers and Steamfitters, Labour Temple, Vancouver, B.C.
R. C. McCutcheon, Esq.Int. Bro. Boilermakers and Iron Ship Builders, Winnipeg.
J. E. Tighe, Esq.....Int. Longshoremen's Association, St. John, N.B.
T. Jackson, Esq.....United Bro. of Carpenters and Joiners, Toronto.
Jas. W. Frame, Esq....Int. Bro. of Electrical Workers, Calgary, Alta.
J. L. Bourbonniere, Esq.Amal. Association Street and Electric Railway Employees, Montreal.
James Drury, Esq.....Int. Typographical Union, Montreal.
R. A. Rigg, Esq.....Int. Bro. Bookbinders, Winnipeg.
W. R. Trotter.....Int. Typographical Union, Vancouver, B.C.
A. J. Larden, Esq.....Printing Pressmen and Assistants, Ottawa.
L. J. Rousseau, Esq...Mine, Mill and Smelting Workers, Thetford Mines, P. Que.
Jos. Gorman, Esq.....Mine, Mill and Smelter Workers, Cobalt, Ont.
E. W. A. O'Dell, Esq.Boot and Shoe Workers Union, Hamilton.
W. R. Rollo, Esq.....Broom and Whisk Makers Union, Hamilton.
Arthur O'Leary, Esq..Hotel and Restaurant Employees Int. Alliance and Bartenders Int. League, Toronto.
L. Braithwaite, Esq....Amal. Meat Cutters and Butcher Workmen of N.W., Toronto.
Jas. Lockwood, Esq...Int. Bro. of Paper Makers, Sault Ste. Marie, Ont.
Maurice LaBelle, Esq..Int. Bro. Pulp, Sulphite and Paper Mill Workers, Ottawa.
E. Dalrymple, Esq....Amal. Association Iron, Steel and Tin Workers, Sault Ste. Marie, Ont.
J. A. Gillis, Esq.....Amal. Association Iron, Steel and Tin Workers, Sydney, N.S.
W. P. Harpur, Esq....Policemen's Federal Association, No. 26, London.
Henry Bishop, Esq....Civic Employees Union, No. 30, Edmonton, Alta.
Joseph Sexton, Esq...Clerical Workers Union, Glace Bay, N.S.
E. S. Woodward, Esq...Retail Clerks Int. Bro. Assen., Victoria, B.C.
Geo. Smith, Esq.....National Bro. Operative Potters, St. John's, Que.
John A. Flett, Esq.....Federal Unions, Hamilton.
G. R. Melvin, Esq.....Federal Unions, St. John, N.B.
James Simpson, Esq...Int. Typographical Union and Industrial Banner, Labour Temple, Toronto.
Gus Francq, Esq.....Int. Typographical Union and Labour World, Montreal.
D. A. Carey, Esq.....American Federation of Musicians, Toronto.
(Miss) Doris Meakin..Int. Bro. of Electrical Workers (Telephone Operators), Labour Temple, Winnipeg.
(Miss) H. Gutteridge..United Garment Workers, Labour Temple, Vancouver, B.C.
F. Grierson, Esq.....President Civil Service Federation of Canada, Ottawa.
J. C. O'Connor, Esq...2nd Vice-President, Civil Service Federation of Canada, Ottawa.
Major M. A. MacInnes.President, Western Canada Interior Association, Saskatoon, Sask.
W. A. MacDonald, Esq.Vice-President, Dominion Letter Carriers, Association, Hamilton.
S. N. Berry, Esq.....Senior Vice-President, Order of Railway Conductors, Cedar Rapids, Iowa, U.S.A.
J. M. Mein, Esq.....Canadian Railway Board of Adjustment No. 1, Montreal.
Geo. K. Wark, Esq....Canadian Railway Board of Adjustment No. 1, Montreal.
James Murdock, Esq...Canadian Railway Board of Adjustment No. 1, Montreal.
Ash Kennedy, Esq.....Canadian Railway Board of Adjustment No. 1, Montreal.
Wm. Dorey, Esq.....Canadian Railway Board of Adjustment No. 1, Montreal.
Jas. A. Sullivan, Esq...Cigarmakers Int. Union, South Hamilton.
Wm. P. Covert, Esq...Int. Alliance Theatrical Stage Employees and Moving Picture Machine Operators, Toronto.
H. A. Foucher, Esq....United Textile Workers, care of Gus Francq, Montreal.
Mrs. Kathleen Derry...Boot and Shoe Workers Union, Toronto.
W. L. Best, Esq.....Legislative Representative, Bro. of Locomotive Firemen and Enginemen, Ottawa.
L. L. Pelletier.....Dominion Legislative Representative, Order of Railroad Conductors, Ottawa.

Group B Delegates Representing Employers

1—MANUFACTURING—GENERAL

T. P. Howard..... Phoenix Bridge and Iron Works, Ltd. ..... Montreal, Que.
S. R. Parsons..... British American Oil Co., Ltd....Toronto, Ont.
M. P. White.....Canadian General Electric Co., Ltd.Toronto, Ont.
J. E. Davies.....Alberta Foundry and Machine Co., Ltd. ..... Medicine Hat, Alta.
J. G. Gernant.....International Harvester Co. of Canada, Ltd. .....Hamilton, Ont.
J. Burns.....P. Burns & Co., Ltd. .....Calgary, Alta.
E. Parnell.....Spiers, Parnell Baking Co. .....Winnipeg, Man.
T. R. Deacon.....Manitoba Bridge and Iron Works, Ltd. ..... Winnipeg, Man.
J. B. Thompson....James Thompson & Sons, Ltd.....Vancouver, B.C.
A. B. Weeks.....Canadian North-West Steel Co., Ltd. ..... Vancouver, B.C.
J. J. Coughlan.....J. Coughlan & Sons .....Vancouver, B.C.

Food Products (other than milling and packing)

G. F. Benson. ....Canada Starch Co., Ltd.....Montreal, Que.

Woollens

Richard Thomson..Hawthorn Mills .....Carleton Place, Ont.

Garment Manufacturers

J. S. McKinnon....S. F. McKinnon & Co., Ltd. .....Toronto, Ont.

Cottons

F. G. Daniels.....Dominion Textile Co., Ltd. .....Montreal, Que.

Lumber and Timber

Angus McLean....Bathurst Lumber Co., Ltd. .....Bathurst, N.B.

Manufacturers of Lumber and Timber

John R. Shaw.....Canada Furniture Mfrs., Ltd. ...Woodstock, Ont.

Printing, Publishing and Bookbinding

W. J. Bulman.....Bulman Brothers, Ltd. .....Winnipeg, Man.

Rubber

C. H. Carlisle.....Goodyear Tire & Rubber Co. of Canada, Ltd. .....Toronto, Ont.

Chemicals and Allied Products

E. G. Henderson...The Canada Salt Co., Ltd. .....Windsor, Ont.

Clay, Glass and Stone Products

F. P. Jones.....Canada Cement Co., Ltd. .....Montreal, Que.

Tobacco and its Manufactures

W. T. Gregory....Imperial Tobacco Co. .....Leamington, Ont.

Vehicles for Land Transportation

G. M. McGregor...Ford Motor Co. of Canada, Ltd....Ford, Ont.

Oils, Paints and Varnishes.

Dr. D. Strachan...Imperial Oil Co., Ltd. .....Sarnia, Ont.

Leather and its Products.

Hon. E. J. Davis...Davis Leather Co., Ltd. .....Newmarket, Ont.

Machinery

Henry Bertram....John Bertram & Sons, Co., Ltd...Dundas, Ont.

Shipbuilding

H. B. Smith.....Collingwood Shipbuilding Co., Ltd.Collingwood, Ont.
R. W. Wolvin.....Halifax Shipyards, Limited.....Montreal.

Pulp and Paper

F. A. Sabbaton....Laurentide Co., Ltd. .....Grand Mere, Que.
T. B. Wilson.....Spanish River Pulp & Paper Co...Sault Ste. Marie, Ont.

Milling

A. E. Labelle	St. Lawrence Flour Mills Co., Ltd.	Montreal, Que.
N. C. Sinclair	Empire Flour Mills, Ltd.	St. Thomas, Ont.

Packing

J. S. McLean	Harris Abattoir Co., Ltd.	Toronto, Ont.
O. W. Waller	Swift Canadian Co., Ltd.	Toronto, Ont.

Steel and Iron

F. H. Whitton	The Steel Co. of Canada, Ltd.	Hamilton, Ont.
Mark Workman	Dominion Steel Corporation	Sydney, N.S.

Supplementary delegates who may be used as substitutes to replace any of the above:

H. I. Thomas	Care of J. R. Booth	Ottawa, Ont.
W. J. Sadler	Sadler & Haworth	Montreal, Que.
T. A. Russell	Russell Motor Car Co., Ltd.	Toronto, Ont.
M. V. Ladd	Dominion Bridge Co., Ltd.	Montreal, Que.
W. S. Fisher	Emerson & Fisher	St. John, N.B.
L. W. Sims	T. S. Sims & Co., Ltd.	St. John, N.B.
Thos. Findley	Massey-Harris Co., Ltd.	Toronto.
S. Harris	Harris Lithographing Co.	Toronto.
A. Sommer	A. Sommer Co., Ltd.	Montreal, Que.
Alex. Welsh	British American Ship Co.	Welland, Ont.
James Whalen	Port Arthur Shipyards	Port Arthur, Ont.
W. A. Lawson	Bemis Bros. Bag Co.	Winnipeg, Man.
W. A. McKay	The Codville Co., Ltd.	Winnipeg, Man.
Wm. Martin	Manitoba Gypsum Co., Ltd.	Winnipeg, Man.
D. Kyle	Algoma Steel Corporation	Sault Ste. Marie, Ont.
Victor Ross	Imperial Oil, Ltd.	Toronto.
A. A. Bittues	Gillette Safety Razor Co. of Canada, Ltd.	Montreal, Que.
J. L. Waldie	Canadian Tube and Iron Co., Ltd.	Montreal, Que.
Julien C. Smith	Canada Carbide Co., Ltd.	Montreal, Que.
Wm. Rutherford	Wm. Rutherford & Sons, Ltd.	Montreal, Que.
W. S. Fallis	Sherwin Williams Co. of Canada, Ltd.	Montreal, Que.
Geo. Henderson	Brandram-Henderson, Ltd.	Montreal, Que.
P. L. Miller	Canadian Vickers, Ltd.	Montreal, Que.
B. W. Coghlin	B. J. Coghlin & Co.	Montreal, Que.

3—EMPLOYERS AND OTHER MANUFACTURERS

Canadian Mining Institute

D. H. McDougall	Nova Scotia Steel & Coal Co., Ltd.	New Glasgow, N.S.
B. Neilly	Penn-Canadian Mines, Ltd.	Cobalt, Ont.
Geo. R. Smith	Bell Asbestos Mines	Thetford, Que.
O. E. Whiteside	International Coal and Coke Co.	Coleman, Alta.

Union of Canadian Municipalities

Alderman C. H. Grant	Edmonton, Alta.
Arthur Roberts, K.B.	Bridgewater, N.S.
Mayor T. D. Bouchard	St. Hyacinthe, Que.

Canadian Electrical Association

A. Monro Grier, K.C.	Canadian Electrical Association, 12 Adelaide St. E.	Toronto.

Bell Telephone Company

J. E. Macpherson	Bell Telephone Co.	Ottawa, Ont.

Credit Men's Association

Geo. B. Fraser	Greenshields, Limited	Montreal, Que.
Hugh Blain	Eby-Blain Co., Ltd.	Toronto.
J. H. Ashdowne	J. H. Ashdowne Hardware Co., Ltd.	Winnipeg, Man.

Shipping Federation of Canada

Thos. Robb	Shipping Federation of Canada	Montreal, Que.

Pacific Coast Shipping Interests

G. M. Bosworth	Chairman, Pacific Coast Shipping Interests	Montreal, Que.

Association of Canadian Building and Construction Industries

E. R. Reid	Engineers and Contractors, Ltd.	St. John, N.B.
Col. J. A. Little	Thunder Bay Harbour Improvement Co.	Port Arthur, Ont.
H. T. Hazelton	Winnipeg Builders' Exchange	Winnipeg, Man.
Fred Armstrong	F. Armstrong, Co.	Toronto.
J. P. Anglin	Anglin Ltd.	Montreal, Que.

Canadian Railway Board of Adjustment

A. D. MacTier	Montreal, Que.
G. C. Jones	Montreal, Que.
F. P. Brady	Montreal, Que.
S. J. Hungerford	Montreal, Que.
Geo. Hodge	Montreal, Que.
A. J. Hills	Montreal, Que.

Canadian Electric Railway Association

G. Gordon Gale	Hull Electric Co.	Hull, Que.

Canadian Fisheries Association

A. H. Brittain	Maritime Fish Corporation	Montreal, Que.
H. A. Hager	Canadian Fishing Co.	Vancouver, B.C.

Group C—Delegates Representing Other Interests

Chief Justice Mathers	Court of King's Bench,	Winnipeg, Man.
Carl Riordon, Esq.	President, Riordon Pulp and Paper Co.,	Montreal, Que.
Charles R. Harrison, Esq., M.P.	Railroad Conductor,	North Bay, Ont.
J. W. Bruce, Esq.		Toronto, Ontario.
Hon. W. L. Mackenzie King		Roxborough Apartments, Ottawa.
Hon. Smeaton White		The Gazette, Montreal, Que.
F. A. Acland, Esq.		Deputy Minister of Labour, Ottawa, Ont.
Calvin Lawrence, Esq.		Kenilworth Apartments, Elgin Street, Ottawa.
Wills MacLachlan, Esq.		301 Excelsior Life Building, Toronto.
H. J. Daly, Esq.		72 Warren Road, Toronto, Ont.
G. Frank Beer, Esq.		54 Glen Road, Toronto, Ont.
Col. David Carnegie		Offices of the War Cabinet, No. 2 Whitehall Gardens, London, S.W. 1, England.
W. D. Tate, Esq.		Care of Repatriation and Employment Committee, Plaza Building, Ottawa.
Col. Thos. Candley		Nova Scotia Steel and Iron Co., New Glasgow, N.S.
J. A. Stevenson, Esq.		Care of Repatriation and Employment Committee, Plaza Building, Ottawa.
F. Pauze, Esq.		Lumberman, Montreal, Que.
R. B. Maxwell, Esq.		Vice-President G.W.V.A. of Canada, Plaza Building, Ottawa.
John Lowe, Esq.		Manager, Montreal Cotton Mills, Valleyfield, P. Que.
H. Mortimer-Lamb, Esq.		Secretary, Canadian Mining Institute, 503 Drummond Street, Montreal, Que.
R. R. Grant, Esq.		302 Avenue Road, Toronto, Ont.
Alfred Burton, Esq.		Hon. Secretary, Society of Chemical Industry, 114 Bedford Road, Toronto, Ont.
Charles A. Magrath, Esq.		Chairman, International Joint Commission, Ottawa.
F. E. Ewart, Esq.		American Institute of Electrical Engineers, 212 King Street West, Toronto, Ont.
Sir John Willison		President, Canadian Reconstruction Association, Royal Bank Building, Toronto, Ont.
Alderman C. H. Grant.		Edmonton, Alberta.
Arthur Roberts, K.C.		Bridgewater, N.S.
Mayor T. D. Bouchard.		St. Hyacinthe, Que.

Agricultural Representatives

J. A. Ruddick	Dairy and Cold Storage Commissioner	Ottawa, Ont.
H. F. Arkell	Live Stock Commissioner	Ottawa, Ont.
Geo. H. Clark	Seed Commissioner	Ottawa, Ont.
W. S. Blair	Fruit Expert	Kentville, N.S.
W. A. Brown	Live Stock Branch, Department of Agriculture	Ottawa, Ont.

Company Licensing Laws

His Majesty's Privy Council has granted leave to appeal in the three test cases which were instituted by the Association for the purpose of testing the validity of the company licensing laws of the provinces of Saskatchewan, Manitoba and Ontario. The three cases have been ordered to be consolidated in one appeal, the effect of which will be to make the cases practically a reference on the whole subject of company licensing, so that it is likely that a broad judgment will be obtained determining the questions arising not only on the particular acts in question but also the acts of the other provinces. In view of the proposed appeal it is not likely that any serious attempt will be made in any of the provinces to enforce the licensing acts as against Dominion companies.

Fire Prevention Campaign

The attention of members is directed to the "Fire Prevention and Clean-up Campaign," which is being launched throughout the North American continent during the week of October 9. In Ontario, the task of promoting the campaign is being undertaken by the Ontario Fire Prevention League, of which George F. Lewis, Deputy Fire Marshal, is Secretary. The League is doing all in its power to impress on the public the importance of co-operating in the movement to restrict the appalling fire loss which is daily consuming $42,000 worth of property in Ontario alone. To manufacturers in particular the appeal is being made that they should provide better and more systematic inspection and watchman service and more efficient fire-fighting equipment. While only 5 per cent. of the total number of fires in 1918 occurred in industrial plants, these occasioned 48 per cent. of the total fire waste of the province. To assist in making the campaign a success will be most meritorious work on the part of all manufacturers.

Recent Activities of the Prairie Division

By G. E. CARPENTER
Secretary, Prairie Provinces Division, C.M.A.

A WELL-ATTENDED meeting of members of the various branches of the Division in Alberta was held at Calgary on August 13th, when members had the pleasure of a conference with the General Manager of the Association, Mr. J. E. Walsh, upon many matters of importance to the general membership of the Association, and particularly those doing business in Alberta. At this meeting it was decided to continue the practice of holding general meetings of all members in Alberta and that the next meeting should be held in Edmonton at the time of the next session of the Legislature, when steps will be taken to perfect the organization in Alberta.

The members of the Medicine Hat and Winnipeg Branches also availed themselves of the visit of the General Manager to hold general meetings when he outlined the re-organization that had taken place in the Association, with a view of affording better service to the membership.

Labor Situation Improves

The past month has seen considerable improvement in the general labor situation in Winnipeg and in fact, Western Canada generally. Apparently the saner element in labor ranks did not take the interest that it might have done in its organization's affairs in the past, but like others was prepared to "Let George do it," with the result that the more radical element gained control. Now that the saner element sees the result of its indifference, there is every indication from reports from the Prairie Provinces that the larger body of labor is asserting itself and that conditions are improving steadily. Probably the most notable example of this happened at Drumheller where the O.B.U. officials were persuaded to take a permanent holiday. It remains now for Civic, Provincial and Dominion Governments to look ahead and place orders for next year's operations early so that as much work as possible may be done this winter and employment provided for large numbers of men. Otherwise we may be faced with a serious situation.

Saskatchewan Minimum Wage Board Award

The following decisions of the Saskatchewan Minimum Wage Board were recently announced in Regina:

First six months—Factories, $9.50; stores, shops, $9.50; made-to-order houses, $8.00.

Second six months—Factories, $11.00; stores, shops, $11.00; made-to-order houses, $10.00.

Third six months—Factories, $12.50; stores, shops, $13.00; made-to-order houses, $12.00.

After eighteen months—Factories, $14.00; stores, shops, $15.00; made-to-order houses, $14.00.

Length of week—Factories, 50 hours; stores, shops and made-to-order houses, 48 hours.

In connection with retail stores, the latest decision of the Board amends the finding of a week earlier by lengthening the period of apprenticeship from twelve to eighteen months.

Winnipeg Cartage Service

At a meeting of the Shippers' Bureau of the Winnipeg Board of Trade on August 18th, in order to assist improving the railway companies' service with a view to lessening the congestion of the freight at Winnipeg as the result of the general strike, an arrangement was agreed to with the representatives of the cartage companies under which shippers would pay an additional charge where teams were delayed by them over the prescribed limit. In a like manner shippers are to be credited with delays upon the part of the cartage companies. In order to deal with disputes arising under this arrangement a Board was appointed to be constituted of representatives of the cartage companies, the Manager of the Transportation Division of the Board of Trade and the Secretary of the Prairie Division of the C. M. A. The arrangement will become operative as soon as the cartage companies can get the necessary forms printed. In the meantime the cartage companies advise that there has been a marked improvement in the loading and unloading of teams.

Telegraph Rates Under Consideration

Telegraph companies operating in Canada have applied to the Board of Railway Commissioners for authority to increase the tolls now charged for telegraph service, which were authorized by the Board of Railway Commissioners in March, 1906, and which brought about a substantial reduction in the tolls previously in effect. In support of this application the telegraph companies state that the increased cost of labor and material, amounting to 85 per cent. and 60 per cent., respectively, has so added to the expense of maintenance and operation that the revenue derived from the present tolls is inadequate and that, if the furnishing of the telegraph service is to be continued unimpaired, there must be a substantial increase in tolls. This matter is receiving the attention of the Transportation Committee of the Division and members are invited to communicate their views to the Secretary in order that the Committee may have the benefit of the advice of the members.

Winnipeg Housing Scheme

After much talk and a great deal of delay, the Winnipeg City Council has decided to avail itself of the Government's offer and has made application for an allotment of one million dollars to be loaned to citizens for the erection of dwellings. It is planned to loan 85 per cent. of the value of the dwelling, not to exceed four thousand dollars, at 6 per cent. interest, repayable in instalments extending over twenty years. This plan is conditional upon the citizens of Winnipeg subscribing a fund amounting to 10 per cent. of the money loaned by the City, thus reducing the City's direct liability to 75 per cent. of the value of the home. It is believed that this is the first municipality in Canada that has made the adoption of the Housing Scheme conditional upon some of the citizens subscribing a fund and bearing a portion of the risk for the monies advanced by the City. However, as there is a great need for homes and as much unnecessary delay has already taken place, it is held that the attitude taken by the City Council should not result in the plan being further held up and that the 10 per cent. fund will be subscribed readily. In this connection it is felt that the manufacturers will no doubt be glad to do their share and members in Winnipeg are requested to give the matter favorable consideration and communicate with Mr. E. Parnell, of the Speirs Parnell Company.

Demurrage During Strike

Railway companies in Winnipeg reduced demurrage charges accruing on cars placed on sidings where delay occurred in loading and unloading during the strike, from the regular

scale of charges ranging from one to five dollars per day to one dollar per day flat. However, members felt that in view of the fact that the delay was caused by circumstances over which they had no control and in view of the widespread nature of the Winnipeg strike that the railways should be willing to extend to shippers the same terms that the railways are granted under the conditions of carriage embodied in the bill of lading, approved by the Railway Commission, which relieves the railway company from responsibility for delay accruing as a result of strikes. On taking the matter up with the Transportation Department of the Association, members have been advised not to pay demurrage charges accruing during the strike under the above conditions.

A committee from the Winnipeg Board of Trade and this Division has taken the matter up with the Car Service Department of the railways and the Western Committee of the Canada Railway War Board, contending that demurrage charges assessed during the strike should be treated in the same manner as those assessed during the influenza epidemic, where under an Order of the Railway Commission the railways were instructed to afford relief to shippers where delay occurred through the "Flu" and every reasonable effort had been made to load or unload the cars in question. It is hoped that the matter will be disposed of along these lines, but failing this it may be necessary to appeal to the Board of Railway Commissioners.

Made in Canada Movement Gains Strength

By SIR JOHN WILLISON
President, Canadian Reconstruction Association

PUBLIC concern for the development of the home market increases daily, and there is healthy, popular support of the Made in Canada movement. Neaarly 4,000,000 of the specially designed Made in Canada cards, issued by the Canadian Reconstruction Association are now in circulation. By the end of this month the total initial issue of 5,000,000 should be exhausted. The campaign continues to meet with warm approval from commercial and industrial interests. Manufacturers, wholesalers, and retailers are all supporting the movement, and there is no question that the cards are being given wide circulation to householders throughout the Dominion. Nearly half a million cards in French are now being circulated in Quebec. A recent report from the Secretary of our Western Committee, which has just asked for an additional half million cards, shows that in the western provinces manufacturers alone have already taken 632,000 cards, distributed as follows:—

Manitoba	95 firms	.....	283,250 cards
Saskatchewan	22 "	.....	32,500 "
Alberta	73 "	.....	140,900 "
British Columbia ...	105 "	.....	175,100 "

The Association has received scores of letters endorsing its Made in Canada activities. One firm manufacturing corks, corkwood, etc., says: "It will give us great pleasure indeed to insert these cards in our letters, invoices, pay-envelopes, etc., as we are in hearty accord with any movement that will assist in increasing the purchase of Made in Canada goods, thus building up our own country and assuring continued steady employment of our fellow-citizens in Canada."

A manufacturer of heating and cooking stoves and ranges, says: "It is no doubt a splendid way of bringing before the public the necessity of purchasing goods made at home, and we believe that it will prove very effective."

Another firm writes: "We believe that it will benefit the country and incidentally ourselves to give these appeals a widespread publication."

A milling company, asking for 2,000 cards, promises to do its best to help along the good cause. A printing company says: "We congratulate you on the campaign and hope it will be successful. You can command us at any time to help along with this work."

A firm of mining, metallurgical and industrial chemists says: "We strongly advocate Made in Canada propaganda and will do all we can to further the interests of the home markets." A French-Canadian firm says: "We are at your disposition as helpers in the movement which we appreciate highly."

Support of the movement is not confined to industrial interests. The Canadian Club of Hamilton, for instance, has asked for 5,000 cards and believes they can be used to advantage by its secretary in sending out notices, etc. Indeed the campaign should receive the support of agricultural, financial, commercial, and transportation interests as well as of industrial companies. Throughout the world other countries are pursuing a similar policy of home market development. Great Britain is protecting home industries, so are Australia and South Africa. Japan is following an extreme policy of protection. France has recently decreed increases in protective duties ranging as high as 200 per cent. Italy is following a comprehensive policy of import restrictions. Spain is to revise her tariff next month and it is expected that she will take extensive measures to protect the home market. In the United States no less than 22 bills have been introduced in the House this session calling for higher duties. Canada cannot afford to ignore the international economic movement, particularly when Canadian money is at a discount of 3½ per cent. in New York, and as high as 6 and 10 per cent. in many stores on the border. The balance of trade with the United States is against the Dominion to the extent of over $20,000,000 a month. Imports can only be reduced and the balance of trade corrected by supporting the home market and buying Made in Canada goods. Until that is done Canadian money will remain at a discount.

Capt. Robert Dollar, head of the Dollar Steamship Company, addressing the Industrial Congress at Calgary, said: "My ships are continually plying in and out of Vancouver, but only one-tenth of what they bring in stays in Canada. The balance goes to Seattle and Chicago and Detroit, and later finds its way back across the line to Canada, in tne form of manufactured goods. Wake up, you Canadians! You should be ready to take that raw material and turn it into the finished product for your own use, instead of paying all those profits to your competitors across the line."

Canada should wake up indeed. We need not only a public policy of buying in the home market, but Canadian raw and semi-manufactured materials should be used in primary and secondary processes of manufacture. With domestic production of all-Canadian goods, industrial activity would be stimulated, a large new market would be opened for Canadian labor and hundreds of millions of dollars now lost to the Dominion through the export of unfinished products would be saved to the country.

Alberta Proclaims Wealth of its Resources

Unique Gathering for the Purpose of Making Known to Eastern Canadians and Americans the Extent of the Province's Natural Resources, and Urging their Development is Staged by Alberta Industrial Development Association

By G. E. CARPENTER

Secretary, Prairie Division, C.M.A.

Special Representative of "Industrial Canada" at the Congress

FROM the standpoint of making known to a large number of men representing important industrial and financial interests in Eastern Canada and the United States, the immense and varied natural resources of Alberta, and in fact of all three prairie provinces, the Industrial Congress, promoted by the Alberta Industrial Development Association, and held during the week of August 11th in the cities of Medicine Hat, Lethbridge, Calgary and Edmonton, must be recognized as a distinct success. No effort was spared to inform the delegates from the east and south of the great potentialities of the province, and by personal contact, whenever possible, to place them in touch with those sources of wealth now awaiting development. The affair was unique of its kind. It will undoubtedly be repeated and may indeed become an annual event, with an ever widening sphere of influence.

Considerable disappointment was expressed by the Executive Committee of the Development Association and by several of the speakers, over the relatively small attendance of Canadians from Winnipeg and the East. It was unfortunately true that there were more people present from the United States than from Canada, outside Alberta itself. Possibly when the complete proceedings are printed and circulated and a better idea is obtained of the aims and objects of the Industrial Development Association, a larger number of Canadians will find it desirable to attend another year.

Favorable Publicity for Association

One of the pleasing features of the Congress was the favorable publicity which was given to the Canadian Manufacturers' Association through the presence and speeches of Mr. J. E. Walsh, the general manager, as well as through the remarks of Hon. Gideon Robertson, Minister of Labor, who gave the members of the Association a certificate of character for fair-dealing with their workmen.

When delegates from the east and south rolled down Dunmore hill into what seemed intended by nature to be a sleepy hollow, they were amazed at the extent of the industries created by the enterprising citizens of the "Gas City" of Medicine Hat.

The power question is solved for manufacturers at the Hat by nature, which provides natural gas in unlimited quantities. It is sold to plants by the city at a rate of 5 cents per 1,000 cubic feet. Fifteen thousand cubic feet of this fuel is equal to one ton of steam coal. In other words, as one local manufacturer tersely put it, "If we were supplied with steam coal for nothing, the cost of handling it and the resultant ash would be greater, and it would be far more inconvenient."

On the afternoon of Monday, the first day of the provincial tour, Mayor Brown, of the Hat, took the delegates in charge, and fifty citizens placed their automobiles at the disposal of the visitors for the purpose of showing them the industries of the city.

The first plant visited was that of the Medalta Stoneware Co., of which Charles Pratt, the chairman of the Medicine Hat Branch of the Canadian Manufacturers' Association, is president. The Medalta Stoneware Company use twelve tons of clay daily, which they bring 200 miles from a point in southern Saskatchewan for the purpose of making crocks, jugs, churns, bowls, etc. This company has captured the western Canadian market, which was formerly supplied by the United States, and is now shipping into Ontario. The company also produces flower pots from local clay.

Production of Linseed Oil

The next plant visited was that of the Alberta Linseed Oil Mills, where 1,000 bushels of flax seed is used daily in making 50,000 gallons of linseed oil a month. The by-products, linseed oil meal and cake, find a ready market in the northern part of the prairie provinces, which are going more and more into mixed farming. Mr. W. A. Church, the honorary secretary of the Medicine Hat Branch, is manager of this company.

The Alberta Foundry & Machine Co., J. E. Davies president, which did its "bit" in turning out munitions during the war period, has entirely remodelled its plant for the manufacture of a farm tractor which they have named the "Canadian." The courage of the West is exemplified by this company's enterprise, notwithstanding the continual cry of the prairie farmers for "free tractors." The company intends to place 1,000 of these tractors on the market for next year's use.

Another company in Medicine Hat has also turned its attention and energies to tractor manufacture, viz., Martin & Phillips, who are making the "Stinson."

While the cessation of municipal work and building of all kinds during the war must have had a great effect in curtailing their market, the Alberta Clay Products Company, which make brick, hollow tile and vitrified sewer pipe, have continued their operations right along, and have now a large stock on hand to meet future requirements.

The Medicine Hat Brass & Pump Company have a large, busy factory for the manufacture of iron pumps and farm windmills to be used in connection therewith.

The Tabor Candy Company's plant was visited also, and there, the ladies in the party especially, were treated to a fine, fresh sample of the "Taberta" brand of candies and shown the sanitary conditions under which they are produced.

A Great Flour Milling Centre

Medicine Hat is the largest flour milling centre in Alberta, and no tour of its industries would be complete without a visit to the modern plants of the Ogilvie Flour Mills Co., the Lake of the Woods Company, and the Maple Leaf Milling Company. These mills have a combined capacity of between 4,000 and 5,000 barrels a day.

Owing to lack of time, the delegates did not have an opportunity of visiting the many other factories in the Hat, but were driven over to the neighboring city of Redcliff and spent an enjoyable hour looking over its industries, the principal of which were the large rolling mills of the Cana-

Leaders in the Fields of Industry and Finance who

dian Western Steel Company, where an open hearth furnace has recently been added to the equipment.

At the Dominion Glass Company's plant visitors were entertained with a demonstration of an almost human machine which reaches into a furnace of molten glass, picks up a lump and casts and blows it into a finished bottle.

The coal mine of the Redcliff Brick & Coal Co. attracted a lot of attention from the visitors, who realized that this district is doubly blessed in its two principal natural resources, gas and coal.

In the evening the Medicine Hat Board of Trade entertained the visiting delegates at a banquet, which was served by the young ladies of the city, in the curling rink. Acting-Mayor Huckvale presided, and extended an official welcome to the visitors.

The first speaker, Col. Nelson Spencer, M.L.A., dealt with Alberta's future development, stating that in 14 years the value of its manufactured products had increased from $65,000 to $400,000 per annum. He dwelt upon the fact that Alberta contained one-fourth of the arable lands of Canada, and one-seventh of the known coal resources of the world.

Speakers Express Appreciation

James Ramsay, M.L.A., Edmonton, followed along similar lines, and the appreciation of the American visitors was expressed by R. C. Haskins, Vice-President of the International Harvester Co. of America, Chicago; Mr. Hill, manager of the Business Men's Bureau of the Chicago Chamber of Commerce; and Mr. Thorn, representing Montgomery Ward Co., Chicago.

D. W. Hays, President of the Canada Land & Irrigation Co., spoke upon the extent of irrigated lands in southern Alberta, which, he stated, comprised 1,000,000 acres.

D. C. Coleman, Vice-President, Canadian Pacific Railway, referred to that company's large investment in southern Alberta, and expressed confidence in its future.

J. E. Walsh, General Manager, Canadian Manufacturers' Association, referred to the growth of manufacturing enterprises in Western Canada, as evidenced by the fact that three years ago the membership in the Association in the prairie provinces was less than 200, whereas to-day it stands at over 550. He also quoted figures showing the large increase in capital invested in factories in the Prairie Provinces, the number of workpeople employed, the varied articles made and the value of the products.

E. Leonard, of E. Leonard & Sons, advocated the taking of the tariff question out of the hands of designing politicians and placing the matter of tariff regulations and customs duties under a Board representing all classes of citizens for careful study and scientific adjustment. His remarks met with considerable applause, and were ably seconded by M. J. Beatty, of Beatty Bros., Fergus, Ont.

Father Fitzpatrick and Wm. Toole, Calgary, also spoke.

Trip to Lethbridge

Following the banquet, the city of Medicine Hat "blew off" a gas well. Delegates who had not witnessed an event of this character were greatly impressed with the awful forces of nature.

Tuesday morning the visitors, with a number of Medicine Hat citizens, departed by special train for Lethbridge, where they were entertained at luncheon by the Board of Trade of that city. Those who had not visited Lethbridge for a few years were deeply impressed with the manner in which the city had been beautified since their last visit, the Galt Park, comprising 10 acres, adjoining the station, around which the business section is built, being specially remarked upon.

The chief industries of the city are, the plants of the Columbia Macaroni Co., the Taylor Milling Co., The Lethbridge Brewing Co., and the many coal mines, whose payroll under normal conditions is $160,000 per month.

Following the luncheon, the party was motored through the country surrounding the city, particularly to view the irrigation farms. It was claimed the productiveness of these lands was increased three-fold by irrigation, three crops of alfalfa

attended the Alberta Industrial Congress last month —*Photo by W. J. Oliver, Calgary.*

being harvested each year, also that their value was increased from $25 to $160 per acre.

The special train arrived at Calgary at 9 p.m., and Wednesday morning about 600 delegates assembled at the Grand Theatre for the business sessions of the Congress.

Congress Opened at Calgary

Promptly at 10 a.m. Mayor Brown, of Medicine Hat, and President of the Alberta Industrial Development Association, opened the business sessions of the Congress. With him on the platform were: Lt.-Gov. His Honor R. G. Brett; Premier Hon. Chas. Stewart; Acting-Mayor McCoubrey, Calgary; Wm. Toole, President, Calgary Board of Trade; J. E. Walsh, General Manager, Canadian Manufacturers' Association, Toronto; D. C. Coleman, Vice-President, Canadian Pacific Railway, Winnipeg; R. Warren, Asst. Gen. Manager, Canadian National Railways, Winnipeg; Col. J. S. Dennis, Chief Commissioner, C.P.R. Dept. of Colonization and Development, Calgary; and several others.

After the invocation and reading of messages of regret, M. A. Brown, Mayor of Medicine Hat and President of the Alberta Industrial Development Association, explained the purposes for which the congress had been called. The subject uppermost in everyone's mind at the present time, he said, was how the country is to pay its great obligations contracted during the war. This could only be done by intensive development, and it was plain to be seen that development was not intensive in this country. Everybody knew, he said, that the greater portion of the resources of this country were still undeveloped. There had been an increase in development during the last 15 years, he said, but the increases had not been big enough.

Some, he said, held the opinion that the country is not ready for an intensive development at the present time, but he did not agree with this view. "The time has arrived," he said, "when we should be more than producers of raw materials. We should produce the finished article for the world's markets. To convince the world of these facts we called this industrial congress. I think that the delegates will be satisfied of this when they have seen the country and heard the speakers at the meetings here. The interest of the United States in this congress speaks much for the friendship between the two countries."

Addresses of welcome were also delivered by Lieut.-Governor Brett, Premier Stewart, Acting Mayor McCoubrey, and Wm. Toole, President of the Calgary Board of Trade. The congress then got down to business, and throughout the sessions of Wednesday and Thursday listened to informative addresses, by men of prominence in the fields of science and industry, on the resources of Western Canada, and the policies which should be adopted for their development. A motor trip through the city and visits to the theatres and golf and country clubs were interspersed in the proceedings, while on Thursday evening the Board of Trade banqueted the delegates at the Hotel Palliser.

Visit to Edmonton

During Thursday night a special train conveyed the members of the congress to Edmonton. At noon on Friday a luncheon was tendered by the local board of trade, after which a final session of the congress was held. Then in the evening the Provincial Government entertained the visitors at dinner, while the day's proceedings terminated with a reception at Government House. Entertainment features filled in the hours of Saturday, the final day of the convention.

In the following pages a few of the addresses delivered before the Congress are published, while it is hoped in subsequent issues to present readers of INDUSTRIAL CANADA with others of the more important addresses at the gathering. Altogether a great deal of material was collected bearing on the resources of the Province of Alberta which is well worth preservation.

The Natural Resources of Western Canada*

Western Provinces Have Been Blessed with Immense Resources in Agricultural Land, Coal, Gas, Oil, Clay, Timber and Precious Minerals, and Sooner or Later these will all be Developed along Proper Lines

By COL. J. S. DENNIS, C.M.G.

Chief Commissioner, Department of Colonization and Development, C.P.R.

I PROPOSE to deal with our natural resources under separate headings and in the order of their importance as I view the subject, beginning with that natural resource which is the foundation of development and progress in all countries, viz., Agricultural Land.

The measure of sound prosperity in any country is the possibility of producing, through agriculture, the food needed by its inhabitants. It is recognized that many countries which have not been favored with large agricultural areas have reached a measure of prosperity through industrial development of their other natural resources, but the necessity for local production of sufficient food for home consumption through the utilization of available agricultural land has been specially emphasized in many countries during the late world war.

In the matter of land available and suitable for successful agriculture with all its allied interests of horticulture and animal industry, nature has been very bountiful to the four western provinces of Canada. The Provinces of Manitoba, Saskatchewan, Alberta and British Columbia comprise an area of about 711,000,000 acres. Of this vast area it is estimated that at least 225,000,000 acres are available for immediate settlement and cultivation. At the present time not more than 30,000,000 acres of this area are occupied and cultivated, leaving the enormous area of 195,000,000 acres of good land available for further extension of our agricultural activities. The total population of these four western provinces does not exceed 2,200,000, and when it is realized that this small population occupies this vast area in such a manner as to provide an average of only 1.88 people per square mile one can get some conception of the possible density of population and the enormous value of agricultural products which will be produced so soon as the remaining 195,000,000 acres are occupied and made productive. For comparison, it may be noted that were the Western Provinces occupied on the same basis of distribution of population per square mile as the small Province of Prince Edward Island in the eastern portion of the Dominion, the four western provinces of Canada would to-day have a population of 20,000,000.

Difficulty of Securing Settlers

Our greatest problem in Western Canada to-day in connection with the development of our natural resources is that of securing settlers of the right kind to take up and cultivate the vast unoccupied acreage, which only awaits the intelligent effort of the agriculturist to produce vast quantities of food.

The suitability of the vast unoccupied areas of the four western provinces of Canada for successful agriculture, horticulture and animal industry has now been definitely proved by the prizes won in competition with all the other countries of the world, for our grain, fruit and livestock, and the grain production in the occupied areas of our prairie provinces, even under the existing conditions of sparse settlement, is already playing, as is indicated by the figures I will quote, an important part in supplying the food of the world.

It is within my recollection, and also that of other "old timers" present, that the vast areas in these western provinces now occupied by thousands of prosperous farmers were looked upon and characterized as a part of the "Great American Desert" unsuited for occupation or the growth of grain, and destined to be the home of wandering bands of hardy cattle as successors to the buffalo. This erroneous idea was only dispelled by the efforts of those hardy pioneers at widely scattered points, who undertook to cultivate the soil, and it has now been entirely removed by the actual results obtained in the production of grain, vegetables, fruit and livestock all over these provinces.

The value of the agricultural, dairy and animal industry products of these four western provinces for the year 1917, the last year for which complete statistics are available, amounted to the sum of $1,222,831,000, made up as follows:

Manitoba		
	Grains and fodder	$137,470,750
	Dairy produce	8,054,567
	Live stock	88,350,000
	Total	$233,875,317
Saskatchewan		
	Grains and fodder	$349,488,200
	Dairy produce	4,098,187
	Live stock	218,125,000
	Total	$571,711,387
Alberta		
	Grains and fodder	$176,965,800
	Dairy produce	10,218,876
	Live stock	216,148,000
	Total	$403,332,576
British Columbia		
	Grains and fodder	$ 12,171,100
	Dairy produce	1,355,837
	Live stock	375,357
	Total	$ 13,912,294

It is true that on our vast agricultural areas nature exacts intelligent effort in utilizing the facilities she has provided, and at times like the present year, withholds in certain districts the moisture necessary for successful agriculture.

The introduction of irrigation in the southern portion of the Province of Alberta and the western portion of the Province of Saskatchewan, and the proper utilization of the water supply provided by our rivers, has provided that vast areas of land in those districts which at times are lacking sufficient rainfall for successful agriculture, can be made, and are being proved, the most productive and intensively cultivated areas in the West. In this great work the Canadian Pacific Railway Company have already expended over $15,000,000 in providing canals and ditches for the proper distribution of water, but

*Address before the Alberta Industrial Congress, Calgary, August 13, 1919.

the extension of this most ancient of all systems of permanent agriculture to the vast areas which can be reclaimed is a work of national importance and one which in the near future must engage the attention of both our Dominion and Provincial Governments.

Outside of the utilization of our agricultural areas for the production of grain, fruit and livestock as food products, Western Canada offers exceptional opportunities for wide extension of our milling, packing, canning and tanning plants, and of industries for the utilization of our vast quantities of cereal straws for the manufacture of paper, it having already been demonstrated that the straw of the flax grown in these Western Provinces produces a very high grade of paper.

Situated as the four western provinces are in the northern part of the Northern American Continent and subjected to cold winter weather on account of their geographical position, the question of fuel for domestic use is, of course, a matter of first importance. In this connection nature has again been very bountiful, and aside altogether from the enormous supply of timber fuel contained in the Province of British Columbia, which is referred to later on, I may direct your attention first to the recognized standard fuel of the world.

Speaking in round figures, the best available estimate indicates that the known coal reserves of the world amount to seven million million of tons. Of this enormous quantity the four Western provinces of Canada contain one million three hundred thousand million of tons. The coals of the Western provinces cover all the different qualities from the lignites up through the semi-bituminous, bituminous cooking, to anthracite, and the vastness of the coal resources, as noted by the above figures, indicates that nature has blessed these Western provinces with one of the vast coal supplies of the world, and has solved the fuel supply, both for domestic and industrial use, for many centuries to come.

The Great Irrigation Dam at Bassano

The coal production in the Provinces of Alberta, Saskatchewan and British Columbia for the year 1917 was 7,352,945 tons. This production will, without doubt, increase rapidly with the extension of settlement and the introduction of additional industries using coal for the generation of power, but the facts quoted will be sufficient to indicate to you that in the matter of coal for fuel this western portion of Canada occupies a most advantageous position.

In this connection attention must also be drawn to the fact that so far we are only utilizing our coal deposits under the wasteful method of its use for fuel only, with the exception, in a few cases, of its conversion into coke. Ultimately no doubt more modern scientific methods will be adopted to utilize our coal deposits on the basis of saving the by-products, and in this way enormously increase the value of this natural resource.

Not satisfied with endowing us so generously with almost inexhaustible quantities of coal, nature has added to her gift, particularly in the Province of Alberta, by furnishing us with vast quantities of natural gas.

During your visits to Medicine Hat and Lethbridge, and also in this city, you have had some opportunity of seeing something of the natural gas development, but it may interest you to know that natural gas has been developed in the Province of Alberta within an area extending from the national boundary north for about 700 miles and from the Rocky Mountains east for 200 miles.

This natural product is now being utilized both for industrial and domestic purposes, and the possibility of its extension as a fuel in generating heat, light and power is almost beyond measure.

You no doubt will also be interested to know in connection with our natural gas supply that investigations lately carried on have proved the possibility of extracting from this gas, at a low cost, the character of gas required for use in the balloons which will probably play an important part in the matter of transportation in the world in the near future.

Associated with our vast coal deposits and the vast natural gas area referred to, it is probable that nature has also blessed this western country with a vast deposit of oil.

We are not justified at present in claiming that we have located and developed a vast oil field in these Western provinces, but the exploratory work so far carried on over an area extending some 700 miles north to south in the Province of Alberta and at one or two isolated points in the adjacent Province of British Columbia, and the oil obtained in small quantities at these widely separated points justify the assumption that somewhere within the Province of Alberta there exists one of the vast deposits of petroleum of the globe, and after having given some special attention to this matter as head of the Canadian Pacific Railway Company's Department of Development, I personally venture the opinion that sooner or later, and in all probability in the near future, a large producing oil field will be located through the medium of some of the many test wells that are now being drilled at widely separated points and when that time comes we will not only have this great addition to our fuel supply but the benefit of the vast number of by-products resulting from the scientific use of crude petroleum.

Timber has always played an important part in assisting in the development of new countries. This is particularly true of the prairie portions of Western America, where the first need of every settler is lumber. In this particular nature has again been exceptionally kind to the four Western Provinces of Canada, for while the prairie Provinces of Manitoba, Saskatchewan and Alberta produce a certain amount of lumber, the lumber needs of the prairie districts of these provinces could not be filled were it not for the vast timbered areas of the Province of British Columbia. This province differs from its three sister provinces to the east in that it is more or less mountainous throughout and only in the valleys

is there opportunity offered for agriculture, horticulture and animal industry, but the province possesses one of the great undeveloped timber areas of the world. Conservative estimates indicate that the commercial standing timber in the Province of British Columbia amounts to 366 billion feet. This timber comprises cedar, Douglas fir, spruce, hemlock, white fir, lodgepole pine, western yellow pine, yellow cypress, western larch, western white pine and cottonwood.

This vast timbered area has already been developed to a certain extent through the medium of sawmills and allied woodworking industries, but the extension of this portion of our industrial activity will offer opportunities for a further investment of capital coincident with our extension of agricultural settlement east of the mountains and of our overseas export lumber business. There would also seem to be an opening for the extension of our wood pulp paper making industry in view of the vast quantities of suitable pulpwood to be found in all these four Western Provinces, and in this connection it is noted that we must endeavor to correct the situation which occurred last year in which Canada exported pulpwood to the value of $15,000,000, whereas this pulpwood manufactured into paper at home at the then existing prices would have realized the sum of $79,000,000.

Clay and Clay Shales

The members of the Congress who visited Medicine Hat had an opportunity of seeing one of the large industrial plants engaged in utilizing our clay deposits. Throughout all the four Western Provinces vast deposits of clay of differing values have been located, and the utilization of these clays through our existing industries justifies us in the claim that we possess in these deposits clay suitable for all purposes from the manufacture of common brick to that of high grade pottery, and this branch of our industrial activity offers opportunities for wide extension.

We have also been able to demonstrate the suitability of certain of our sand deposits in the West for the manufacture of glass, and where these deposits are located in close proximity to our natural gas supply this industry offers an opening for wide development.

The many large lakes situated in the provinces of Manitoba, Saskatchewan and Alberta already provide large quantities of freshwater fish, but our great fishery resource of Western Canada is on the coast line of British Columbia. This coast line covers in extent some 7,000 miles and may reasonably be claimed to provide one of the great fishing industries of the world. This industry has already been developed to considerable limits as will be indicated by the fact that the catch of eight kinds of fish during the year 1918 amounted to 233,000,000 pounds, valued at $22,000,000. The export of a large quantity of this coast fishing industry, together with fresh-water fish from the interior lakes, comprises one of our important industries of the West, but like many other phases of the development of our natural resources is only in its infancy.

Iron Ore an Uncertain Quantity

With unlimited quantities of coal and natural gas as fuel, and the probable addition of crude petroleum to this list, it was only necessary for nature to have blessed Western Canada with a large deposit of iron ore to insure her future as one of the richest countries of the world. In this particular, however, nature seems to have been somewhat sparing in her gifts. We have indications of deposits of iron ore in the Lake Winnipeg district of Manitoba, some smaller deposits in the Provinces of Saskatchewan and Alberta, and probably more important deposits at several points in British Columbia, but as yet, sufficient development has not been completed at any of these points to justify the prophecy as to how far these deposits can be utilized in connection with our fuel to supply the steel which is rapidly becoming one of the most widely used products in the world's development.

Transportation Well Developed

In developing the natural resources of any country, the transportation available not only for the movement of the raw material but of the finished product is a most important factor. The outline given above will, I hope, have served to convey to you the wonderful development which may be looked for in Western Canada through the ultimate utilization of our natural resources, and fortunately the foundation for the rapid development of these resources, through the medium of transportation, has already been laid. In the four Western Provinces we have to-day in operation a railway mileage of 19,873 miles, which provides one mile of railway in operation for each 110 of population. This fact will indicate to you that Western Canada has as great if not greater mileage of railway per capita than any other country in the world. It is, of course, true that the vastness of the country makes it inevitable that even as yet large districts are not served by existing railway lines, but the foundation work for the extension of the system as conditions warrant has already been laid, and from the standpoint of available transportation, Western Canada, with the opportunities offered for agricultural and industrial development through ready transportation of raw material and finished product, occupies a very unique position.

Precious Minerals Known to Exist

The vast mountainous areas of the Province of British Columbia are without doubt one of the most highly mineralized districts of the world. The production of gold, silver, lead, copper, zinc, and some of the smaller miscellaneous minerals, showed the large value of $28,500,000 in 1918. Like the development of all the rest of our natural resources of the West, that of our precious minerals, especially in the Province of British Columbia, is only in its infancy; vast areas of that highly mineralized country having as yet only been roughly explored and prospected.

As was intimated in my opening remarks, I have only endeavored to put before you in an outline manner the natural resources with which Western Canada has been blessed and the steps so far taken to develop them. With the increase of our population, the demand for the finished product of many of these raw materials will increase and the increased demand will, doubtless, result in the extension of our industrial life. This extension, however, will only be possible through the medium of the investment of large sums of capital and the value of meetings of this kind, through which reliable facts may be made public regarding our resources and interest awakened in their proper development, cannot be overestimated.

In common with all new countries, which have undergone more or less rapid development, we have experienced in Western Canada the inevitable land, coal, oil, timber and other booms with concurrent disappointment, in many cases, relative to returns from capital invested with the inevitable retardation of sane development. We, however, know that we have the raw products of agricultural land, coal, gas, oil, clay, timber, precious minerals, etc., and indulge in the prophecy that sooner or later these will all be developed along proper lines and result in making these four Western Provinces of Canada one of the most extensively settled, highly developed and prosperous portions of the British Empire.

An Up-to-Date Coal Mining Plant near Lethbridge

Water Powers and Coal Resources in Alberta*

Province Does Not Possess Large Year-Round Water Powers in Vicinity of Well-Settled Sections, but by Supplementing Them with Steam Powers, Developed from Coal Resources, Should Have Plenty of Power for All Needs

By JAMES WHITE, C.M.G.
Vice-Chairman, Commission of Conservation

POWER has been defined as the "substitution of mechanical energy for human energy, of mechanical work for human labor." As a result of the utilization of power, civilized nations expend enormously more energy than the combined muscular power of their inhabitants and their beasts of burden. Sir Dugald Clark has estimated that the factories of the world, including electric lighting and street railways, use 75,000,000 horse-power; the railways of the world, 21,000,000; and the shipping of the world, 24,000,000, or a total of 120,000,000 horse-power. Fairgrieve, in his "Geography and World Power," says that "the power of Greece, whereby she achieved such great things in all directions of human progress, was largely based upon the work done by the servile class. On the average, each Greek freeman, each Greek family, had five helots, whom we think of not at all when we speak of the Greeks, and yet these were the men who supplied a great part of the Greek energy."

Equivalents in Slave Power

Of the 75,000,000 horse-power used in factories and general industrial and municipal activities, about 13,000,000 is used in the United Kingdom, about 29,000,000 is used in the United States, and 6,000,000 in the British Dominions and dependencies.

The work accomplished annually in the industries alone of the United States is, therefore, equivalent to the labor of 580,000,000 slaves, and each family in the United Kingdom has, in the industries, nearly 30 serfs to "supply energy, requiring no food and feeling nothing of the wear and tear and hopelessness of a servile life."

Having demonstrated the enormous importance of power, the next step is the examination of this particular problem under consideration, namely, power in the Province of Alberta. Water-power, with its numerous advantages, is naturally first in order of consideration. This has been exaggerated, partly due to the impression gained, say, by the traveller who, from the railway train in summer, sees large volumes of water flowing down the beautiful rivers of Alberta. The traveller is not aware, or forgets, that the low water season in the western rivers is not in the driest summer weather, when the glaciers and snow-fields are swelling their volume, but in the coldest winter, when frost seals the ice and snow-fields, and the volume is practically dependent upon the springs that feed the streams.

Height of Falls Available

Another important consideration is the height of the falls that are available. This is a geological question. The Rocky Mountains are, in large part, composed of limestone, with sandstones and shales in some valleys in the eastern portion. The tendency of a river in such rocks is to reduce its bed to a nearly uniform gradient, hence the few falls of considerable height. On the other hand, high dams to create high heads are, in most instances, prohibited by the heavy cost, and, in the case of several important streams, the presence of railways debars such constructions.

So far as water-powers are concerned, Calgary is more favorably situated than any other city in Alberta, the six powers on the Bow River having an aggregate minimum of 60,000 horse-power, with regulated river, and less than one-half that amount with unregulated river. These powers are from 30 to 50 miles in an airline from Calgary.

The Rocky Rapid power on the North Saskatchewan, is 60 miles from Edmonton. To develop this power would require a dam 85 feet high.

The Baptiste power, 12,000 horse-power, on the Athabasca,

* Address delivered before Alberta Industrial Congress, August 13, 1919.

near the mouth of the Baptiste, is 170 miles from Edmonton. Another power, nine miles above the Baptiste power, would yield 6,000 horse-power. The total available at these sites, 18,000 horse-power.

It is estimated that the Grand Rapids of the Athabasca would yield 22,000 horse-power, the Long Rapids power, 12,000 horse-power, Boiler Rapids 11,000 horse-power, Middle Rapid, 9,000 horse-power, Crooked Rapid, 6,000 horse-power; Rock Rapid, 5,000 horse-power; rapid five miles above Mountain Rapid, 7,000 horse-power, and the total power on the Athabasca, between the Pelican Rapids and McMurray, is estimated at 97,000 horse-power. As these powers are from 200 to 250 miles from Edmonton, they cannot be regarded as possibilities at the present time.

Powers Are Far Away

Peace Canyon power, 94,000 horse-power, is 400 miles from Edmonton, and to develop all the power at one site would require a flume or penstock nine miles long; the Vermilion power, 20,000 horse-power, is 350 miles distant; the Upper Fort Smith Rapids, on the Slave, 184,000 horse-power, and the Lower Fort Smith Rapids, 128,000 horse-power, are respectively 460 and 670 miles from Edmonton.

It should be noted here that the figures for the powers on the Athabasca, Peace and Slave rivers, given in the report on "Water Powers of Manitoba, Saskatchewan and Alberta," are for the open season only, namely, from May to November. Accurate data respecting the minimum flow of these rivers are not obtainable, but available information indicates that the minimum in winter is about one-third of the open season minimum, and the figures quoted above are based upon that assumption.

The foregoing brief review of the larger water-powers of Alberta does not indicate great resources in the vicinity of the well-settled portions of the province, assuming that the demand for power is uniform throughout the twelve months of the year. It is necessary, therefore, to consider measures to supplement or to replace power from water.

With Alberta's enormous coal resources, however, the deficient power during the low water months could readily be supplied by auxiliary steam plants. Such plants could also take care of the peaks of the loads.

If such auxiliary stations are only required for a few months in the year, it may be advisable to construct them at low first cost, even at a sacrifice in economy. If operated to cut down the peak load, however, or to prevent interruptions of service, economy of operation is more important.

Steam Power vs. Water Power

In the foregoing review, attention has been devoted solely to water power and its utilization.

There is a fairly general popular belief that water power is inherently cheaper than steam power. As a matter of fact, their relative costs are dependent upon a number of considerations, and, in many instances, steam power is cheaper than water power, particularly since 1914, owing to the altered conditions created by the war.

As compared with steam power, water power has the following advantages:

(1) Cost of operation is usually much lower.
(2) Very few attendants are required in the plant. No fuel except for heating the building.

The disadvantages are:

(1) Usually the cost of development and installation is much higher than with steam power.
(2) The situation of the water power plant is fixed by nature, and, as a rule, a transmission line is required to transmit the electric energy to the user.
(3) The service is less reliable owing to the possibility (*a*) injury to the transmission line, and (*b*) lack of power due to unusually low water.

During recent years, largely owing to the introduction of the steam turbine, the capital costs of modern high-powered steam plants and of many hydro-electric developments are coming close together, and many engineers predict that, at an early date, steam-electric power will be produced at less expense, other things being equal, than hydro-electric energy. Formerly steam plants consumed 30 to 35 lbs. coal per horse-power hour; now modern plants use nine to nine and a half lbs. In 1915, a modern steam turbine of large size, using units of 10,000 to 20,000 kilowatts (13,300 to 26,600 horse-power) rating could be constructed for from $50 to $60 per kilowatt of maximum capacity as compared with hydro-electric costing from $200 to $250 per kilowatt.

Alberta contains 87 per cent. of the coal in Canada, but the estimate in the "Coal Resources of the world," states that 82 per cent. of the coal in that province is lignite or sub-bituminous. Practically the whole of the settled portion of the province is underlain by this valuable fuel, and the relative costs of steam-electric and hydro-electric power, indicate the desirability of investigating the economics of steam-electric power generated at central stations and transmitted to the municipalities within say 100 to 120 miles.

The larger coal mining centres could be selected because such large central plants give unusual opportunities for economies. For instance, they can use coal that under ordinary circumstances, would be left in the mine, as it would be unprofitable to bring it to the surface. As an example of such economy, the Alliance Coal Company states that "by burning lignite slack they have succeeded in reducing the coal bill in the Edmonton, Alta., power house from $165,000 a year to $75,000;" also that if an automatic stoker were devised which would "respond and evaporate the necessary water in the boilers to handle the overload at peak," much better results could be obtained.

Electrification of Railways

While extension of the electrification of steam railways in the near future is probable, there are several factors in the problem which render it extremely unlikely that a very considerable mileage will be electrified.

The advantages of haulage by electric locomotive, as compared with the steam locomotive, are numerous. The cost of maintenance of an electric locomotive is much less, it does not require to be sent into the round house for cleaning, etc., at the end of a run, two or more can be operated together without loss of power, at the top of a long grade, the electric retains its full power and on long descending grades, regenerative braking returns the energy of the train into the trolley line or third rail, and in severe winter weather the train load need not be reduced.

On the other hand, electrification would necessitate raising large amounts of capital; railways are not finding that an easy operation, and interest charges are much higher than in pre-war days. Electrification of all lines would require the construction of hydro-electric and steam-electric plants. The railway load is a fluctuating one, varying from hour to hour and from day to day, and the numerous plants which had no market other than the railway load would have a low load factor, which, as already pointed out, means expensive power. Again, failure of portions of the electric installation, such as break in the transmission line, may tie up considerable mileage.

Mr. W. F. Tye has stated that no road in Canada, except possibly the Canadian Pacific, is in a position financially to contemplate large capital expenditures, and that he understands the "Canadian Pacific has not as yet, found a place where the traffic is sufficiently dense to justify the cost of installation of electric traction."

Making Most of Canada's Natural Resources*

Imperative Need of the Day is a National Economic Policy Based on the Scientific Development and Utilization of Our Natural Resources—We are Importing Far Too Much of the Raw Materials of Industry

By R D. MacLAURIN, B.A., Ph.D.
Professor of Chemistry, University of Saskatchewan

"DURING the past five years Canada's national debt has rapidly increased until it has reached the sum of $1,950,000,000, incurring interest charges to the amount of $115,000,000. Our adverse balance of trade with the United States in 1918 mounted to $292,000,000 and our exchange rate is five and one-eighth per cent.

"The recommendation by the finance minister of Canada to meet that situation was 'increased production and thrift.'

"The war made it necessary for Canada to mortgage her resources, human and material, for the purpose of carrying on. The obligations were loyally and willingly assumed, but we are now confronted with the question—How is the liability to be financed? Will 'increased production and thrift' accomplish this?

"The imperative need in Canada to-day is a national economic policy based on the scientific development and utilization of our national resources. An outstanding feature of that policy should provide for participation by the state in the results of that development, small in the initial stages, but in an increasing ratio as development and revenue therefrom advances. Canadian credit in general would benefit from such a provision for participation, and should the proceeds remain the property of the Dominion, a sinking fund for the discharge of federal indebtedness would be created.

"The necessity for such a policy is evidenced by the fact that we import 98 per cent. of our petroleum products at an annual cost of 30 millions of dollars; 95 per cent. of our iron ore and iron products, at a cost of 177 millions of dollars, and over 50 per cent. of our coal, at a cost of 71 millions of dollars, making a total of 278 millions of dollars annually drained from Canada for those three minerals. That amount constitutes the major part of our adverse balance of trade. Canada is richly endowed in coal, oil and iron. To retain those millions of dollars in Canada, to extinguish the adverse balance of trade, to make Canada industrially independent, no time should be lost in inaugurating a policy for the development of our raw materials.

"For the successful carrying out of a policy formulated for the development of our natural resources the co-operation of men of scientific attainments is essential. In 1916, in urging the development of our resources, I suggested that provision be made in the case of a research subsidized by the government and leading to a discovery, invention, or the improvement of a technical process, protecting the author in the ownership thereof. As government aid had, at least, materially contributed to such discovery, invention or improvement of a technical process, provision should also be made for a royalty to the Government on its use for the purpose of maintaining a national research fund.

Parrish, The Alberta Foundry and Machine Co, Ltd.; J. H. Tabor, J. H. Tabor Candy Co., Ltd.; Geo. E. McDonald, Medicine Hat Pump and Brass Works; A. F. Andrews, Manager, Ogilvie Flour Mills, Ltd.

"The creation by the Alberta Government of a ministry of industry, and the calling of this Industrial Congress by the Industrial Development Association of Alberta, whose guests we are, is an outstanding recognition of the value of Alberta's natural resources, and a realization of the urgency for their immediate development.

"The Dominion of Canada ranks second among the nations of the world as regards its potential coal resources, which have been estimated at 1,234,269 million tons, of which 1,059,927 million tons, or 86 per cent. of the total, is possessed by the province of Alberta. Furthermore, the total coal in Great Britain and Ireland, Australia, India, South Africa, New Zealand, Rhodesia, Newfoundland, South Nigeria, British N. Borneo has been estimated at 494,961 million tons;

* Address delivered before Alberta Industrial Congress at Calgary, August 14, 1919.

consequently, according to the above figures, Alberta contains more than twice as much coal as Great Britain and her other possessions within the Empire.

"In order to more fully appreciate the national significance of coal, it may be advisable to refer briefly to the part which it has played in the constructive economic policies of certain countries.—

Cheap Coal Cause of Supremacy

"Great Britain gained her position in the world's commerce very largely by reason of her plentiful supply of cheap coal, which enabled her not only to pay for a considerable portion of imports, but exercised a very potent influence on inward freights of food and raw materials by providing a useful and paying return cargo. The influence of cheap coal, cheap food and raw materials on the cost of manufacturing is so obvious that it need not be emphasized. To day Great Britain faces a national crisis in her coal trade, as is evidenced by a decrease in production of over 20 per cent. during the past five years, and a decrease in exports during the same period of 56.7 per cent. Furthermore, the cost of production has increased to such an extent that successful competition with the United States in the South American and European markets is endangered.

"In order to visualize the national significance of coal in industrial Germany, it is essential to keep in mind the meaning of the distillation of coal, which process was the cornerstone of her economic structure for peace and war. Crude coal tar was the raw material from which dyes, pharmaceutical and photographic preparations were obtained, and Germany gained control of the greater part of the world's trade in those chemicals. Furthermore, the same compounds used in making dyes, etc., were those from which explosives and poisonous gases were made, consequently Germany has the chemical plants, equipment and personnel for manufacturing unlimited quantities of the above materials. The coke and gas from the distillation of coal was used in the iron, steel and other metallurgical industries. The ammonia was used for fertilizers, the manufacture of nitrates and other chemicals; consequently it is apparent that Germany prepared for peace and war by building up essential chemical industries, the products of which controlled the world's market in war materials, thus establishing a profitable foreign trade and at the same time preventing other countries from building up those fundamental industries and being prepared for war.

"During the war, the coal distillation process was necessarily extensively developed in England, and also in the United States, so that now those countries are largely independent of German supplies in dyes and other chemicals, but the cost of production is still considerably higher than that of Germany.

"The government of the United States recognizes as never before the national significance of coal, and is co-operating in the development of the coal industry. The United States has adopted the former British economic policy of exporting coal, as is evidenced by an increase of 243 per cent. in her coal export to Europe, and 350 per cent. to South America, and the German economic policy of building up national industries, utilizing the products of coal distillation. These industries have been established during the past few years at an expenditure of hundreds of millions of dollars, the products of which will be protected by license system. As the United States possesses 51 per cent. of the world's total supply of coal, and produced last year 685,000,000 tons, while all the other countries in the world outside Great Britain produced only 500,000,000 tons, it is obvious that the United States will occupy a strategic position in the world's trade.

"As already pointed out, Canada ranks second in coal resources, of which Alberta possesses 86 per cent., and as the vital national significance of coal has been incontrovertibly established, it is apparent that Alberta is destined to become one of the chief industrial provinces in Canada.

"Alberta coal has not received its due recognition, its capability, for instance, to successfully compete with Pennsylvania anthracite for the Manitoba market, owing to, firstly, the high cost of production, due to avoidable overhead charges; secondly, existing belief that Alberta coal is unsuitable as a domestic fuel (with consequent large importations of Pennsylvania anthracite); thirdly, present inefficient methods of combustion, due to furnaces now in use being designed for anthracite coal.

Agriculture and Industry

"A phase of this subject which might be touched on is the close relation between agriculture and industrial development. While agriculture, our basic natural industry, has been fostered, the fact remains that our average crop yields are still far below those of many countries. The history of agricultural science in various European countries shows that the full measure of success can only be attained by intelligent mixed farming supplemented by artificial fertilization.

"The soil possesses only a limited quantity of plant nutrients, and since a portion of that source of supply is removed by each crop, the time will inevitably come when the quantity of essential constituents will be insufficient to produce paying crops.

"To bring before us clearly the importance of conserving our soil's strength, its wealth in plant food, by home milling,

Plant at Medicine Hat Manufacturing Various Clay Products

One of the Big Flour Mills at Medicine Hat

I have made the following calculation of the fertilizing constituents contained in one hundred million bushels of wheat and forever lost to us should the 100,000,000 bushels be shipped out of the province. As, however, in the milling of wheat, 70 per cent. approximately, is converted into flour, the by-products being represented by the remaining 30 per cent., it would follow that home milling would retrieve the latter percentage for stock-feeding purposes, and a consequent ultimate return to the soil.

"The approximate quantity of potassium, nitrogen and phosphorus removed from the soil by 100,000,000 bushels of wheat is:

Nitrogen, 142,000,000 lbs, valued at 36 3-7c. lb.....	$51,720,000
Phosphorus, 24,000,000 lbs., valued at $21.46 cwt...	5,150,000
Potassium, 26,000,000 lbs., valued at 31.62c. lb.	8,220,000
	$65,090,000

"That exportation of flour rather than wheat is a sound economic policy has been recognized by the United States Congress. The Wheat Guarantee Law of March 4, 1919, in Clause 5, contains the following provision:

"'That as between the two parties mentioned (wheat and flour) preference shall be given to the exportation of flour, except when the public interest would, in the judgment of the president, be injuriously affected thereby.'

Straw Burning Loss

"A brief allusion to the loss from burning of straw may be of interest. When the straw is burned the fertilizing constituents are practically all wasted. The approximate quantity and value of nitrogen, phosphorus, potassium in straw resulting from 100,000,000 bushel yield of wheat, calculated on the basis of 15 bushels to the acre and one ton of straw per acre, is as follows:

66,666,660 lbs. nitrogen, at 36 3-7c. per lb.	$24,285,711
10,666,665 lbs. phosphorus, $21.46 per cwt.	2,289,042
119,999,998 lbs. potassium, 31.6c per lb.	36,919,915
	$63,494,668

"Some years ago Mr. George Harrison, of Moose Jaw, conceived the idea of utilizing straw to provide the farmer with gas for lighting, cooking and power purposes. The necessary equipment consists of a retort, gas scrubber and gasometer. When the straw is heated in a retort, gas, tar and ammonia are given off, and a valuable carbon residue remains. From a ton of straw there is obtained between 11,000 and 12,000 cubic feet of gas. Straw or gas may be used for heating the retort in which the straw is carbonized, and from each ton of straw there is a surplus of about 7,000 cubic feet of gas.

Straw Not Utilized

"The quantity of straw non-utilized in western Canada is approximately 20,000,000 tons.

"The heating value of straw gas is approximately 400 B. T. U.'s per cubic foot. The gas from 20,000,000 tons of straw, at 7,000 cubic feet per ton, in terms of power, would be equal to 2,511,000 H. P. years, or seven times the power generated at Niagara Falls on the Canadian side. As a matter of fact, then, every farmer has a small Niagara of his own. The thermal value of a gallon of gasoline is 119,000 B. T. U.'s, so in terms of gasoline the gas from the straw wasted annually in western Canada would be 470,000,000 gallons, which is more than one-sixth of the total production of gasoline in the U. S. A., and the U. S. A. produces two-thirds of the world's total supply of oil.

"The combustible constituents of the gas are methane, hydrogen and carbon monoxide. The gas burns with a blue flame and may be used in the same way and for similar purposes as coal gas.

"After the gas and other by-products are driven off from the straw there remains in the retort a carbon residue which amounts to 650 pounds from each ton of straw. The residue has a fuel value of 10,000 B. T. U.'s per pound.

"The potash content of the carbon residue varies from 3-6 per cent., so the minimum amount of (K_2O) potash in the carbon residue from 20,000,000 tons of straw would be 180,000 tons.

"Also the carbon residue contains from 1-1.5 per cent of ammonia and .34 per cent phosphoric acid. The carbon residue can be easily washed and thereby remove the soluble matter. After this treatment the carbon may be used as lampblack. It has been valued at $50 per ton by a well-known authority on pigments in New York, so if a market could be secured for six million tons of carbon resulting from 20,000,000 tons of straw it would be worth $300,000,000.

"In conclusion let me say that sufficient work for carbonizing straw has been done to demonstrate its commercial possibilities. The United States department of Agriculture

and bureau of chemistry co-operated with me in New York city, September 1918, in exhibiting at the National Exposition of Chemical Industries an equipment based on Mr. George Harrison's invention, and the United States Bureau of Chemistry have installed a straw gas plant at Arlington farm in the neighborhood of Washington, with the object of continuing experiments on straw and also cornstalks, of which latter approximately two hundred million tons are wasted annually in the United States."

Factories Hold Population

West Will Lose Surplus Population Unless it Establishes Industries

Speaking before the Alberta Industrial Congress at its inaugural session in Calgary, R. T. Riley, of Winnipeg, vice-president of the Union Bank of Canada; managing director of the Northern Trust Co., and director of the Canadian National Railways, had some pertinent comments to make on the general situation.

"What this country is going to amount to," declared Mr. Riley, "depends not so much on the resources of which we have heard this morning, but upon the character of the men who undertake the development of these resources. Don't try to make every last cent—be more interested in building up a good, fair business or factory."

"You've either got to establish industries and factories or you will lose your surplus population in exactly the way that Ontario did. You have built up merchandizing centres in this country," said Mr. Riley; "you must start manufacturing centres. Are you going to risk your money in this line or are you going to let things drift? Don't imagine you will get all the money you will need from the States or the east. The men who have made their money here must put it back into production here.

"But someone says, 'we have no cheap labor.' We don't want cheap labor," said Mr. Riley, emphatically. "What we want is efficient labor." (Applause.)

When Mr. Riley declared that he hoped and prayed that the country from the lakes to the mountains would be settled by English-speaking people, the big audience applauded him.

"We've had enough of the foreigner from Europe," he declared. "When the European comes here he does not know the language. It is at least the second generation before these settlers are of real use. We must have the English-speaking settler in order properly to develop this country."

A Big Conservation Dam

How the Flow of Water in the Spanish River Will be Regulated in Future

(From "Conservation")

A water conservation work of vast importance is that at present under construction at Big Eddy, on the Spanish river, Algoma district, Ont., for the International Nickel Co. The conservation dam will raise the level of the river 100 feet, and will create a lake with an area of 15 square miles. Combined with the storage in the upper third of the Spanish River watershed, it will increase the minimum flow to over 1,800 cubic feet per second, or almost three times the natural low-water flow, *viz.*, 675 cubic feet per second. It will also create a power site where 15,000 h.p. can be continuously developed.

The engineer who designed this work, Mr. Henry Holgate, of Montreal, in reporting on the matter to the Commission of Conservation, states that:

"When this work is complete, the waters of the Spanish River above the Township of Hyman will be conserved to their full extent, and this will be one of the most complete systems of water conservation in Canada.

"Conserving water, and regulating flow on our streams, is one of the most important subjects we have before us, and merits the co-operation and assistance of the Government, as it should be a cardinal principle in power development that the full efficiency of the water in the watershed be made use of, and this cannot be done unless carefully considered systems of storage are provided, so as to equalize the flow as nearly as possible throughout all seasons of the year."

New Price List Issued

Mills Adopt a New Standard in Pricing Cold Rolled, Cold Drawn, Turned and Polished Steel

A new price list has been issued by the United States mills, and adopted by the Canadian mills, for cold rolled, cold drawn, turned and polished steel, and as there is apt to be confusion in the minds of buyers when the new list comes out with such radical changes, an explanation of this list may be a help to readers.

Ever since cold drawn steel appeared on the market, it has been sold on the basis of a list price for the various sizes and shapes, with a discount which varied according to the market; therefore all quotations were made in the form of a discount. The new list now takes the same form as the hot rolled steel, or iron bars, namely, a base price with extra for size and shape. It is only necessary for the buyer to know the base price and to add the extra for the particular size or sizes he may be ordering. The base price applies to all material covered by the new price list, that is, the same price base is applicable to rounds, squares, hexagons and flats, or other shapes. It is not necessary to remember the list price of each individual size, and take the discount from it, but all that is required is to remember the extra that the different sizes take over the base price.

A New Product

Hamilton Motor Works, Limited, Manufacture Hand Oil Pump for Attachment to Oil Barrels

Among new products being produced by Canadian manufacturers is a hand oil pump for which the Hamilton Motor Works, Limited, are responsible. The purpose of the pump is to do away with the waste and fire hazard more or less inseparable from the use of the ordinary type of faucet when attached to a barrel of oil. With the hand oil pump any desired quantity may be drawn from the barrel and it does away with the oil-soaked floor and waste of oil. There are two adjustable stops on the pump so that it can be set to pump any desired quantity up to one quart. There is also a lock with two keys provided, so that the apparatus can be locked up.

New Paper Products

The Rolland Paper Company, Limited, are introducing a new Canadian paper product—Rolland Antique Linen and Rolland Antique Vellum—and have been sending out samples. Rolland Antique is a superior paper of pleasing and distinctive appearance. It is strong and durable with a clear, even texture, and is recommended for the better class of letterhead, whether printed, embossed or lithographed.

The Newmarket Explosion—a Danger Signal

What About Your Feed Water?—Root of the Trouble at Newmarket Appears to Have Been Due to Action of Chemical Constituents in Fluid Drawn from an Artesian Well, Causing Caustic Embrittlement of Plates

By A. E. EDKINS

Chief Inspector, Boiler Inspection and Insurance Co. of Canada

WHILE it is now some time since the disastrous boiler explosion occurred at the plant of the Wm. Cane & Sons Co., Limited, Newmarket, it is only recently that the investigation into the causes of the disaster has been completed, making possible a review of the circumstances surrounding the accident. It goes without saying that the explosion gave much food for thought and study among engineers, boiler inspectors and mechanical men generally, while it proved to be just another striking example of how, after every human precaution seems to have been taken to make the use of steam boilers safe in industrial establishments, explosions may and do occur.

The boiler that failed was one of two, double-drum B. & W. boilers, built in Great Britain, and of standard design and construction for 150 lbs. working pressure.

The two boilers were installed in 1903 to replace four H.T. boilers, one of which had exploded causing the death of two persons and also considerable property loss. The explosion of this H.T. boiler was definitely traced to a longitudinal lap crack defect, such as occasionally occurs in that type of boiler construction, it being a defect which is very hard and sometimes impossible to detect. Wm. Cane & Sons, after their experience with the explosion of this H.T. boiler, decided to install the B. & W. boilers, even though it entailed a much greater expense, as such boilers were thought to be practically immune from explosion.

After the B. & W. boilers had been in service a few years they both began to give evidence of trouble by leakage and cracking at cross-box flange seams. The cracks ran from rivet holes to edge of plate and were very slight at first, not being considered in any way serious. However they increased gradually each year, and finally cracks began to develop from rivet hole to rivet hole. The leakage and defects became so serious that in 1914 new cross-boxes were ordered to be put on. When the old cross-boxes were removed it was found that the steel plate in the flanges was so hard and brittle that it would break off like cast-iron under a smart blow with a hammer.

It was also found that cracks had developed between the rivet holes in the shell plates of steam and water drums at the cross-box flange seams, making it necessary to put in new half sheets at each end of drums where these defects had developed. Considerable thought was given to try and locate the cause of the defects referred to, but no satisfactory solution was forthcoming. The repairs were made in a first-class manner and the boilers were tested on completion by an Inspector of the Boiler Inspection & Insurance Co. of Canada, and an Inspector of the Ontario Government Department to 225 lbs. hydrostatic pressure, being allowed 150 lbs. working pressure. It was thought by everyone interested that the trouble with these boilers was now at an end (as it had been assumed that perhaps it might have resulted from the plates being too high in carbon, or the workmanship—rivetting—inferior). It was, therefore, a great surprise to all concerned when, after about two years operation lap cracks and leakage began to develop again at the cross-box flange seams of both these boilers, and to cap the climax, on June 12th, No. 2 boiler exploded.

Appalling Effect of the Explosion

Photograph of the wrecked portion of the plant, taken immediately after the bursting of the boiler; the latter may be seen in the centre background

The writer on being advised of the disaster by telephone, immediately took the car out to Newmarket and was on the spot examining the exploded boiler within 2½ hours after the accident occurred, and therefore saw condition of boiler and the appearance of fracture of plate before any change, due to atmospheric conditions, could take place.

The rear head of the left hand drum of No. 2 boiler had blown out as a result of a crack having developed in the lap of the flange of the head for

nearly two-thirds of its circumference, said crack having started from the outer surface of the plate, where it was hidden from view by the plate of the steam and water drum. In places from and below about the water line, the crack had extended nearly through the plate of the head, running circumferentially just outside and in some places just into the edge of rivet holes of the head flange seam. It was evident that the rear head had first given way at the bottom side where the crack had extended nearly through the plate and from which point up to about the water line the fracture showed that the plate had become of a very brittle or crystalized nature, very much like cast metal, while the part of the head at the top which had remained attached to the drum, and which had been severed by the force of the failure of the lower part of the head showed a reduction of about 20 per cent. in area, and the fracture had every appearance of good homogeneous, ductile steel plate of good quality, while, as before stated, the plate at the fracture from and below the water line had the appearance of being just the reverse in quality.

> "I WOULD advise all steam users who draw their boiler feed water from artesian wells to have a sample of water analyzed at once and thus make sure whether or not it contains anything in its composition that would have a tendency to cause deterioration of boilers by 'embrittlement' of the plate."
>
> —A. E. EDKINS

This fact, coupled with the defects and trouble that had formerly occurred with the original and the renewal cross-box flange seams, would indicate that no fault could be found with either the original quality of the plate or the workmanship of boiler, but seemed to indicate that some deterioration of the plate had gradually ensued from some obscure cause after boiler was put into operation. After consultation with Mr. S. F. Jeter, Chief Engineer of the Hartford Steam Boiler Inspection & Insurance Co., and Mr. Coombe of the Babcock and Wilcox Co., the conclusion was reached, that the accident occurred as a result of embrittlement of the plate of boiler through the action of some ingredient in the feed water, which under certain conditions, as to temperature, etc., has been found to have such an effect on steel boiler plate. Chemical analysis of the feed water from the artesian well from which a part of the feed for the boiler in question was taken, has been made in the laboratory of the Babcock and Wilcox Co., who report that said water contains a considerable quantity of chemical constituent that would cause embrittlement of steel boiler plate. Chemical analysis of the plate of the head of boiler which failed has been made by the Chemical Department of the Hartford Steam Boiler Inspection and Insurance Co., which has proved that the plate in question was in a highly embrittled state, and it would seem that the accident to this boiler can only be satisfactorily accounted for as a result of the "Caustic Embrittlement Theory."

The University of Illinois Engineering Department has made tests and experiments, which have proved, that, with boilers using feed water from artesian wells containing certain constituents of an alkaline nature, the steel plates of boilers may become affected by embrittlement, and I understand that further tests are to be made in this institution, with a view to gaining more definite information in regard to the matter.

The Wm. Cane & Sons Mfg. Co. are having four entire new drums put on their two B. & W. boilers, and have decided to change the source of their boiler feed water from the artesian well, and take it from the river after passing it through a filter chamber.

The Functions of Canada's New Office in New York

By J. T. STIRRETT
General Secretary, Canadian Manufacturers Association

CANADIAN business men will be interested in the opening of a Canadian Government Office at 1463 Broadway, New York. It is known as the Canadian Bureau of Information and is in charge of Lt.-Col. John A. Cooper, a well-known journalist, who has recently returned from service overseas.

The primary object of the Bureau will be the maintenance of friendly relations between the United States and Canada. The trade between the two countries has reached tremendous proportions and is still growing. Canada is now selling over four hundred million dollars worth of products annually to the United States, or three times as much as in 1913. Similarly the sales of United States goods in Canada have grown just as rapidly and now amount to about eight hundred million annually. The total trade between the two countries has been multiplied by ten in the past twenty years.

Just what the future development will be remains to be seen. As the United States is now selling Canada twice as much as it buys, it is reasonable to assume that Canada's exports are likely to increase faster than her imports. It will be difficult to maintain the present situation where Canada must pay $400,000,000 in cash to cover the excess of United States sales to Canada. Already the rate of exchange is an indication of the difficulty of maintaining this condition. Col. Cooper reports that his preliminary investigations indicate that the United States manufacturers realize the gravity of the situation and are urging the authorities to consider the financial difficulties raised by the rise in exchange. They fear that the Canadian Government may be forced to put an embargo on the entry into this country of certain forms of luxuries as was done during the war. Even if that does not occur, they fear that the Canadian consumer will not pay the extra five per cent. which is added to the cost of United States imports through the working of the exchange.

Col. Cooper's business will be to supply the United States newspaper writers, financiers and exporters with the fullest information about the Canadian situation and thus facilitate any movement of American capital to this country which may be found necessary. As the annual national income of the United States is estimated at over 50,000 million dollars, it would be easy for the United States to spare the 400 millions required to finance Canada's present purchases.

Any Canadian exporter desiring to increase his sales in the United States is invited to consult the New York Bureau, as it may be able to render him assistance.

What Has Happened to Our Express Rates

Radical Changes in the Basis of Rates May Look Somewhat Complicated in the Railway Board's Forty-eight page Judgment, but they will be Readily Grasped after a Perusal of the Following Summary

By S. B. BROWN
Assistant Manager, Transportation Department, C.M.A.

AFTER wrestling with the express companies' case from November of last year until July of this year, the Board of Railway Commissioners for Canada has at last completed its task and a lengthy judgment extending to 48 pages of its reports has been issued. The case originated with an application from the express companies for increased rates and involved the allied questions of charges, practices, classification and delivery limits. It was made the subject of numerous hearings and much argument and eventually radical changes have been allowed by the Board in the basis of rates, method of statement of rates in tariffs and basis of delivery limits. For the benefit of readers of INDUSTRIAL CANADA, who may not feel inclined to plough through the intricacies of the judgment itself, the following summary has been prepared.

Basis for Making Rates

Division of Territory.—The application proposed to divide the Dominion of Canada for express rate making purposes into three zones, as follows:

(*a*) East of and including Windsor, Sarnia, Sudbury, Ont. (except Temiskaming & Northern Ontario Railway) and Parent, P.Q.

(*b*) West of Sudbury and Parent (including Temiskaming & Northern Ontario Railway) to and including Crow's Nest, B.C., Canmore, Edson and Tollerton, Alta., also on interchange traffic between (*b*) and (*a*).

(*c*) West of and including Crow's Nest, B.C., Canmore, Edson and Tollerton, Alta., also on interchange traffic between (*c*) and (*a*) or (*b*).

The Board in its judgment allowed this grouping. The arrangement is practically the same as at present except that traffic moving from Zone (*a*) to points on the T. & N. O. are now made by taking rates under present Scale (*a*) and adding 25c. to each rate. Vancouver Island, now having a slightly lower scale than the present rates in B.C., has been added to zone (*c*).

First Class Mileage Scale

Prince Edward Island has been added to zone (*a*). Formerly rates to the Island were made by adding arbitrary for the ferry service. Now it will be the through rate under zone (*a*).

Merchandise or First Class Mileage Scale.—The application proposed to establish rates on a mileage basis starting at 50 miles and advancing by 50 mile blocks to 2,000 miles in zone (*a*); to 3,400 miles in (*b*) and to 4,000 miles in (*c*), the greater distances in (*b*) and (*c*) being required for the purpose of naming joint rates between the different zones; the rates beginning at 80c. per zone (*a*); 85c. for (*b*) and 90c. for (*c*), and advancing by 20c. in zone (*a*); 25c. in zone (*b*) and 30c. in zone (*c*), for each block up to 1,000 miles. Over this distance the advance in the scale tapered in a somewhat irregular manner from 15c. to 5c. per block in (*a*); from 20c. to 10c. in (*b*) and from 25c. to 15c. in (*c*).

The irregularities in the scale over 1,000 miles caused the Board to order a modification so that the scale would be made more regular, the judgment, page 158, setting forth the following scale:

						Per Block		
						A	*B*	*C*
Over	1,000	miles	to	1,200	miles.....	15c.	20c.	25c.
"	1,200	"	"	1,800	"	10	15	20
"	1,800	"	"	2,000	"	5	10	15
"	2,000	"	"	2,500	"	..	10	10
"	2,500	"	"	3,400	"	..	5	5
"	3,400	"	"	4,000	"	..	..	5

After making a study of the statements filed by the express companies and the railway companies, the Board came to the conclusion (page 148) that the basis for rail service (which covers transportation movement from point of origin to destination) should be 1½ times the average first class standard freight rate, which amounts to 20c. per block in zone (*a*); 25c. per block in zone (*b*) and 30c. per block in zone (*c*) up to 1,000 miles, after which the scale as hereinbefore mentioned is applied. (In this connection see tables at pages 152 and 153 of Judgment.)

The Board also found that the proper amount to cover the express companies' service should be 60c. per 100 pounds, or 30c. each at point of origin and point of destination. The work of the express companies consists of billing, loading at point of origin, care by messenger in transit, unloading at point of destination, collection and delivery where such services are established, necessary clerical work and auditing, together with liability for loss and damage claims. This amount is the same as named in the application of the express companies.

Second Class Rates

Comparisons of the present and proposed rates in the three zones will be found on pages 155 and 157 of the Judgment.

Scale "N" or Second Class Rates.—At the present time Scale "N" covers more or less perishable articles made up mainly of products of the farm and fisheries (see page 160 of Judgment). The rates for this scale are per 100 lbs. approximately 80 per cent. of the mdse. rate. The express companies in their application have changed this scale to read "Second Class" and have made it per 100 lbs., 75 per cent. of the first class rate, which the Board allowed.

Scale "K."—This scale at present covers various beverages (see page 166 of Judgment). The rates named therein range from 25 per cent. to 40 per cent. below mdse. rates. The express companies proposed to eliminate this scale and apply the new first class rates. The Board, however, found that the articles named in Scale "K" properly belong in the new second class scale, which as hereinbefore stated will be 75 per cent of the first class rates per 100 pounds.

Section "D."—This section applies on books, calendars, circulars, and other printed matter, etc. (See page 165 of Judgment.) The rate charged is 1c. for each two ounces or fraction thereof, subject to a minimum charge of 10c. for each zone except on shipments between points one of which is east of Sudbury and the other west of Winnipeg, in which

case the minimum charge is 15c. The liability is limited to $10.00 per shipment and the weight to 5 pounds, except single books which are limited to 10 pounds. The application of the express companies to cancel this section has been allowed by the Board on the grounds that it was established in competition with the post office, and being competitive the express companies have the right to withdraw it when they see fit.

500 Pound Special.—This scale covers shipments in lots of 500 pounds and over, and was established apparently for the purpose of securing shipments which might otherwise move by freight, and is therefore of a competitive nature. The rates are on the average 22 per cent. below the mdse. rates, and as this is not as low as Scale "N" or Scale "K" such traffic did not move under it. The Board finds that the scale is discriminatory in that it gives larger shippers an advantage over smaller ones, and orders it cancelled. The application of the express companies desired this action.

Commodity Rates

Commodity Rates.—In addition to the "Mdse.", "Scale N," "Scale K," "Section D" and the "500 Pound Special," the express companies have a number of commodity rates applicable to staple food products, chiefly fish, (fresh, dried or smoked), fruit and vegetables. The express companies proposed to eliminate all of these commodity rates and apply the new first or second class rates, whichever would be applicable. The effect of this, particularly on the fish, fruit and cream, would mean an enormous increase in a product which necessarily could not bear but a small, if any, advance at the present time. The rate from Vancouver to Montreal is now $3.00, and the proposal would advance it to $7.20 per 100 pounds. The Board accordingly took the stand that no advance should be made in these rates. However, a slight modification was made in regard to collection and delivery service in connection with such rates, requiring that commodity rates for less than carload should not include the collection service but must include the delivery service at destination. Carload rates must be entirely exclusive of collection or delivery service, but the express companies must switch the cars to team tracks adjacent to passenger stations convenient for unloading without additional charge.

Empty cream cans which are returned at a nominal charge of 5c., including collection by waggon, will in future be exclusive of this collection.

The question of allowing carload shipments of fruit the privilege of partial unloading in transit was given consideration and the Board found that at the present time the express companies allow one opening for this purpose at the charge of $5.00, whereas in the United States two openings are allowed. Accordingly it is ordered that two openings shall be allowed at a charge of $5.00 per opening.

Ruling on Joint Rates

Joint Rates.—A very important portion of the decision is that outlined on page 169, which states that no higher rates shall be charged for carriage where the services of two or more companies have to be used than for a similar mileage to a single company, in other words, joint rates are established on a single line basis.

At the present time such joint movements are charged the aggregate of each company's rate on shipments of 100 pounds and over, shipments of less than 100 pounds taking the graduated charges as appear under such aggregate rate.

The express companies at a hearing in Montreal in connection with this question supplemented their application by filing information to the effect that they desired to state the new rates shown in the application in what are commonly known as "block tariffs" with a view to simplicity in stating rates.

Division of Dominion Into Blocks.—The international tariffs naming rates from Canada to the United States and in the opposite direction have been arranged by dividing the Dominion of Canada into blocks similar to those in effect in the United States, beginning in number from the 49th parallel. The first block is 5,819 at Alberni, B.C., the numbers following along the 49th parallel to Cochrane, Ont. The blocks directly underneath these blocks are numbered so that the last two numbers are the same. The lowest numbered block is 3,102 at Windsor, Ont. The express companies proposed to adopt this same blocking for the rates between points in Canada.

Main Blocks.—Each block measures one-half degree each way and the constant dimension is therefore the north and south length, roughly 34½ miles on the meridian. The width is approximately 23 miles at the 49th parallel.

Sub-blocks.—Each main block is sub-divided into four sub-blocks by lines intersecting at right angles at the centre. These blocks are lettered A, B, C and D.

Method of Stating Rates.

(*a*) *Between Sub-blocks in One Main Block.*—The appropriate rate between any two sub-blocks is arrived at by following the line of railway and counting each sub-block as 15 miles north and south and 12½ miles east or west.

(*b*) *Between Sub-blocks and Adjacent Main Blocks.* The rates from a point in any main block to a point in each of the three adjacent main blocks, in any direction, are made in somewhat the same way as the rates between two sub-blocks, that is, the sub-block in which point of origin is located is taken as the basing block, and the line of railway is followed from point of origin to final destination, counting 12½ miles east or west and 15 miles north or south.

(*c*) *Between Main Blocks.*—The rates between any two main blocks, that is a block at destination being more than three from block of origin in any direction are made by establishing a base point in block of origin and block of destination as near the centre as may be practicable, preference being given to large commercial or distributing towns and points which are common to two or more express companies. The distance between these two points following the line of railway is then determined and the rates as appearing in the mileage scale applied. These rates would therefore apply from all points in block of origin to all ponts in block of destination, although the actual mileage between some points would be less or higher than between base points.

Directory of Express Stations

Joint Directory of Express Stations.—As part of the block system tariffs, the express companies provided this directory for the Dominion of Canada, which shows in alphabetical order, by province and town, each station together with express company or companies serving it, and also the main block numbers and sub-block letters, to be used in determining its location and the rates to apply. In this way each main block will have one tariff naming rates from all points in that block to all points in the Dominion of Canada, giving the agent a quick and simple method of determining rates.

Graduated Charges for Less than 100 Pounds.—The present graduated table carried head line or rates per 100 pounds having a spread of 10c. from the 40c. to the 60c. rate; and 15c. from the 60c. to the 90c. The 90c. to $1.00 is only 10c., while all those over $1.00 were subject to a uniform spread of 25c. For example: The first head line or rate per 100 pounds is 40c., the next 50c., the next 60c.—or a spread of 10c. between each. This is followed by 75c. and 90c., or spreads of 15c. Then $1.00, after which the 25c. spread occurs uniformly starting with $1.25.

The application of the express companies proposed to make a uniform spread between each headline or rate per 100 pounds of 10c. Owing to the establishment by the Board in the judgment of different rates where delivery service

s not performed, multiples of 5 had to be introduced, so the graduated table as ordered is the same as that applied for by the express companies except that multiples of 5 have been inserted in the headline rates, and appropriate graduated charges named thereunder. Further explanation will be found under "Delivery Limits."

At the present time the graduated table begins at 1 pound and advances by 1 pound up to 10 pounds, after which it advances by 5 pounds. The scale as applied for by the express companies and ordered by the Board advances by 1 pound up to 15 pounds, after which it advances by 5 pounds. There is also quite a revision in the scale of charges. The effect of this revision is to actually make some reduction in shipments weighing between 10 and 50 pounds. (See page 162 of Judgment.) The minimum charge is, however, advanced from 25c. to 30c. per shipment.

Free Delivery Limits

At the present time the express companies collect and deliver shipments free of charge at a number of points throughout the Dominion of Canada, or in other words, the rates from point of origin to point of destination include both collection and delivery service.

A great many complaints have been made in the past few years dealing not only with free delivery area and the fact that it did not include certain districts, particularly in large centres, but also to the fact that the express companies did not maintain the service at a great many points although the rates charged were the same as between points where the service was given. This question was considered to a certain extent by the Interstate Commerce Commission in the United States at the time they ordered into effect the block system of tariffs and rates in that country, but they could not come to any definite conclusion as to what should be done, and to-day they handle the situation the same as the express companies in Canada.

The judgment of the Board deals very fully with this question (pages 171 to 179), and the Chief Commissioner has decided that some thing can be done to prevent the apparent discrimination as between cities getting the service and cities not receiving service. He accordingly ordered that where no waggon service is given, that is collection at point of origin or delivery at destination, the rate per 100 pounds shall be reduced by 30c., and where only one of the services is given, either collection at point of origin or delivery at destination, 15c. must be deducted from the rates per 100 pounds. For example, take where no service is given and the rate between point of origin and point of destination including service is $1.10, the rate without the service would be 80c., and where only one service is given the rate would be 95c. Shipments of less than 100 pounds to take the appropriate graduate rate as appearing under the reduced headline rate.

The express companies also made an application to the Board for the establishment of a uniform basis for determining the free delivery of collection areas at different points, along the lines of dividing the city or town into one-quarter mile squares and determining the free delivery area by the number of population for each quarter mile square. The Board gave this matter very careful consideration and ordered the basis in effect. (See page 177 of Judgment.)

The following will explain this matter clearly:

1. The corporate area shall be mapped into four parts by lines intersecting at right angles at a centrally located point, and based on these lines each such part shall be divided into squares measuring one-quarter mile each way, hereinafter called "blocks."

2. The minimum qualification for free cartage shall be four adjoining blocks, each containing at least 100 families in places with a population of 5,000 or over, and 50 families in places with a population of less than 5,000; except that in places with a population less than 1,000, free cartage may be provided in the discretion of the company. Industrial plants and business houses shall be initially reckoned as one family of five (or less) regularly employed persons, and each additional five as one family more.

3. From said four primary blocks each successive block conforming to the requirements of rule (2) shall be included in the free cartage area.

4. Any block not conforming to the minimum requirements of Rule (2) but which is bounded on three sides by cartage blocks, or through which express vehicles necessarily pass, shall be included in the free cartage area.

5. Four or more contiguous blocks conforming to the requirements of Rule (2), but separated from the free cartage area hereinbefore defined by not more than one-quarter mile (air mileage) shall receive the free cartage service.

6. Industries, or business or public institutions, in non-cartage blocks shall receive the free cartage service, provided they are not more than one-quarter mile from the nearest cartage block, and the intervening area shall also be so served.

7. A detour of more than one-quarter mile outside the free cartage area, in order to use an intervening bridge or vehicular ferry, is not hereby required.

8. Free cartage is not required by these rules beyond the corporate limits, nor within such limits where or when the roads are not reasonably passable by express vehicles.

9. The boundaries of the free cartage area shall be defined by thoroughfares or topographical features nearest or most convenient to the farthest lines produced by these rules.

Free cartage shall also be extended to a thoroughfare beyond but bordering the cartage limit, provided that at least 75 per cent. of its lots within a block are occupied, and that convenient cross connections exist; such thoroughfare to become the provisional limit with respect to the next thoroughfare beyond but adjacent to it that complies with the said minimum requirement; and so on until a complete block is formed under Rules (1) and (2).

A description of the local free cartage limits shall be posted in the express office at each cartage point and filed with the Board.

10. Should the traffic at any cartage point be so limited as in the judgment of the company not to warrant the expense of furnishing its own vehicles, an independent agency shall be employed by the company at its own expense, and shall be used until and unless the company is able to show to the satisfaction of the Board of Railway Commissioners that the price demanded for such service is unreasonable.

Joint Freight Rates

Board Orders Basis of Joint Freight Rates in Eastern Canada by Judgment and Order No. 28618, dated Ottawa, August 1st, 1919

The question of establishing a basis for joint rates to apply on shipments moving between points on one railway to points on another, has been under consideration for a number of years.

At the present time there are joint rates in effect between the C.P.R. and the Michigan Central, Pere Marquette, Chatham, Wallaceburg & Lake Erie, Wabash, and T.H. & B. The G.T.R. have similar joint rates with these lines. There are also joint rates in effect between the C.P.R. and G.T.R. on the one hand and the portions of the Canadian National Railways, formerly known as the "Central Ontario," the "I.B. & O." and the "Bay of Quinte" on the other. There are also several other joint rates arrangements between the larger systems, the C.P.R. and G.T.R., and various small roads. This leaves joint movements between the C.P.R. and G.T.R. and other portions of the Canadian National Railways, particularly between Montreal and Windsor, without any basis for joint rates.

As has been stated, the question has been under consideration for a number of years. The G.T.R. and C.P.R. endeavored to meet the situation and filed with the Board of

Railway Commissioners, effective May 1st, 1918, tariffs naming joint mileage class rates to cover such movements. Objection was raised to this tariff on the grounds that the rates so named were too high and really made advances over the existing joint through and combination of local rates. The basis for this tariff was the standard mileage rate plus 4c. per 100 pounds first-class up to 110 miles, 2c. 110 to 120 miles, with no addition beyond this distance. To this was of course added the 15 per cent. as allowed in the "15 per cent. advance" case.

The new Order and Judgment of the Board establishes a basis for joint rates within the territory bounded roughly by Windsor, Sarnia, Lake Huron, Georgian Bay, Sudbury on the west, and on the north by and including the C.P.R. Sudbury to Mattawa and the Ottawa River, and on the east by Quebec and Megantic. This is roughly the territory covered by the Internationl Rates Case Order 3258, dated July 6th, 1907, as amended.

The rates to be used are those shown in what is known as "Schedule A" (a scale of mileage class rates forming part of the Order in the International Rates Case) plus the following amounts in cents per 100 pounds:

1	2	3	4	5 to 10
8	7	6	4	2½

The mileage scale referred to is that now in effect for a one-line haul on the C.P.R. and the G.T.R., except in a few cases where maximum rates have been established from Windsor, Buffalo and Hamilton. The addition of the amounts just mentioned is stated by the Board to cover an additional charge for cost of transfer from one line to another as well as a certain amount for a two-line haul. The order requires that the railway companies shall prepare tariffs naming rates from point to point. They must also consider the various provisions as to grouping and the maximum rates between certain points as outlined in the International Joint Freight Rates.

Rates Case Order

In connection with the point of interchange the Board have specified the junction points at which such transfer, from one line to another, shall take place, the points named being as follows: Lennoxville, Actonvale, St. Rosalie, Montreal, Ottawa, Renfrew, Brockville, Kingston, Peterborough, Toronto, Orillia, North Bay, Essa (Utopia), Inglewood, Milton, Guelph, Tillsonburg, Woodstock, London, Mount Forest. All shipments moving under these rates are to be subject to a minimum charge of the first-class rate per 100 pounds point of origin to destination, but not less than 75 cents.

It would be rather difficult to prepare a comparison of rates which would be of interest to all members and show the rates which would be put into effect in accordance with the order. However, there is no doubt that this new basis will make a reduction in a great many cases from the present arrangement. It might be pointed out that the judgment of the Board shows a comparison for specified distances as between the rates which would apply under the Order of the Board and those which were proposed by the G.T.R. and the C.P.R. in the tariffs which they submitted to the Board to take effect May 1st, 1918. This comparison shows that the rates now ordered are considerably lower than those proposed by the carriers. The Order requires that the tariffs naming the rates shall be filed with the Board to become effective not later than October 1st, 1919. As the rates shown therein will be reductions from those now in effect, the carriers will not be required to give more than 3 days' notice as provided by the "Railway Act."

Further announcement will be made as soon as the tariffs come to hand.

In connection with this question it is interesting to note that the Railway Act has recently been amended, making it mandatory rather than permissive, that the carriers establish joint rates. Section 336 formerly read that the carriers "may" establish joints rates, and this has been changed to read "shall" establish joint rates.

It will be noted that there is no junction point provided in the Board's order for traffic moving between the C.P.R. and the G.T.R. on the one hand, and the Canadian National Railways on the other, between Toronto and Montreal. It is our understanding, however, that arrangements will be made for applying the basis named in the order between these lines at junction points such as Napanee, Bonarlaw, Trenton. This refers particularly to movements between local points on the Canadian Pacific Railway, such as Peterborough, and points on the Central Ontario Railway such as Picton.

Cartage Charges

New Schedule which Became Effective at Cartage Points on September 4th

For the information of our members we show herewith a complete list of the "Cartage Points" where the railway companies' cartage agents maintain such service, together with the old and new charges and list of "Exceptions."

	carloads.		Less carloads.		Smalls—Minimum charge in cents for any one consignment			
					300 lbs. and under.		Over 300 lbs.	
	Cents per 100 lbs.							
	New.	Old.	New.	Old.	New.	Old.	New.	Old.

CN—Canadian National Railways.
CP—Canadian Pacific Railway.
GT—Grand Trunk Railway.
TH & B—Toronto, Hamilton and Buffalo Railway.

Cartage charges will be collected on the basis of actua weight subject to the minimum provided in the Canadia Freight Classification.

These charges apply on freight rated 1st, 2nd, 3rd, 4t and 5th class in Canadian Freight Classification No. 16, sup plements thereto or reissues thereof, except articles show under the heading of "Exceptions."

Cartage charges shown herein will not apply on,—

Freight carried under Canadian Freight Classificatio classified lower than 5th class.

Freight carried under other classifications which may classify therein 5th class or higher, but which is lower than 5th class in Canadian Freight Classification.

Freight weighing 2,000 lbs. or over, per piece or package.

Freight in bulk, carloads, classifying 5th class or higher.

Freight for private house delivery.

Acid in Carboys or Demijohns.
Agricultural Implements.
Ash Sifters.
Baby Carriages.
Bakers' Ovens.
Bananas, not crated.
Bar and Shop Fittings and Furniture.
Baskets.
Baths.
Boats.
Bone Black, in bags.
*Broom Stock.
Brooms (straight shipments).
Cereals (straight shipments).
Churns.
Cork.
*Conductor Pipes.
Cream Separators.
*Culverts.
Doors, Windows.
Door and Window Sashes and Frames, including Skylights and Ventilators, Metal or Wooden.
Dressed Meats (except hogs), unless properly canvassed or otherwise protected.
*Dry Hides.
*Eave Troughing.
Elevators (and parts thereof).
Empty packages or containers, new or old: except when K.D. Flat, whether loose, nested, jacketed, in crates, or boxes, or otherwise, including Caskets and Coffins.
Excelsior.
Feathers.
*Flax Fibre.
Furnaces (and parts thereof).

*Added, effective September 4th.

Freight Men Shifted

Changes Consequent Upon Resignation of Guy Tombs from Canadian National Railways

In a circular issued by Mr. George Stephen, Freight Traffic Manager of the Canadian National Railways, the promotion of Mr. A. T. Weldon, to the position of Assistant Freight Traffic Manager at Montreal, with jurisdiction over all lines east of Port Arthur and Armstrong, Ont., is announced. Mr. Weldon previously held the position of Assistant Freight Traffic Manager at Moncton, N.B., with jurisdiction over the lines of the Canadian National Railways in the Maritime Provinces only. Mr. Weldon will be succeeded at Moncton, N.B., by Mr. M. F. Tompkins, who will have jurisdiction in freight traffic matters over the lines of the Canadian National Railways east of Matapedia, Que., and Edmundston, N.B., with the title of General Freight Agent. These changes are consequent on the resignation of Mr. Guy Tombs, formerly Assistant Freight Traffic Manager at Montreal, who left the railway field to engage in commercial work.

The branch factory in Galt of the Williams, Greene & Rowe Co., shirt manufacturers, Kitchener, which was opened on August 11th, in the Kerr Block, is reported to be doing well, and fifty machines are in operation. It is stated that no difficulty is being experienced in getting help.

Will Manufacture Buttons

International Button Co., a New Enterprise, Will Locate Plant in Arnprior

According to an announcement appearing in the Arnprior *Chronicle*, the International Button Co., Limited, will establish a factory in that town. Negotiations have been in progress for some time between the local Board of Trade and Messrs. W. C. Thompson and H. C. Bellew, of Montreal, president and secretary respectively of the company.

The International Button Company, Limited, are a newly incorporated organization. Mr. Thompson has had a great deal of experience in the manufacture of buttons in the Old Land and in the United States, and he came to Canada at the suggestion of the Canadian Government to enquire into the possibility of this and other industries that have been largely confined to Germany and Austria. They have had the latest improved machinery built for them and they are prepared at once to begin manufacturing. Their purpose is to erect a factory to employ 200 hands, but they have already marketed their entire output for two years, and as it will delay matters to wait for the construction of a new factory, they will probably lease the old clothes pin factory and premises for the present, renovating and enlarging it.

At the commencement the company will employ at least fifty hands, with a weekly payroll of $500; this they expect to double within six months.

The raw product used is vegetable ivory, and this will be brought from South America in shipload lots.

An Important Incorporation

An Eight Million Dollar Corporation to Develop Iron Ore Deposits has been Formed

A charter for $8,000,000 was issued on August 13, to the Consolidated Iron & Steel Corporation, Limited, a company of Detroit and Toronto parties engaged in the mining business. The company is essential Canadian, with head offices at 20 King Street East, Toronto. They own two large deposits of proven iron ore lands and it is their intention to proceed in a large way with their development.

The company has opened a large hematite mine on the C.N.R. in the County of Leeds, 25 miles north of Brockville at Furnace Falls, where they have 1,500 acres. The early settlers erected a smelter at this place 110 years ago and it was operated in a primitive way the ore being ground out by water wheel. It still retains the name given to the place at that time. This was in the days when Lake Superior and Pennsylvania ores were almost unknown. The City of Brockville has offered inducements to the company to build a pig iron smelter there, and it is being seriously considered as there is a surplus of electric energy at a low rate. As the mine has excellent transportation facilities, ore can be shipped by the St. Lawrence, either west to Canadian and United States markets or east to Montreal, Ottawa, and European markets.

Their other property consisting of 2,500 acres is located at mileage 182 on the Algoma Central Railway. This has been gradually developed since it was discovered in May, 1911. Up to the present time permanent camps have been built and diamond drilling has been carried on from November, 1917. to July, 1918, proving up large deposits of ore to a depth of 500 feet. Prominent iron ore engineers reporting on this property estimate the tonnage at from 800,000,000 to one billion tons of ore. The ore is free from titanium and low in phosphorus and sulphur. Work on both properties is now being carried on, thousands of tons already being piled up at the Furnace Falls mine ready for shipment.

The Plumb Plan of Railroad Administration

Scheme of Ownership and Operation which is Now Receiving a Great Deal of Attention in the United States—Practically Places Control of the Railroads in the Hands of Those who are Deriving their Livelihood from Railway Operation

By HON. ATLEE POMERENE

Member of United States Senate

IN the United States at the present time a great deal of attention is being directed to what is termed the Plumb plan of railroad re-organization and administration. The plan is proposed by the Railroad Brotherhoods and has the support of the American Federation of Labor. Under its terms the Government of the United States would acquire the railroads and hand over the control and operation to what has been termed a "Tripartite Board," the members of which would be selected as follows—one-third by the President of the United States, one-third by the railroad operatives in the official class. and one-third by the railroad employees below the official rank. In other words, two-thirds of the Board members would represent those who were on the railroad payrolls, while one-third would presumably represent the general public.

Valued at Twenty Billions

A criticism of the Plumb plan has been made by Senator Pomerene, which brings to light several of its weak points. The Senator replies to a letter received from one of the railroad brotherhoods in which he is asked to state whether he is for or against the plan. In the course of his reply, Hon. Mr. Pomerene says:

"The railroads of this country, in round numbers, are valued at $20,000,000.000. They are the web and woof of America's industrial, commercial and social life. Under the Plumb plan it is proposed to take this property by purchase or condemnation from its stockholders, among whom are thousands, not to say millions, of the plain people of the country—old and young, the widows and the orphans—and to pay for them in cash payments or by the issuance to such owners of United States Government bonds. In other words, they shall be paid for by the people's cash or by their obligations. They are then to be managed and operated by the national railway operating corporation for 100 years, which shall have a board of directors to be composed of fifteen men, five of whom shall be selected by the classified employees of the railways, five by their official employees, and five to be appointed by the President, not more than three of them to belong to one political party.

"Suffice it to say that you and I both understand—even if we are not willing to admit it—that the ten railway directors will have interests which will be at variance with the interests of the traveling and shipping public, who pay the bill; and while the other five appointed by the President are said to represent the public, which perhaps embraces about 100,000,000 people—I mean the people other than those who will be directly or indirectly interested either as the classified and official railway employees or their families —they will owe their appointment to a political power and, it is my judgment, may be influenced by the political purposes of the party in control of the Government.

"Are you quite sure that when the Plumb plan was devised it was in the interest of 'the masses?' If so, how does it happen that the bill is presented by the brotherhoods alone and their associates? Why were not the interests of the general public consulted?

"In the history of railroad economics do you know of any country anywhere under which any plan akin to the Plumb plan has been adopted; Are you quite sure that it is fundamentally sound to require the Government of the United States to invest $20,000,000,000—about one-twelfth of the total wealth of the country—in this enterprise and turn it over to the operatives for 100 years?

"If the Plumb plan is sound economically and is for the interests of 'the masses,' why do you not suggest that similar legislation be adopted whereby all public utilities, including water works, electric-light plants, gas and heating plants, be purchased and turned over to their employees and operatives, respectively?

"If it is sound and in the interest of *the masses*, why do you not suggest that all the coal mines, iron and copper mines, be purchased by the Government and turned over to the operatives in the same way?

"Why do you not suggest that all the manufacturing and industrial plants of the country be purchased with Government funds or by the issuance of Government bonds and turned over to their operatives in the same way?

"Why do you not advise that all the stores be purchased and turned over to their operatives in the same way?

"Why do you not recommend that all the banks of the country be acquired by the Government and turned over to their operatives?

"Why do you not ask, in the interest of 'the masses,' that the Government purchase all the farms of the country and turn them over to the employees on the farms?

"And, lastly, may I suggest that if one man should happen to own two houses, one of which he rents, why do you not ask that the second house shall be bought by the Government and turned over to the renter?

"Where is this going to end?

"My friends, permit me to say the Plumb plan has nothing akin to it outside Bolshevik Russia.

"It is worse than socialism.

Ownership for a Class

"Socialism contemplates the public ownership of property to be controlled and operated by the public for the public. The Plumb plan contemplates the public ownership of the railroads for a class. As already stated, they are to be taken over by purchase or condemnation, and paid for with the cash or bonds of the whole people and then turned over to the national railway operating corporation, whose board of directors shall consist of fifteen men, ten of whom shall be railroad classified and official employees. As neither class of these employees will have any stock, their interests will be one and the same as against the public. In other words, $20,000,000,000 worth of property bought by money belonging to 110,000,000 people is to be turned over to 2,000,000 railroad men, representing, perhaps, including their families, 10,000,000.

"Does this seem to be for the benefit of 'the masses?'

"Mr. Plumb in his testimony before the Senate Committee on Interstate Commerce in February, assumed that the capi-

tal invested amounted to $18,000,000,000 approximately. In his testimony last week before the Interstate Commerce Committee of the House, he estimated that all the present owners would get for their property is $13,000,000,000. So, according to his own testimony, Mr. Plumb's plan, if enacted into law, will substantially confiscate $5,000,000,000 worth of property belonging to private owners.

"And how is he to pay for this property even at this reduced value?

"He tells the public that he will, by his plan, save to the shippers of the country a large expense, in that these bonds can be sold for 4 per cent.

"The railroads earned during the three years of Government control 5.21 per cent. He does not say who is to buy this perhaps $18,000,000,000 or $20,000,000,000 worth of bonds. He has not named the purchasers.

"May I not remind you that during the last Victory loan, by the best organized, nation-wide campaign conducted by all the patriotic men, women, and children of the country, we sold less than seven billions of bonds at 4¾ per cent. And if, when all the patriotism of the country was back of this campaign, it was so difficult to sell these bonds at par for 4¾ per cent., will Mr. Plumb rise up and tell us where he is going to sell $20,000,000,000 worth of bonds—probably the real value of the roads—at 4 per cent.?

"Ought you not to tell me how you are going to sell these bonds when you ask me to support this proposed legislation?

"Does it not occur to you, when not only the whole nation, but the whole world is disturbed, industrially, economically, and financially, that we had better wait until normal conditions are restored before beginning a scheme so revolutionary as that proposed in the Plumb plan, even if it were sound?

"And what would be the result if it fails?

Should Be More Consistent

"Invoking the principle of brotherhood—a name I love—do you not feel you ought to be consistent, and while asking for this investment of the public funds for your benefit to likewise ask for the benefit of a proportionally equal amount of Government funds for every other business enterprise in the United States, and turn that over to the employees of those several enterprises?

"Does not the principle of fraternity suggest this?

"And by the time we get through with it there will be $240,000,000,000 of Government bonds issued and on the market.

"My friends, this Plumb plan spells ruin for beloved America.

"In the past few years a good many people have urged Federal ownership and control of the railroads, the telegraphs, and the telephones. In view of recent experiences most of them who have had no selfish purpose to serve have changed their views.

"Government control of these utilities has been so complete that it does not differ materially from actual Government ownership, and there is no such radical difference between the present Government control and operation and that provided for in the Plumb plan as to warrant anyone in saying that while the former has been a failure the latter will be a success.

"From the standpoint of operation every user of the railroads, telegraphs, and telephones knows that the service has been worse than during the private control, excepting only the condition of the railroads during the last two months of private control, which was due to war conditions.

"And let me say a word concerning Government control of railroads from a financial standpoint.

"You will remember that the increases in wages during the year 1918 were made retroactive, dating from January 1, 1918.

"Freight rates were advanced 25 per cent., and passenger rates much more, the increase to take effect as of July 1, 1918. Director General McAdoo, in his testimony before the Committee on Interstate Commerce, said to us that if the increase in rates had been for the entire year there would have been a 'substantial surplus for the year of at least $100,000,000 to the Government.' And he added, 'For the year 1919, with all wage increases granted in 1918 operating for the entire twelve months, and upon the assumption that the traffic of 1919 is substantially the same as in 1918 and that the cost of fuel and supply remain the same, it is estimated that there should be a surplus to the Government over and above the standard return of approximately $100,000,000.

"As I now recall, Director General Hines gave substantially the same assurances early in January of this year.

Losing Millions a Month

"But what was the result? Senator Cummins, chairman of the Interstate Commerce Committee, speaking in the Senate on August 5, said, 'We lost $240,000,000 last year, and we lost in the first four or five months in this year, 1919, $260,000,000 and we are now losing at the rate of $39,000,000 a month.'

"Do you really believe that under the Plumb plan you can turn this deficit under Government control either into a surplus for the account of the Government or the public or into better service for the country?

"I do not believe it can be done except by one increase after another in transportation rates.

"Permit me to make another suggestion: Since Government control was begun, the wages to the employees have been increased about $1,000,000,000. The Director-General, on July 31, 1919, informed the President that additional increases were demanded, which would aggregate, if granted, about $800,000,000 more per year.

"I have no knowledge as to whether the conditions are such as to justify this increase or not, and I express no opinion with regard to it. I want the railroad men and all laboring men to be liberally paid, whether under public or private control.

"But this is only an incident to the larger question to which I want to call your attention. If the conditions are such that this increase is justified, then I am for it. I await the proof before I shall decide it.

Should Not Insinuate Revolution

"But when your representatives come to Washington and not only ask this increase but demand that the Congress of the United States shall buy these properties at a cost to the Government of $18,000,000,000 or $20,000,000,000 and turn them over to the national railways operating corporation for management and operation, I want to say to you as one American to another, it is neither fair nor American, for them to insinuate revolution, as they have before the Interstate Commerce Committee of the House, unless their demands are granted.

"And let me suggest that the people at large have not expressed any desire for this plan, but members of your brotherhoods—I do not mean the chiefs—have been in Washington making their threats as to what would happen unless this legislation is enacted. As one Senator I shall always be open to conviction, but I never yet have yielded to a threat, and I never will.

"Of course, I know that you do not approve these methods. Law-abiding citizens, real Americans, never do approve them. It is only men of the Bolshevik type of mind that ever resort to them.

"Among the threats that have been made are threats of a nation-wide strike. I do not mean to suggest that the chiefs

Canadian Catalogues Wanted

The Public Library of New South Wales are making an effort to secure as complete a collection as possible of the latest information concerning trade, industries and manufactures of all countries, especially those included in the British Empire. They have procured from manufacturers and trading associations throughout Australia, Great Britain, United States of America and other countries, a fine collection of trade catalogues and similar publications. At present, however, Canadian manufacturers are not sufficiently well represented.

It would be well worth while for Canadian manufacturers to send their catalogues.

Address: Principal Librarian, The Public Library of New South Wales, Sydney.

of the brotherhoods have suggested a nation-wide strike, but some of the members of the brotherhoods have made these threats here in Washington to Senators. I am sure that you do not give any countenance to strikes under present conditions.

"I believe in the right of the laboring man to use the instrument of the strike under proper circumstances, but I do not believe the occasion is here or ever has been here or ever will be here which will justify a nation-wide strike, with all the distress it will bring, not only on the public at large but on the strikers and their families.

"With a general strike on in this country, tying up all the railroads, the products of the mine and the farm and the factory could not be moved to the centres of population and in one week's time the people of our great cities would be starved, and in winter frozen. The people of these centres of population include the wives, the children, and the babes of railway men as well as others. It is too shocking a situation to even contemplate.

"A sub-committee of the Interstate Commerce Committee, of which I am a member, has been engaged for a number of weeks in preparing a bill providing for the reorganization and regulation of the railroads to present to the full committee for its consideration. I hope it will appeal to the sober sense of the public. I can give no assurances as to whether it will be approved or disapproved, but of this I am convinced, that the American public never will approve the Plumb plan or anything akin to it.

"The Plumb plan is the most vicious piece of legislation that has been presented to Congress since I have been in the Senate. I would feel that I was contributing to the ruin, not only to the transportation system of the country, but to its financial and industrial breakdown, if I voted for it. It would lead not only to the ruin of the whole people, but to every railroad man as well.

"Notwithstanding the statement in your letter to the effect that this plan was unanimously adopted at a meeting of the representatives and delegates to whom it was submitted by you, I venture the assertion that when they understand it the vast majority of them will oppose it.

"Much has been said by the brotherhood chiefs and their counsel in the last few days here in Washington about the democratization of industry, and the Plumb plan is referred to as the means of democratizing transportation. A careful study of the bill will show that it is not democracy in transportation for which it provides, but autocracy in transportation.

"Mr. Plumb the other day referred to the Wall Street control of the railroads. That was true in the past. It is not true now. Wall Street has many vicious things to its credit in years gone by, but the captains of finance have never demanded $20,000,000,000 of the American people's money at one time!

"The Plumb plan out-Harrimans Harriman in his palmiest days! The public does not want to be skinned, but if it must be skinned it will make little difference whether it is by Wall Street or by the methods provided for in the proposed Plumb plan.

Toronto Branch and the Fire Marshals' Convention

By H. MACDONALD
Secretary, Toronto Branch, C.M.A.

THE Fourteenth Annual Convention of the Fire Marshals' Association of North America, an organization which now has 26 members and 29 associates, practically all of the latter having been added during the past year with a view to widening the interest in the work, assembled in Toronto on August 26th for a four-day convention. Many of the States in the Union have no Fire Marshals, but in practically all there is some officer such as a Fire Commissioner, whose duties are similar.

In Canada, Ontario has a fire marshal, while the other provinces delegate the pursuit of arson, organization of prevention work, etc., to some other officer. This was the first time the Association had met in Canada.

The C.M.A. entertained the delegates at dinner on the evening of Wednesday, August 27th, at the Scarboro Golf and Country Club, Mr. W. C. Coulter, Chairman of the Toronto Branch, presided, and extended the best wishes of the manufacturers to the visitors.

Mr. J. S. McKinnon, First Vice-President of the C.M.A., delivered a stirring address on the "Interest of the C.M.A. in the Work of Fire Prevention," giving the gathering some interesting facts about the work performed by the Association's Insurance Committee.

Mr. H. W. Fleury, Chairman of the Insurance Committee of the C.M.A., referred to Canada's record in the matter of fire losses as shameful. There was a great deal of inertia which would have to be shaken off. He hoped that by the next time the convention met in Toronto, the record would be better. Mr. Arthur Hewitt, Chairman of the Ontario Fire Prevention League—in the organization of which the C.M.A. took an active interest, gave a short review of the activities of the League and invited co-operation and support.

Mr. T. A. Fleming, President of the Fire Marshal's Association, acknowledged the hospitality of the C.M.A., stating that the present was a serious time for both sections of the American continent, but that through it all, the present good fellowship must continue.

Toronto branch was represented by Messrs. W. C. Coulter, W. H. Shapley, T. A. Hollinrake, R. L. McIntyre, and H. Macdonald, Secretary.

The Question of Conservation

is of more importance to the country to-day than ever.

Do Manufacturers Realize

the necessity of better Fire Protection? Do they realize

What Fire Prevention Means?

Fires during 1918 in Industrial Plants numbered only 486 or 5% of the total number for the year; but these 486 fires caused a loss of $7,565,322 or 48% of the total Fire Waste of the Province.

CLEANLINESS, ORDER AND FORETHOUGHT

are important factors towards reducing this preventable waste.
Manufacturers should provide better and more systematic
Inspection and Watchman Service.

More efficient fire fighting equipment---Chemical Fire Extinguishers and Automatic Sprinklers. In 15,000 fires, tabulated by the N. F. P. A., Boston, where Automatic Sprinklers were installed, 85% were put out by one Sprinkler Head.

Hangers in attractive colors, similar to this cut, may be had from your local Fire Chief

Appointed to Australia

James N. Mackin, who during the war represented E. C. Atkins & Co., Indianapolis, Ind., and Hamilton, Canada, manufacturers of the Atkins silver steel saws, in Washington, D.C., has been selected to represent the company in Australia. He is now superintendent of the entire Australian Division, with headquarters at the E. C. Atkins & Co. Branch House, 5 Australasia Chambers, Martin Place, Sydney, N. S. W., Australia. Mr. Mackin's thorough knowledge of every detail concerning saws, as well as his wide experience in selling and his pleasing personality, make him a man eminently fitted for this important position. He has many friends throughout the country who will be pleased to hear of his further success.

CANADIAN AGENCIES WANTED

British Trade Representative returning to London, England, desires Canadian Agencies for the British Isles and France. Salary or commission basis. Apply C. W. James, 11 Wineva Ave.; 'phone Beach 1112.

TWO YOUNG MEN, RETURNED OFFICERS

and possessed of capital, are prepared to purchase or take an interest in a sound and profitable manufacturing or commercial business; all replies will be treated confidentially, and may be addressed to "Enquirer," care London and Canadian Loan and Agency Co., Toronto.

HARDWARE REPRESENTATIVE

Returned man who has nearly fifteen years' experience in the wholesale hardware business, eight of it spent on the road in Alberta and British Columbia, seeks position to represent Eastern manufacturer in the West. Hardware lines or engineering specialties preferred. Can furnish satisfactory references. Box 4300, INDUSTRIAL CANADA.

To Manufacturers CANADIAN MANUFACTURERS, LTD., Box 1881, Johannesburg, South Africa, wish to inform all Manufacturers they are open to negotiate for representation in South Africa. ANY LINE CAN BE HANDLED SUCCESSFULLY

DESIRABLE FACTORY FOR SALE

At Less Than One-third Replacement Value

Above L shaped building, mill construction, one wing 200′ x 65′, the other 260′ x 65′, total floor space, exclusive of basement, 120,000 sq. ft. Ceilings 12½′ high. 2 boilers 72″ x 16′, with eighty-eight 3½″ flues each; Leonard-Corliss engine 12″ diameter cylinder and 30″ stroke; Dakin feed water heater 11′ high, 42″ in diameter, 2 feed pumps, a duplex and a single; a Leonard Highspeed engine, 9″ x 12″, formerly used for lighting purposes. Factory is well constructed, in excellent repair, one block from Grand Trunk Station at Stratford, 3 blocks from City Hall, has private switch and small yard space with additional adjacent property available at reasonable figure. Splendid property with exceptional sign advertising possibilities. Price most attactive, owners desire to sell outright. Purchaser would have no difficulty in sub-letting excess floor space.

Also available, factory formerly used for war contracts, 210′ x 47′, 2 storey, mill construction with boiler and engine room 70′ x 37′, 2 storey warehouse 56′ x 30′ and 4 acres of land. A Leonard-Corliss engine 13″ x 30″, boiler with capacity 100 horse-power, electric dynamo and hot water heater. Factory is located in centre of furniture manufacturing district, has good switching facilities, price is right, and easy terms could be arranged.

Available labor includes: Skilled mechanics, skilled wood workers and ample female help; labor 99% British; 75% home owners; living conditions unsurpassed and no strikes in Stratford for 15 years. 6 lines of the Grand Trunk serve the City; shipping facilities are unexcelled; Hydro Electric Power available and water supply unlimited.

Manufacturers or wholesalers wishing further particulars and prices of the above properties are requested to communicate with Stratford Chamber of Commerce

TIME

—*the Power to Which the World's Work is Harnessed*

ALL the work of the world, all men, all businesses, are belted to the flying pulley of Time—some snugly and efficiently, others loosely and wastefully.

Snug belts drive. Loose ones slip. The moral is obvious—*see that YOUR time belt is tight!*

To take up the slack, to cut waste out of working hours, systematize your business with

International Time Recorders

Internationals make every minute count; put workers on their mettle; discourage small time losses and thus prevent big ones.

They enable the worker to *keep his own time* with mechanical accuracy, and give him a new sense of responsibility. It becomes a matter of pride to have his International card stamped for full time; and a matter of business also, for with Internationals *every minute* of service rendered will show in his pay envelope. Internationals are sure.

The simple and complete manner in which Internationals record the data needed for payroll accounting greatly reduces clerk hire. Two or three clerks will accomplish with Internationals the work that would require half a dozen clerks by any of the manually-controlled systems;

—and besides, the *International records will be right.*

Yes—we make the model you need. There are 260 International types, either electrically operated or spring-driven, and adapted to every line of business. ***Write us.***

Organization Depends on You

Your filing clerk is not responsible for the way your filing system works; it's not her fault if it's *fundamentally* wrong. And you certainly can't blame her if she holds you up for that "wanted-in-a-hurry" paper—to close some important point in a discussion—to get some needed information.

You're responsible for the proper organization of your office, and everything that's in it—including your filing system.

This is the case in your factory; every operation is planned for your men; shop practices are standardized; all the thinking is done in advance—to save time, delays and clogged wheels.

The only difference between factory and office routine is one of function—*for efficiency both depend on organization.*

So your clerks are only responsible for carrying out the details of filing. And if your filing system isn't fundamentally right—in other words if it won't yield up the paper you want when you want it—is it really fair to put the blame on your filing clerk?

The "Office Specialty" Direct Name System of filing correspondence is a steel-trap, error-proof system of filing. Your filing clerk can't go wrong. Everything's worked out to act automatically—it's organization based on simple, fundamental principles.

Hundreds of business men in every kind of business have found this system the end to their "filing-and-finding-of papers" problems. The same benefit it has brought to them is offered to you—and backed by time, labor and money saving proof.

If this "getting-papers-when-you-want-them" question is bothering you, get in touch to-day with our nearest Filing Equipment Store and let one of our service men demonstrate its particular benefits to you. Or if you want a little more information about it before doing anything write to the nearest store for descriptive folder No. 1862.

Some Aspects of Foreign Exchange

By GEORGE E. ROBERTS
Vice-President, National City Bank of New York

(From the "Nation's Business")

FOREIGN exchange has always been considered a subject of great obscurity to the layman, and in fact it has many complexities, but the main principles are simple enough.

If a country imports more than it exports, evidently it must settle the difference. The methods of settlement are substantially the same as in case of an individual who buys more than he sells, to wit: by payment of cash, a use of credit which postpones payment, or by the transfer of securities representing property of some kind.

In normal times trade naturally keeps fairly well in balance, a country's outgoing products approximately settling for the products and services which it obtains of others. We see this principle illustrated within our own country in the relations of particular sections to the whole country. The products of a state flow out to the general markets and settle for the goods which that state buys outside, and for various services, such as transportation, insurance, loans, etc. In some cases, as when a state's production is mainly of one crop, the payments will run heavily one way at one season of the year, when the state will accumulate either cash in its own banks or credit balances in the banks of financial centres outside; and then during the remainder of the year the payments will run adversely, compelling shipments of cash or a drawing down of outside balances, and possibly the negotiation of loans outside.

When Crop Failures Occur

If there should be a crop failure, cutting off the flow of products one way, the situation will be thrown seriously out of balance. In this event the state or locality will be obliged to use its credit to a greater extent than usual. The merchants will ask for credit where they are accustomed to buy, the local banks will borrow of their correspondent banks in the financial centres, real estate loans will be negotiated, collateral will be pledged, and securities will be sold, all for the purpose of tiding the community over an adverse trade balance.

Settlements between different sections of this country are now made largely through the Federal Reserve banks, and the system illustrates the usual process of settlements between countries. Drafts, checks, etc., representing claims for cash received within a given reserve district, first find their way to the reserve bank of that district; the reserve banks send them direct to each other, but report their claims on each other by wire daily to a clearing house maintained in Washington, where they are offset against each other. This clearing house keeps a book account with each reserve bank, crediting it with balances in its favor and debiting adverse balances. It has in its custody a stock of gold, amounting at this writing to about $524,000,000, deposited by the reserve banks for the purpose of covering the balances which may arise against them.

Originally, these deposits were actually segregated, and weekly settlements were made by the physical transfer of metal to balance the accounts, but of late the gold is all kept together, like the ordinary deposits of a bank and settlements are made simply by debit and credit entries. The efficacy of the system, however, depends finally on the authority which the Federal Reserve Board exercises to require the creditor banks to re-discount paper for the debtor banks whenever the latter's share of the gold fund runs low. The parity of domestic exchange is thus sustained at last by grants of credit between the Federal Reserve banks. The whole system is based upon the theory that in the long run the transactions will balance each other.

But What of Foreign Barter?

Arguing from the successful operation of this clearing system with its gold settlement fund, an international clearing system and gold settlement fund have been suggested. It would work all right, undoubtedly, so long as every country kept up a deposit of gold sufficient to cover its adverse balances, but when any country failed to do this the exchanges on it would slump, unless the creditor countries would come forward with loans.

It is obvious that there is more difficulty about managing an unbalanced situation in the international exchanges than in the domestic exchanges. Between different sections of the same country the money is the same, banking system the same, investments are mutually familiar, and all business relations are so close as to establish confidence and credit. Between this country and England the conditions have been quite favorable in the past because England has been a large investor in American securities, and had a familiarity with them which made it easy to pass large amounts of them back and forth in the balancing of trade differences. We, however, have never invested much in British securities, and comparatively few people in this country have any knowledge of them. Therefore, now that there is a heavy trade balance in our favor in our dealings with England, we are not as well prepared to handle the situation as England was when the balances ran the other way.

The Supremacy of London

London's long career as the clearing centre of the world's trade has been due to several important conditions:

Her maritime supremacy, with shipping lines communicating directly with all parts of the world.

Her capital investments in all parts of the world, creating credits for her everywhere, making London a world market for securities and familiarizing her bankers with credits everywhere.

The great free trading market for commodities of every kind, making it always possible to sell any kind of products there at a good price.

The free gold market, making a draft on London a preferred means of payment anywhere in the world.

Fluctuations in exchange rates are caused by the fluctuating state of trade. If trade is in balance, there is no factor in exchange rates but the simplest of banking service.

BANK OF MONTREAL

A GENERAL BANKING BUSINESS TRANSACTED

ESTABLISHED 1875

IMPERIAL BANK
OF CANADA

CAPITAL PAID UP $7,000,000 RESERVE FUND $7,500,000

PELEG HOWLAND, President

The Bank offers a service of the highest order to Canadian manufacturers because of its 152 Branches located in important industrial and agricultural centres throughout Canada.

COLLECTIONS made at all points in Canada and in foreign centres.

DRAFTS—Money Orders and Letters of Credit issued, available throughout the world.

EXCHANGE—Domestic and Foreign Exchange bought and sold.

SAVINGS received at all Branches—interest credited half yearly at current rate.

Accounts of Merchants and Manufacturers solicited.

HEAD OFFICE - TORONTO

It is merely book-keeping, the drafts drawn between countries cancelling each other in the accounts. But as soon as trade begins to get one-sided a new service is required and somebody must be paid for rendering it. A credit must be created by other means. If the balances are small and temporary or seasonal, the bankers of the debtor country will readily handle them. They first will draw down their foreign balances, and perhaps borrow to replenish them, and so far exchange charges will be light. If the adverse balances increase, exchange rates will rise and gold will begin to flow out. This gold will come out of bank reserves, and its loss will compel the banks to contract their loans. To hold the movement in check they raise the exchange charges, which become a serious tax on importation and tend to restore the equilibrium.

Changed Position of U.S.

The war has wrought a great change in the position of the United States in the exchanges. During the ten years preceding it the average annual trade balance in favor of the United States was approximately $500,000,000, and it was practically offset by interest and dividends paid to foreign holders of American bonds and stocks, charges of foreign shipping upon our imports, expenditures of American tourists abroad, remittances of foreign-born residents to the old countries, and other items for which we were indebted to Europe. Now we have bought back most of our securities and made loans to Europe upon which the interest coming to us will be $500,000,000 to $600,000,000 per year, with more in prospect.

This change from a debtor to a creditor position is certainly to our advantage, but the effects are very perplexing to some people, because they are not favorable to our export trade. Formerly we had to export about $500,000,000 per year to pay our accruing obligations. Europe simply gave us credit on the books; now she must send us something for it. She cannot pay us in gold, for the total annual production of gold in the world is not equal to that sum. She can pay us temporarily in securities, if we will take them, but of course that will increase the annnual balance in our favor.

How Can Our Customers Pay?

The normal tendency in trade is to find a state of equilibrium, but during the war this equilibrium has been violently disturbed, and the United States has run up enormous balances against Europe. These have been settled, first by the return of millions of securities, then by payments aggregating a billion dollars in gold, then by the borrowings of foreign governments of the United States Government and in the open market, aggregating $12,000,000,000. The net trade balance in favor of the United States against the rest of the world in the fiscal year just closed was a little above $3,700,000,000.

The moment we cease to grant credit to purchasers, exchange rates will rise rapidly against us. They have done so already. The pound sterling, worth in gold $4.86, is today worth less than $4.50, a discount of about 7 per cent.; the franc is at a discount of 40 per cent. as compared with the American dollar, and Italian exchange still lower. The effect of this is that residents of these countries in making purchases of American products must pay corresponding premiums to convert their money into American drafts. Even a resident of Canada must pay $103 to liquidate a debt of $100 in the United States.

In normal times trade cannot continue under such a handicap as this. Moreover, this discount on foreign currencies in relation to the dollar not only handicaps our exports but promotes the importation of foreign goods into this

country, because the American dollar has high purchasing power everywhere.

American business men must face this situation intelligently. They have been thinking only of selling more abroad. They will have to give up that ambition or recognize that in order to do so they must also take more of foreign products.

He is a poor merchant who never considers how his customers are going to pay for the goods he hopes to sell. It is well to understand while Congressional committees are making a search with a view to stopping up every crevice through which foreign goods percolate into this country that the effect of stopping them must be to also stop the outward flow of American goods.

Making Up Annual Statements

Greater Clearness and More Detail Should Feature Reports of Industrial Companies

(From Montreal "Journal of Commerce")

A legend circulates around St. James Street that once upon a time complaint was made to a prominent business man concerning the unusually scanty character of the information to shareholders published in the annual report of the corporation of which he was the head. "Well," replied the prominent business man, "what right have shareholders got to information anyway?"

This "public be damned" attitude is not exactly typical. But an extensive acquaintance with the financial statements issued by Canadian corporations to their shareholders, and published in the newspapers, suggests that the investor who buys the stock of these corporations in the open market has to make very much of a venture of faith, unless trade connections or technical knowledge give him the capacity to judge the real value of a particular stock, actual and prospective. In sober fact, the financial statements published by many limited liability companies are by no means intelligible to the great majority of shareholders or prospective investors, and in some cases there is an apparent intention to disclose as little information as possible.

Financial Statements Lack Detail

In part, at least, this condition of affairs is due to the well-known fact that many people, thoroughly successful in their own line of business activity, are children in business matters outside their own particular field. Unfamiliarity with accounting jargon, and incapacity to view financial statements intelligibly, are frequently enough found among those who may be to a certain extent accurately described as successful men of business. This lack of financial education accounts to a considerable extent, possibly, for the bonfires of rubbish frequently found to be necessary on the winding-up of even large estates.

On the other hand, an investor may be a past master in the mysteries of accountancy, but what is he to make of an entry like this—the sort of entry which appears in the financial statements of too many Canadian corporations:—

"Real estate, buildings, machinery and goodwill, $5,000,000."

This impressive looking entry tells the shareholder or prospective investor, in fact, nothing. Goodwill, that familiar and elusive asset, may be a small or a large proportion of the $5,000,000. Land, buildings and machinery may represent half a million dollars of the total, or two million dollars, or $4,999,999. Real estate may be taken in at a high valuation, or at one much below its real market value. Buildings

Offices Throughout the Civilized World

Executive Offices: Nos. 346 and 348 BROADWAY, N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world. Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

and machinery may or may not be at a properly depreciated valuation. A compensating entry of "Depreciation Reserves" among liabilities may give the reader of the statement some inkling on this point, but no real information regarding the actual depreciated value of the company's assets. Frequently enough, too, that compensating entry is missing, depreciation, where it was written off at all, having been written off direct to profit and loss or surplus. In such case, it would be necessary to hunt up the financial statements of the concern for years past to obtain even a vague idea of what had been done in this connection.

Hopeless Search for Information

In any event, unless the value of the company's fixed assets is clearly and distinctly set forth in the balance sheet, an entry of "Depreciation Reserve" among liabilities or an allocation in the profit and loss account to that reserve, tells the shareholder or prospective investor nothing unless the basis of these depreciation allowances is also set out. The depreciation reserve may be hopelessly inadequate in view of the character of the assets, or largely excessive, so concealing profits and establishing a secret reserve, or merely normal. And when, as is sometimes known, the allocation to depreciation is joined up with repairs, taxes, pension fund, or half a dozen other items, in one preposterous total, the search for information on this point becomes utterly hopeless.

There is another entry among assets of a pretty common sort, which at the present time when many raw materials used in manufacturing processes have reached their zenith, and are at the beginning of a period of declining prices, is of much importance: "Inventories at cost or under." This may mean the greater part of the inventory at cost, with a merely nominal allowance for old or depreciated stock, or it may mean a substantial writing down from cost in anticipation of falling markets. Has the inventory basis been changed in comparison with the preceding year? Changes in the basis of inventories taken at the beginning and end of a company's financial year can make a considerable difference in apparent profits.

What Are "Net Profits?"

In regard to what constitutes profits, particularly "net profits," there is a vast divergence of practice, which cannot but be mystifying to the ordinary shareholder. It is a common practice to state the amount of "net profits" before taking into consideration interest on bonds, depreciation, etc., although it should be apparent that real "net profits" can only be arrived at after these charges have been met. A measure of uniformity in accounting practice in this matter is strongly desirable in the interests of shareholders and investors. Some degree of camouflage in corporation financial statements has also been seen of recent years in connection with the Business Profits War Tax. Quite a number of large corporations have refrained from disclosing to their shareholders in the published annual statements the amount of this taxation for which these corporations have been assessed. The tax has been lumped with other items, though it might be supposed that the actual extent of the burden imposed by what is admittedly very heavy special taxation would be a matter on which shareholders are reasonably entitled to clear and accurate information.

No doubt, in recent years, action by members of the accountancy profession, who have taken a public-spirited view of their duties and obligations, has improved considerably the general level of corporation financial statements in Canada. It is to be expected also that in the next revision of the Dominion Companies' Act, further legislative provisions will be put into force for the safeguarding of investors by the publication of

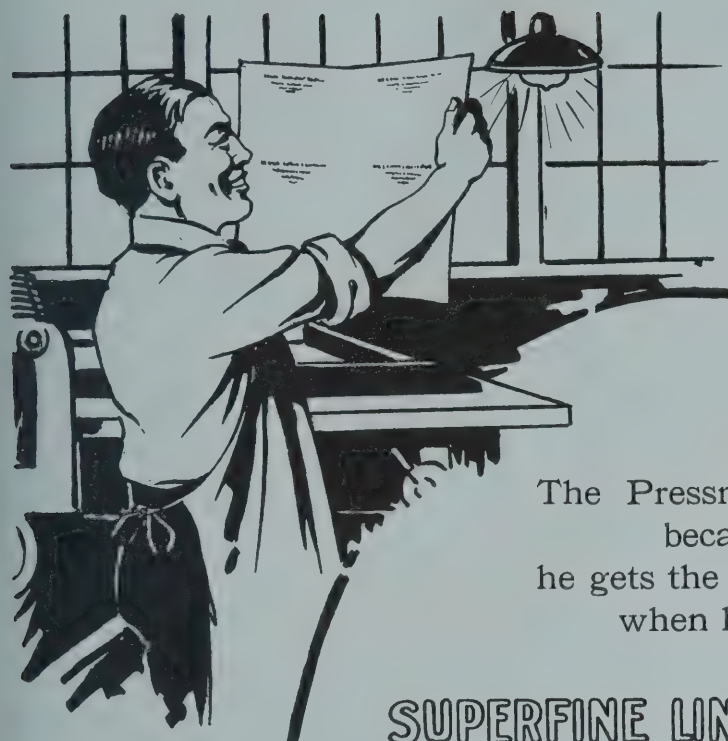
full information in both prospectuses and financial statements. A desirable supplement to legislative enforcement in this connection would be a recognition by corporation executives generally of the rights in this matter of shareholders as real partners in the business, although limited partners, and realization that much information of importance to shareholders and investors can be given, without touching in the least upon office secrets that might be useful to hungry competitors. The examples already quoted, which could be multiplied in respect of many other balance sheet items, show this clearly enough.

Need Educating on Financial Matters



In this matter, it seems that corporative executives and financiers need to realize that they have a duty not merely to their shareholders and to investors, but to the country as a whole. Those engaged in the workings of Canadian finance are aware that at the present time, Canadians are taking a greater interest in the business of investment than ever before—and that in spite of the high cost of living. The originating cause of this interest is undoubtedly the wide distribution of the various War Loans, as a result of which many people have in the last year or two received, for the first time in their lives, incomes earned while they slept. That of the thousands who have shared this experience a considerable number are keen to increase that income is clear enough from the steady demand for sound investments which is reported by many financial houses. Moreover, the future of Canada, from the purely economic point of view, depends not merely on the capacity and willingness of Canadians to save, but upon their ability to employ those savings wisely in safe and productive investments. To have savings made through real effort, thrown away in foolish or dishonest ventures, will be in the coming years of onerous national financial burdens, not merely a tragedy for the individual, but a severe hindrance to the economic progress of the whole Dominion.

The education of the general public in matters of investment, the curbing of the deeply rooted human intinct to take the wildest of wild chances, will be necessarily a terribly long process. But something at least can be done in the stimulation of a healthy interest and common-sense in financial matters, through the securing of greater clearness in corporation financial statements. On that account, if for no other reason, it appears urgently desirable that the too-common practice of giving shareholders and investors a minimum of information regarding the industrial undertakings in which they are interested needs modification. Obviously those most intimately concerned with Canadian industry and finance would themselves benefit by the growth of Canadian investors, not merely in numbers, but in intelligence, while the ultimate advantages accruing to the Dominion as a whole through an increasingly intelligent use of our accumulated financial reserves, need no emphasis.

Profits Were Lower

American Cyanamid Company Reports Smaller Returns for Past Year

The American Cyanamid Company, which operates a chemical plant at Niagara Falls, Ont., besides plants in the United States, showed net profits on sales of $1,573,041 for the year ended June 30, 1919, this comparing with $2,345,235 for the preceding year. The president, Frank S. Washburn, reports the operation of the plant at Niagara Falls at full capacity for the entire year. Progress is being made in the transition from war to peace conditions.

Good Things from Other Magazines

Industrial Production in Relation to Wages

The amount of a wage is not an absolute but a relative fact. It seems almost incomprehensible that a man should be fired for suggesting a better way to work, yet in two-thirds of the manufacturing concerns of the United States such a suggestion will be resented. Wages are high when they do not result in production; they are low if they give production

By SAMUEL CROWTHER

(From the "World's Work")

The curious part of it all is that in most discussions of wages, what the man does for a wage is seldom considered, while page after page of testimony is taken as to how much it costs to live, although it must be self evident that as long as we work under a wage system, if production be not returned for wages, then a living wage can never exist. Inevitably a wage paid which is not wholly earned must be added into the price of the finished product and eventually raise the price of all products, so that when the wage earner goes to buy he is bound to find his money insufficient.

Two glaring examples of this are England and Germany to-day. In both countries great numbers of people are getting unemployment allowances. They are getting paid for doing nothing, while those who are at work are giving but little in return for their wages. The consequence is that the price of all commodities is so high that although the workers are receiving unheard of sums they are not able to live as well, in most cases, as they did before the war.

If a man should buy a tract of land and then instead of plowing and sowing, he should merely sit on his porch and contemplate, he would get scant sympathy if he said that his income from the farm was wholly insufficient to support life decently. Yet that is exactly what millions of workers are doing to-day and they are asking for government aid because of the straits in which they find themselves—because they will neither plow nor plant.

Ignorance not a Class Trait

There are two sides to this. Some workers are willing to plow and plant, but they think that the owner of the field takes more than is coming to him—that is, the employer is getting too much and they are getting too little. There are employers just as unintelligent as the workmen, who think that they too can get something for nothing—that they can get production without using brain power in the movement of their capital, in the planning of the work, and in the adequate paying of their men. Ignorance is not a class trait and, comparatively speaking, there are just as many employers who do not know how to do their work as there are workmen who do not know how to do theirs. That is one of the reasons that we are having so much trouble about wages.

Spurred on by the cost of living and not a little convinced that perhaps after all something can really be had for nothing, the wage earner has taken the bit in his teeth and is off at a gallop. It remains to be seen whether he will tire himself out before he spills the milk wagon.

The trade unionists, headed by Mr. Gompers, say after the manner of oracles, that wages must stay up. A few impolitic owners say that wages must come down and at once, but whenever an organization attempts to reduce wages it has a strike.

The workers and the employers alike talk about wages as though they were definite payments quite detached from mundane affairs and as though a dollar yesterday were the same as a dollar to-day and a dollar to-morrow—that there is some particular sanctity attached to the payments they made, say back in 1913 or 1914. Both sides quite forget that, since the beginning of time, the average worker has considered his wage too low, and the average employer has considered that same wage too high. Neither side talks of production and its relation to wages, but they agree that a dollar is a specific thing and, for the purpose of wage argument, they are very apt to take it as a standard of fixed value. The employer forgets that the dollar a day man disappeared long before the dollar watch went off the market and that we to-day are dealing in a different sort of currency. A moving picture producer who is thoroughly acquainted with the country, said to me most significantly not long since:

When Wages are High

"We used to reckon the nickel as the multiple of value for admission, but now it is the dime. It is foolish to raise an admission fee only five cents. We have made many experiments and we know that the man who formerly had a ten cent show has just as big an audience if he goes to twenty cents as if he goes to fifteen."

Whether wages will stay up or come down does not depend upon the employers, or upon Mr. Gompers, or upon any other group in the world. The particular number of counters used is not of the slightest importance anyway. Wages are too high when they do not give production. They are too low not when they do not support life, but when the return to the employer is higher than it should be. This is a very indefinite statement, but the whole matter of wages is indefinite because it gets down to particular cases, and the balance between labor and capital is not a thing which can be decided except in the crudest manner by national boards, for it is largely a matter of individual brains. Nationally fixed wages promote sloppy production and inevitably raise prices.

There is no particular reason why there should be a limit to wages, unless we are prepared to say there is a limit to skill and intelligence. That skill and intelligence are as much the business of the employer as they are of the worker. When an employer says he cannot pay more than five dollars a day in his business he really says in effect, "I have reached my limit of intelligence in the conduct of this business and I do not know how farther to improve the process of fabrication."

Take a case in point. A factory making automobile parts in Cleveland was swamped with orders. It had risen through a somewhat hazardous career, having been originally financed on about half a shoe string, and like so many firms connected

DOMINION SHEET METAL CORPORATION, Limited
HAMILTON, CANADA

THE FOUNDATION COMPANY
LIMITED
ENGINEERS CONTRACTORS
MONTREAL SYDNEY, N.S.

Up-stream view of the power house and a portion of the dam just completed at St. Jerome, P.Q., for the Canadian Consolidated Rubber Company.

with the automobile industry, it went ahead faster than its capital. The company wanted to borrow money, but the security from the banking standpoint was none too good and the only rates offered were exceedingly high. The workmen asked for higher wages, but the cost sheets showed that the company could not pay materially higher wages without so increasing the cost of the product that it would lose business to competitors.

In their straits they had recourse to an industrial counsel. He discovered a number of things. Among them was that, due to the bad arrangement of the machinery, the stock room, and the transportation inside the plant, they were paying 60 per cent. of their total shop wages for walking and not for working. He found that they were carrying nearly a million dollars' worth of raw stock, whereas they only used about $300,000 per month and all of their stock was at that time readily procurable from day to day. They cut down their stock, rearranged their factory and adjusted credits so as to be able to turn their capital every 60 days instead of slightly more than once a year, with the result that this concern found that it did not need more capital at all—that it needed only better management and planning. They arranged to pay their men on performance and shortly they were able, with their former plant facilities and without increasing the number of men, to do nearly double the business which they had previously thought impossible without a large increase in capital. The workers not only earn large amounts, but the company has greater profits than ever before.

If that company had succeeded in borrowing all the money it wanted it would not have put its house in order, but instead it would have gone sprawling along, wasting money in every direction, and trying to pay a satisfactory dividend on the additional capital which it did not need. With all of this management wastage added into the price of the product, it could not adequately have paid the men.

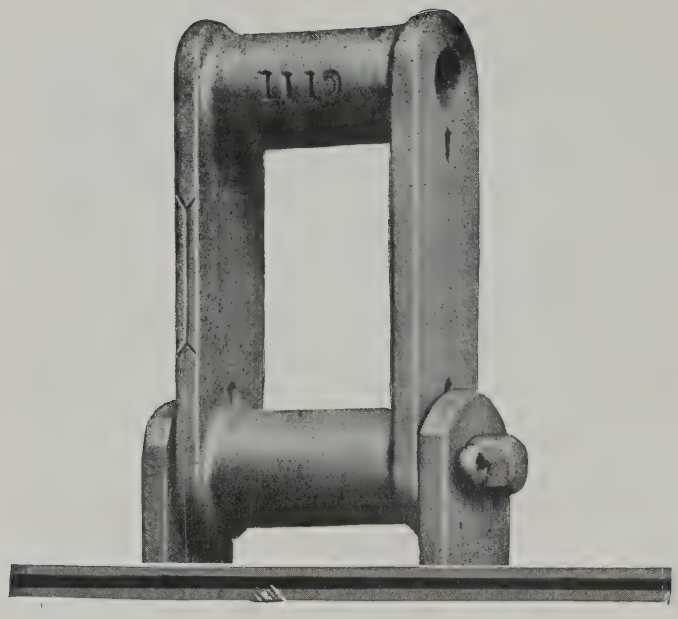
The workers are quite right when they say that capital which performs no service in an enterprise should not expect a profit and, although the largest dividend paid upon capital will seldom mean a considerable increase in wages if spread over the dividend period, yet the principle is entirely correct that watered stock or idle capital should not expect to receive a dividend. The converse is equally true. Workers who insist that more men than are necessary be kept on a job should be prepared to pay the wages of those men. And men who do not give a return are no better than the capital which does not give a return.

Workers Want the Facts

But in many cases wage disputes do not seem to turn so much on the gross wages paid as on the relation to what the company itself is earning. A very large company which is noted for extraordinary stupidity in treating with workers, not long since announced a cut in wages and almost at the same time a special dividend to stockholders. Very naturally and very properly, they immediately had a strike on their hands. This strike will cost them considerably more in lost business and in idle plant charges than the comparatively small amount of money which they expected to save by cutting wages. It is not so much that workers object to the reduction of wages as that they object to being taken in, to being made the goats, so to speak, for extraordinary profits. Profits may not be extraordinary, but if the workers think they are, it amounts to the same thing. If a thoroughly representative body of the workers is supplied with all the facts, wage adjustments on a fair basis can always be arrived at.

An illustration of this is the Filene Store in Boston. Many years ago, Mr. E. A. Filene received a protest from a cashier who, being accidently short in her accounts, asserted that the sum should not be deducted from her wages, because when she was over in her accounts, it was the company and not she who received the money. She thought mistakes could work both ways. Mr. Filene said, "Let us leave it to a third party." They did, and the third person decided against the firm; but the idea gave such general satisfaction that out of it grew a co-operative association of the employees which now to a very large degree helps in the management of the store. This co-operative association appoints a committee to audit the finances. Every employee in that store knows how much the company makes and more or less accurately the salary of every executive officer and, although they do not fix their own salaries, yet through a system of committees and arbitration boards, every person who believes that his salary is not right has an opportunity to show why it is not right. The employees have a flat wage and a commission on all sales made above the point where they have earned their wages according to the calculation of selling expense. It is a curious fact that the decisions of the board of arbitration from year to year will average about one half in favor of the company and one half in favor of the employees.

Mass Meetings Are Held



Take another case. Up at Bantam, Connecticut, is a machine plant employing about one hundred men. These men assemble at a mass meeting once a month to talk over business affairs, to hear complaints if there are any, and more especially, constructively to discuss the advancement of the business. A small percentage of these men are American born, nearly all of them came into the plant as unskilled laborers. They gained their training within this place. They have committees to attend to various details, but the working body being small, they transact most of their business in mass meetings.

That plant is in the war zone only thirty miles from Bridgeport, and at times during the war Bridgeport was offering three times the wages which were being paid at the smaller plant, but during that time only two men left for the high wages, and after a few weeks both of them came back. Long before the Armistice, the meetings began to discuss what they were going to do when peace came. Their wages had been increased, they knew exactly what the company was doing, what the company was making, and practically what each executive was drawing in the way of salary. Over and above their wages they receive a dividend on the gross factory production on the theory that if the factory turns out the proper amount of goods, it is up to the management to make the sales. They agreed among themselves that the big thing was to keep going after the Armistice and that, if it were necessary, they would reduce their wages and go upon a shorter time.

The salesmen of the company also attended those meetings and those salesmen went out and secured sufficient orders for advance work to be delivered after peace—the company was 100 per cent. on war work—and where many companies were demanding that the Government pay money for the cancellation of their contracts, this company on the day of the Armistice wired Washington for permission to cancel its contracts and within two days was going ahead full time on peace work! The only reason for the delay of two days was that most of the workers participated in every parade within a radius of twenty miles.

That plant has not found it necessary to reduce wages. Other employers in that same valley, whose people do not help them manage, have reduced wages and have been most of the time tied up with serious strikes.

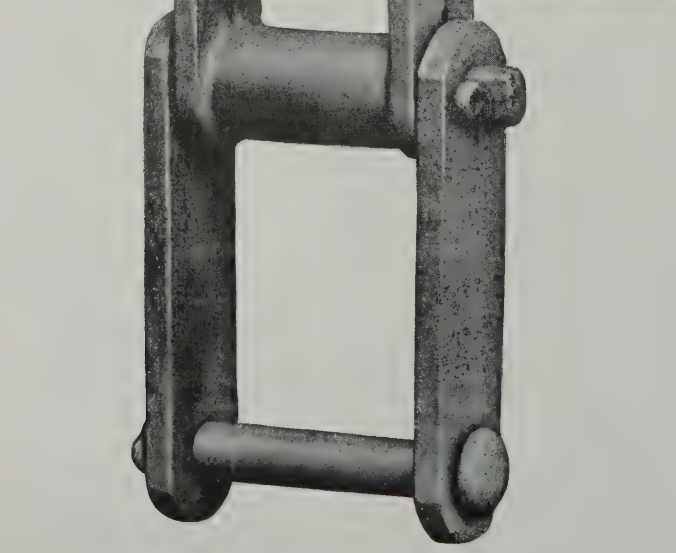
Take another case. Out in Fort Wayne, Indiana, is a piano factory which is organized as a kind of industrial democracy. The executives of the company form a cabinet,

"COMBINATION"

LINK-BELT

FOR ELEVATING AND CONVEYING

STRENGTH and low cost are combined in "C" Class Link-Belt. It is well-established in the fertilizer industry as a durable Link-Belt for elevating and conveying



Length of life in service is increased by preventing motion between the pin and the side bars which hold it. The pins are accurately fitted to the side bars. A flat portion is milled accurately at the end of the pin, fitting into a carefully broached hole in the side bar. Obviously this construction is superior to forged lugs or necks under the head to hold the pin in place

the superintendents and foremen meet in a body, which is called the "senate," while the workmen elect by secret ballot to the "house of representatives." These three bodies legislate for the plant. These men in 1914 during the depression, by their own action reduced their wages and went on part time. There were then 265 of them, but economic reasons caused their number gradually to dwindle until only 168 were left. These devised so many new methods and so many new machines that later, when times picked up, and the boom began, they were able, without increasing their number, to double what was supposed to be the former capacity of the plant. There has been no wage trouble. Their productivity and ingenuity have made them masters of their craft and it is profitable for the company to pay them double what men in similar lines receive. In more than one case, after having devised a better method, the men have voluntarily rearranged their piece rates because with their new methods the old rate produced an income which they felt was disproportionate to the job. In addition to their rates and wages each employee shares in what is known as an "economy dividend"—the relative savings in production costs are divided "fifty-fifty" between the company and the men.

Wages and Labor Disorders

What is a job worth? The average manufacturer will tell you that he cannot pay above the market rate, whatever that may be, and he will view dollars of wages exactly as a workman views them—that is, without any relation to what the one is going to get, or the other to give, in return for the money. A certain trade can pay so much and it cannot pay more—that is settled. The wage is high or low according to the number of dollars it contains, regardless of production—that is, regardless of return per dollar of wages. Because a man who formerly got $18 a week now finds $25 or $30 in his envelope he is convinced that he is receiving fairly high wages, while the employer is quite certain that he is paying high wages. One hears everywhere the complaint that the price of an article is so high because of the wages which must be paid. Somehow or other every discussion of employment troubles eventually gets around to wages. Now just what have wages to do with what is called "labor disorder," when are they high and when are they low, and is there any particular reason that wages should be lowered or should be raised?

Wages have this much to do with labor trouble and no more: If the wage which a man receives for a day's work is not sufficient to support him and leave even a moderate amount for pleasure, the wage is indeed too low; if the wage does not increase with the intelligence and production of the man, if it is possible for him to look ahead and see an absolute bar beyond which he cannot go, then something is the matter with the wage. High wages do not mean contentment and, if employment is arranged solely on the basis of wages, the men will neither give good service nor stay on their jobs. During the war it was the highest and not the lowest wage concerns which had the greatest turnover of labor.

Turnover of labor is the number of men who must be employed each year to retain an average force, and during the war, in some very high-wage establishments that employed on an average of 5,000 men, 25,000 men were employed during the year.

Labor and a Market Rate

Wages are high when they do not result in production; they are low—no matter how many dollars are contained in them—if they give production. The union between wages and production is inseparable, but it is neglected by nearly all employers and by most employees. There is somehow an idea, regardless of all the facts, that a particular job is worth just so much and no more. Hence we have what is

called the market rate, which in turn varies according to the demand, as compared with the supply of labor.

But the best employers of the country have long since given up any idea that there is such a thing as a market rate for labor. There is no market rate for professional men above a certain grade, there is no market rate for surgical operations, or for good portrait painting. In fact we find the market rate only in mediocrity. That is what farseeing employers have discovered and, by lifting themselves out of mediocrity, have found it unneccessary even to inquire what the market rate is.

The market rate does not amount to much in merchandising. If an article is thoroughly good, it is bought eagerly regardless of the price, because it gives service. And that is just the way some employers have regarded the value of the services of those whom they hire; instead of looking at wages as so much paid out, they have looked at them in the longer way of service purchased and they have found that for $2 rightly paid they can purchase more than twice as much service as for $1.

There are many ways of paying wages and there is no rule at all involved, there is no best way—the best way is that which suits the circumstances. In many places what are called "piece rates" obtain; that is, a man is paid for the number of articles or operations which he completes during the day. Piece rates are generally unsatisfactory, because it is a very difficult matter properly to fix the rates. A very common loose method is this: Suppose a group of girls have been working on a certain article for some time. The superintendent drops in, chats with the foreman, and then asks why those girls shouldn't go on piece rates.

"What will the best of them do a day," he queries.

"Well, the fat girl will do about 200 and the big girl about 210."

"Then if we make the day's quota 225, they will all have to hustle to get the money they are getting now."

"You bet they will," responds the foreman, "and it will do them good."

And on that basis the rate is fixed with the idea in mind that an economy has been accomplished, when as a matter of fact, the only accomplishment has been in the way of creating a certain amount of resentment and dissatisfaction, which means that workmanship will suffer.

A Conclusion About Wages

The objection of intelligent workmen to better methods is that, when they do give service and make money, they immediately find that their rates are cut to such a point that their additional service results in no greater financial return to them than the previous poor service. In this, in many instances, they are perfectly correct, for the short-sighted employer does cut down when he thinks his men are "making all they ought to make."

From the long and varied experience of many able men this conclusion on wages can be deduced: "A wage is never of itself high or low, but the amount is relative and its righteousness depends upon the co-ordination of the respective skills of both capital and labor. It is not a fixed, but a shifting payment, depending upon and adjusted to performance, and that adjustment is best made by frequent conference between the employer and the employed."

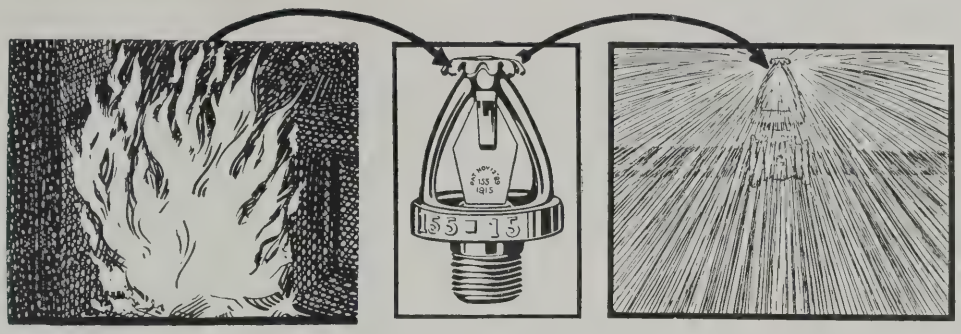
But recently no fixed wage has been of itself satisfactory, and methods have been devised, some good and some bad, further to compensate according to mass performance and to establish a reason for working with the company.

The wage is the measure of the workers' contribution—how is it to be measured?

THE CANADIAN APPRAISAL COMPANY
LIMITED

The market conditions of high costs, which arose soon after the outbreak of war and have ruled ever since, have very largely destroyed the significance of figures of original costs appearing in Plant Accounts, particularly where these represent properties installed or acquired in pre-war times. Such figures are to-day misleading, and dangerous if adopted as a basis for insurance, and equally so for determining present day manufacturing costs.

Complete Insurance protection calls for present day values. The cost of replacing any but a new plant to-day would almost invariably be much greater than when it was originally installed, and if it is not insured on this basis of to-day's values you become a co-insurer; in other words, you are not fully protected, and in the event of a loss by fire you may have to bear a substantial part of such loss yourselves.



For the same reasons, a cost system based on pre-war costs is to-day a delusion and a snare.

When the Fire Starts----The Water Starts

That's the story in a nutshell of the Grinnell Sprinkler Head

With Grinnell Automatic Sprinkler Protection this is just what happens. A series of distributing pipes carry water to every nook and corner of the building. Every ten feet is a heat-operated sprinkler head which holds back the water. When the fire starts, the heat starts. When the heat starts, the water starts. When the water starts, the fire goes out!

It is a one, two, three and out proposition. In just this order fires are putting themselves out every day, and have been doing so for thirty-five years, until now over 30,000 officially reported successes are recorded.

Because of the absolute protection against fire afforded by automatic sprinklers, insurance companies give large reductions in insurance rates. These reductions vary from 40 to 90 per cent. and many owners of Grinnell Sprinkler Equipments have had them installed and paid for them out of their insurance savings. That is, the sprinkler systems have paid for themselves in from three to seven years, after which savings in insurance premiums go into the pocket of the wide awake concern.

Do you know what your insurance savings would be if a sprinkler system was installed in your establishment? It is easy to find out about this. Just drop us a line today and we will get in touch with you with the facts and figures.

GERMANY'S FUTURE IN INDUSTRY

According to this eminent British banking authority, the Allies are now interested in Germany as a business concern from which they must draw dividends. Otherwise they will have no chance of collecting the indemnities imposed upon the defeated nation.

From Barclay's Bank Bulletin.

The question of the export trade of enemy countries is a matter rapidly coming into prominence. Evidence—in some quarters regarded as perturbing—is already forthcoming that Germany's exports to Holland and the Scandinavian countries are increasing, largely, it is thought, because her depreciated exchange enables the importer to purchase very cheaply the marks necessary to pay for his German purchases.

Unquestionably a depreciated exchange does have this effect—it encourages exports and discourages imports, and so long as Germany's exchange remains depreciated, so long will she possess an advantage in selling her goods in the world's markets, providing her increased cost of production caused by inflation does not negative the advantage given by her depreciated exchange.

Effect of Inflation on Exchanges

This question is important and endeavors are being made in commercial circles to connect the depreciated exchange with the inflated currency. Actually there is no direct connection, for the value of currency is measured by its internal purchasing power, while that of exchange is measured by its value in exchange for other currencies and so by its external purchasing power. To take an extreme example—if under normal conditions a country which possessed a note issue based pound for pound on gold, yet prohibited gold exports, it would be possible by reason of an adverse trade balance for her exchanges to be quoted at a substantial discount. Equally it would be possible for a country with an unduly inflated and inconvertible currency—a country not possessing one single ounce of gold—to build up a favorable balance of trade such as would maintain her exchanges at a premium. This second position is extremely improbable because of the indirect effect of inflation on exchanges. The effect of inflation is to increase the cost of production and this has the effect of prejudicing and reducing exports. With the reduction in the volume of exports the foreign exchanges depreciate in value until such time as the depreciation or cheapness of the exchanges counterbalances the internal increase in the cost of production. Other things being equal, the foreign exchange quotation for a country possessing an inconvertible and inflated currency will stabilize at a figure where the high internal cost of production is negatived by the discount on her exchange.

Stimulation of Exports

Now under circumstances such as those existing to-day, when inflation is world-wide, let us take the case of a country possessing a depreciated exchange and an inconvertible currency and assume that approximately the inflation in that country is not greater than that in other countries. Here the cost of production will be increased by the inflation, but only in proportion to the increase in other countries. Exports therefore, will not be prejudiced by cost of production but they will be stimulated by the depreciated exchange. The effect of the stimulation of exports will be to restore gradually the balance of trade and to bring the exchange to parity.

Now take the position of a country which in existing conditions possesses a depreciated exchange and an inflated and

inconvertible currency, the inflation being greater than that existing in other countries. Here the undue inflation will tend to produce the high prices prejudicial to export trade while the depreciation in the exchanges will only stimulate exports if it is more than sufficient to counterbalance the higher prices. Even then the increase in exports will merely continue until the exchange is brought to a figure where the depreciation approximately offsets the increase in the cost of production.

Germany's Exchange Position

This would appear to be the position of Germany. For various reasons—sentimental and otherwise—the depreciation in her exchanges is more than sufficient to counterbalance the increased cost of production caused by excessive inflation. Because of this, exports are stimulated. As has been shown, however, this effect—other things being equal—can only be temporary.

The trading position would not be remedied, as is suggested in certain quarters, if such a proportion of Germany's notes and bank balances were cancelled as would bring the degree of inflation existing there approximately into line with that existing elsewhere. On the contrary, the first effect of such action would be to decrease the cost of production and thus increase exports until such time as the exchange stabilized itself at a new level. Other things are not, however, equal, for Germany, in order to pay her war indemnities, must of necessity export far more than she imports, using the balance for indemnity payments.

In few words and simply stated this is the theory when applied to a country which cannot adjust its trade balance by means of exporting gold or securities. There are, however, various factors which may operate to disturb its exact working. For instance, cost of production is affected by various influences other than inflation. There is the question of output per individual, the efficiency of organization, the standard of comfort demanded as represented by wages and profits, and also such matters as tariffs and natural advantages.

Taking the instance of Germany, there is the effect of war indemnities to be considered, for to pay these Germany must of necessity export far more than she imports, using the balance for indemnity payments. In these circumstances a consideration of her position will be of interest, for although opinions may differ as to the severity or otherwise of the terms of the peace treaty, there can be no doubt that Germany has a great task before her compared with which our reconstruction difficulties are quite trifling.

In a Worse Financial Position

Always ignoring the United States, whose position is unique, Germany's war debt per head of her population shows a more favorable percentage to the capital per head of population than that of the other belligerents, but this position is altered when allowance is made for the loss of territory and population under the peace treaty. Starting, therefore, in a worse financial position than the allies, Germany will have to pay to them vast sums in the shape of indemnities. When the present internal condition of Germany is remembered, together with the facts connected with the working of the blockade, the wisdom of allocating some portion of the first £1,000,000,000 to the provision of food and raw materials becomes apparent—indeed, unless this is done and done liberally, there will be little hope of Germany meeting within

the specified time even the first thousand millions, to say nothing of the four thousand millions to follow.

Bargaining with Germany for an indemnity resolves itself into bargaining for a larger share of her export business.

Allies Must Support German Industry

Unpalatable as it may be to many, the fact is that, because of the indemnities they are to receive, the allies are now interested in Germany as a business concern—not as a beaten, disorganized and ill-found nation—and if they are to draw from that business the dividends they require and demand, then not only will it have to be superbly organized but it will demand the unremitting energy of its workpeople and the ungrudging economic assistance of the would-be receivers of dividends. Facts are stubborn things and their inevitable consequences are better faced than ignored. The allies have to face the fact that if they are to receive from Germany a great contribution of their war expenses they must first of all help her to become again a great industrial nation, for apart from a comparatively trifling total of gold and foreign securities the indemnity will indirectly have to be paid for and accepted in goods. It cannot be too strongly emphasized that an indemnity must be paid in kind. Therefore Germany must manufacture and ship her goods. She must also find buyers, otherwise she cannot pay. It follows that the acceptance of an indemnity forces the allies to trade with her.

Still facing the facts as they are, this will involve admitting German products into allied markets, and even this will be useless unless we, the allied peoples, despite resolutions to the contrary, buy freely the things that are "Made in Germany." If we do not do this, or if we render it impossible for Germany to compete with us in the world's markets—then we must sacrifice the indemnity.

Further, sanity tells us that no people will continue to work and strive without reward or hope, and it follows that the allies must assist Germany, not only to an industrial reconstruction adequate to the production of a surplus of commodities large enough to meet indemnity installments, but also to provide the German people with sufficient present comfort and hope of future comfort to induce and enable them to put forth their maximum effort. Briefly, then, the allies must individually recognize that, having in righteous judgment sat on Germany and assessed the penalty, they cannot, in common justice, refuse her the only possible means of payment—payment in kind. Admitting this, the sooner they organize and settle down to business with their late enemies the sooner they realize the impossibility of reconciling the receipt of an indemnity with efforts to keep Germany out of the world's markets, and with such remarks as "never again will I knowingly buy an article 'made in Germany,'" they sooner they help Germany to re-establish her industries and settle down to an ordered existence, free from Bolshevik disturbances, the better will it be for the world at large and for the ultimate success of the League of Nations.

Develop Productive Powers

Reconstruction needs and the compulsory abstinence of the past five years will supply the whole world with adequate work for a long time to come, and it is for British trade to develop energetically its productive powers, and for the British government to make the way smooth for private enterprise. The fact that Germany is already returning to the Scandinavian markets is not a matter for perturbation, for, apart from other considerations, it is an inevitable consequence of the indemnities that in the future, as in the past, she will be our competitor in foreign markets.

CHANGES IN THE COST OF LIVING

Between July, 1914 and July 1919, an increase of 71 per cent. was recorded in the cost of living of American wage-earners. The cost of clothing increased most, being double what it was in 1914. Food increased by 85 per cent., and fuel, heat and light, by 57 per cent. These are findings of the National Industrial Conference Board.

(From the "Manufacturers' News.")

The cost of living for American wage-earners was 71 per cent. higher in July, 1919, than at the outbreak of the world war in July, 1914, according to a preliminary statement issued to-day by the National Industrial Conference Board based on a careful survey of conditions the country over. This represents an advance of 6 per cent. since March, 1919, and of 12 per cent. since June, 1918. The increase of 71 per cent. to July, 1919, marks the highest point yet reached and compares with an increase of 61.3 per cent. to March, 1919; of 65.9 per cent. to November, 1918, and of 52.3 per cent. to June, 1918.

The total increase for the five-year period since the beginning of the war, in the average cost of each of the principal items entering into the family budget was:

	Per Cent.
All items	70.8
Food	85
Shelter	28
Clothing	100
Fuel, heat and light	57
Sundries	63

Increases since last March were as follows:

	Per Cent.
All items	5.9
Food	5.7
Shelter	4.9
Clothing	10.5
Fuel, heat and light	No change
Sundries	5

In combining these separate items to obtain the increase in the budget as a whole, account has been taken of the fact that approximately 43 per cent. of the income of the average wage-earner's family is spent for food; 18 per cent. for shelter; 13 per cent. for clothing; 6 per cent. for fuel, heat, and light, and 20 per cent. for sundries. This distribution is based on studies of the expenditures of a large number of families made by the United States Bureau of Labor Statistics and other authoritative government and private agencies. The method of computing the change in the cost of living on the basis of the increases found for the separate items by the National Industrial Conference Board is shown below:

Budget items.	Relative importance in family budget. Per cent.	Increase in cost between July, 1914, and July, 1919. Per cent.	Increase as related to total budget. Per cent.
All items	100.0		70.8
Food	43.1	85*	36.6
Shelter	17.7	28	5.0
Clothing	13.2	100	13.2
Fuel, heat and light	5.6	57	3.2
Sundries	20.4	63	12.8

*Based on an increase of 84 per cent. up to June 15th, 1919, as reported by the United States Bureau of Labor Statistics.

The allocation of expenditures for the different budget items usually varies so little among the families of wage-earners that with any reasonable distribution there would be but slight deviation from the average increase of 71 per cent. since 1914. This figure is, therefore, broadly representative of conditions the country over. But it should be emphasized that special local, racial, or other circumstances may at times make necessary some revision to adapt this estimate to meet specific conditions. This is especially true of rents, since changes in this item have at times differed considerably in separate communities.

Estimates of changes in the cost of living made by the board on the basis of retail prices and expenditures for the

SELLING The Consumer Seventy-two Years EXPERIENCE

THAT is what you do when you sell McClary's Goods. Seventy-two years ago McClary's began to manufacture and sell good goods. To four separate generations the same quality has been supplied. Each generation has told to its children the worth of McClary's goods. To-day, the fourth, is receiving its McClary's education through consumer satisfaction, National and Local advertising. This force of publicity is forever flowing strongly and creating sales. Dealers should take full advantage of our co-operative business methods. Full information sent on request to our nearest branch.

McClary's

LONDON, TORONTO, MONTREAL, WINNIPEG, VANCOUVER, ST. JOHN, N.B., HAMILTON, CALGARY, SASKATOON

separate budget items by average families must not be confused with changes in wholesale price index numbers such as Bradstreet's, Dun's or those of the *New York Times* Annalist. Wholesale commodity prices do not necessarily change concurrently with retail prices and, as already pointed out by the board, they often tend to advance faster than retail quotations. Although valuable as an index of market conditions, commodity prices do not take account of the relative importance of the different items in the family budget. Likewise changes in retail prices of food should not be used as representing changes in the cost of living, since they measure but one item in the budget. The only accurate measure of changes in the cost of living is that based on retail prices weighted according to the proportion of the total budget spent for each item by average families.

More detailed information regarding changes in the cost of the separate budget items is given briefly below. Average retail prices of food as collected by the United States Bureau of Labor Statistics have been accepted by the board as the best available measure of changes in the cost of this item. For all others, original data were secured by the board through replies to detailed questionnaires distributed to a large number of retail merchants, real estate brokers, and others in close touch with local conditions in all parts of the country.

Advance in Retail Food Prices

Average retail prices of food were slightly more than 5 per cent. higher on June 15, 1919, than on March 15, 1919, and 84 per cent. higher than before the war, on the basis of average prices for the year 1913. The increase within the year ending June 15, 1919, was 14 per cent. These figures cover price changes of 22 articles of food as reported by over 2,000 dealers. Since the bureau's estimate of 84 per cent. increase is for June 15, a slight addition was made by the board to allow for a possible rise in the last half of the month.

Some of the articles showing the most significant price changes since June, 1918, were onions, the price of which increased 133 per cent.; prunes, 53 per cent.; coffee, 41 per cent.; potatoes, 31 per cent.; cheese, 28 per cent.; eggs, 26 per cent.; butter, 24 per cent.; lard, 23 per cent.; sugar, 16 per cent.; milk, 15 per cent.; and flour, 12 per cent. The prices of chuck roast and plate beef decreased 5 per cent., of corn meal, 6 per cent., and of navy beans, 31 per cent. Compared with June, 1913, the average prices of the following articles in June, 1919, were 100 per cent. or more higher: sugar, pork chops, ham, bacon, potatoes, corn meal, flour, and lard.

Rapid Increase in House Rents

Reports regarding rent conditions were received from practically all of the cities in the United States having a population of 50,000 or over, and from a number of smaller places. Of more than 300 statements from persons closely in touch with rents as paid by wage-earners in these separate cities, only one recorded a decrease in this item since March, 1919. In many places rents were still rising, although few pronounced increases were found. Frequently the larger increases reported in July were in those localities where former advances had been least, indicating that the tendency to a leveling of the total increase in rents the country over, which had been evident in March, was still in progress in July. The estimate of 28 per cent. as the average rise in rents since 1914 is, therefore, of more general application than that of 22 per cent. up to March, 1919; of 20 per cent. up to November, 1918; or of 15 per cent. up to June, 1918, as given in previous reports by the board. Between March, 1919, and July, 1919, the average increase in rents for the country as a whole was about

5 per cent. These are averages for all sections of the country and reflect a considerable variety of rent conditions.

The opinion was general that rents would continue to rise, since, on account of the abnormally high cost of construction and maintenance, the number of houses being built is inadequate to meet the demand for accommodations. In some places the housing shortage had stimulated popular "own your own home" campaigns and various schemes to assist people to build.

The advance of 100 per cent. in the cost of clothing is larger than that of any other of the major budget items. The average outlay for a family's clothing needs in July, 1919, was 10.5 per cent. more than in March, and 3.6 per cent. more than in November, 1918, when the previous high peak of clothing prices was reached. Since the summer of 1918, the average cost of clothing had advanced 13 per cent. These increases were obtained by combining the percentage of change in the cost of the separate articles according to their relative importance in the total clothing budget.

Quotations for 29 types of most commonly used yard goods and wearing apparel were secured from 146 dealers in 43 cities. For every article the average price was higher in July, 1919, than in March. As compared with November, 1918, changes varied, but the most important were upward. Cotton and woollen yard goods, overalls, knit and muslin underwear, and the cheaper grades of work shirts, although higher in price than in March, were slightly lower than in November. Prices of yard goods increased more than did prices of made-up garments in the five-year period since 1914, but the cost of women's shoes advanced 131 per cent.; women's gloves, 125 per cent.; women's knit underwear, 120 per cent.; women's coats, 116 per cent. and women's hosiery, 104 per cent. between July, 1914, and July, 1919. In every case these marked the highest points reached since 1914. Several articles of men's clothing also cost 100 per cent. more than before the war.

Dealers very generally expressed the opinion that clothing prices were likely to go still higher.

Fuel, Heat and Light

No important change in the combined cost of fuel, heat and light between March and July, 1919, was indicated. While there was a small increase in the cost of anthracite, there was a corresponding decrease in the price of bituminous coal. Prices of other items in this group were practically unchanged. The average increase in the total cost of fuel, heat and light combined, therefore, is again placed at 57 per cent., as in the March study.

Retail price quotations of anthracite and bituminous coal for household use, secured in July, 1919, from 97 dealers in 43 cities, were analyzed. These showed changes since last March for anthracite varying from a 9 per cent. increase in Boston, to a 9 per cent. decrease in Charleston, S.C., and an average increase for the country as a whole, of 1 per cent. to 2 per cent. The total increase since the beginning of the war in 1914 was between 54 per cent. and 57 per cent. The increase for bituminous coal within the five-year period was 55 per cent.

Coal dealers were generally of the opinion that the price of anthracite would advance further within the next few months, but there were suggestions that the price of bituminous coal might drop.

Average retail prices of coke and wood fell in a number of cities, but in others they advanced; for the entire country no significant difference was indicated.

Few important changes in the cost of gas and electricity to small consumers between March and July, 1919, were reported, although the tendency of rates was upward.

Reports regarding car fare, one of the principal items in the sundries group, were received from 143 cities. In 121 of

these there had been no change between March and July, 1919, and in 3 there was a decrease. Such increases as occurred were small. Changes in car fare the country over were, therefore, unimportant. The retail price of tobacco was somewhat higher in July than it had been in March, partly because of increased taxes. The tax on candy, soda water, and ice cream as well as on toilet preparations and drugs also contributed to raise the cost of these items. Household furnishings and supplies were, in many instances, higher in July than they had been in March. On the other hand, the prices of admission to amusement places, of reading materials, and of doctors' services remained about the same. Postage decreased.

From these separate estimates it appears that there was a small increase in the cost of all sundries combined between March, 1919, and July, 1919. This has been placed at 5 per cent. It must be understood, however, that families vary more in their expenditures for sundries than for any other of the budget items and that no estimated change can be said to be typical. The estimate of 5 per cent. increase is based on a wide variety of combination and is as representative of the change that has occurred as any that can be reached. This brings the total increase in the cost of sundries since 1914 to 64 per cent. as contrasted with 55 per cent. in March, 1919, and November, 1918, and 50 per cent. in June, 1918.

Recapitulation of Complete Budget

A summary of changes in the cost of living as determined in the four surveys made by the National Industrial Conference Board is given in the table below:

Budget items.	July, 1914, to June, 1918. Per cent.	July, 1914, to Nov., 1918. Per cent.	July, 1914, to Mar., 1919. Per cent.	July, 1914, to July, 1919. Per cent.
All items	52.3	65.9	61.3	70.8
Food	62	83	75	85*
Shelter	15	20	22	28
Clothing	77	93	81	100
Fuel, heat & light	45	55	57	57
Sundries	50	55	55	63

*Based on an increase of 84 per cent. up to June 15th, 1919, as reported by the United States Bureau of Labor Statistics.

Get Trenton Plant

American Interests Secure Possession of Chemical Plant Located at Trenton, Ont.

Briggs & Turivas, Chicago and New York, dealers in iron and steel scrap and salvage, have purchased from the Imperial Munitions Board of Canada the entire plant and property of the British Chemical Co., Ltd., located at Trenton, Ont. A Canadian Corporation under the name of Briggs & Turivas of Canada, Ltd., and capitalized at $1,200,000, has been formed, with main offices in the Canadian Pacific R. R. Building at Toronto, Ont., and a branch office at Trenton, Ont. The property consists of 255 acres and fronts the Trenton River, a navigable stream. Three trunk line railroads enter the plant. The British Chemical Co. was formed and built during the war at an outlay of approximately $8,000,000. The equipment consists principally of two separate and complete sulphuric acid chamber plants, sulphuric acid concentrators, a nitric acid plant, an alcohol rectifying plant, two refrigerating plants, a smokeless powder plant, a complete high pressure fire system, two miles of narrow gauge trackage with electric locomotives and trucks, two boiler houses, electrical equipment, warehouses, storage tanks, administration building, etc. The new owners are as yet undecided as to the extent of the operations of the plant for the future, but it is expected that the powder manufacturing apparatus and equipment, and possibly the nitric acid plant, will be dismantled and disposed of, allowing the sulphuric acid plants to stand.

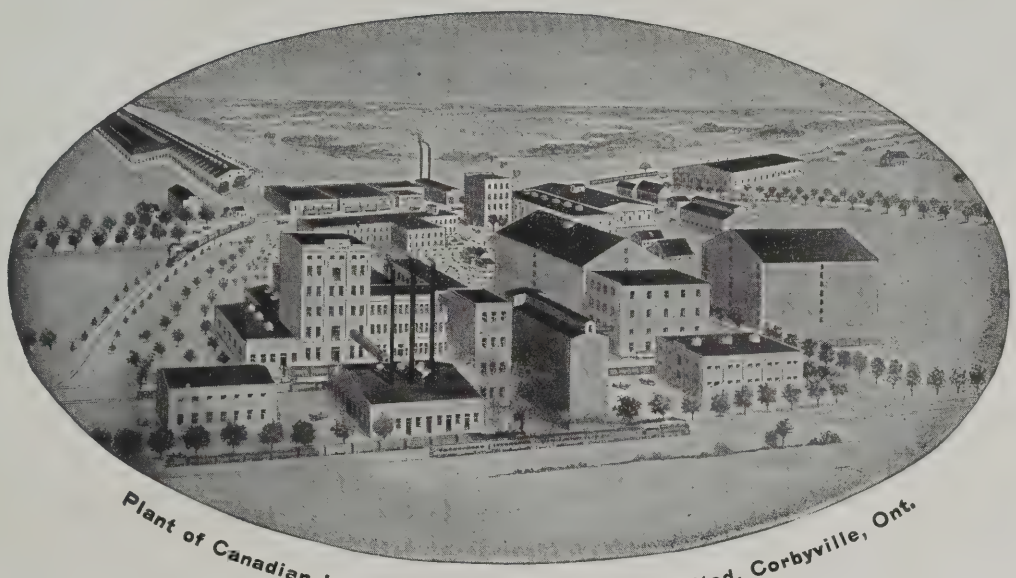
ENLARGING THE WORKMAN'S DOLLAR

Many employers have doubtless considered possible ways of increasing compensation to workers without raising wages. Often co-operative or company stores have been considered, but there have been too many failures in attempts of this kind to permit of hasty action. In the following article the possibilities of granting concessions to competent dealers are set forth.

By Emerson P. Harris.
(From "Industrial Management.")

The conditions under which most employees of big industrial companies spend their money for family supplies leaves much to be desired. Where no effort is made in their behalf, workmen are at best taxed for the present chaotic and wasteful system of merchandising, and at most, they are exploited by a raise in prices whenever there is a raise in wages. The writer is told by an officer of a large mining company that this latter practice is not uncommon among retailers who sell to this company's men.

Many managers of industrial companies have felt moved to try to reduce the cost of purveying family supplies to their workmen by conducting stores in their interest. But usually, for one reason or another, such undertakings are discontinued after a comparatively short trial. The reason for this lack of success could not be given in detail without information which is not at present available. But there is one broad fact which goes far to answer the question, and that is that what the employer seeks to save for his employees is absorbed in inefficient buying and management on the part of the manager in charge of the company store. It is assumed that there is sufficient gross profit usually made by the local dealers to make it possible to save money for consumers, even though the consumers' store is run by a hired manager less efficiently than the individually owned store. This is a fatal mistake. The local retailer may sell at prices averaging as much as 25 per cent. gross profit on the retail price, and yet his expenses may be such as to leave him no profit above a small salary for his own work. Let a store start which is owned either by a co-operative society of employees or by the employing company, and be run by a hired manager, and the chances are that the inexperience and inefficiency of the management will be such that the new store cannot even meet the prices of the existing stores, let alone making a saving for its customers.



Inefficiency and Waste in Retailing

The greatest cause of inefficiency and waste in retailing to-day is the sham hide-and-seek competition consisting of selling a few well-known articles at a low price and recouping by selling hundreds of less well-known items at good profits. Through this policy consumers are switched from one store to another, and half a dozen stores are permitted to exist where one would suffice, and prices are made high by the duplication of overhead expenses.

The efficient and economical purveying of family supplies is a highly technical business requiring a thorough knowledge of a thousand different articles, the ability to judge of them regardless of brands and trademarks, and such familiarity with values and sources of supply as no hired manager is likely to have. Again, the paternalistic attitude of the industrial store is such as often to breed suspicion on the part of employees, and the store is without the spirit of aggressive enterprise which in privately owned stores attracts and holds trade and makes for large volume of sales.

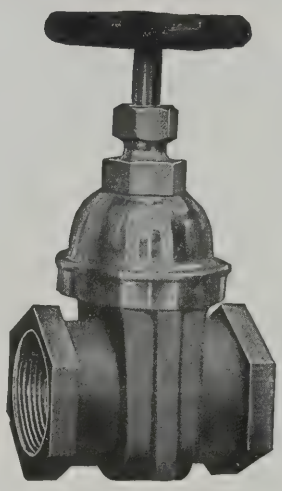
This false assumption that the sale of goods at, or even below, going prices is sure to create a surplus with which to meet the cost of experiments and mistakes in buying, and

ALCOHOL

Plant of Canadian Industrial Alcohol Company Limited, Corbyville, Ont.

With a capacity of 450,000 (proof) gallons per month we are the largest producers of Alcohol in Canada.

Manufacturers of vinegar, perfumes, essences, pharmaceutical preparations, etc., are invited to write us for prices of Alcohol suitable for their particular line of business.



We make a special feature of contracting for the requirements of manufacturers for the year or season, thus providing not only a uniform cost but also a steady supply as needed.

Those who are using Duty Paid Alcohol in their manufacturing processes would do well to consult us with a view to using it "In Bond," thus avoiding the use of two-year-old Alcohol. Under the rules and regulations of the Department of Inland Revenue, newly made Alcohol may be used "In Bond." This Alcohol is much cheaper than two-year-old.

METHYLATED SPIRITS or Denatured Alcohol is sold only by the Department of Inland Revenue, Ottawa, Ont., but any other kind of Alcohol may be secured from us.

management is at the bottom of thousands of failures of store enterprises of well-intentioned groups or companies. The failure of the undertaking is made more probable by the further fact that employees expecting immediate benefits, are in no frame of mind to overlook apparent occasional overcharges or other things they think faulty.

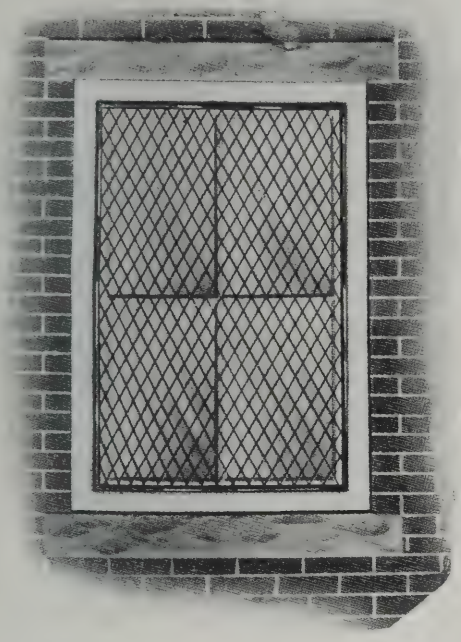
The employees, on their part, have often undertaken something resembling Rochdale co-operation, but up to this time, this character of store has not been any more successful than the company store. The co-operative spirit among consumers has not reached this side of the Atlantic so as to enable working people to make the immense savings which 15 or 20 million British workmen are enjoying.

And yet, one who studies the situation can hardly relinquish the thought that in some way a large part of the expense of retailing and wholesaling should be saved to working people who are in a position collectively to buy large quantities.

Gross Profits of Retailers of Food

The Harvard Graduate School of Business finds that the gross profits of retailers of food range all the way from 14.6 to 27.9 per cent. on selling prices, and that the gross profits of wholesalers range from 7.7 to 17.2 per cent. If we were to assume that some of the goods which are sold at the highest retail profit also pay the highest wholesale profit, the gross tax on the consumer under these most disadvantageous conditions would be 45.1 per cent.

But if the dealers, retailing at 14.6 per cent., buy of the wholesalers who only get 7.7 per cent., the consumer bears a total gross profit burden of only 22.3 per cent., or less than half the higher expense of distribution. To be sure, this retailer getting 27.9 per cent. may give more service, such as delivery, and the like, than does the low-profit dealer. But it is not optional with the working man to forego this service and get a lower price at these particular stores, for the prices are usually uniform to all, with or without service. So it may happen that some working men are paying 45.1 per cent. on the retail price for bringing their foods from primary markets, while others are paying only 22.3 per cent.



Perhaps it would be fair to say that of all family supplies, including foods, the amount paid by the workman-consumer for both wholesale and retail merchandising would range from 30 to 40 per cent. of the retail price. When it is remembered that something like two-thirds of the workmen's wages are paid for such supplies, it would seem that the task of reducing the cost of distribution should not be given up until the utmost efforts have been made.

Make Purveying of Food to Employees a Concession

The writer wishes to recommend a plan which he believes will go a long way toward solving the problem. This plan consists simply of treating the business of purveying foods to the employees as a concession, and leasing the privilege to the competent and resourceful dealer who would perform the service under proper stipulations at the lowest average gross profit between the quotations in primary markets and the retail price. The successful bidder should comply with clearly stated conditions as to the service he is to perform, and his books should be carefully audited under the supervision of a committee of employees and employer, say, monthly or quarterly to see that such prices were charged as would average only the gross profit stipulated.

Bidders should be large enough dealers to perform practically their own jobbing service as well as retailing, know goods, values and sources. Prices should be at the counter and not delivered to the homes, a separate charge being made for delivery.

Industrial companies should give free store rent and perhaps even a bonus in order that the retail prices made possible

by such an arrangement would be enough lower than prices current in competing stores to insure practically the whole trade of the employees. This is very essential for, to insure the lowest bid of responsible dealers, they must be assured a large minimum trade. Conditions should be such as to make the concession attractive to responsible bidders, and to insure real competition between bidders.

Verified reports of the auditing committee should be made easily accessible to all customers, the figures being given in the simplest possible manner. Of course, it should be made clear that the employer company makes no profit, but fosters the undertaking as further compensation for its employees.

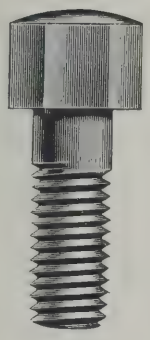
The report of the bureaus of labor statistics of some states seem to indicate that the prices in some communities are such that consumers must pay double the gross profit that they pay in other communities.

Probable Saving to Employees

It is very probable that this arrangement would enable the employees to buy their supplies from 10 to 15 per cent. lower than they could otherwise get them, and be assured of a quality and purity which would be unobtainable without the kind of supervision which an auditing and inspection committee of the employers and employees could insure. It will be noted that this plan keeps the operation of merchandizing in the hands of trained and experienced merchandizers, thoroughly posted as to qualities, values, sources, and leaves the incentive of a small net profit on the gross turnover to give life and push to the business. The fact is that a large dealer in foods would be satisfied with a net profit of far less than the waste due to weak and inefficient merchandizing. A certain large market known to the writer, doing over 10 millions a year, is conducted at a net profit of not exceeding 2½ per cent. When prices yield more than that percentage they are reduced.

This plan would result in real competition, and in the adoption of economical methods and devices like the self-service or groceteria idea, and would cut out the expenses which are incurred, not to serve the consumer, but to beat competition and profit the dealer.

Of course, a responsible organization of employees would be very desirable, if not almost necessary; and, in fact, the right kind of an organization of employees could take the whole initiative of letting the contract. The furnishing of store room and facilities on the part of the company should be frankly treated as a part compensation to working men, and not as a philanthropic gift handed down in a paternalistic way. Such an arrangement could hardly fail to promote a feeling of responsibility and independence among employees and make for reduction of labor turnover.*



* Since this article was written the writer has learned that two stores of the American Smelting & Refining Co. at Garfield, Utah, and El Paso, Texas, are conducted on this plan so far as restricting the gross profits of the dealers.

Another Branch Plant

United States Chemical Industry Will Locate a Canadian Plant in Walkerton, Ont.

The Kamovar Chemical Co., of Cleveland, Ohio, have decided to establish a Canadian company, and will make their headquarters in Walkerton. Their factory, in which they will manufacture toilet articles, will be located in the Sinclair Block, next to the Rattan Factory. The new industry, in which some local capital will be placed, will eventually employ about 200 hands, and it is expected that operations will start about the middle of November.

"MORROW"

From the Atlantic to the Pacific, and from the north to the south MORROW products are the standard—the kind you have used satisfactorily—strength and accuracy.

Always specify MORROW Set and Cap Screws, MORROW Twist Drills. Ingersoll Files are good files.

BRITISH COLUMBIA'S MINERALS

The mineral production of the province for 1918 was the largest of any previous year with the exception of 1916, when it reached $42,290,462, and when the copper production was the highest on record, being nearly 4,000,000 pounds greater than for 1918.

By E. A. Haggen.

(From the "Vancouver Province.")

The annual report of the Minister of Mines for British Columbia for 1918 has been issued, and is one of the best yet published. Its value lies mainly in the fact that it represents the first complete year's work by the resident engineers of the mineral survey districts. Comparative figures of mineral production for years 1917 and 1918 are:

	1917.		1918.	
	Quantity.	Value.	Quantity.	Value.
Gold, placer, oz. ...	24,800	$496,000	16,000	$320,000
Gold, lode, oz.	114,523	2,367,190	164,674	3,403,812
Silver oz.	2,929,216	2,265,749	3,498,172	3,215,870
Lead lb.	37,307,465	2,951,020	43,899,661	2,928,107
Copper, lb.	59,007,565	16,038,256	61,483,754	15,143,449
Zinc lb.	41,848,513	3,166,259	41,772,916	2,899,040
Coal, tons, l'g	2,149,975	7,524,913	2,302,245	11,511,225
Coke, tons, l'g.	159,905	959,430	188,967	1,322,769
Miscellaneous	.....	1,241,575	.....	1,038,202
Totals	.....	$37,010,392	.....	$41,782,474

The mineral production for the year 1918 was the largest of any previous year with the exception of 1916, when it reached $42,290,462, and when the copper production was the highest on record, being nearly 4,000,000 pounds greater than for 1918.

The Coast district made the largest production of any district, with a value of $13,827,663, the Cassiar district ranking next with $9,178,441. The figures for other districts are: East Kootenay, $7,259,897; West Kootenay, $6,113,279; Boundary-Yale, $4,961,452; Cariboo, $383,996; Lillooet, $57,746.

The coal mines of Vancouver Island and the copper production of the Britannia mainly account for the excellent figures for the Coast district, but the figures for coal do not represent an increase of tonnage so much as the increase in price, amounting to nearly 50 per cent. over the average of previous years. The Cassiar production mainly comes from the Granby Company's Hidden Creek mine, and the Belmont Surf Inlet gold mine, on Princess Royal Island.

District Production

It is noteworthy that East Kootenay is now a larger producer than West Kootenay, this result being mainly due to the Crow's Nest Pass coal production and the development of the Sullivan mine as the world's largest silver-lead-zinc mine.

The Boundary district, which used to lead by long odds, has now dropped to fifth place, owing to the Canada Copper Corporation closing down its Greenwood mines, and the Granby Company's Phoenix mines approaching exhaustion. The principal producer in that district after the closing down of

DOMINION EXPRESS BUILDING MONTREAL, CANADA

Phoenix will be the Hedley Gold Mining Company's Nickel Plate mine, whose output averages about $750,000 a year.

The placer gold production for 1918 was the lowest in sixty years, and shows how this once prominent source of gold production is steadily disappearing. Ninety per cent. of the placer gold production is derived from hydraulic mining.

The increase in lode gold was due to the Surf Inlet mine being brought into production with an output of around $1,000,000 a year. Rossland produced about 10,000 oz. more than in 1917; the Coast district about 1,800 oz. more, due to the greater production at the Britannia mine; and Nelson district showed an increase of 4,600 oz., due to the increased production of the Yankee Girl mine at Ymir.

Silver Output

Slocan was the largest producer of silver, accounting for 1,873,236 oz. of the total production of 3,498,172 oz. Skeena mining division ranked second, with 416,616 oz., almost entirely as a by-product from the ores treated at the Granby Company's smelter at Anyox. Other districts produced as follows: Fort Steele, 261,497 oz.; Ainsworth, 228,699 oz.; Boundary-Yale, 228,561 oz.; Nelson, 136,738 oz.; Southern Coast, 116,425 oz.; Windermere-Golden, 91,784 oz.; Omineca, 84,125 oz.; Trail, 47,203 oz.

The Slocan production exceeded that of the previous year by 325,660 ounces, the largest produced being the Surprise, followed by the Queen Bess and Standard. Half of the production of the Boundary district came from the Granby Company's Phoenix mines, other producers being the Mother Lode mine of the Canada Copper Corporation, the Sally and the Union.

The production of the southern coast district was mainly from the Britannia mine, and from the Omineca, from the Silver Standard mine at Hazelton. About three-fourths of the silver production is derived from the silver-lead mines, and the balance as a by-product of copper ores.

The lead production was greater than 1917 by 6,592,196 pounds, but owing to the lower prices realized, $22,913 less The producing districts were, in order of quantity: Fort Steele, 18,695,565; Slocan, 14,575,379; Ainsworth, 6,106,262: Windermere-Golden, 2,659,210; Nelson, 1,611,166.

Of the Fort Steele production, 860,000 pounds came from the North Star, and the balance, nearly all, from the Sullivan mine. The Queen Bess was the heaviest producer in the Slocan, and was followed by the Surprise, Van Roi, Galena Farm and Standard. In Ainsworth mining division the Florence was the largest producer, with an output of 2,500,000 pounds, followed by the Blue Bell with about 1,300,000 pounds; Highland and Cork-Province with about 600,000 pounds each.

The production of Nelson mining division was almost entirely from the Emerald mine. In the Windermere-Golden section the Paradise mine produced about 1,800,000 pounds of lead, and the Couverapee, at Field, about 800,000 pounds.

Copper is King

Since 1905, copper has been the principal metal produced, and for the past few years its production has exceeded that of all the other metals put together. The production for 1918 was the largest on record with the exception of 1916. The production for 1918 was 2,476,189 pounds more than for the previous year, but owing to the drop in price it was valued at $894,807 less. Skeena mining division produced 30,190,606 pounds, nearly half of the total output of copper, this being from the Granby Company's Hidden Creek mine. Other districts produced as folows:

Southern Coast, 18,475,013 pounds; Boundary-Yale, 9,940,125 pounds; Trail, 1,654,356 pounds; Omineca, 643,843 pounds. The production of the Southern Coast was mainly from the Britannia mine, with 17,548,127 pounds, an increase of 1,767,297 pounds over the previous year. The Marble Bay mine pro-

duced 624,442 pounds. The Boundary-Yale production was mainly from the Granby Company's Phoenix mines, which accounted for 7,347,273 pounds, or double that of previous years. Canada Copper Corporation produced 1,832,382 pounds. For years the Boundary district was the principal producer, but with the closing down of the Greenwood and Grand Forks smelters its days of mining prosperity have passed for the present. It is worthy of note that eighty per cent. of the copper production is now from Coast mines.

Zinc Production

The production of zinc was 75,597 pounds less than for previous year. Fort Steele produced about two-thirds of the total, the figures for the various districts being: Fort Steele, 26,704,806 pounds; Slocan, 14,107,682 pounds; Ainsworth, 640,991 pounds; Omineca, 313,112 pounds. The Fort Steele production was entirely from the Sullivan mine. The Standard was the heaviest shipper in Slocan with a production of 7,000,000 pounds, which, however, was 3,000,000 pounds less than previous year. The next largest producers were the Surprise, Lucky Jim and Galena Farm. Ainsworth produced only two-thirds the amount of previous year. The Omineca production came from the Silver Standard mine at Hazelton.

Iron—Bog iron ore was shipped from Mons on the P. G. E. Railway, to the Irondale plant at Washington, and averaged 40 to 50 per cent. iron, but was high in phosphorus. Magnetite ore was shipped from Texada Island.

Arsenic—The arsenic production was doubled from $20,000 in 1917, to $40,000 in 1918, being entirely the output of the Nickel Plate mine at Hedley, and treated at Tacoma smelter.

Molybdenite—The only shippers were the Hazelton View, at Hazelton, which shipped a carload of ore to Ottawa, and the Golconda, in Osoyoos mining division.

Chromite—Eight hundred tons of chromite were shipped from the Mastodon claim at Grand Forks, and a deposit opened at Scottie Creek, near Clinton.

Manganese—The Curle mine at Kaslo shipped fifteen carloads of manganese ore, and large deposits of high-grade ore were discovered at Cowichan Lake.

Fluorspar—A total of 100 tons were shipped from the Rock Candy mine at Grand Forks mining division, this mineral being used by the Trail smelter in the manufacture of hydrofluoric acid, used in the lead refinery.

Epsom Salts—Epsom salts were shipped from Spotted Lake, Osoyoos mining division, and 170 tons from Clinton.

The 1918 Coal Figures

The coal production was 180,009 tons over the previous year, and was the largest production since 1912. A total of 276,479 tons were made into coke. Vancouver Island was the largest producer, with 1,666,211 tons. Crow's Nest produced 732,864 tons; Nicola-Similkameen, 179,179 tons, and Omineca 470 tons. The Canadian Collieries, Limited, was the largest producer, mining 30.7 per cent. of the total. The Canadian Western Fuel Company was the second largest producer, with 28.4 per cent. of the total. The Crow's Nest Pass Coal Company mined 23.6 per cent. of the total. The following was the production of the various collieries:

	Tons.
Canadian Collieries	791,830
Canadian Western Fuel Co.	731,922
Crow's Nest Pass Coal Co.	608,875

260 ST. JAMES ST., MONTREAL

The year added two new collieries to the list of producers, namely, the Granby Company's mine at Cassidy, and the Telkwa Mine at Telkwa. Of the production of the coast collieries, amounting to 1,845,860 tons, 933,296 tons, or nearly half, were sold to local markets, and 469,020 tons exported. The local consumption showed an increase of 8.3 per cent. probably due to the substitution of coal for fuel oil in heating plants. In the Crow's Nest Mines, on the other hand, 80 per cent. of the output is exported ot the United States.

The coke production was 29,062 tons more than for the previous year. Of the coke output, 24,887 tons was from the ovens of the Canadian Collieries, Limited, at Union Bay, and 164,080 tons from the coking plants of the Crow's Nest Pass Coal Co. The whole of the coke was sold to the local smelters and foundries, the output of the Canadian Collieries being taken by the Granby Company for its Anyox smelter. Now that this company is mining its own coal and has a by-product coking plant in operation at Anyox, it is probable the Union Bay coke ovens will again be closed down until the Ladysmith Smelter reopens. This will leave all the more coal available to meet the home demand for fuel.

Building Materials

The demand for building materials was the lowest for some years. The Clayburn Company was the principal manufacturer of clay products, the output of which amounted to about $250,000. Lime production for building and fertilizer purposes fell from $102,223 in 1917, to $28,536 for last year. On the other hand, quarried for smelter flux represented a value of $100,000, used in the furnaces of the Granby and Consolidated Mining and Smelting companies. Cement was manufactured to the value of about $300,000, by the Vancouver Portland Cement Company, Limited, at Tod Inlet.

Shipping Mines

There were 175 shipping mines on the list for 1918, and these produced 2,892,849 tons of ore, or about 130,000 tons more than for 1917, though the production was about 300,000 tons less than for 1916.

The number of men employed in the metal mines was 4,148, and in the coal mines 5,427. The tonnage of coal produced per man in the Coast coal mines was 649, and in the Crow's Nest mines 900 tons.

A notable improvement in mine labor conditions is the reduction in accidents in the coal mines, the ratio of accidents last year being the lowest in ten years.

Launch Large Tonnage

Launchings in British Columbia this Year will Exceed Last Year

For the first half of 1919, 28 ships were launched in British Columbia, with a total tonnage of 75,500 tons. Of the launchings, two were 8,800-ton steel vessels from the Coughlan yards, Vancouver; two 4,300-ton steel vessels from the Wallace yards, North Vancouver; 7 wooden vessels from the Lyall yards, North Vancouver, and 8 of the 3,000-ton wooden steamers from the Foundation yards, Victoria, in addition to the completion of the contract at the latter's yards in launching all the 1,500-ton class boats. Other companies launching 1,500-ton wooden steamers were the New Westminster, Pacific Construction Co., Northern Construction Co., and the Cholberg yards. It is expected that the total tonnage launched during the year will exceed 165,000 tons, as compared with 155,600 in 1918.

NEW SOURCES OF LEATHER SUPPLY

How the shortage of supply of hides of land animals may be made up by having recourse to the skins of sea creatures. The most significant development in the art of converting the skins of aquatic animals into leathers of excellent grades is that now being pursued in dealing with the hides of sharks, rays, dogfish, etc.

By Robert G. Skerrett.

(From the "Scientific American.")

Heretofore, with minor exceptions, we have depended upon the skins and hides of land animals for the great bulk of our leather stocks. To-day, because of the reflexes of the war, and owing to diminished if not totally destroyed herds of cattle, sheep, goats, etc., we, with other peoples, are face to face with an unprecedented shortage of leathers. And, what is equally disquieting, this scarcity is going to lay a tax upon all of us.

The pinch upon our purses will come home most directly through the added prices that are certainly going to be charged for our footwear next fall and winter. The average pair of shoes will cost us something like a dollar more if the experts of the leather industry be correct in their prophecy. That is to say, the nation as a whole will have to hand out for its boots and shoes a matter of $100,000,000 additional to cover its feet in the course of the next six months without gaining anything in the way of improved articles.

We are accustomed to boast of our self-sufficiency when it comes to raw materials, especially. It will, therefore, probably shock many good Americans to learn that the United States commonly relies upon the outside world for nearly half of its cattle hides, for well-nigh all of its goat skins, and likewise for a very large part of the pelts of sheep and calves consumed here. From an industrial point of view, the present leather shortage and outlook become even more serious when we recognize the fact that we have grown to be the leading nation among those manufacturing boots and shoes. What are we going to do to make up the existing scarcity and to insure our factories against shut-down or woefully diminished output?

Many Uses for Leather

During 1917 we imported 700,000,000 pounds of hides and skins, valued at the ports of entry at $216,000,000. Since then, there has been a notable decrease in the quantities of leather stocks brought into the United States, and this falling off has reached hundreds of millions of pounds. Only a part of the leather worked up here annually goes into footwear. Much of it is demanded by the upholsterer; great quantities of it are used in the making of harness and saddlery; the glove trade levies a big toll; and then its employment is varied in the fabrication of travelling bags, handbags, pocket-books, and an endless multiplicity of other useful as well as ornamental articles. In the field of mechanics, leather meets with peculiar fitness numerous needs, and the whirring wheels of our factories and other services calling for power transmission would be at a loss if a sufficiency of leather belting were not available. Finally, the automobile and aircraft have brought to the fore the advantages of leather in providing especially suitable garments.

Manifestly, the demands for leather stocks are certainly going to increase rather than to diminish; and if the herds, the droves, and the flocks of land animals are inadequate, from what other sources can we obtain skins susceptible of being tanned and made fit to meet these manifold services? Happily for us the period of strife has stimulated research and brought about material achievements which otherwise

might still be remote potentialities. Quite two years ago, the Department of Commerce urged the experts of the leather industry to see what they could do here towards successfully tanning the skins of a number of marine mammals and fish.

Previously, the skins of some domestic porpoises had been tanned but not in sufficient measure to loom at all conspicuous in the volume of the native leather industry. There were two reasons for this. First, the catching of the porpoise was an infrequent occupation and we had little if any trouble in securing from long-established sources the desired amounts of leather stocks; and, next, porpoise leather for boots or shoes found only a limited use owing largely to the fishy odor that clung to the finished product. The more common employment of the leather was in the form of shoestrings. In England, on the other hand, for a good long time, the tanners have been producing a fine grade of so-called porpoise leather from the skin of the beluga or white whale, which attains a length of 18 feet or more and will average in girth from 10 to 12 feet. This leather has great tensile strength and is remarkably well adapted to the making of machinery belts; and because it keeps its shape under varying stresses it is admirable for working into shoes. The beluga abounds in the waters contiguous to the northern coasts of this continent.

A Concern that has Succeeded

The most significant development in the art of converting the skins of aquatic creatures into leathers of excellent grades is that now being pursued upon a commercial scale in dealing with the hides of sharks, rays, dogfish, blackfish, etc. Despite the fact that many firms, encouraged by the United States Department of Commerce, failed to secure satisfactory results, one New York concern has solved the difficulty that has hitherto baffled the tanner. One of the early operations in preparing the skin of the aquatic animal for tanning is that of soaking the hide in a lime solution. If this is not done with extreme care and with due regard to the natural differences peculiar to the fish skin the resultant product is so spongy and lacking in strength that it has practically no market value. This stage of the process has pretty generally ruined the skin and made further work upon it quite useless. To-day, the secret of a correct lime bath has been discovered, and, similarly, some other phases incidental to the manipulation of the skins have been mastered. Among these is a degreasing treatment which effectually removes the fishy odor.

The adaptation of the shark skin to the general purposes of the leather worker has presented distinctive difficulties—so, too, has the skin of the ray and the dogfish—because of the horny, tuberculous exterior which is frequently so hard that it can be ground down only by means of abrasive belts or wheels. In fact, this shagreen has been extensively employed by cabinet-makers, ivory workers, metal workers, etc., in lieu of emery cloth and sand paper. The question of making shark skins available for leather has, therefore, rested in part upon devising ways to get rid of the shagreen. The results as a rule have been anything but satisfactory, simply because grinding away what might be called the superficial hard material still left the supporting parts or bonds imbedded in the leather, to just that extent stiffening it, greatly hampering cutting and sewing, and yielding a product which had numerous drawbacks.

Thanks to recourse to chemistry, the shagreen can be completely separated from the underlying skin and yet leave the hide beautifully marked with its characteristic "grain." So dressed, the leather lends itself to the manufacture of bags, belts, card cases and other articles where an ornamental surface is desired. With this exterior removed, either the upper layer of the skin or the underlying "splits" can be

dressed for shoe stock—including the heavy material for soles. The leather will take a beautiful finish and is notably durable. From a 500-pound shark it is possible to obtain ten square feet of leather from the hide, and the stomach furnishes a raw material that will yield a leather which is soft and strong and looks not unlike glazed kid when ready for the market.

The ray or devil fish will frequently provide a skin, when tanned, having an area of 100 square feet; and the sawfish is also a potentially abundant source of leather stock. The dogfish, being comparatively small, is not as individually profitable as the full-grown shark, and yet its hide is well worth tanning. The porpoise, depending upon its size, will give a skin susceptible of producing anywhere from 10 to 20-odd square feet of leather. Not only that, but from this skin can be taken a sturdy upper layer of grain of very fine quality and then two underlying "splits"—the first of these being thick and strong enough for a good grade of heavy shoes, while the second "split" is of the character of a thick suede. The intestines of the porpoise make leathers for which there are many uses. The skin of the blackfish and likewise the skin and stomach of the whale lend themselves to tanning, and from these several sources leathers of fine qualities can be secured.

Utilization of Other Parts.

But this whole question of "sea leathers" would make but a moderate appeal to enterprise and capital if it were not possible to utilize other parts of these aquatic creatures. From the livers of the shark an oil is obtainable, also from the livers of the dogfish, which is said to have much of the medicinal properties which characterize cod liver oil, and, besides, the oil is in demand for the manufacture of soaps, for mixing paints, and for the treatment of some leathers. A 500-pound shark will give an average of from 10 to 15 gallons of liver oil, which is easily marketable at fifty cents a gallon. The dorsal fins, when dried, bring $2.50 apiece among Oriental epicures. The teeth sell readily for five cents each to manufacturing jewelers who work them into ornaments of one kind or another. The flesh of the shark is said to be decidedly palatable, and the Bureau of Fisheries has published some thirty different recipes for fresh shark, smoked shark, salt shark, and canned shark. In common with the meat of other sea creatures, the flesh of the shark can be converted into fertilizer or dried and ground for chicken and cattle food. As a fertilizer the stuff is rich in ammonia and phosphoric acid. Sharks in our southern waters range from 400 pounds to 2,000 pounds in weight, while the devil fish or ray will frequently tip the scales at 3,000 pounds.

Porpoise Yields Oil

The porpoise, besides furnishing skins that can be tanned, yields three grades of oil—i.e., body, head, and jaw-pan. The latter is especially valuable as a lubricant for watches and other fine mechanisms and, to-day, fetches quite $50 a gallon. Certain parts of the skins of some of these aquatic animals—parts that are not worth tanning—contain fully 90 per cent. of glue. Likewise, from the blood of some of these creatures is to be had the basic material for a superior kind of waterproof glue such, for instance, as is desired in the built-up stock now used in making airplane propellers and other wooden parts of the flying machine. From the intestines that cannot be worked into leather it is possible to get the gut for string instrumens, tennis rackets, etc., and sausage casings, parchment, stopper-covers, glue, and other marketable commodities. The point is, nothing need go to waste; and, at the same time, an inexhaustible source of leather stock is thus made available which heretofore has been almost entirely neglected.

Among the Industries

Under this heading are published items of news of current interest concerning the activities of Canadian manufacturers. Information about changes of interest, enlargement of plants, and plans for future developments are welcome, and are published free of charge, provided they should not be properly classified as advertisements

ALBERTA.

Redcliff.—Plans are completed for the erection of two large additions to the Dominion Glass Co.'s plant here.

BRITISH COLUMBIA.

Beaver Cove.—An addition is planned to the plant of the Beaver Cove Lumber & Pulp Co.

Collingwood.—Announcement has been definitely made regarding the location of the new rubber plant of the Gregory Tire and Rubber Company, which is to be at Collingwood, near Kingsway. It is expected that the plant will employ approximately 50 men and will have an output of 300 tires and 600 inner tubes per day. The concessions offered by the municipality of South Vancouver were ten years' exemption from taxation and water supplied at cost.

Merritt.—Plans were completed and work commenced recently to establish the Nicola Pine Mills, Ltd., in Merritt. It will be remembered that some months ago the splendid plant and yards of the company at Canford were completely destroyed by fire since which time strenuous efforts have been made by the citizens to have this industry established at Merritt. With this object in view, a joint stock company was formed to purchase the Blair property, situated south of the Coldwater river, between Merritt and Middlesboro, immediately adjoining the city limits.

New Westminster.—The Western Cordage Company has definitely decided to locate a plant in New Westminster, a site having been secured near Sapperton in the industrial area. The machinery has been ordered and when completed the plant will employ eighty to ninety returned men. The industry will be a co-operative concern, organized under the Provincial Government's industrial development scheme.

Port Coquitlam.—Pitt River Shingle Mills plan the erection of a $30,000 mill.

Vancouver.—A $15,000 factory is planned by the Dust Control Co.

A $10,000 factory will be built by the Kennedy Sash and Door Co., Front Street.

A group of local business men, headed by Gordon Jonah, of the Jonah-Piat Co., have formed a company and will erect a woollen mill.

T. H. Laslett will construct a new brick factory at 721 Seymour Street. Estimated cost, $10,000.

A plant which was to have been installed at Vancouver by the Argyll Bute Co., a concern manufacturing "Scotch Snack" products of fish paste, with main plants and offices at Montreal, is to be established at Seattle, according to a statement by W. O. Barber, representative of the company. The site for the plant at Vancouver has been under option and much of the material had been delivered at Vancouver, but work of installation was ordered suspended pending Mr. Barber's trip of inspection to Seattle.

MANITOBA.

Winnipeg.—The Manitoba Bridge & Iron Works are now manufacturing the Anderson grain-saving guards, which, it is claimed, have proven to be very efficient in saving all fallen field crops, including wheat, oats, flax, rye, barley and also timothy and other hay. There are at present over ten thousand sets in use and the sales are increasing.

The Twin City Separator Co., manufacturers of the Bull Dog fanning mills, are at present constructing a three-story brick machine-shop and warehouse building. Manager P. J. Grou states that with recent additions the total floor space of the company will be 124,000 square feet. Their business to date has been the best in the history of the organization, which has shown a record of steady advancement.

The Emerson Manufacturing Company, who have for some time been distributors of the Emerson wild-oats separator, announce that they have taken over the entire production of this separator for the American continent. The Winnipeg concern recently concluded negotiations with W. H. Emerson & Sons, Detroit, Mich., whereby they take over the machinery, plant, goodwill, stock and all assets of the American concern. The factory in Detroit has for sixteen years been supplying farmers and elevators all over the United States with this well known grain cleaner. The Emerson Manufacturing Co., Winnipeg, are at present making large additions to their plant to take care of the expansion. The company will employ about forty hands, which will be added to as production increases.

Additions to their lime plant are being made by the Manitoba Gypsum Co.

The Continental Oil Company, which has operated plants at Winnipeg, Regina, Saskatoon, Calgary, Lethbridge and other Western points, has been taken over by a new firm, the North Star Oil and Refining Company, Limited. The head office will be at Winnipeg.

NEW BRUNSWICK.

Marysville.—Plans of the big dam which is to be constructed on the Nashwaak river, near Marysville, N.B., by the Nashwaak Pulp and Paper Co., of which Hon. N. M. Jones is general manager, have been filed with the Lieut.-Governor of the province in accordance with the provisions of the Act passed at the last session of the New Brunswick legislature. It is understood that the Nashwaak Co. will proceed with the erection of the

big sulphite pulp plant at Marysville in the near future and will eventually remove the present plant from St. John to Marysville.

Mullin's Brook.—The Hardwood Last Block factory, which was spoken of some time ago as about to be located at Mullin's Brook, York County, N.B., is now being built. The site is about four miles from McGiveny Junction on the Canadian National Railway. The interest behind the enterprise is H. Mobbs, of Kettering, England, said to be the largest maker of last blocks in the world. Between one and two hundred persons will be employed to begin with, and the manufacturers have entered into an agreement with the Nashwaak Pulp & Paper Company for 3,000,000 feet of hardwood lumber.

NOVA SCOTIA.

Sydney.—The plant of the Cape Breton Pulp and Paper Co. at St. Ann's, Victoria County, is very busy at the present time and about three hundred men are employed. The company is looking for additional help. A large new barking drum is being installed. Gangs of men are at work taking out large quantities of pulp wood and making roads in order to facilitate the movements of the motor trucks, which will deliver the product to the pulp mill. Shipments of pulp have been made by steamer to several points in the United States, and it is the intention of the directors to erect eventually a paper mill, which will convert the raw material into the finished product.

The Sydney Foundry and Machine Company of Sydney, N.S., who conduct a large repair business in marine lines, are applying for a site upon which to build a dry dock for this port.

ONTARIO.

Arnprior.—The International Button Co. plan the erection of a $25,000 factory.

Belleville.—A proposition to build a large steel plant in Belleville is now under consideration by the Tivani Steel Co., Ltd. The plant would consist of electric furnaces, rolling mills, merchant bar mills and open hearth furnaces. A similar plan is being considered for Vancouver.

Brantford.—C. H. Hyman & Co., London, have let a contract for a $125,000 four-story reinforced concrete canning factory.

The works of the Kerr & Goodwin Machine Company at Brantford are now turning out one of the new Hoag oil engines manufactured by this company every day. There is good prospect of these engines being made on a large scale very shortly.

The Brantford Piano Case Co. contemplate further extensions to their plant.

Additions to two buildings will be made by the Cockshutt Plow Co., Limited, at a cost of $24,500. Additions to plant are also being made by the Brantford Roofing Co.

Alterations and extension to office building are being made by the Dominion Steel Products Co., Limited.

The Robbins & Myers Co., of Springfield, Ohio, will erect a factory here.

The United Portland Cement Co., Limited, propose to erect a factory at Lafayette, Ont.

Contracts have been let for addition to factory and dry house of the Slingsby Mfg. Co., Limited, and to the factory of the Brantford Computing Scale Co., Limited.

Brockville.—The Brockville Paper Manufacturing Co. will erect a three-story factory on Park Street. Estimated cost approximately $100,000.

A smelter may be built here by the Consolidated Iron and Steel Corporation, Limited, 20 King St. East, Toronto, recently incorporated with a capital of $8,000,000, and backed by Toronto and Detroit interests.

Cargill.—The woodworking plant of Cargill, Limited, is shut down, due to the shortage of skilled operators. They expect to resume production about the first of the year.

Chatham.—A new three-story brick factory building will be erected immediately by the Gray-Dort Motor Sales Co.

Cobourg.—The Crossen Car Co., Limited, who formerly manufactured a line of sleeping, parlor and passenger cars, etc., have discontinued business. The plant has been completely dismantled.

Collingwood.—An amalgamation has been made with the Collingwood, Ont., steel plant and the Canadian Western Steel Co., Ltd., with rolling mills at two Western points. The new firm has been incorporated in the name of the Canadian Western Steel Corporation, Limited, and it is proposed to start the idle rolling mills at Collingwood and also start up the open hearth furnaces. Construction will begin within a few weeks. This new corporation will have in operation before long three rolling mills, located at Collingwood, Ont., Medicine Hat and Redcliff, Alberta, also a bolt and nut factory at Medicine Hat, which it is said, will enable them to supply the trade, both East and West.

Cornwall.—The Firestone Tire & Rubber Co., Akron, Ohio, may erect a Canadian branch here.

Fort William.—The Kakabeka Falls Brewing Co., are extending their present buildings to accommodate an additional bottling plant.

Galt.—It is stated that a tin smelting plant is to be located at Galt. The idea is to build one smelter to begin with, to be followed by others as the need arises.

The plant of the Victoria Wheel Works is being equipped to manufacture shafts, poles, and all bent goods required for carriage making.

Goderich.—The Convertible Tractor Corporation of St. Paul, Minn., may erect a Canadian branch at Goderich.

Guelph.—The International Malleable Iron Company of Guelph have called for tenders for the construction of a new machine shop and warehouse. The building will be one story in height and will be 189 feet by 120 feet, of concrete and brick, and will cost about $33,000.

The Fried Grills Hat Co. will erect a large addition to their present building, Suffolk Street, to be completed by early spring.

Among recent building permits at Guelph was one for $45,000 for addition to the Partridge Rubber Co.'s factory and one for $100,000 for the new factory of the Northern Rubber Co.

Hamilton.—Tenders will be opened on September 15 for the erection of the $600,000 plant to be erected here by Porritts & Spencer, Limited, Bury, England.

The Dominion Canners have purchased new office premises in Hamilton. They have bought the old Bell Telephone building on Hughson Street, the price being reported to be over $50,000. Their present offices are in the Landed Banking and Loan Building.

It is stated that plans have been prepared for a five-story tailoring establishment to be erected on Hughson Street.

The Beaver Motor Truck Company, capitalized at $350,000, have decided to locate in Hamilton. A light two-ton truck will be turned out.

Contracts have been let for a $16,000 warehouse for Canadian Cotton Co.; a $10,000 boiler house for Chipman Holton Knitting Co., and $10,000 warehouse for Canadian Steel & Wire Goods Co.

Kapuskasing.—It is expected that work will shortly be started on the new pulp and paper mill of the Spruce Falls Pulp & Paper Co., which will be erected at Kapuskasing, Ont. The capacity of the plant will be 200 tons a day, and the general contractors for the work and large dam which will be built on the river at this point are Morrow & Beatty, Limited, of Peterboro.

Kitchener.—The F. W. D. Auto Co. will commence construction of their new factory immediately.

The Komavar Chemical Co., Cleveland, Ohio, contemplate establishing a Canadian factory. It is stated that a site may be chosen in Kitchener or in London.

The Berlin Engine and Thresher Company, Limited, has changed its name to the Tuerk Engine and Tool Co., Limited.

A contract has been awarded by the A. & C. Boehmer Box Co. for the erection of an addition to their factory.

London.—General contract has been let by C. S. Hyman & Co., Limited, for a $300,000 addition to tannery.

Work will be commenced shortly on the Canadian branch factory of the Republic Motor Truck Co. The Canadian company is capitalized at $2,000,000.

The London Concrete Machinery Co. is building a $5,000 addition to its factory.

Merrickville.—The Percival Plow and Stove Co., Limited, are negotiating with the council for land on which to erect a new moulding shop and machine shop.

Morrisburg.—Handley-Page, Ltd., have secured a Dominion charter to engage in a general aeroplane business in Canada. The capital stock will be $2,500,000, and the head offices of the company will be at Morrisburg, Ont. The directors named are William Harold and Admiral Mark Kerr, London, Eng.; Harry Clark, Montreal; Fred. Chalmers and W. H. Gannon, of Morrisburg.

Niagara Falls.—A contract has been let for a factory for the Niagara Wire Weaving Co.

A factory is being erected by the Spring Water Bottling Co. Ferry Street.

Oshawa.—Contract has been let for a factory building to cost $100,000 by the Gananoque Spring & Axle Co.

The General Motors of Canada, Ltd., have announced part of their extension policy. A new four-story plant, 400 feet x 80 feet, will be erected to assemble Oldsmobiles and trucks. A central shipping building, 200 feet x 80 feet, with a capacity of fifty-six freight cars under roof, will be erected, so that inclement weather will not handicap shipping operations. An enamelling plant, 300 feet x 80 feet, three storeys, equipped with the most modern facilities for efficiency and mammoth production, will also be erected.

Port Colborne.—The Canada Cement Co. have let contracts for a potash recovery plant to cost $150,000.

Preston.—A new factory will be erected here by Otto Homuth, manufacturer of woolstock.

St. Thomas.—The F. J. Harding Co. are reported to be contemplating additions to their plant.

Sandwich.—A Detroit company manufacturing clutches for automobiles, trucks and tractors, has secured a site here and proposes to erect a branch plant, though building operations will not be commenced until next year.

Sault Ste. Marie.—The Algoma Steel Co. will spend several hundred thousand dollars in making extensions to their mills to enable them to manufacture structural steel up to 32 inches.

Stratford.—The Kalbfleish Planing Mill, who have been for many years in the woodworking and retail lumber line, have recently branched out and added a new department in the manufacture of bodies for motor hearses, ambulances, coupes, limousines and other equipages.

Strathroy.—The Dominion Canners, Limited, have let the contract for a $60,000 plant here.

Toronto.—The new steel rolling mill which will be erected on the old British Forgings site, Ashbridge's Bay, Toronto, by Baldwins, Limited, of Swansea, Wales, will be known as Baldwin's Canadian Steel Corporation. A. M. Russell, of Hugh Russell & Sons, Montreal, will be president of the company which will employ about 2,300 men within a year.

An addition costing about $16,000 will be made to the factory of J. J. McLaughlin, Limited, manufacturers of bottling and ice-cream machinery, etc.

A $60,000 factory building is being erected by Jos. Simpson & Sons, Limited, manufacturers of underwear and knitted goods.

A new suspender plant is to be erected on Spadina Avenue between Adelaide and Richmond Streets at an estimated cost of $135,000. Mr. Henry Greisman, head of the King Suspender Company, is the interested party. The building will be of mill construction and six stories high.

Possibly the only exclusive Canadian textile soap factory has been opened up in Toronto by the Standard Soap Company.

"BUTTERFIELD"

ON A TAP, DIE OR REAMER

is the most positive assurance of quality in the world. When a skilled mechanic looks on the shank of a tool and sees the name "Butterfield" he is satisfied that he has been provided with a tool that will be equal to the most exacting work.

Protect yourself by ordering "Butterfield" Taps, Dies and Reamers.

MADE IN CANADA

Butterfield & Co., Inc.

ROCK ISLAND, QUE.

Limited, who secured in May a modern factory at 40 Dovercourt Road, and are now manufacturing a full line of all kinds of textile soaps. Mr. H. M. Marshack, who is the part owner and manager of the new company, has had a lifelong experience in the textile soap manufacturing. Prior to coming to Canada he was for ten years associated with the Fiske Manufacturing Co., of Springfield, Mass. A number of the Canadian textile mills are already using the product of the new factory, which has a present capacity of two and a half million pounds a year, with room for enlargement if necessary.

Work has started rebuilding factory for Granite Concrete Block Co., Limited, 832 Weston Road.

An addition will be made to the foundry of the Wm. & J. G. Greey Co., 16 Church Street.

A tannery building will be erected by H. B. Johnston & Co., 774 Dundas St. East.

Canadian Tank and Pump Company, Limited, capital $50,000, head office, Toronto, Ont., plans to manufacture and deal in self-measuring oil pumps, tanks and storage systems.

Wallaceburg.—A small extension is being made to the plant of the Dominion Glass Co.

Windsor.—It has been announced that the Fisher Body Company, of Detroit, will shortly erect a five-story factory for the manufacture of closed automobile bodies at Windsor, which, when completed, will provide employment for about 200 men. This company is already operating a plant at Walkerville, where open automobile bodies are being manufactured.

The ratepayers have voted against the proposed by-law granting certain concessions to the Lamb Railway Service Co., including two-thirds of an acre in the factory district, in return for construction of a $10,000 factory.

Woodstock.—The Canadian Linderman Company of this city is about to resume manufacturing operations on a very extensive scale. The local plant was visited recently by representatives of the American Linderman Company, and they announce that, beginning this month, they will start manufacturing in the local plant, which has been undergoing extensive repairs of late, a unit electric lighting and power system, on which it is understood the company has purchased full patent rights. When the plant gets running steadily many men will be employed. During the war the company was manufacturing shells.

QUEBEC.

Longue Pointe.—General contract has been let for two factory buildings for the Montreal Locomotive Works, Limited.

Cap de la Madeleine.—Plans are being prepared for $50,000 extension to machine shop for Tidewater Shipbuilders, Limited.

Montreal.—Plans and specifications have been prepared for a factory for the Smardon Shoe Co., Limited, 533 Visitation Street.

Contracts have been let for a $60,000 addition to the factory of the McFarlane Shoe Co., Limited, 61 De Normanville Street.

Contracts have been let for four buildings at a cost of $455,000 by the National Breweries, Limited. A $44,000 factory will also be erected by the United Shoe Machinery Co.

Quebec.—The Rock City Tobacco Co. are making a $20,000 addition to their factory.

It is reported that an option has been taken upon property situated around Sillery Cove for its eventual purchase for the erection of a nine-million-dollar pulp mill. The promoters are well-known American financiers and practical pulp mill men.

Rigaud.—Burnett and Crampton are planning a new foundry capable of turning out 250 tons of castings a month. They will install molding machines and equipment of the most modern type for producing machinery castings, mill and mining equipment and general castings.

St. John's.—Belding-Paul-Corticelli, Limited, have awarded a contract to Anglin-Norcross, Limited, for the erection of a dye house. Cost of construction will be about $75,000.

Three Rivers.—It is announced that work will start at once for sulphite mill, grinding mill and three workshops costing $500,000 for the International Paper Co.

An extension is being made to the office of the Three Rivers Shipyard Co.

Plans are in preparation for the erection of an $8,000 factory for the Frisco Bottling Works Co.

Canada Iron Foundries, Limited, are erecting an $18,000 bath building.

SASKATCHEWAN.

Melville.—A cold-storage plant costing $60,000 will be erected by the Saskatchewan Co-operative Creameries.

Regina.—The Goodyear Tire and Rubber Co. has announced its intention of building a $75,000 block here at once to serve as western headquarters.

A warehouse will be erected here by the British-American Paint Co.

Plans are in progress and tenders will be called shortly for erection of $50,000 bakery for G. Gillam, Sanitary Bakery.

Young-Thomas Soap Co. will rebuild part of factory destroyed by fire, at cost of $5,000.

The Sanitary Buildings, Limited, contemplate construction of a warehouse and factory at corner of Scarth and Sixth Street. Estimated cost, $25.000.

Saskatoon.—Jackson Machines, Limited, are increasing their building capacity by three new buildings which will make their plant one of the most up-to-date factories in Western Canada. This year they are building 250 sheaf loaders and will increase this number for next year, when they will also be building a low-down type of separator which will be entirely new in this part of the country.

The shareholders of Frontenac Breweries, Limited, have agreed to the proposal of the Directors to increase the capital stock of the company from $1,000,000 to $2,000,000, and to make a further bond issue of $400,000. The additional capital is needed to provide for extensions.

Recent Trade Enquiries

A List of Enquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

Foreign.

71. Agency.—Gentleman recently returned from four years overseas' service with the Canadian forces and having a thorough knowledge of Continental life, is in a position to act as a representative for Canadian firms on a commission basis.

73. Italy.—A correspondent in Genoa is desirous of communicating with some purely Canadian Asbestos Company with a view to representing them in Genoa. He states that a large trade can be developed in Italy, as the mines in Russia are closed.

73. West Indies.—A Canadian correspondent with considerable experience in the West Indies is desirous of representing some Canadian manufacturers.

74. Roumania.—A correspondent with high-class references wishes to represent Canadian manufacturers in Roumania. The goods specified are: Fencing nails, Agricultural implements, Women's wear, Dried fish, etc.

75. Antwerp.—An agency in Belgium is desirous of securing the names of Canadian firms who are likely to consider taking up direct export with Belgium.

76. Agency.—We have an enquiry from a gentleman in Jamaica who is desirous of getting into communication with one or two Canadian manufacturers of food products with the object of representing them on a commission basis or a regular weekly salary basis. He states that at present there are splendid opportunities offered for new and permanent business.

77. Export Agency.—A Canadian export agency with satisfactory bank and business references has opened a branch in Stockholm, Sweden, and desires to bring this fact before manufacturers who might be interested in that territory and at present have no connections there. They also wish to inform Canadian manufacturers that they have a branch in London, England.

78. English Markets.—A Canadian import and export agency of sound financial stability and with branches in London, Liverpool and Bradford, would like to hear from concerns desirous of exclusive representation in English markets.

79. France.—A correspondent who has been established in London as a manufacturers' agent wishes to open an office in Paris and would like to get into communication with some Canadian firms with the object of representing them in the following lines: Paper and other stationery articles; Household enamelledware; Electrical sundries and Rubber sundries; Twines; Foodstuff.

80. England.—A correspondent in Manchester wishes to sell the following articles on commission: Dry Batteries; Pocket Lamps; Electric Novelties; Carbons, etc.

81. Agency.—An export agency specializing in hand tools, hardware and goods appertaining to the general ironmongery trade, would be glad to be placed in communication with Canadian manufacturers of these articles.

82. Jamaica.—A firm in Kingston is desirous of representing Canadian manufacturers who are prepared to give them exclusive option for the sale of their products. This firm is especially interested in: Fishstuffs; Canned Goods; Butter; Margarine; Flour; Biscuits.

83. Roumania.—We have received a communication from a gentleman in Roumania, who for many years has been engaged in business as an importer in that city. He is conversant with five languages and states that he would like to make a connection with Canadian manufacturers for the sale of Canadian goods in Roumania.

84. Building Materials.—An import and export merchant in London who has been importing large quantities of building material from the United States, is seeking a source of supply for these commodities in Canada. He has been asked to quote for Canadian goods and wishes to get in touch with one or two manufacturers who require their goods put on British markets.

85. Liverpool.—An agency in Liverpool with connections in West Africa is prepared to ship palm Oil, Raw Cocoa Beans, and tropical products, direct from West Africa to Montreal, and is desirous to hear from any manufacturers who may be interested. They are also open to buy tallow and grease from Canada.

86. Export.—A London export firm having a branch established in Shanghai for over twelve years is desirous of communicating with Canadian manufacturers of hardware who wish their goods placed on the Northern China market.

87. Buenos Aires.—A firm in Buenos Aires desires the names of Canadian woollen and cotton concerns who wish to be represented in the Argentine Republic, Uruguay and Paraguay. For the past sixteen years this agency has been representing European and American concerns.

88. France.—A correspondent is anxious to act as agent for Canadian goods.

130. Automobile Accessories.—A Glasgow firm asks for catalogues and price-lists of automobile accessories, such as horns, mechanical and electric, tire pumps, lamps, hub caps, hub-cap and sundry spanners, etc.

131. Aluminum Billets.—A Glasgow firm asks for quotations on 300 tons of aluminum billets.

132. Hardware.—A correspondent with extensive business connection wishes to arrange with export manufacturers in Canada of hardware and woodenware to represent them in England.

133. England.—A reliable firm in London wishes to get in touch with Canadian packers of jam: plum, peach, quince, gooseberry, pear, strawberry, raspberry, and apricot. They already handle a large trade with South Africa and could do the same with Canada.

134. Holland.—We have numerous enquiries from reliable agents in Holland, wishing to get in touch with Canadian manufacturers and exporters of the following: biscuits, preserves, tinned goods, jams and confectionery.

135. Leather, Agricultural Implements, Oilcake, Asbestos, Aluminum.—A Belgian company with branches in the United Kingdom, France, the United States, etc., is desirous of securing the sole agency for Belgium of Canadian manufacturers of sole leather, agricultural implements, oilcake, asbestos and aluminum in pigs.

136. Wood, Steel and Leather Products.—A correspondent who has been crossing the ocean continuously from 1880-1908, calling on manufacturers in Great Britain and France, is keenly aware of the openings for manufacturers of wood, steel and leather products in the British market, and knows where there are still opportunities for Canadian makers now supplying manufactured lines formerly purchased from German makers. Having the knowledge and experience, he is anxious to get in touch with Canadian manufacturers with the object of representing them in the British Isles and France.

Taking Over Toronto Plant

British Forgings Plant Become Baldwin's Canadian Steel Corporation, Limited

Announcement is made that the British Forgings plant at Toronto, which was recently bought by Baldwin's, Ltd., of Swansea, Wales, will be operated as Baldwin's Canadian Steel Corporation, Ltd. The new firm will be capitalized at $10,000,000, it is said, and will employ 2,300 men within a year.

E. L. Cousins, chief engineer of the Toronto Harbor Commission, who negotiated with the company on behalf of the city and the harbor commission, states that A. M. Russel, of Hugh Russel & Sons, Ltd., Montreal, was largely instrumental in persuading Baldwin's to establish a plant in Canada. Mr. Russel went to Wales for the purpose of interesting his principals, with the result that J. C. Davies, managing director of Baldwin's, Ltd., came to Canada, accompanied by D. E. Roberts, consulting engineer of the company, and the deal was consummated soon afterwards. Mr. Russel will be president of the new Canadian corporation.

Within a few months the new firm will begin the manufacture of tin plates, black sheet and galvanized sheet. The British Forgings plant, located in the Toronto Harbor Commission's eastern harbor terminal, is 127 acres in extent, with 1,600 lineal feet of 24-ft. dockage.

20-Year Barrett Specification Roof on Hog Pens of Union Stock Yards, Limited, Toronto, Canada. Architects: Union Stock Yards, Limited. General Contractors: Archibald & Holmes, Toronto, Canada. Roofers: The Maitland Roofing & Supply Company, McDermid Bros. Successors, Toronto, Canada.

100,000 Square Feet of Barrett Specification Roofs

The above photograph shows the mammoth new Hog Pens of the Union Stock Yards, Ltd., Toronto, in process of construction.

This is a roofing job of more than one hundred thousand square feet, covering one continuous building, extending back beyond the sixth monitor in the picture.

Naturally, in deciding what type of roof to adopt for this enormous plant, the question of cost had to be given careful consideration.

It is significant, therefore, that a Barrett Specification Roof should have been decided on.

It means that the Union Stock Yards architects fully realize what so many architects and builders have come to appreciate—that it *pays* to buy the *best* roof because, while the original cost may be a little higher, *the cost per year of service is lower than for any other type.*

This plant has a roof that will stand up year after year under the rigorous Canadian climate; one that takes the base rate of insurance and that is guaranteed for 20 years.

Guaranteed for 20 Years

So sure are we of the service Barrett Specification Roofs will give *under the most severe conditions*, that we are prepared to *guarantee them for 20 years,* in all towns of 25,000 or over, and in smaller places where our Inspection Service is available provided they are 50 squares or more in area. The guaranty costs you nothing. We merely require that our Specification dated May 1, 1916, shall be strictly followed and that the roofing contractor be approved by us. The guaranty is a Surety Bond issued by a well-known fidelity and guaranty company.

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request.

Vol. XX. TORONTO, OCTOBER, 1919 No. 6

Editorial Comment

The Country's Need

AT the present time grave economic problems threaten to disturb the equanimity of civilized society and even to endanger its existence. Strikes and riots, in many countries, show how widespread is this vague unrest; and, by extending from the industrial to the political field, these economic disturbances are shaking the entire fabric of civilized society. This discontent is not confined either to politics or industry. Many groups of society have prepared their personal lists of grievances, have organized, and appear determined to secure demands, arising out of these alleged grievances, without showing any particular consideration for other classes, or the welfare of their community as a whole.

This unrest which is sweeping over the world is no doubt due to natural as well as artificial causes, and one of these causes is the reaction from the nervous strain and severe discipline to which most civilized peoples have been subjected during the war.

A great political upheaval is almost invariably followed by industrial disturbances, for obvious reasons, and it is therefore not surprising that the greatest war in history should bring in its train the most serious industrial unrest. It is the heaving of the sea after the storm. In our time this natural phenomenon has not only produced industrial trouble, but, by its very magnitude and intensity, appears to be reaching out, through industrial channels, to influence the political and social functions of the state.

The times are abnormal, the minds of men are abnormal, but the present conditions will not be the conditions that will obtain in ordinary times, which, we hope, will soon return.

There are some who insist now, as some have always insisted, that the present constitution of society is all wrong, that the industrial organization of the modern world is wrong, and that it must be completely transformed according to certain theories which they will demonstrate by force if necessary; but the majority are optimistic enough to believe that during the centuries when our present form of society, including our industrial system, was evolving, the world has moved steadily, though slowly, forward.

The British Empire, for example, which particularly represents the Anglo-Saxon portion of civilization, has extended British law and British ideals over one quarter of the earth's surface, has attained and kept command of the seas, and has been the backbone and mainstay of the allied forces in the Great War. Consequently, is it not reasonable to assume that the industrial organization which has been part of that system of society must have some real merits, and must have been founded on principles of truth?

When we turn to Canada, and survey our own history, and examine the part which Canadian industry has played both in peace and war, can we not also feel some assurance that our industrial system has been and is based on sure foundations?

There are at present about 700,000 people employed in Canadian factories. With their dependents, they number about 2,000,000. Thus the factories of Canada provide a living for 2,000,000 people, or a quarter of the total population.

This is a concrete and permanent result which those who talk lightly of revolutionizing our industrial system, might well keep in mind; and, conversely, if this industrial system is broken down, 2,000,000 Canadians will be directly affected and other millions will indirectly suffer.

Certain demands are being made by the representatives of the wage-earners, through the employers to the public. It is only right and fair that these demands should receive a careful and sympathetic hearing. Employers do not contend that the industrial system cannot be improved. They see considerable room for improvement. But the people of Canada must consider not only what is desirable but also what is possible. Those engaged in industry, both employers and employees, constitute only one section of the population and no section can long enforce its will upon the majority. The 700,000 people, including employers and employees, engaged in industry, constitute only about 9 per cent. of the population of Canada; with their dependents they form about 25 per cent. Organized labour includes about 3 per cent. of the population; with their dependents, about 10 per cent. All wage-earners in urban communities and their dependents, include considerably less than half of the population. Consequently, we must remember that those engaged in industry are a minority of the people of Canada, and that the people of

Canada will quickly remind us of this fact if we attempt to attain our own ends without considering the national welfare.

Let us, therefore, regard industrial matters from the national point of view. We strongly believe that industrial employees and all other wage-earners should have as short hours, as high wages and as many privileges as the rights of all other citizens and the competition of other nations permit them to enjoy.

There is no doubt that the necessity of increasing our national production is the most important question now before this country. That it has become a critical problem in the United Kingdom is shown by the following extracts from recent speeches by British Ministers:

David Lloyd George, Prime Minister of Great Britain, in the House of Commons, August 7th, 1919,—

"The situation is indeed grave, but not beyond the compass of its resources if the nation will pull itself together. All that is needed is that everybody throughout the land put forth their best exertions as they did during the war, and we shall emerge triumphantly."

Hon. J. Austen Chamberlain, Chancellor of the Exchequer, Great Britain, House of Commons, London, August 7th, 1919,—

"If we can't increase production, we shall go straight to national bankruptcy. Neither increased production nor reduced expenditure alone will be sufficient. We have got to do both if we are to pull through and turn the corner."

Sir Robert Horne, Minister of Labour for Great Britain in July, 1919,—

"Any man who is unprepared to put forth an effort even greater than that he made during the war mocks the dead he professes to glorify. They died to preserve their country. If men are unwilling to exert all their power in peaceful production and honest toil, the country will be ruined as irretrievable as if the Hun had invaded it and spread his devastating hand over it."

This year the Government's budget calls for about $450,000,000, or about $150,000,000 more than our revenue. Our total gross debt is $1,863,000,000. How can we bear our increased national burdens unless we increase our national production, consume the minimum, and sell as much as possible? Yet, manufacturers have been forced to refuse foreign contracts running into an aggregate of millions, because they dared not tender lest threatened strikes between closing and delivery should turn their estimated profits into heavy losses. Other countries are crying out for our goods. We never had such an opportunity to sell abroad. Is it not of vital importance that we be guaranteed such stability in economic conditions as will enable us to take advantage of these opportunities?

All must realize that the fundamental principles of economics govern the conditions under which men work, and under which the business of the country is conducted. Legislation has its function, but legislation which attempts to limit or pervert great natural laws will defeat its own ends and injure those whom it designed to benefit.

A Cause of Industrial Unrest

IS it possible that a portion, at least, of the industrial unrest prevalent at the present time is chargeable to the advertising being put out so prolifically in the magazines by the correspondence schools? At least, one Canadian manufacturer is of this opinion and he advances a quite reasonable argument in support of his theory.

"Almost without exception," he writes, " these correspondence schools seemingly offer wonderful sure things to those who subscribe for their courses and usually lead off in startling head lines. Many of these advertisements are appealing to men in the shops to get out of their present positions into ones of greater magnitude, pleading with them not to be satisfied with anything less than the presidency or treasurership or managership of a company and pointing out that other men no better fitted are now making $10,000 a year, where formerly one-tenth of it was their limit, etc.

"Some of the illustrations are designed to make an increased discontent on the part of the one appealed to; in fact on one or two occasions the appeal was pictured in such a way that it was almost Bolshevism. In looking for the cause of continued unrest, I believe that this is one of the contributing factors. It is perfectly natural for a man to want to do better than he is doing or to get a good deal more than he is getting and under seemingly easier conditions, but the fact of the matter is that many a good mechanic is disconcerted and soured on his good job with no possibility, by reason of his particular incapacity, of ever getting into a $10,000 class so alluringly promised.

"I venture to say that not one in 500 of those who subscribe to the courses, make the success of it that the advertisements claim in generality, and what otherwise would prove to be a force of good, interested men, on the factory side of the business, are turned into more or less disgruntled, easily-inflamed, discouraged floaters, whose failure to attain the position pictured to them, makes them a liability of first magnitude. These same men appealed to to improve themselves in their own particular lines, to study ways and means of increasing production and of working in with their various companies along that line, with the probability of their reward for so using their brain, naturally adaptable to that line of thinking, would help solve the difficulty of the present hour in securing thoughtful co-operation and genuine results in the increasing demand for greater production."

With the general idea of the correspondence school there can be no just quarrel. These schools have undoubtedly done real service in bringing the opportunity to study and better themselves mentally to thousands of people who would otherwise never have enjoyed that opportunity. Any incentive to improve one's condition mentally and socially must be good and the agency that gives the incentive merits approbation. It is to be feared, however, that several of these schools, in an effort to get pupils, have gone too far in the direction of using exaggerated bait

The National Industrial Conference in Session

View of the Senate Chamber, in which the Conference was held, taken from the rear of the employers' side of the House. The chairman, Hon. Gideon Robertson; Hon. N. W. Rowell, and several well-known captains of industry may be seen in the gathering

in their advertisements. There are limitations to the capacity of all of us and these limitations should be recognized. To lure the artisan from his bench with the promise of immensely larger returns in the field say of salesmanship, if that artisan has no real capacity for salesmanship, is obviously wrong and cannot be condoned.

The very plan of operation of correspondence schools makes it difficult to deal with this problem, as there is no personal contact between teacher and pupil. But if harm is being done through the creation of a number of discontented and disgruntled floaters, surely some remedy should be sought. Would it not be possible for the schools to pay more attention to technical training, with a view to holding men in industry, instead of enticing them away into other over-crowded fields of effort? We need production and, as contributing to it, greater efficiency. A splendid patriotic work could be done in promoting that end and no criticism could be made of any advertisements which sought to make the artisan a better workman.

The Victory Loan Campaign

IN self interest, if for no broader reason, the manufacturers of Canada should put their shoulders vigorously to the task of making the approaching Victory Loan Campaign the success it must be if the country is to carry on. We have no longer the incentive of the war-appeal to help us secure the necessary funds. That is over and many people, having this motive withdrawn, will feel that there is no longer any special call on their patriotism. This attitude must be overcome and it will be the part of the leaders of industry, who realize the issues at stake, to see that those in their employ are given a proper conception of the duty that lies before every citizen.

However wide may be the differences of opinion as to the financial policy of the Dominion, there can be no escaping the necessity for the immediate borrowing of a very large sum of money. No other course is open to the Government and this might as well be admitted at the outset. There is a large floating indebtedness which is being increased daily; the costs of demobilization and rehabilitation are still immense and there is only one way of maintaining the volume of our export trade and that is by the provision of credits, which will enable foreign countries to continue their purchases of Canadian goods. The whole situation reacts on the factory, and, if we are to provide profitable employment for our population throughout the winter, it is essential that the Government should be given the means of carrying out its obligations.

From the experience of previous loans, employers must realize that it is a good thing to have the worker of the country participate in these government flotations. In these days of unrest, the stabilizing influence latent in the possession of Dominion Government bonds, is valuable. Subscriptions encourage thrift and thrift is a laudable virtue at all times and particularly in the present abnormal period. Possession suggests responsibility and where there is responsibility there need be little fear of revolution. From every angle there is benefit attaching to participation in government flotations and we believe that the members of the Canadian Manufacturers' Association will not be behind hand, both as regards personal and company subscriptions, and advice and encouragement given to their employees in connection with the loan.

The National Industrial Conference

A Survey of the Results Achieved by this Notable Gathering, together with an Account of the Events Leading Up to it, and a Record of the Resolutions Submitted on the Various Items of the Agenda

THE National Industrial Conference assembled in Ottawa from September 15th to September 20th during a period of peculiar significance in Canadian history. For the first time it was considered expedient to call together representatives of industry for the purpose of discussing industry and its relations, not only to its own constituent elements, but also to the nation. The public was represented by a third group, which, though it was denied the right to vote, had the right to speak on any subject on the agenda. The agenda was compiled from the recommendations in the report of the Royal Commission on Industrial Relations which toured Canada last spring and took evidence in twenty-eight industrial centres.

Throughout the conference the courtesies of debate were well observed, and the questions at issue were discussed in a constructive spirit. The presence of the third group reminded both employers and employees that industrial questions must be considered from the national rather than from the partisan point of view.

There was a gratifying unanimity reached on certain subjects of the agenda. The question of unifying and coordinating the existing labor laws of the Dominion Parliament and of the provincial legislatures, caused little difference of opinion, except as to the matter of procedure, as it was felt that it would be to the advantage of all parties to have not only labor laws but all laws as uniform as local conditions would permit.

In regard to the establishment of Joint Plant and Industrial Councils, the employers agreed so far as the individual plant is concerned, but they objected to the establishment of a Government Bureau to promote the development of such councils on the ground that a standardized government scheme would not be suitable for all conditions. Compromise was reached by the employees consenting to the limitation of the Government Bureau's activities to the collection and furnishing of information upon request. A compromise was reached in regard to minimum wage laws. The employees demanded minimum wage law for all classes of labor; the employers consider the advisability of establishing, after investigation, minimum wage laws for women and children as local conditions required, but firmly opposed the establishment of any minimum wage law for adult male labor. An agreement was reached on this basis.

It was unanimously decided to recommend the appointment of Boards of Enquiry into the subjects of state insurance against unemployment, sickness, invalidity, and old age. It was also unanimously agreed to ask the government of each province to establish compulsory education for full time at least up to and including the fourteenth year, and for part time in cities and towns for the two ensuing years. It was also recommended that in all provinces, education should be made free.

The Royal Commission's views on freedom of speech and freedom of the press were endorsed, but it was recognized that no person has a right to do anything that is liable to incite people to commit unlawful acts.

A joint resolution was also adopted asking federal, provincial, and municipal governments to provide for immediate and continuous survey of available and prospective employment, and for adequate employment machinery to direct unemployed workers to available employment.

Employers and employees agreed to disagree on three points. The first was the subject of the hours of labor. The employees' delegates asked that legislation be introduced establishing the 44-hour week throughout Canada. The employers took the ground that the hours of labor cannot be made a subject for legislation, except where it can be shown, after investigation, that the health of the worker in the industry under discussion is injured by too long application. The employers showed that the demand for a 44-hour week is only a camouflaged demand for higher wages, because it would be necessary, if the 44-hour week were established, to increase wages greatly by the payment of time and a quarter or time and a half overtime rates. They contended that the hours of labor must be governed by economic conditions, such as the necessity for production and the competition of other countries. They pointed out that the regulation of hours of labor by law immediately transfers the whole subject from the economic to the political field, to which it does not properly belong.

The second point on which there was disagreement was the recognition of unions and their demand to bargain collectively. The employers admitted the right of the

HANSARD REPORTS SUPPLIED

Arrangements have been made by which every member of the Canadian Manufacturers Association will be furnished with a complete verbatim report of all proceedings and discussions at the National Industrial Conference. These were reported in Hansard form by the stenographic staff of the Senate, and are now available in paper bound copies. All members are urged to make a careful study of these reports.

employees to join any lawful organization, but they contended that employers should not be required to recognize unions or to establish "closed shops." They insisted on the right, when so desired, to maintain their plants as "open shops," by which they mean that no employer should discriminate against any employee because of the latter's membership or non-membership in any organization, and no employee should interfere with any other employee because of the latter's membership or non-membership in any organization. In regard to collective bargaining, employers contended that they should not be required to negotiate, except directly, with their own employees, or groups of their own employees.

The third point of disagreement rose in connection with the recommendation that employees of the Government should be given the right to appeal to some independent tribunal for settlement of their wage and other grievances against the Government. The employers took the ground that the subject was one for the Government itself to deal with and was not within the jurisdiction of the conference.

The conference no doubt had great educational value. The resolutions adopted or recorded and the information and arguments produced in support of them become part of the permanent records of the Government, and will be consulted when legislation is proposed.

The employers conceded what they felt was required, not by labor alone, but by the national interests, but on certain points, which they considered fundamental, they took a firm stand, advanced sound arguments in support of their views, appealed to the sound judgment of the country and maintained their position fearlessly.

Hon. Gideon Robertson

Canada's Minister of Labor, who was largely responsible for the holding of the Conference and who presided most acceptably over its deliberations

Origin of the Conference

The National Industrial Conference originated from a resolution which was passed on March 19th, last, by the Labor Sub-Committee of the Reconstruction and Development Committee appointed by the House of Commons. The resolution follows:—

"The Labor Committee has been impressed by the necessity of some policy being formulated which will bring about the adoption of co-operative relations between employers and employees in the various lines of industry, as the best means of establishing a satisfactory relationship in industry throughout Canada. The Labor Committee realizes the different conditions existing in various industries, but nevertheless feels that there are certain basic principles which apply to all. The Labor Committee has itself given earnest consideration to the efforts which are being made in this and other countries for the solution of the problem of industrial relationships, and, recognizing the complexity and importance of this problem, recommends that a Royal Commission be appointed immediately to report to the Government on the following matters, namely:

"1. To consider and make suggestons for securing a permanent improvement in the relations between employers and employees.

"2. To recommend means for ensuring that industrial conditions affecting relations between employers and employees shall be reviewed from time to time by those concerned with a view to improving conditions in the future.

"For the above purposes the Commission shall:—

"1. Make a survey and classification of existing Canadian industries.

"2. Obtain information as to the character and extent of organization already existing among bodies of employers and employees respectively.

"3. Investigate available data as to the progress made by established joint industrial councils in Canada, Great Britain and the United States."

Suggestion Approved by Privy Council

The Committee of the Privy Council on April 4th, last, concurred in the foregoing recommendations and appointed the following Commission, which was called "The Royal Commission on Industrial Relations."

The Hon. Chief Justice Mathers, of Manitoba, Chairman.

The Hon. Smeaton White, a member of the Senate, and Managing Director, *Montreal Gazette* Publishing Co., Montreal.

Charles Harrison,, M.P., railroad conductor, North Bay, Ont., as representatives of the public.

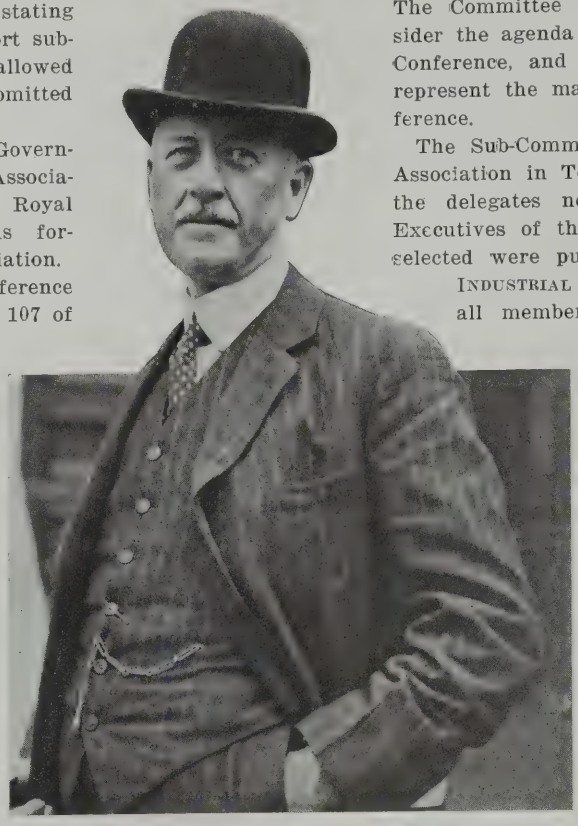
Mr. Carl Riordan, President, Riordan Pulp and Paper Co., Montreal, P.Q.

Mr. F. Pauze, lumberman, Montreal, P.Q., as representatives of the employers.

Mr. T. Moore, Ottawa, President of the Trades and Labor Congress of Canada.

Mr. J. W. Bruce, of Toronto, member of the Labor Appeal Board, as representative of the employees. Mr. Thomas Bengough, of Toronto, who served as Secretary of the Technical Education Commission, Secretary.

This Commission opened its inquiry at Victoria, B.C., on April 26th, and completed its tour in Ottawa on June 13th, last. Between these dates the Commission held 70 sessions in 28 industrial centres extending from Victoria, B.C., to Sydney, N.S. During the sittings the Commission heard 486 witnesses. The sittings of the Commission were advertised in advance, and any one who cared to do so was permitted to give evidence. The following majority of the Commission reported to the Government on June 28th: Messrs. T. G.



Mathers, Chairman; Carl Riordan, Charles R. Harrison, Tom Moore, John W. Bruce and Thomas Bengough, Secretary.

A minority of the Commissioners, consisting of Senator Smeaton White and Mr. Frank Pauze, dissented from the views of the majority and submitted a separate report to the Government on June 25th. A supplementary report, signed by Mr. Carl Riordan, stating that he had signed the majority report subject to the privileges of his being allowed to make comments thereon, was submitted to the Government on June 29th.

By special arrangement with the Government, the Canadian Manufacturers' Association had a copy of the reports of the Royal Commission on Industrial Relations forwarded to each member of the Association.

The suggestion that a National Conference be called was contained in clause No. 107 of the majority report, which reads as follows:

"If it is finally decided that the enactment of any legislation necessary to give effect to our recommendations is not within the competence of the Parliament of Canada, we suggest that in order, if possible, to secure concerted action on the part of the different Provincial Legislatures, a conference should be held in the near future in the City of Ottawa. To this Conference we suggest that the Premiers, or other members of the Governments of each Province, together with representative employers, be invited for the purpose of considering the whole question, and, if possible, arriving at a unanimous decision. We believe it is in the interest of harmony that concerted action along this line should be taken, and we know of no better means of bringing about unanimity. At such conference the question of unifying and co-ordinating the existing legislation bearing on the relations between employer and employees, now in force in the several Provinces and in the Dominion, might be carefully considered and reviewed."

J. R. Shaw

Well-known Woodstock Manufacturer who acted as leader of the employers throughout the Conference

Calling the Conference

Hon. G. D. Robertson, Minister of Labor, in a letter dated Ottawa, July 21st, 1919, notified the Canadian Manufacturers' Association that the Dominion Government had approved of the proposal contained in the report of the Royal Commission on Industrial Relations to hold a conference of Dominion and Provincial Ministers and of representative employers and labor men, for the purpose of discussing the recommendations contained in the Commission's report. The date set for the conference was September 11th, which was subsequently changed to September 15th.

The Canadian Manufacturers' Association was allotted 25 delegates, as follows:—

	Delegates.
Iron and Steel Industry	2
Packing Industry	2
Flour Mill Industry	2
Shipbuilding Industry	2
Pulp and Paper Industry	2
General Manufacturing	15
Total	25

This allotment was later increased to 36.

It had been the policy of the Association in the past not to deal with labor matters, but owing to the industrial unrest and more particularly to the appointment of the Royal Commission on Industrial Relations, the annual meeting, held in Toronto in June, last, decided to appoint an Industrial Relations Committee to deal with labor questions.

A meeting of the Industrial Relations Committee was called at the head office of the Association on July 30th. The Committee appointed a sub-committee to consider the agenda of the proposed National Industrial Conference, and to select the delegates who would represent the manufacturing industries at that Conference.

The Sub-Committee met at the head office of the Association in Toronto, on August 6th, and selected the delegates nominated by the various Division Executives of the Association. The names of those selected were published in the September issue of INDUSTRIAL CANADA. A circular was issued to all members of the Canadian Manufacturers' Association outlining the objects of the National Industrial Conference, containing the agenda of the Conference, and asking for the opinion of members as to the attitude which should be taken by the Association's delegates. Instructions were issued to the staff to secure all possible information on the subjects mentioned in the agenda. With the assistance of the head office staff and legal counsel who had been specially retained, a large amount of valuable information was obtained for the information of our delegates.

The following committee of seven, appointed to advise in respect to arrangements on the agenda for the Conference, met in Ottawa, on September 11th: Chairman, C. A. Magrath; Representatives of Employers: Messrs. C. H. Carlisle, Goodyear Tire & Rubber Co. of Canada, Ltd., Toronto; F. P. Jones, Canada Cement Co., Ltd., Montreal; E. G. Henderson, Canadian Salt Co., Ltd., Windsor, Ont. For the employees: Messrs. R. A. Rigg, Organizer of the Trades and Labor Congress of Canada, Winnipeg; Gus Francq, of the International Typographical Union, Montreal; W R. Rollo, Broom and Whisk Makers' Union, Hamilton.

Nine Committees Appointed

It was recommended that nine committees should be appointed by the Conference to bring in resolutions on the following subjects:

1. Industrial disputes legislation and other labor laws.
2. Hours of labor.
3. Minimum wages legislation.
4. Employees' right to organize, the recognition of labor unions and the employees' right to collective bargaining.
5. The proposed establishment of joint industrial councils.
6. State insurance against unemployment, sickness, invalidity and old age.
7. Proportional representation.
8. Other features of the report of the Royal Commission on Industrial Relations.
9. Consideration of any other proposals which may be introduced bearing on the relations of employers and employees.

Resolutions

The following resolutions were submitted to the Conference in the order mentioned:

(1) Industrial Labor Laws

"Resolved: That the advantage of uniformity in the laws relating to the welfare of those engaged in industrial work in the several provinces of the Dominion of Canada be brought to the attention of the Government of Canada and of the Governments of the several provinces respectively; and, that this National Industrial Conference suggests the following as a means towards the end desired, namely:

"The appointment of a board composed as follows:

"(1) As respects the Dominion:
(*a*) A representative of the Government.
(*b*) A representative of the employers.
(*c*) A representative of the employees.

"(2) As respects each of the Provinces:
(*a*) A representative of the Government.
(*b*) A representative of the employers.
(*c*) A representative of the employees.

"And that the Dominion Government be requested to ask the Government of each of the Provinces to select or have selected representatives in respect of the Provinces as above set forth."

Adopted unanimously.

(2) Proportional Representations

"Believing that there are defects in the system of Electoral Representation in Canada, which defects are stated by the Royal Commission on Industrial Relations to be a contributory cause of social and political unrest, this Conference welcomes the declaration of the Prime Minister on behalf of the Government, that a Speaker's Conference will be called to investigate the merits of the Proportional System, and urges that such action be taken without delay."

Adopted unanimously.

(3) Joint Industrial Councils

"Your Committee is of the opinion that there is urgent necessity for greater co-operation between employer and employee. We believe that this co-operation can be furthered by the establishment of Joint Industrial Councils. Your Committee does not believe that it is wise or expedient to recommend any set plan for such Councils.

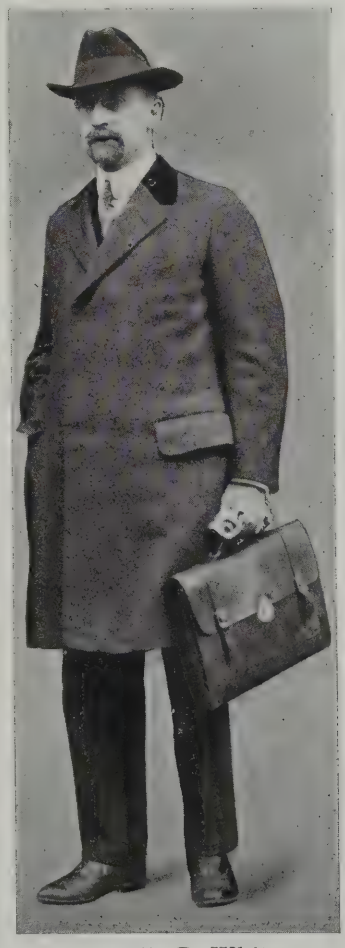
"We therefore recommend that a Bureau should be established by the Department of Labor of the Federal Government to gather data and furnish information whenever requested by employers or employees or organizations of employers or employees, and that whenever it is desired to voluntarily establish such councils the fullest assistance should be given by the Bureau."

Adopted unanimously.

(4) Unemployment, Sickness and Old Age Insurance

"This Committee unanimously endorses the recommendations of the Royal Commission on Industrial Relations that a Board or Boards be appointed to enquire into the Subjects of State Insurance against Unemployment, Sickness, Invalidity and Old Age.

"For the effective carrying out of the above this Committee recommends:



"1st. That such Board or Boards shall be representative of the interests participating in this Conference, viz., the Government, the public, the employer and the employee, and shall include a representative of the women of Canada.

"2nd. That in order to collect necessary data, the Government shall forthwith attach to the proper branches of the labor or other departments concerned experienced investigators, who shall do the necessary research work and furnish to the Board at the earliest opportunity the results of their investigations.

"3rd. That the Government shall set a time limit for the receipt of the report and recommendations as to the advisability of enacting legislation.

"4th. While this Committee has been appointed to consider only the questions of State Insurance against Unemployment, Sickness, Invalidity and Old Age, it respectfully recommends that the subject of 'Widows' Pensions' be added."

Adopted unanimously.

Melville P. White

Toronto Manufacturer, who figured prominently in the proceedings of the Conference

(5) Minimum Wage Laws

"Whereas it is considered expedient that minimum rates of wage should be fixed throughout Canada for women and children, whether employed at a time rate or according to any other method of remuneration;

"Whereas Minimum Wage Laws for women and children have been enacted in five, and are now in operation in four, of the Provinces;

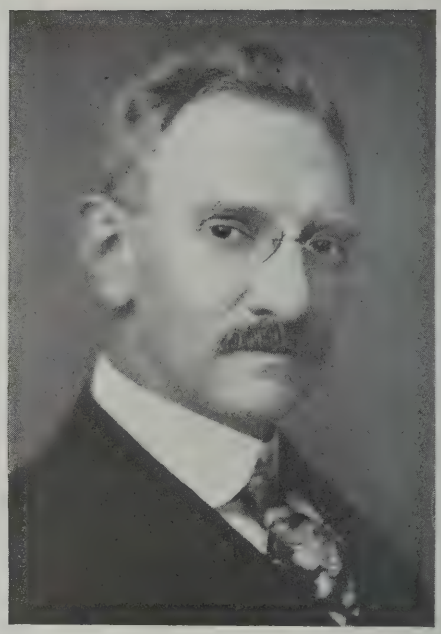
"Therefore, be it resolved, that this Industrial Conference recommend to the Governments of all those Provinces which have not adopted Minimum Wage Laws for women and children, the speedy investigation of the necessity for such laws, and, if so found, the enactment of such legislation.

"It is further recommended that the various Provinces throughout the Dominion adopt a uniform law and method of application, but that in all cases the minimum of wages for women and children is to be determined from time to time, due regard being given to the local living conditions.

"It is the opinion of this Conference that the Dominion Government should appoint a Royal Commission, composed equally of representatives of labor, employers, and the public, to investigate wages to unskilled workers, and issue a report.

"Representation has been made to the Committee that the remuneration paid female school teachers in one of the larger Provinces of the Dominion is so low as to discourage the employment of the talent necessary to the proper education of its citizens. Your Committee recommends that the various Provincial Governments be asked to investigate such conditions, in the respective Provinces, to the end that the children of all Provinces of the Dominion have equal educational opportunities."

Adopted unanimously.



(6) Free Compulsory Education

"That this Conference endorses the recommendation of the Royal Commission on Industrial Relations as to the necessity of the extension of equal opportunities in education; and, in view of bringing about this reform;

"That the Government of each Province in Canada be asked to establish compulsory

Tom Moore
President of the Trades and Labor Congress of Canada and leader of the employees' side at the big Conference

C. H. Carlisle
As chairman of the C.M.A.'s Industrial Relations Committee, Mr. Carlisle had much to do with working up the employers' side of the argument

education, for full time at least, up to and including the fourteenth year, and for part time in cities and towns for the two ensuing years; and

"That, in all Provinces, education in all grades should be made free, so that the child of the poorest paid worker be given the opportunity of reaching the highest educational institution."

(7) Freedom of Speech and the Press

"That we unanimously endorse paragraph 70 of the Report of the Royal Commission, as follows:

"(70). The restrictions placed upon the freedom of speech and the liberty of the press, and the denial of the right to read such literature as any portion of the public demanded, was given as one of the principal causes of the present industrial unrest. During the war it was necessary in the interests of the whole country and of the Empire that individual liberty should in many directions be restrained, but we believe that restrictions should not be imposed upon either the freedom of speech or the freedom of the press unless such restrictions are urgently demanded in the interest of the peace of the whole community. We recognize that no person has a right to do anything that is liable to incite the people to commit unlawful acts. A line must be drawn between liberty and license, but care must be taken to avoid creating the impression that the restraints imposed upon the freedom of speech or the liberty of the press, are intended to prevent criticism of legislative or governmental action."

Adopted unanimously.

(8) Employment and Unemployment

"1st. That in the ouinion of this Conference adequate provision, by the public works or otherwise, should be made by the federal, provincial and municipal governments in connection with all interests represented at this Conference, to avert any serious unemployment crisis which might occur during the ensuing eight months.

"2nd. That the various interests represented at this Conference adhere strictly to the employment policy agreed upon by the Provincial Governments, which aims at the centralization of labor supply and demand in one agency.

"3rd. That provision be made for immediate and continuous survey of available and prospective employment, and for adequate employment machinery to direct unemployed workers to employment available."

Adopted unanimously.

(9) Insufficient and Poor Housing

"That this Conference commends the action of the Dominion and Provincial Governments in their united efforts to improve housing conditions and to provide facilities for the proper and satisfactory housing of our people, and recommends increased co-operation of, and investigation by, the Dominion and Provincial Governments to find a satisfactory solution of the problem."

Adopted unanimously.

Where They Disagreed

On three subjects of the agenda no agreement was reached, and the resolutions submitted by the various parties were simply recorded on the proceedings of the agenda.

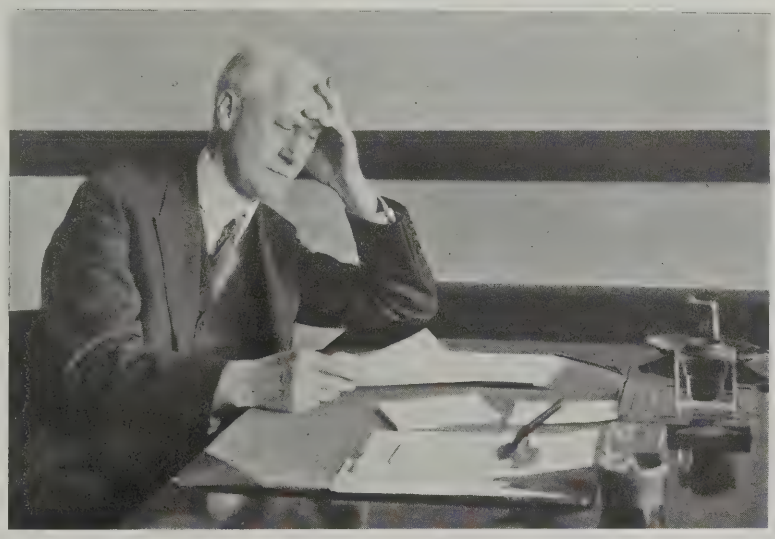
Hours of Labor

The first subject on which disagreement was reported was the hours of labor.

(*a*) The following resolution was returned by the delegates of employers:

"Resolved that appropriate Government Commissions, composed of an equal representation of employers and employees

of the various industrial, producing and distributing industries, should be appointed to undertake investigations as to the adaptability of the hours of labor principles of the Peace Treaty to the different industries of the country, and to report as early as possible."



(*b*) The following resolution was returned by the delegates of employees:

"That we agree with the recommendations and findings of the Royal Commission on Industrial Relations, and urge the adoption of an eight-hour day by-law throughout the Dominion, with due regard and recognition of the Saturday half-holiday where same prevails, and, if possible, extension.

"In industries subjected to seasonal and climatic conditions, such as farming, fishing and logging, if it can be established by investigation that the operation of such a law is impracticable, then exemption shall be granted such industries from the operation of the law."

(*c*) The following resolution was returned by delegates representing the third party:

"We approve of the principle regarding employment and hours of labor set forth in the Treaty of Peace and in paragraphs 50 to 53, inclusive, of the report of the Royal Commission, and would recommend that the governments of Canada enact legislation providing for such in all industries where it is now established, by agreement, at the earliest opportunity, and after due investigation by a commission, composed of representatives of employers and employees representing the various industries, legislation be enacted by the governments of Canada providing for the same to be extended in all industries where it can be applied, having due regard to the curtailment of production and distribution."

Dr. D. Strachan

Who took a prominent part in presenting the employers' case to the Conference. Dr. Strachan is in charge of welfare work in the Imperial Oil Company's organization

The second subject of disagreement was the recommendation of the Royal Commission on Industrial Relations that the findings of the Commission be put into effect on all work controlled by the Government when the principles of democratic management can be applied.

(*a*) The following resolution was returned by the delegates representing the employers:

"The undersigned members of your Committee beg leave to report that the matter referred to them does not, in their judgment, come within their province, but that it is entirely a question between the governments and their employees concerned."

(*b*) The following resolution was returned by the delegates representing the employees:

"We concur in the recommendation of the Royal Commission on Industrial Relations that the findings of the Commission should be put into effect in all works controlled by all government bodies where the principle of democratic management can be applied.

"We further recommend that employees of all government bodies should be entitled to the right of appeal under the Industrial Disputes Act, so long as that Act remains upon the statute book of Canada.

"We further recommend that the wages and working conditions of employees of the governments should not be less favorable than those which now exist for similar workers in the employment of private individuals or corporations."

(*c*) The following resolution was returned by the representatives of the third group:

"The representatives of the Third Group on this Committee believe that, in so far as the findings of this Conference approve and such findings are to the benefit of the public weal, the suggestions of the Royal Commission should be put into effect in all departments and works controlled by the Government of this country."

The third subject of disagreement occurred in consideration of:

(*a*) Employees' right to organize.
(*b*) Recognition of labor unions.
(*c*) Right of employees to collective bargaining.

(*a*) The following resolution was returned by the representatives of the employers:

"Employers admit the right of employees to join any lawful organization.

"Employers should not be required to recognize unions or to establish 'closed shops.' Employers insist on the right, when so desired, to maintain their plants as 'open shops,' by which they mean that no employer should discriminate against any employee because of the latter's membership or non-membership in any organization, and no employee should interfere with any other employee because of the latter's membership or non-membership in any organization.

"Employers should not be required to negotiate, except directly, with their own employees or groups of their own employees."

(*b*) The following resolution was returned by the delegates representing the employees:

"Your Joint Committee, to whom was referred item No. 4 of the revised agenda, viz.:

"Consideration of—

(*a*) Employees' right to organize;
(*b*) Recognition of labor unions; and
(*c*) The right to collective bargaining;

respectfully submit the following report, with recommendations, for your favorable consideration:

"(1) With a view to effecting and maintaining harmonious relations between employers and employees, this Conference declares the following principles and policies, and urges their adoption by all employers relative to their respective employees:

(*a*) The right of employees to organize;
(*b*) The recognition of labor unions;
(*c*) The right of employees to collective bargaining.

"(2) In these recommendations, without changing the generality of their terms:

"(*a*) 'The right of employees to organize' means the right of employees to organize or form themselves into associations for lawful purposes.

"(*b*) 'The recognition of labor unions' means the right of employees, or their duly accredited representative or representatives, to recognition of their employer or employers, for the purpose of mutually arranging rules and regulations governing wages and working conditions.

"(*c*) 'The right of employees to collective bargaining' means the negotiations of agreements between employers or groups of employers and employees or groups of employees, through the representative or representatives chosen by the respective parties themselves.

"Entering into agreements and bargaining collectively with an association or union of employees does not mean recognition of the "closed shop," unless the agreement so provides.

"(*d*) 'Employer' or 'employers' as used in clauses 1 and 2, means any employer or employers of any industry and of federal, provincial and municipal governments.

"(3) 'That the federal and provincial governments be urged to enact legislation applicable to industries within their respective juridictions, to make it unlawful for any employer who shall discharge or refuse to employ or in any manner discriminate against employees merely by reason of membership in labor unions or for legitimate labor union activities outside of working hours."

(*c*) On this subject the representatives of the third group did not bring in any resolution.

By FINLEY P. MOUNT
President, Advance-Rumely Company

THE introductory portion of Mr. Mount's address was taken up with a discussion of the part played by food production both during the war and in the post-war period. He showed how serious was the food shortage in the war-ridden countries of Europe and how keen would be the demand for grain in Canada and the United States for years to come.)

Here, then, is our problem. These people must be fed, and their country and their power to produce must be restored, not only for humanity's sake, not alone for their own safety, but for our safety as well. Upon whom may the world better rely than on the American and the Canadian farmer? And to meet this demand in the future we would say emphasis should be laid upon the agricultural resources of Canada, for here indeed is the greatest room for expansion in production. Here you have in your prairie provinces three great empires, with possibilities of development so vast the human mind cannot encompass them. You are a great agricultural country now, but will be a greater. Your people will increase, your fields broaden, new homes will spring up, your herds will multiply; your farmers will diversify their crops; your methods of production will improve until your great neighbor on the south may well look to her laurels for agricultural primacy on this continent, and you and we will again take our places in the ranks shoulder to shoulder, to fight in peace as we fought in war, this time against hunger, the most powerful enemy of mankind, the destroyer of peace, the scourge of the world.

Successful Agriculture

And as successful agriculture constitutes the very foundation of a nation's prosperity, your future is well assured, and all the things which go with success and prosperity are secured unto you.

With agricultural development must come industrial development; the one is the concomitant of the other. It was so with us. It has always been so with our race. It must be so with you. You are especially blessed with the requirements for a great industrial development; your cheap fuel, your wealth of minerals and forests, are known and inexhaustible; your great and wonderfully efficient systems of railroad transportation. You in this province are fortunately situated to the market of the Orient. Many of us here, I predict, will see the day when the products of your country and ours will be loaded at the western ports of Lake Superior on ocean vessels bound through an enlarged ship canal for Liverpool and all the markets of the world, and closely competing in point of accomplishment and more economical during the season of its use will be your route through Hudson's Bay to all the seven seas.

Farmer's Best Friend

Your farmer must learn, as ours has long since learned, that industrial development is his best friend, and his best paying investment. As the market at his door increases, so will the value of his products and his farm increase. As new industries are built up in your communities, new opportunities for profit and enjoyment of life are created. Your foreign market for your agricultural products is now good, and it is reasonable to suppose it will be a good market for some time to come, but eventually your reliance must be on your home market. A home market is always a better market, a higher and a surer market, and for this reason, if no other, you should see to it that industrial enterprises are built up in each of your local communities. This should be done by building the things your communities most need, and the materials for which are nearest at hand. Do not start industries merely for the sake of starting industries. I have in mind cases in our own country where this was attempted, where, for instance, a rolling mill was started in a small county seat town, far removed from raw materials, and not especially convenient to markets or shipping. Under this same town a splendid quality of building stone, well known to the community, had lain for centuries undeveloped, though efforts had been made to interest local capital in its development. The community could not see the building stone enterprise, but was obsessed with the rolling mill

* From an address delivered before the recent Alberta Industrial Congress at Calgary.

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Maritime Provinces Meetings

A meeting of the Executive Council of the Association was held in the Board of Trade Building, St. John, N.B., on Wednesday, October 1st. On the following day the semi-annual meeting of the Maritime Division took place in the same place. Owing to the fact that so many members of Council had attended the National Industrial Conference at Ottawa during the week of September 15th, the attendance from the west was not as large as it might otherwise have been. However, several members accompanied the president, Mr. T. P. Howard, to St. John, among them being C. Howard Smith, the Howard Smith Paper Mills, Limited, Montreal; F. W. Stewart, Cluett, Peabody & Co., Montreal; Jos. O. Picard, Rock City Tobacco Co., Limited, Quebec; Geo. D. MacKinnon, MacKinnon Steel Co., Ltd., Sherbrooke; H. W. Fleury, J. Fleury's Sons, Aurora; W. H. Shapley, Sterling Actions & Keys, Toronto; H. A. Telfer, Telfer Bros., Limited, Toronto; S. Harris, Harris Litho. Co., Limited, Toronto; Henry Bertram, John Bertram & Son Co., Limited; Geo. H. Douglas, Thornton & Douglas, Limited, Hamilton; M. R. Meldrum, Herbert Morris Crane & Hoist Co., Limited, Niagara Falls.

While a good many members of Council found it impossible to attend, the letters of regret received indicated a cordial approval of the idea of holding a meeting of council in the Maritime Provinces and a desire that the full benefits of Association work should be extended to the members in the Martime Division.

Following the meetings in St. John, a tour of the Provinces was undertaken by the president, Mr. T. P. Howard; the chairman of the Maritime Division, Mr. W. S. Fisher; several members of the executive council; and Messrs. J. E. Walsh, General Manager; J. T. Stirrett, General Secretary; J. K. R. Bristol, Manager of the Tariff Department and H. R. Thompson, Secretary of the Maritime Division, the Cities of Fredericton, Moncton, Halifax, Truro, Amherst, Sydney, Charlottetown and New Glasgow being visited. Meetings with the local members were held at all these points and much good was accomplished in bringing members into touch with the officials of the Association and enlightening them on the services available.

To Organize Quebec Division

A general meeting of all members of the Association within the Province of Quebec has been called by order of the President for Thursday, October 16th next, in the Windsor Hotel, Montreal, commencing at 10 a.m. This action is in accord with the amendment to the Association by-laws passed at the last annual meeting, by which a Quebec Division of the Association was created. Nominations for a divisional chairman, vice-chairman and an executive committee of twelve has been called for, and the election of these officers will take place in the meeting. Mr. J. E. Walsh, the general manager of the Association, will be present to open the business session with an address to the members, explaining the purposes for which the division is formed and outlining the activities which would properly come under its jurisdiction. The afternoon session will be devoted to the study of problems with which manufacturers are wrestling. It is hoped to have present men eminently qualified to introduce these subjects and the discussions should be illuminating.

The day will be completed by an informal dinner at 7 p.m., for which function the committee in charge have been fortunate enough to secure the attendance of Dr. Michael Clark of Red Deer. Dr. Clark will need no introduction, for he is known from coast to coast as one of the most brilliant and entertaining speakers in Canadian public life. Great interest has been evidenced in the announcement that Dr. Clark would speak and a capacity audience is already assured.

Retire from Committee

The terms of office as members of the Executive Committe of Messrs. H. H. Champ, Steel Co. of Canada, Limited and J. R. Shaw, Canada Furniture Manufacturers, Limited, expired in September and their successors were elected at the meeting of the Executive Council at St. John.

Ontario Shoe Manufacturers

The Ontario Shoe Manufacturers Association, which is a section of the Canadian Manufacturers Association, now holds quarterly meetings. October 8th is the date of the current meeting. Mr. G. W. McFarland, of Williams Shoe, Ltd., Brampton, is the chairman of this organization.

The Association is now dealing with such questions as the development of a form of technical training suitable to their business, and a modest but very real effort is being made to provide interesting lectures on underlying principles and practical demonstrations of the right way to perform the important operations in shoemaking. Lengthy reports have also been prepared on the value and desirability of a publicity and advertising campaign for "Made-in-Canada" shoes. A committee is also at work on the preparation of a cost estimating sheet, to enable manufacturers properly to analyse and trace their costs, no matter what line they may produce.

Arrangements are also being made to meet the shoe retailers' organization for the discussion of matters relating to the good of the trade as a whole.

The work of this section calls for so much investigation, correspondence and negotiation that it is being seriously proposed to have a secretary for the organization

who can devote his whole time to the shoe business. It is anticipated that the section will retain, through its secretary, the intimate connection that it has always had with the Canadian Manufacturers Association.

Protecting Association's Crest

As attempts have been made at various times to infringe the special crest of the Association, steps have been taken recently by the Legal Department to secure protection. It may now be stated that the crest is registered as a specific trade mark under the provisions of the Trade Mark and Design Act. Action has also been taken to protect the name "Canadian Trade Index" by registering the title under the terms of the same act.

Spoke on the Tariff

Mr. J. K. R. Bristol, Manager of the Tariff Department, was a guest at a dinner meeting of the Purchasing Agents' Association of Toronto, held at the King Edward Hotel on September 17th. He addressed the Association on the subject,—"The Reason for a Tariff, the Recent Changes in the Tariff and the Future Outlook." As the subject is one of special interest to members of the Association, the address is reproduced in this number of *Industrial Canada.*

Export Publication Received

There has just been received in this office the first number of the "British Standard Exporter." The present volume is devoted to leather, earthenware and hardware, except metal hardware. This is the first of a series dealing with the British industries which are catering to the export trade. The series, when complete, will consist of twenty-five large volumes, each replete with illustrations, descriptions and, in some cases, prices of the different articles listed. Much useful information regarding telegraphic communication is also given, and the series should be of real value to business people interested in getting goods from British sources.

Progress on Trade Index

The compilation work of the new edition of the Canadian Trade Index has been completed and about one-third of the book is now in the printers' hands. In this edition there will be listed approximately 9,500 manufacturers, while about 2,200 new headings have been added. The total number of headings showing articles manufactured is now 8,445. Numerous rearrangements of headings have been made to make the information more readily available to users.

In addition to the usual French translation section, a translation into Spanish of all the headings has been provided. Useful statistics showing the value of imports, exports and production of various kinds of goods have been prepared for insertion, together with the usual lists of consuls, trade commissioners, etc.

Considerable difficulty has been experienced in keeping up to the schedule, as it was found impossible to get as numerous a staff together who were satisfied to do temporary work, and at the same time be trusted to take the necessary care with the wealth of detail involved. In the later stages not only care is necessary, but actual knowledge of the system, symbols and the names of the manufacturers, so in those stages inexperienced help is a hindrance rather than a valuable and time-saving assistance.

We have also been hampered by the extraordinary number of changes in names of firms. Such changes involve the rewriting of the whole part of the book wherever their names appear. The changing back from war to peace conditions and the consequent change and addition to the lines of goods manufactured caused an amount of clerical work that was abnormal. Some difficulty was also experienced in getting returns from those eligible for entry in the book. In each of these cases the firms had to be checked up in rating books, telephone books and other directories, or by correspondence with the firms themselves or with someone in their neighborhood to determine whether they were still in operation or not. All these have now been successfully overcome, and the matter of speedy production now rests with the printer.

It is assured that besides a very extensive Canadian circulation among manufacturers, wholesalers, railways, Government departments and other heavy purchasers, the distribution of the index in British and foreign countries will be large and so placed as to render most effective publicity and sales service to Canadian industry.

Visit to Peat Fuel Plant

Representing the Special Fuel Committee of the Association, Messrs. W. H. Shapley and R. L. McIntyre of Toronto, accompanied a small inspection party, headed by Hon. G. H. Ferguson, to the Ontario Government's experimental peat plant at Alfred, near Ottawa, on September 15. The Association's delegates report that, as far as they could see, after an examination of the work being done, the money already spent in development has been used to good advantage, and that progress is being made. The experimenters appear to have reached the right principle of operation, and it will be mainly a question of solving the problem of transportation. The thanks of the Fuel Committee have been extended to Hon. Mr. Ferguson for the invitation given and courtesies extended to their representatives on the trip.

Toronto Branch Dinner

A dinner and meeting of the Toronto Branch was held in the Board of Trade lunch rooms, Toronto, on the evening of Friday, September 26, for the purpose of hearing and discussing a report on the National Industrial Conference. The chairman, Mr. C. W. Coulter, presided. A comprehensive report dealing with the work of the Conference was presented by Mr. H. Macdonald, secretary of the Branch, after which speeches dealing with various phases of the event were delivered by Mr. J. S. McKinnon, vice-president of the C.M.A.; Mr. Melville White, Dr. Strachan, Mr. S. R. Parsons, Mr. A. Munro Grier, K.C., Mr. J. P. Bell, general manager of the Bank of Hamilton, and others From the remarks of these gentlemen an excellent idea of the proceedings at the Ottawa Conference was derived. Several of the speakers referred with gratification to the part played by the C.M.A. in organizing and handling the employers' side of the argument.

Explained the Sprinkler Campaign

At the September meeting of the Insurance Committee, Mr. Grove Smith, the Dominion Fire Commissioner, gave some interesting information in connection with the sprinkler campaign now being inaugurated by the Dominion Insurance Department in conjunction with the Dominion Fire Prevention Committee. Mr. Smith stated that arrangements had been made by which any factory in Canada could be inspected by an expert sprinkler engineer, sprinkler layouts drawn up and the cost of the installation submitted to the manufacturer, together with a statement of the annual savings in insurance premiums which would be effected. All this would be done free of

charge and without any obligation on the part of the manufacturer. It was confidently expected that very many manufacturers would see the wisdom of installing this system of protection once the profitable nature of the investment was demonstrated to them. The arrangements made assured the lowest possible cost of installing the equipments, without in any way interfering with competition between the various sprinkler companies. The object of the Insurance Department in carrying out this campaign is, of course, the reduction of Canada's fire waste. It is estimated that, if every factory in the Dominion were equipped with automatic sprinklers, the country's annual fire waste would be reduced by at least fifty per cent.

New Members of Committee

At the organization meeting of the Transportation Committee, held on September 9, the following additional members were appointed to the Committee:—

C. E. McGhie ..... The Welland Vale Mfg. Co., Ltd., St. Catharines, Ont.
W. R. Ingram ..... Swift Canadian Co., Ltd., Winnipeg, Man.
J. E. McFarlane ..... Western Canada Flour Mills Co., Ltd., Toronto, Ont.
A. H. Thorpe ..... Wm. Davies Co., Ltd., Toronto, Ont.
M. F. Gibson ..... National Fireproofing Co. of Canada, Toronto, Ont.
A. H. Brittain ..... Maritime Fish Corporation, Montreal, Que.
H. T. Diplock ..... Steel Company of Canada, Ltd., Montreal, Que.
F. G. Daniels ..... Dominion Textile Co., Montreal, Que.
L. L. Anthes ..... Anthes Foundry Co., Toronto, Ont.
Norman Boyd ..... Gutta Percha & Rubber, Ltd., Toronto, Ont.
Robin Boyle ..... Provincial Stone Co., Toronto, Ont.
John F. Ellis ..... Barber-Ellis, Ltd., Toronto, Ont.
S. R. Parsons ..... British American Oil Co., Toronto, Ont.
W. S. Campbell ..... Canadian General Electric Co., Peterborough, Ont.
Geo. Henderson ..... Brandram-Henderson, Ltd., Montreal, Que.
H. R. Silver ..... H. R. Silver, Ltd., Halifax, N.S.
Angus McLean ..... Bathurst Lumber Co., Bathurst, N.B.
A. H. Whitman ..... Robin, Jones & Whitman, Ltd., Halifax, N.S.
T. H. Estabrooks ..... T. H. Estabrooks Co., Ltd., Halifax, N.S.
B. W. F. Johnson ..... B.C. Sugar Refining Co., Vancouver, B.C.
J. R. Duncan ..... Vulcan Iron Works, Vancouver, B.C.
J. E. Hale ..... Vancouver Milling & Grain Co., Vancouver, B.C.
J. J. Palmer ..... Clayburn Co., Ltd., Clayburn, B.C.
J. H. McDonald ..... B.C. Manufacturing Co., Ltd., New Westminster, B.C.
A. S. Capwell ..... Canadian Blower & Forge Co., Ltd., Kitchener, Ont.
J. H. Baetz ..... Baetz Bros.' Furniture Co., Kitchener, Ont.
Chas. O. Shaw ..... Anglo-Canadian Leather Co., Ltd., Huntsville, Ont.
Chas. Waterous, Jr. ... The Waterous Engine Works Co., Ltd., Brantford, Ont.
F. A. Nancekivell .... The Ford Motor Co. of Canada, Ford, Can.
A. Kinzinger ..... Kinzinger, Bruce & Co., Ltd., Niagara Falls, Ont.

Trade Sections Department

There has been unusual activity amongst Trade Sections during the summer months. No less than twenty-seven meetings have been held since the beginning of July, in which sixteen different groups participated.

The Trade Sections Department is constantly on the watch for motives of peculiar trade interest which may warrant the calling of groups together, but in this respect members can be of great assistance by supplying the department with information in respect to which collective action may be appropriate. It is desirable that every separate branch of industry should feel that on matters of common interest facilities for getting together are always available, it being the duty of the Trade Sections Department to supply for the asking the necessary secretarial and organizing service.

A classification of Canadian industry has been prepared, dividing manufacturing processes into eleven main groups on general lines and sub-dividing into sixty groups along particular lines. This grouping system has been designed to adapt itself to the system of grouping in the Canadian customs tariff, the general classification in the Canadian census returns, the grouping system indicated in organizations in all countries, and includes all Trade Sections and Associations already organized in Canada.

There are factors in every branch of industry which may with advantage be dealt with collectively, and it needs but the suggestion of a motive to set the machinery in operation to bring manufacturers in similar lines of production together in any of the centres in Canada in which the Association maintains a staff.

It is hoped that manufacturers will avail themselves of the facilities at their disposal.

Company Test Cases

Reporting on the situation as regards company law, the Legislation Committee states that,—

"His Majesty's Privy Council has granted leave to appeal in the cases involving the validity of the company licensing acts of Saskatchewan, Manitoba and Ontario, the several cases to be consolidated and heard together. This fact and the comments of their Lordships on the hearing of the application for leave indicates that the end aimed at in bringing these cases is likely to be attained, viz.: that the whole subject will be taken up on a broad basis which will insure a determination of the questions at issue not only for the province directly concerned, but for other provinces as well. It will be remembered that the cases were instituted and carried as far as the Supreme Court of Canada by the Canadian Manufacturers Association. This was as far as the Association felt justified in going. Arrangements have now been made by some of the companies interested to finance the further prosecution of the appeal, and the Dominion Government will be represented as intervenent and will bear part of the expense. It is not yet known whether the cases will be heard at the November sittings or whether they will be held over until the spring."

Many Visitors to the Office

During the past two weeks the Commercial Intelligence Department of the Association has been favored with visits from a large number of business men from Canadian points and from different parts of the world. The Department has had great pleasure in enabling them to get in touch with many members of the Association with a view to promoting business. Among those who visited the office were the following:—

Mr. B. Willoughby, Managing Director of Willoughby & Co., Limited, Sydney, Australia; Mr. H. L. Jones, of Jones, Sweet & Co., Import and Export Merchants, Shanghai, China; Mr. H. S. Hart, of Dimond & Hart, Wellington, New Zealand, Wholesale Merchants; Mr. H. A. Barron, of H. A. Barron, Limited, Cape Town, South Africa; Mr. Stamos Zographakis, the Trade Commissioner in Canada for Greece; Mr. M. E. Reich, representing commercial interests in Czecho-Slovakia; Mr. Miles Nelson, of Auckland, New Zealand and Melbourne, Australia; Mr. John J. Matveenoff, of the Russian-America Trade and Industry Development Corporation, New York; Mr. W. C. Simpson, of the Robinson Shields Company, London, England; Capt. P. C. Hollingsworth, of John Lofthouse & Company, London, England, and many others.

Workmen's Compensation Boards Convene

The Association was represented at the Sixth Annual Convention of the International Association of Industrial Accident Boards and Commissions, which was held in the King Edward Hotel, Toronto, on September 23-26, by Messrs. Sam Harris, chairman Legislation Committee; W. C. Coulter, chairman Toronto Branch; R. L. McIntyre and H. Macdonald, legal secretary. The conference, which was presided over by Mr. George A. Kingston, commissioner of the Workmen's Compensation Board of Ontario.

dealt with a large variety of subjects affecting classification of industries, statistics on accidents, compensation insurance cost, cost of medical and hospital treatment by nature of injury, etc. Mr. Samuel Price, chairman Workmen's Compensation Board of Ontario, stated that in Ontario last year only 1½ per cent. of all assessments paid by employers—excluding the amount expended by them in safety work—went toward expenses; the other 98½ per cent. was for actual benefits to the workmen, and none was needed for litigation or legal fees. Mr. A. H. Young, manager Industrial Relations, International Harvester Company, spoke on "Co-operative Representation of Employees in Industrial Policies," describing the work done by the company.

Dominion Bankruptcy Act

Reviewing developments leading up to and following the enactment of the Dominion Bankruptcy Act, the Legislation Committee in its report to the Executive Council says,—

"After discussion in the Canadian Parliament during two sessions and preliminary preparations extending over several years, a Federal Bankruptcy Act was passed in the 1919 session, which may be regarded as a factor in the readjustment incidental to the war. During the course of the bill, our Legal Department, through our Ottawa office, kept in close touch with the Government and with other public bodies upon the subject, with a view to safeguarding the interests of manufacturers. We are glad to state that we were able to introduce very important amendments which are incorporated in the act and which will contribute to the greater protection of creditors, in line with the legislation of other countries.

"Amongst these amendments we particularly urged the adoption of provisions for proper accounting by and discharge of trustees in bankruptcy, and procured the enactment of effective clauses providing that unclaimed dividends shall be deposited by the trustee with the Minister of Finance, to be afterwards available to creditors entitled thereto, with accrued interest thereon.

"Your legal secretary prepared and issued to all our members a digest of the act in circular form, many expressions of appreciation of which were received, as well as numerous requests for additional copies for the use of branches in both Canada and the United States.

"The old assignment acts of the various provinces will become non-effective as soon as the Governor-General has proclaimed the new act. This will be done when the general rules, which are now being drafted, are completed, which will be sometime about November."

Engineering Standards Association

At a meeting on September 8 of the main committee of the Canadian Engineering Standards Association, in which the Canadian Manufacturers Association is represented, the following new members were appointed:—J. M. R. Fairbairn, nominated by the Canadian Pacific Railway; H. G. Kelley, nominated by the Grand Trunk Railway; A. F. Stewart, nominated by the Canadian National Railways; F. A. Gaby, nominated by the Hydro-Electric Power Commission of Ontario; A. A. Dion, nominated by the Canadian Electrical Association, and J. Stadler, nominated by the Canadian Pulp and Paper Association.

Lists of members for the following sectional committees were approved:—Electrical, chairman, Dr. L. A. Herdt; steel bridges and construction, chairman, G. H. Duggan; wire rope, chairman, Professor H. M. Mackay.

Recommendations as to membership of the following sub-committees were received and the committees appointed accordingly:—Steel railway bridges, chairman, P. B. Motley; incandescent lamps, chairman, John Murphy; transformers, chairman, A. A. Dion.

The Secretary reported the progress made with regard to various questions already under consideration, and further reported a number of requests for action on the part of the Association. Several of these were approved for further enquiry and report.

The Chairman then welcomed Mr. C. Le Maistre, the Secretary of the British Engineering Standards Association, who is now on a visit to Canada and the United States. Mr. Le Maistre described briefly the work of the B.E.S.A., and drew the attention of the Committee to certain matters in which his Association would welcome the assistance and co-operation of the Canadian Engineering Standards Association, referring especially to proposals which have been made with a view of obtaining some degree of Anglo-American agreement as to screw-thread standards. Mr. Le Maistre further pointed out the desirability of international agreement as to rules affecting electric appliances and fittings, particularly for interior use.

As regards the first suggestion, it was decided to appoint a sub-committee on screw threads, with instructions to consider and report on Mr. Le Maistre's communication.

Considerable discussion took place on the question of rules for electric appliances, and the committee agreed that the formulation of a Canadian electric code was most desirable. The committee then directed that a sub-committee should be called together to enquire and report further as to this point.

Catalogue and Sample Room at Liege

The Association has been furnished with a memorandum reviewing the work for the past six months by the Catalogue and Sample Room at the British Vice-Consulate at Liége. Owing to the impossibility of providing a special employee for the section, the room has only been open for two hours a day and five days a week, but, during the last 125 days under review, the number of visitors has aggregated 735, 330 prospective buyers of British goods and 463 applicants for British agencies have also been dealt with by correspondence.

The response of British firms for catalogues and samples of small bulk has hardly fulfilled expectations, but it is to be hoped that an important increase in the number received will be assured, as the facilities which this organization provides for bringing British products to the notice of Belgian buyers are realized. It should hardly be necessary to state that catalogues for Belgium should be in French if possible, with metric measurements, etc. The number of firms who have sent publicity matter up to date is slightly in excess of 300.

The organization described above being largely in the nature of an experiment, the continuance and development of which must depend upon the results attained, it is urgently requested that all firms who succeed in doing business by means of the publicity offered them should notify the fact to the British Vice-Consul, Liége.

Swiss Delegation Coming to Canada

Arrangements have been made between the Canadian Mission, London, and the Government of Switzerland in regard to a visit of a Swiss delegation to Canada. The delegation includes representatives for the special study of:—(*a*) Government Administration; (*b*) Universities—Arts and Sciences; (*c*) Medicine—Hospitals; (*d*) Banks; (*e*) Board of Trade; (*f*) Architecture; (*g*) Hotel Management; (*h*) The Press; (*i*) Commerce and Industry.

The Canadian Mission states that about ninety of the three hundred delegates will visit Canada and that the

majority of these delegates are interested in matters concerning trade and industry.

It is expected the delegates will enter Canada via Niagara Falls, between October 1st and October 15th, and will remain in Canada about two weeks. The Canadian Trade Commission, Ottawa, will make the necessary arrangements regarding the tour through Canada, with Mr. Oscar Bosshard, the Commissaire of the Bourse Suisse du Commerce of Berne, who will accompany the delegation.

Trade With Jamaica

At its last meeting the Tariff Department considered a letter from E. A. H. Haggart, Kingston, Jamaica, which deplored the reduction in Jamaica's purchases from Canada. The percentage of her purchases from Canada, the United Kingdom, the United States and other countries in each of the years, 1877, 1887, 1897, 1907, 1917, was as follows:—

	1877	1887	1897	1907	1917
Canada	13.9%	5.6%	7.2%	5.5%	6.7%
United Kingdom ..	50.7%	62.0%	46.7%	47.4%	19.5%
United States	31.6%	28.3%	43.3%	43.6%	70.1%
Other Countries ..	3.8%	3.1%	2.8%	3.5%	3.7%

Jamaica's sales to Canada, the United Kingdom, the United States and other countries, are in the following ratio:—

	1877	1887	1897	1907	1917
Canada	.005%	1.31%	1.11%	7.88%	15.03%
United Kingdom ..	79.46%	38.62%	25.97%	22.37%	45.20%
United States	15.4%	43.93%	57.96%	55.60%	28.22%
Other Countries ...	5.31%	16.12%	14.93%	13.12%	11.25%

It will be seen from the foregoing that Jamaica's purchases from British countries have been steadily dwindling. Over 70 per cent. of her requirements are now purchased in the United States. On the other hand, the sales of Jamaican products to British countries have been steadily increasing, so that now the greater proportion of her sales are to British countries. The products of any British country entering Jamaica are subject to the same rate of duty as would apply on like goods entering Jamaica from the United States. On the other hand, Jamaican products entering Canada are admitted throughout at the lowest British preferential tariff rates provided in the tariff of Canada. In the circumstances the Tariff Committee directed that these facts be brought to the attention of Mr. Haggart, in order that he might take the matter up with the Jamaican authorities, in the hope that they may be persuaded to participate in the policy of strengthening national ties between British countries by extending preferential tariff treatment to British goods.

Stratford Manufacturers Visit West

Six furniture manufacturers of Stratford, Ont., have recently completed a tour through Western Canada. They visited all the important centres as far as Victoria, B.C. They report that they see great business possibilities in the future of Western Canada. Many discussions were held with western dealers and a great many common problems were discussed. Considerable benefit resulted from the interchange of opinions, personally, and a great deal of valuable information was secured. The visit by manufacturers representing the same trade to Western Canada —or, in fact, to other parts of Canada—cannot fail to produce excellent results.

The Stratford manufacturers who made the trip West are as follows:—D. M. Wright, president of Geo. McLagan Furniture Co.; H. W. Strudley, president of Imperial Rattan Co.; W. J. Anderson, president of Stratford Chair Co.; F. M. Gifford, president of Farquharson & Gifford Co.; Chas. A. Moore, president of Stratford Mfg. Co.; F. W. Trebell, manager of Kindel Bed Co.

Textile Manufacturers Meet

Under the auspices of the Canadian Textile Institute and the Canadian Woollen Manufacturers' Association, which is now a section of the C.M.A., a meeting of textile manufacturers was held on September 6, in Toronto, to hear an address by Professor Barker, of Leeds University, who had just completed a tour of Canadian mills. Prof. Barker outlined the policy as regards technical education, which he believed that Canadian manufacturers should adopt. Prior to the holding of this meeting, the Canadian Textile Institute held its annual meeting at the King Edward Hotel, at which there was approved a memorial to the Government on the subject of technical education. In the evening a banquet was held, at which technical education was again to the fore, speeches being delivered by Professor Barker, Hon. Dr. Cody, Sir Robert Falconer and others.

Recent Activities of the Montreal Branch

By W. P. HUGHES
Secretary, Quebec Division, C.M.A.

MONTREAL BRANCH members are manifesting an increasing appreciation of the value of group conferences. During September sixteen trade group meetings were held in the branch board room, while requests for board room reservations already extend over the first two weeks in October. This is considered a most encouraging development, for co-operative study of common difficulties is without doubt the most valuable method of solving the many problems with which manufacturers are faced in this period of far-reaching readjustments. It is the policy of the branch executive to afford every possible facility to the members for such group meetings, and they are following the increase of interest manifested with a great deal of satisfaction.

The September meeting of the Executive Committee, which was held in the Engineers' Club, on Thursday, September 18th, was well attended and definite plans were drawn up for the year's activities. The Reception and Membership Committee, under the able leadership of Mr. F. W. Stewart, submitted a comprehensive programme, covering two important aspects of branch endeavor. The first was a series of general meetings, to be held every two months throughout the season. Mr. Stewart reported that it was the intention of the committee to secure speakers whose prominence and ability would insure deep interest on the part of the members.

He intimated that already negotiations were under way to obtain such outstanding speakers as Sir Henry Drayton, Minister of Finance; the Honorable Mackenzie King, newly elected leader of the Liberal party; E. W. Beatty, President of the C.P.R., and Dr. Michael Clark, of Red Deer; and stated that he confidently expected these negotiations would be successful. He announced that it had been decided to set apart at least one evening during the winter for a purely

A WARNING

Information on the best authority has been received stating that the publication of the "Echos de l'Exportation" is a German paper, although edited in France. We would warn Canadian manufacturers against this publication. It is apparently a medium of economic espionage run for the benefit of German trade in France.

"get acquainted" gathering of the members, on which occasion smokes and general entertainment would alone be in order.

The other important development disclosed by Mr. Stewart's report was a thorough membership campaign. It was possible, he explained, to secure new members from two sources. First from the comparatively small number of manufacturers within the jurisdiction of the branch, who were not already members and secondly from a campaign carried on among our present members, to the end that additional memberships be taken out by them. The committee, he affirmed, were already at work and had encouraging results to show.

A list of the firms deemed eligible for membership had been completed and arranged according to location. A personal letter had been sent to each of these, extending a cordial invitation to them to become members, intimating that if a reply in the affirmative had not been received within a reasonable delay, a member of the committee would call upon them, and that it was hoped they would have the application blank sent them filled out pending such a call. Each of the members of the committee had taken some eight or ten of these prospects and the actual canvass was well under way.

Additional Memberships

With regard to additional memberships from firms already members, the committee had felt that it was highly desirable to have as many as possible of the men who were actually engaged in the various departmental activities of big businesses available for the Association study of particular problems. These men could bring to committee work the expert knowledge which they had acquired in their daily work, and so the questions would be much more intelligently discussed and the results would undoubtedly be much more beneficial to the members at large. It seems reasonable, Mr. Stewart suggested, that such a committee would understand a problem much more thoroughly and be in a position to suggest remedies much more effectively than would a group not so intimate with the subject. In securing the additional memberships it would be suggested that the company signify the particular department in which the additional representative was engaged. This information would be collected for ready reference.

Fifteen applications had been examined by the committee to date, and had received the approval of the Membership Committee. Upon motion of Mr. Stewart, seconded by Mr. Miner, these were unanimously passed by the Executive Committee and recommended to the Central Executive for final adoption. The companies and names of representatives thus passed were as follows:

Lockwood, Greene & Co., of Canada, Ltd.; Mr. E. G. Horne.
Precision Tool & Machine Co., Ltd.; Mr. G. M. Smith.
Salem Oil & Grease Co., of Canada, Ltd.; Mr. E. F. Richards.
Legare Auto & Supply, Ltd.; Mr. L. T. Fogust.
Lymburner Brass Works, Inc.; Mr. J. L. Murphy.
Herald Press, Ltd.; Mr. T. A. Tod.
La Compagne Marchand Freres, Ltee.; Mr. O. Marchand.
Thos. V. Bell, Ltd.; Mr. Thos. N. Bell.
International Machinery & Supply Co.; Mr. W. J. Carrigan.
Second representative, Mr. J. T. Dohm, 2nd membershi
Third representative, Mr. R. J. Hiller, 2nd membershi
Nichols Chemical Co., Ltd.; Mr. C. H. Lyons, 2nd membershi
Berliner Gramophone Co., Ltd.; Mr. R. S. Chilvers, 2nd mer bership.
Riordon Pulp & Paper Co., Ltd.; Mr. A. D. Huff, 2nd mer bership.
Algoma Steel Corporation, Ltd.; Mr. G. A. Irwin, 2nd mer bership.

Eminent Montreal branch members were present in Ottaw attending the Conference on Industrial Relations. Sever of these directly represented branches of industry, as th nomination of the Association, while others were present i some other capacity. T. P. Howard, as President of th Association, was in daily attendance, and among those at th conference were Carl Riordon, of the Industrial Relation Commission; John Lowe, connected with the Governmer Labor Sub-Committee; A. H. Brittain, of the Canadia Fisheries Association; Mark Workman, R. H. McMaster an H. E. Rice, representing the Steel and Iron Industry; F. C Daniels, the Cotton Industry; F. P. Jones, manufacturers c clay, glass and stone products; R. E. Jamieson, the Rubbe Industry; Wm. Rutherford, the Lumber Products Industry.

A full report of this conference is being sent to ever member through arrangements effected by the head office, an will be studied with interest when it arrives.

Commercial Intelligence.

The branch office has been the centre during the mont of much activity in disseminating commercial intelligence both as to domestic and foreign trading possibilities. No les than nineteen representatives of foreign buyers and importer have visited the office in quest of information as to source of supplies of this or that commodity. In a number of case there is good ground for stating that satisfactory busines has resulted to the manufacturers from this service. A con scientious attempt has been made to investigate the standin and experience of men who have come looking for agencies Names of members have been given them with a view to pro tecting the members from the irritation of demands upo their time by inexperienced and unqualified persons desirin to establish themselves.

Offers Five Hundred Dollars

Toronto Publication Holds Competition to Determine How Sales-Costs May be Lowered

An opportunity for those who have ideas to offer as to how sales-costs can be lowered in order to off-set the present clamor against the high cost of living, is afforded by the editor of *Marketing*, a monthly magazine devoted to the problems of selling and advertising in Canada and published in Toronto. Five hundred dollars in prizes are offered for the best articles dealing with any phase of selling or advertising containing practical answer to the problem. There will be six awards in all, the best article receiving $150; the next best $100; the two next best $75 each and the fifth and sixth in order, $50 each. Articles of about 2,500 words are desired, though they may be longer, and they should reach the editor of *Marketing* not later than November 1.

Justification of Made-in-Canada Movement*

Essential that Canada's Revenues Should be Conserved and the Most Made Out of Her Productive Possibilities in Order that She May be as Nearly as Possible Self-Supporting

By T. P. HOWARD

President, Canadian Manufacturers Association

WHEN I received an invitation to address you, I hesitated, for it seemed to me that I must first decide whether or not I had a message that would be germane to the nature of your interests and deliberations. You are a group of busy men, and therefore it would be a waste of time and a failure on my part to appreciate the fitness of things did I consent to come before you without something practical to say.

Your business is to buy. As buyers you represent a determining factor in the distribution of demands for production. To illustrate what I mean, let us say that two million pairs of shoes are needed for the people of Canada during the next six months. This would constitute the demand for production of boots and shoes for that period as far as Canada is concerned. But how is this demand distributed among sources of supply? What factories participate in this production? These questions can be answered only by buyers. They decide these matters, and in so doing, they distribute this demand for production of boots and shoes; and so it is with all demands for production. When you give an order for five thousand tons of flour, or for five thousand yards of piece goods, or for any quantity of any commodity, be it large or small, you are distributing just that much of the demand for production in that particular line of goods. It is so important to Caaada, especially at the present moment, that this distribution of her demands should be as far as possible within her own borders that I feel a real opportunity presents itself to me in the invitation to come here this evening. I want, therefore, to speak to you plainly as distributors of Canada's demands for production on the subject of the vital relationship which exists between that distribution and the economic and social welfare of our country, for it is this relationship which justifies a Made-in-Canada movement.

Buy to the Best Advantage

I recognize that your judgments in this distribution are of necessity controlled primarily by comparison of possible sources of supply. It is your chief concern as wise purchasing agents to buy to the greatest advantage from the standpoint of the organization you represent. This must always be true, and it is with no attempt to minimize this fact that I ask you to consider what is involved when you place your orders, and thereby distribute Canadian demands for production. In terms of money, millions of dollars are annually directed into this or that industry, to one or another section of this country, or to some country other than our own. But money is only a standard of value. Translated into its values, it represents, in the last analysis, food, clothing, shelter, in short, those things which are necessary to sustain individual life and to make that living attractive; to an industry, community or a country, it means social health, prosperity and development. Orders insure busy factories, busy factories an abundance of employment, and when the citizens of a country are wisely and profitably employed, that country is on the road to national prosperity. These truths are so self-evident and so commonplace that they are of the nature of platitudes, but they are facts which we as Canadian citizens to-day should ponder well.

An Appalling Obligation

Canada, as well as other nations who were engaged in the war, is facing a tremendous increase in national debt and expenditure. In five years our debt has jumped from $43.49 to $160.72 for every man, woman and child in the Dominion. The carrying charges on this debt, including interest and sinking funds, have advanced from $1.96 per capita in 1913-14 to an estimated $12.16 per capita for 1919-20. During the war period, expenditure on consolidated fund account has risen from $127,384,473, to an estimated $351,785,491, for the current fiscal year. In the same period capital expenditures have jumped from $37,180,176 to an estimated $85,893,581, exclusive of war expenditures, which are for the fiscal year estimated at $296,696,614. This is an appalling financial obligation, which can only be met by strictest economy in the use of our revenues and by maximum realization of our resources.

What would you say of a family that had incurred a debt relatively as large and yet paid out a considerable portion of the family income for work while several members of the family did no work, or worked only part of the time, because there was not enough work to go around? Or what would you think of the business acumen of this family if they did only the rough and menial labor themselves, and handed over all the profits accruing from producing the highly finished product to outside workmen no more skilful than themselves? And yet the analogy between such a family and a country in the position of Canada is complete. That is just what Canadians are doing when they import more than they need to import, viewed from their own productive capacity, or when they ship out of the country the raw products of farm, forest or mine, and buy the same materials back in their fully manufactured state. It is just as poor management of the affairs of our nation and just as great a failure on the part of her citizens to conserve her revenues as it would be in the case of that family.

Conserve National Income

You will agree, I think, that it would be poor business at any time for a family or a country to conduct its affairs in such a fashion, and under the financial obligations described that it would be nothing short of utter folly. If you were that family's adviser, would you not counsel them to conserve the family's income by first exhausting their own powers of work before they employed others to help them, and would you not insist that the only sensible thing for them to do would be to get for themselves all the profits that their brains and skill could create? This is precisely the

*An address delivered before the Purchasing Agents' Association, of Montreal and District, at the Corona Hotel, Montreal, September 9, 1919.

counsel which a large number of prominent Canadian citizens are urging in the Made-in-Canada idea.

Other countries, some of which are by no means as relatively burdened with debt, realize the wisdom of this counsel. Throughout the world there is a pronounced economic movement towards the development of home markets, and steps have already been taken by the leading nations to accomplish this through increased protection of those markets. Canada alone stands in the unenviable position of being faced with an organized class demand for lower protection. In the United States no less than twenty-two bills have been introduced in the House of Representatives this session calling for higher protection. It is significant that among these measures two bills demand repeal of the Reciprocity Act. The attitude of the American farmers towards Canadian competition was indicated in a recent speech by Mr. George M. Young, Representative from North Dakota, and the father of one of the anti-reciprocity bills, Mr. Young said in part:

Americans Demand Protection

"The Underwood law did not get well under operation before the European war began. The conditions created by that war have acted as a high protective tariff. Then we get back to peace conditions . . . . . the American farmers will raise a howl which, by comparison, will make the roar of protest against Canadian reciprocity seem like a feeble murmur. In other words, when the farmers really find out that the Underwood law lets down the bars as to agricultural products to a much greater extent than Canadian reciprocity, they will throw the men responsible for it higher than they did Mr. Taft."

As the American farmers are demanding protection, so manufacturers are asking for higher duties and there is a marked tendency to keep the American market for the American people.

In France, as the result of a decree of July 8th abrogating that of June 14th relating to *ad valorem* surtaxes on imports, increases in French protective duties will range as high as two hundred per cent. This simply means that France says we will conserve every last franc of our revenues that we can, by doing as much of our reconstruction work as we are able to do. We will import only those things that we cannot ourselves produce, and in that I submit she is wise.

In the British Empire, Great Britain, while committed to Imperial preference, is restricting imports and protecting home industries. Acting Premier Watt, of Australia, has announced the introduction of a measure for higher protective duties. The Premier of South Africa has stated that the revenue tariff of that country will be increased to protect home industries. Japan is imitating pre-war Germany, and is following an extreme policy of protection. Practically every leading statesman of Brazil has declared and voted for a stiff protective tariff, and the country is solid for such a measure.

Revival of Movement

In Canada, in spite of the opposition referred to, there is a widespread revival of the Made-in-Canada movement. The present unfavorable balance of trade with the United States gives stimulus to this spread. Canadian money is at a discount of 3½ per cent. in New York, and in some of the border cities, merchants have taken as high as 10 per cent., while 6 per cent. is a general rule. It is recognized that the exchange situation can be corrected only by the adoption of a national policy of buying Canadian goods and encouraging Canadian industries. If Canada had manufactured at home the commodities imported during the last fiscal year, employment would have been given to more than 100,000 people, and approximately $100,000,000 that went to other countries would have remained in Canada. While I do not mean to imply that a total conservation of these revenues was possible, yet I do maintain that much was needlessly imported. Employment at good wages for thousands of workmen and millions of dollars were thus unnecessarily lost to Canada.

In a special appeal for the purchase of Made-in-Canada products, the Western Committee of the Canadian Reconstruction Association recently published a long list of such imports with an estimate of the additional number of Canadian workers for whom permanent employment would have been provided, and the corresponding addition to the pay-roll of Canadian factories, had these goods been manufactured at home. Here are a few of them:

Commodities.	Value of imports into Canada for home consumption during fiscal year ended March 31st, 1918.	Estimated number of permanent additional Canadian workers for whom employment would have been provided if imported products had been manufactured here.	Estimated addition to pay-roll of Canadian factories if imported products had been produced in Canada.
Boot, shoe. shirt and stay laces.	$275,591	65	$57,00
Boots, shoes and slippers, except rubber, etc.	414,822	95	85,00
Brooms and brushes	670,623	155	135,00
Candles	160,330	37	33,00
Carpet sweepers	103,203	25	21,50
Combs	173,289	40	35,00
Corsets, clasps, etc.	390,132	90	81,00
Cotton, manufactures of	35,230,546	8,100	7,200,00
Curtains trimmed or untrimmed.	357,328	82	73,00
Elastic	154,229	35	31,00
Furs and manufactures of	936,029	236	189,00
Gloves and mitts	1,688,944	425	340,00
Hats, caps and bonnets	3,354,440	771	680,00
Knitted goods of every description	230,296	53	47,00
Silks and manufactures of	13,848,395	3,183	2,800,00
Wool and manufactures of	24,004,193	5,517	4,900,00
Total	$81,992,390	18,909	$16,707,50

Is that kind of business management calculated to provid our country with funds necessary to pay our debts? Eightee thousand nine hundred and nine outside workmen were em ployed, receiving $16,707,500, to produce commodities fo which we had to pay $81,992,390, while Canadian workme looked in vain for work or found part time employment only

Gives Home Employment

A more extensive list on a similar line has been issued b the Canadian Trade Commission, enumerating various pr ducts that can be purchased in Canada, thus developing th home market, and the Commission says that "for every mi lion dollars retained in Canada by a refusal to buy other tha Canadian goods, a year's continuous employment can be give to at least one thousand people." Sir Edmund Walker says "Every dollar's worth we buy abroad means that a dollar' worth has been diverted from a Canadian workman."

Gentlemen, as citizens of Canada, we should, I urge, d all in our power to end this stupid waste of man power an of money. But this is not the only way in which we hav followed the short-sighted lead of that debt-burdened family Last year, for instance, 1,300,000 cords of pulpwood, value at $8,500,000 was exported, which, if manufactured into pape at home, would have represented more than $75,000,000, an provided an additional $25,000,000 for wages for Canadia workmen. So with other Canadian industries. Canada e ported last year unfinished products to the value of mo than $900,000,000. If the manufacturing processes of eve one-third of these had been completed in Canada, emplo ment would have been given to at least 125,000 more wor people, close to $125,000,000 would have been provided f

additional wages, and salaries, and the net value of Canadian products have been increased by approximately $275,000,000.

Are we to continue doing the rough and menial work while others get all the benefits of brain and skill? Do we resign ourselves to this fate by acknowledging any superiority in foreign brains or skill? We do not. We have shown the world during the past five years that Canadian brains and Canadian skill of workmanship are equal if not superior to the best that is produced elsewhere. Not only on the fields of Flanders has this been proved, but in the billions of dollars' worth of manufactured products that we have supplied to the Allies, with which to carry on the fight against the Hun, we have demonstrated our ability to others; they have acknowledged it, but we must realize it ourselves.

Here then is the proposition I put to you as buyers: If you agree with me that it is essential to Canada that revenues should be conserved and that the most should be made out of her productive possibilities, and if you further agree with me that it is only by supplying as many of our wants as we can ourselves, that this conservation and realization on resources can be effected, will you not also agree that in every decision by which you distribute a portion of those demands for production you should give Canadian goods first choice, qualities and prices being equal?

Principles at Stake in the Big Steel Strike

By J. T. S.

THE strike of the employees of the United States Steel Corporation, which began on September 22nd, affecting a host of subsidiary companies dependent upon this basic industry, is a matter of grave concern, not only to those connected with the companies implicated, but also to the entire nation.

According to an Associated Press despatch, dated New York, Sept. 22nd, the United States Steel Corporation, at the beginning of this year had 268,710 employeees, to whom it paid in salaries and wages $452,663,524 annually.

The average daily wage of all employees, exclusive of the general administrative and selling force, was $5.33. The Corporation controls 145 plants.

What the Men Demand

This is the programme of twelve demands prepared by presidents of 24 unions in the iron and steel industries on which the strike vote was based:

1. Right of collective bargaining.
2. Reinstatement of men discharged for union activities.
3. An eight-hour day.
4. One day's rest in seven.
5. Abolition of the 24-hour shift.
6. Increase in wage sufficient to guarantee American standard of living.
7. Standard scales of wages in all trades and classifications of workers.
8. Double rate of pay for all overtime, holiday and Sunday work.
9. Check-off system of collecting union dues and assessments.
10. Principles of seniority to apply in maintenance, reduction and increase of working forces.
11. Abolition of company unions.
12. Abolition of physical examination of applicants for employment.

Chairman Gary's Letter

The following letter from Chairman E. H. Gary, addressed to the Presidents of the subsidiary companies of the United States Steel Corporation, giving the reasons for declining to deal with labor unions, was made public by the Carnegie Steel Company on Sept. 16th:

"Not long since I respectfully declined to meet for the purpose of discussing matters pertaining to labor at our various plants a number of gentlemen representing certain labor unions. They claim this furnishes cause for complaint and have stated that they intend, if possible, to prevent a continuation of operations at our mills and factories.

"I deem it proper to repeat in a letter what heretofore has been said to you verbally. I entertain no feeling of animosity toward the gentlemen personally and would not hesitate to meet them as individuals, but I did not and do not consider it proper to confer with them under the circumstances.

"The declination was made for two reasons: First, because I did not believe the gentlemen were authorized to speak for large numbers of our employees, whose interests and wishes are of prime importance; secondly, because a conference with these men would have been treated by them as a recognition of the 'closed shop' method of employment. We do not combat labor unions as such. We do not negotiate with labor unions because it would indicate the closing of our shops against non-union labor; and large numbers of our workmen are not members of unions and do not care to be.

"The principle of the 'open shop' is vital to the greatest industrial progress and prosperity. It is of equal benefit to employer and employee. It means that every man may engage in any line of employment that he selects and under such terms as he and the employer may agree upon; that he may arrange for the kind and character of work which he believes will bring to him the largest compensation and the most satisfactory conditions depending upon his own merit and disposition.

"The 'closed shop' means that no man can obtain employment in that shop except through and on the terms and conditions imposed by the labor unions. He is compelled to join the union and to submit to the dictation of its leader before he can enter the place of business. If he joins the union he is then restricted by its leader as to place of work, hours of work (and therefore amount of compensation), and advancement in position, regardless of merit; and sometimes, by the dictum of the union leader, called out and prevented from working for days or weeks, although he has no real grievance, and he and his family are suffering for want of the necessities of life. In short, he is subjected to the arbitrary direction of the leader, and his personal independence is gone. Personal ambition to succeed and prosper is stifled.

"This country will not stand for the 'closed shop.' It cannot afford it. In the light of experience, we know it would signify decreased production, increased cost of living, and initiative, development, and enterprise dwarfed. It would be the beginning of industrial decay, and an injustice to the workmen themselves, who prosper only when industry succeeds. The 'open shop' will generally be approved by them, for this permits them to engage in any employment, whether they are or are not members of a labor union.

"It is appropriate to further emphasize what has been said many times in regard to our employees. Every one, without exception, must be treated by all others justly and according to merit. In accordance with our established custom, one of our workmen, or a number of our workmen from any department, will continue to be received by the management to consider adjustment of any question presented.

"It is the settled determination of the United States Steel Corporation and its subsidiaries that the wages and working conditions of their employees shall compare favorably with the highest standards of propriety and justice. Misrepresentations have already and will hereafter be made; unfavorable criticisms may be indulged in by outsiders, especially by those who have little knowledge of the fact; our employees may be threatened and abused in the effort to influence them to join the unions against their own desire; but, whatever the circumstances may be, we should proceed with the conduct of our business in the usual way and should give evidence to our employees that we mean to be fair with them."

Export Trade Opportunities in the Far East*

In China, Because the Country is Practically Undeveloped, there is a Better Opportunity than Anywhere Else for Doing Business—Matters that Should be Borne in Mind when Entering this Field—Should Send Best Men Available

By CAPTAIN ROBERT DOLLAR

IN the early days of this country it was hard for us to believe in opportunities in the Far East; we did not need them. The development of this great country took up all of our time and money; our manufactories were kept busy producing goods for our own needs. At that time we were a world within ourselves. Now the conditions are entirely changed. We are now producing more than we can use; therefore, we must either sell the surplus in foreign countries, or curtail our production. This latter none of us want to consider. Instead of curtailing, we all look forward to increasing our production, so there is only one way out, and that is to increase our sales in foreign countries.

Some people think, "Well, this don't interest me," but I want to say to you that there is not a man in this room that is not interested, either directly or indirectly, and I am pleased to note that many of you belong to the farmer class. All farmers are, or should be, intensely interested; every manufacturer, the merchants, bankers, railroads, and ship owners.

Sell Products to Others

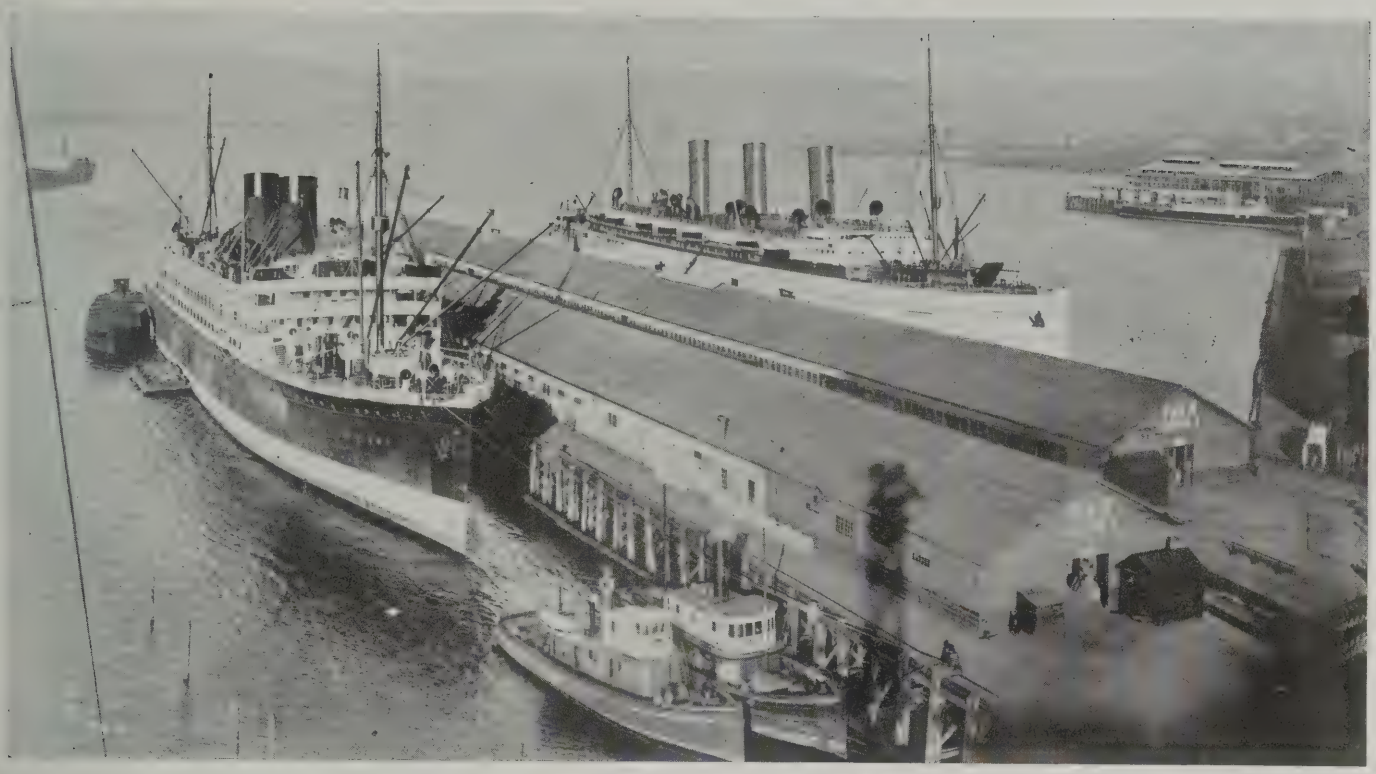
The war, increased taxes, and the results of the war, have intensified the situation. The war tax must be paid, and how can it be paid? Certainly not by us trading amongst ourselves—to use a common expression, "swapping jack-knives"—but by selling our products to other countries, and receiving from them new money or by exchange of commodities, which is as good, especially if it is raw material from which we can manufacture and export the finished products, and anything we can do to make all classes of the community see and understand this vital question will be time and money well spent.

For many years after the Civil war in the United States, they, like ourselves, were busy in the development of the great Western States, which took up all of their time and attention. As a consequence, foreign trade was neglected. At that time it was not a necessity as it has become of late years. But now the whole country is aroused by the necessity of more foreign trade, and there is intense interest in all classes of the community. In every city in the States, foreign trade clubs and committees have been formed, and there are meetings almost every day to devise the ways and means of accomplishing the desired results.

Now, in Canada, there is some interest, but not as general as it should be, and it is up to every one of us who appreciate and know the value and the absolute necessity of foreign commerce, to be up and doing, and to convince our neighbors that we must have it. When the whole community are convinced of the importance of it, then you will see plenty of commerce with the outside world.

Therefore I hope I have convinced you of the necessity of foreign trade.

I have taken that part of the world as an example, although opportunities abound in many parts of the globe, especially on this continent, in the South and Central American countries, but I have spoken particularly of the Far East, as it is bounded by the same ocean that makes our western boundary, so it is just across the Pacific. I will confine my remarks more particularly to China, where there are between 400 and 500 millions of people, and, according to our ideas of development, it is practically undeveloped. Therefore, I believe there is better opportunity there than in any other part of the globe. They are the oldest country in the world, and, until a few years ago, and even at the present time in the interior of the country, the manners and customs of their country are just the same as in Palestine during the time of Christ on earth. But a tremendous change has come over a great part of their country, and now they want much that we have to sell, and we want much that they have for sale; therefore, our interests are mutual. The possible development and magnitude of this trade are not appreciated in this country. Take, for instance, the Yangtze river that is navigable for eight months every year for the largest ocean-going steamers as far as Hankow, about 800 miles from the ocean, and no river improvements of any kind have ever been made. You will understand its importance when I tell you that one-seventh of the population live in the country drained by this great river and its tributaries. The river Han enters the Yangtze at Hankow. It is about one-quarter of a mile wide, and where it falls into the Yangtze I have seen a solid jamb of boats a mile long. This gives an idea of the commerce on this small river, situated in the geographical centre of China.



A German professor, sent by the late emperor to report on the coal fields of this part of China, reported more coal than in all the rest of the world. Of iron ore, little is known how much there is, but there is enough in sight for at least fifty years, and of a very high grade, and practically no development work has been done.

Province of Szchuen

More than 1,000 miles from the ocean is the great province of Szchuen, with over sixty millions of people, which is practically cut off from communication with the outside world on account of what is called The Gorges. This is a rapid which makes navigation impracticable. The rise from low to high water is 150 feet, although five small powerful steamers have succeeded in going up through those rapids and junks are pulled through them by over one hundred men, but the great loss of boats has made insurance next to impossible; therefore, the rate of freight is so high that only the most valuable products can be transported. But this great community, a country by itself, produces in the most primitive way every necessity of life. Several surveys for a railroad line have been attempted, showing that a practical line could be built. On the last of those surveys, bandits captured two of the Americans and claimed and received a large bounty for delivering them back alive. These Americans were in the employ of the American International Corporation, of which I happen to be a director.

When a railroad is built it will open up a very rich field for foreign commerce that at present does not exist. To give you an idea of the diversity of the present trade I took the commodities carried on two of our steamers, which sailed

* Address delivered before Alberta Industrial Congress at Calgary, August 14, 1919.

Scene on the waterfront of Vancouver showing liners loading freight for the Orient

from Vancouver to the Far East, and found they carried from this country 242 different commodities and brought in 120. I have the list here, but it is too long to read to you. Therefore, I am quite safe in saying that there is not a person here who is not interested in some of these articles. Unfortunately for Canada, 90 per cent. of all those goods originated in the United States, and it will surprise you to know that a great deal of them find their way from and especially to Canada through the United States.

The field of opportunity is so large that Canadian merchants in going into it need not displace any other nationalities already engaged in this traffic. But they will develop new industries which do not exist at present. For instance, the time is near at hand when highways will be built in China, at which time there will be an unlimited demand for auto trucks and automobiles. You will be surprised to know that outside of a few cities there are no roads on which an automobile can run. The so-called roads are only fit for wheelbarrows, and in North China, one-horse carts.

The rivers and small creeks are used for transportation. There are only a little over 6,000 miles of railroads in China.

Development of Commerce

Now, to develop commerce, I hear a great many people say, "Let the government do it." The government can assist and are helping, but it is up to the people to do it, and if those meetings do no more than arouse Canadians to the necessity of going out for foreign trade, great good has been accomplished. The farmer can lead his horse to the water, but he cannot make him drink. The government send men to foreign countries and inform you of the opportunities, but unless the merchants go out after and develop the business no results are obtained. Your very best men must be sent to work up trade; none else will do it.

Then you must have branch banks; some are about to be established. You must also have ships. A small start has been made also to get them; they are great drummers of trade.

True commerce is an exchange of commodities, and as ships must have cargoes both ways, the shipowners, if they are to succeed, must develop business so that he can not only carry your products to the people of the world, but must bring back what other countries have to sell, thereby having cargoes both ways; otherwise your products would pay double freight if the ships came home without cargo.

Building Plant in Hamilton

Canadian Carbonate Co., Limited, are Adding Another Factory to Their System

Following their policy of placing plants wherever their growing business demands it, the Canadian Carbonate Co., Limited, who already operate plants in Halifax, Montreal, Toronto and Winnipeg, with warehouses at Quebec and Vancouver, are about to erect a factory in Hamilton. A site has been secured at the foot of Simcoe Street on Hamilton Bay and building operations will commence at once. A careful study has been made of plants in the United States and plans adopted call for building and equipment that will make the factory the most up-to-date on the continent. The building, which should be ready for occupancy by March 1, will be 100 x 50 feet and two storeys in height.

It is interesting to learn that the Canadian Carbonate Co. are now shipping all the carbonic acid gas used in the British West Indies, having captured this important market from the Germans. The gas is shipped from the Halifax factory and, by reason of adequate shipping facilities and attractive prices, a strong hold has been obtained on the market. The increasing use of refrigeration systems and the growing consumption of ginger ale and beer, are factors in the expansion of the business.

New Light on Subject of Technical Education*

Textile Manufacturers of Canada are Furnished with a Scheme of Education Based on the Experience and Investigations of one of the Foremost Authorities on the Textile Industry in Great Britain

By PROFESSOR A. BARKER

Dean of the Faculty of Technology, Leeds University, England

SOON after my arrival in this country I had the privilege of addressing a small audience at Montreal, and in that address I endeavored to deal with mathematics, physics, chemistry and art in their relation to the textile industry. At Hamilton, where I had the privilege of addressing certain leaders in the textile industry, I there referred to such matters as Mendelism and Bio-Chemistry and wool-growing problems.

At Hamilton I tried to show what the attitude of the employer and mill-manager should be towards the prospective employer and mill manager, and also towards the workers with whom every mill manager has to deal. That section of our work this afternoon will come very much to the fore, because it is impossible nowadays, and certainly impossible in Canada, to say that the mill worker does not concern you. You will have to take a lively interest in the employes as well as in thinking about training employers.

This afternoon I want to deal with the more fundamental questions that we have to face and see if we can get something more definite. Purposely I was very indefinite in my previous addresses. This afternoon, because I am hoping to see the industry in the United States, and also a little more of what the evolution of the textile industry is and is likely to be in the Old Country, I don't wish to be much more definite.

Canada is Committed to Textiles

The first question I want to ask is the first one that was put to me on arriving in Canada. One of my old students whom I was delighted to meet at Montreal put this straight away as soon as I landed: "Why should not Canada confine her attentions to farming and mining and leave manufacturing alone?" After having been round the industries here I have got to say that Canada is committed to textile industries. Your organizations are so developed that you have firms interested in the housing question. One can't question the fact. It is absolutely beyond question, and if it were not beyond question on that score, I should be almost disposed to think it would be on another score. One day this week I had the honor and pleasure of being taken out by the Duke of Devonshire, the Chancellor of our University, to the experimental farm at Ottawa, where I found that probably a good deal of the farming in Canada will have to be developed on the four year rotation, and in that rotation nothing will play a more important part than sheep farming. Very likely in the near future you will find that wool production here will be greater and you will have more raw material.

While in Ottawa, too, I went into the market place and saw the farmers coming in with their produce, *and the thought struck me that if there was no one to consume this produce, what would be the use of farming? It is actually to the advantage of the farmer, and will be more and more, that you should develop the textile industry on right lines and link it up on the lines I suggest, with the farming industry.*

The next point I suggest in this: Some of you might say, "'Well, while you have a large experience in the Old Country, can you put a scheme down before us which will fit our conditions?" Again I want to say authoritatively that there is no scheme working at present which will fit Canadian conditions. In other words you have to evolve your own scheme. The next thing that strikes me (and this is almost one of the most important things that I have to say to you this afternoon) is that Canada, both educationally and industrially, is in the sequence of world evolution. You are not cut off from Europe, still less from the United States, and in industry and education, in every line of thought and action, you to-day are not facing different problems, but you are facing the same problems from the same standpoint and the same difficulties that we are facing in the Old Country.

And we want your experience just as much as you want ours. Therefore Canada must play her part in defining actual lines of evolution. A more difficult thing for you to do, but a finer part for you to play, is that alongside other countries you should take your part in working out the salvation of the world as a whole. So, this afternoon, I want if possible, to attempt to help you towards a broader and at the same time, a more definite outlook on your industries through my own experience.

I have got a book here practically filled with notes on my visit to the various firms in Quebec and Ontario. Although I have missed many important concerns, I think I have visited concerns representative of the whole industry, and with my experience in the Old Country, with the experience I have had here, I want to put before you the conclusions I have come to, not in any dominating sense, but in the hope that you will be able to take some of them to yourselves and mould them to your own requirements. If I can add experience in the United States and finally draft my report which I hope to write on my return to England, I will be more definite. The problem is a difficult one because I have to deal with both the educational and industrial sides, to ask what should be the basis of action educationally, and what should be the basis of action, industrially.

Growth of Student's Mind the Basis.

I want to face these questions quite candidly because that might save a deal of trouble later. Technology is, between the devil and the deep sea. Your educationist says that technology is not education. The technologist says that the educationist is not practical. I have satisfied myself that the basis of consideration is the growth of the student's mind. You will get a better result by working on the student than by going to the industry and thinking that you are going to impose it upon him. I know a great deal has been talked about games in the English public school system. I am going to take a very bold stand. Some may say it is theoretical. I have tested it for twenty-one years and it is the line to take, not merely for the operative but for the capable manager in the mill and the capable organizer of industry.

The most useful definition of education, I think, is 'That training which best fits a man or woman to take a

*An address delivered on September 6, before a joint meeting of the Canadian Woollen Manufacturers' Association and the Canadian Textile Institute, held in Toronto.

progressive interest in life—to develop to the full his potentialities.' I think as an educationist, I should say that we must see to it that all courses of instruction that are given, such courses as I am going to suggest, must be scientific in the sense of being reasonably fundamental. We have got over the idea of the scientist who thought that everything might be brought down to certain fundamentals. We know now that we must find our own fundamentals. Courses of instruction must be reasonably fundamental, sequential and capable of stimulating imaginative insight. One word in reference to sequential work. No self-acting mule had been made for the reason that there was not a man in the industry who thought he could combine six or seven movements into one. So we had to go to a mathematician, Richard Roberts, who by his various powers of sequential reasoning, put them together and that is why we have a self-acting mule.

Mr. Saunderson, a famous English schoolmaster, believes that you must educate your boys in the subjects in which they are interested and in which their parents also are interested. If you are going to stimulate the imaginative insight of your student you have to take something that he is interested in. The educationists need not be afraid that textile industries, properly developed, will suppress either of these three things, fundamentals, sequence and imagination.

Must Have Efficient School Equipment

Look at the matter from the manufacturers' point of view. He must see to it that the conditions of satisfactory practice are attained. I would suggest that the manufacturers would attain to that by just attending to two points. First of all you can't teach satisfactorily by talking; you must have an efficient school equipment. I am changing the Leeds system from the lecture, from turning the department itself into a book, to the processes demonstrating the practical from the raw material to the finished fabric. The other way you can ensure satisfactory conditions of practice is to offer prospective students opportunities of practical experience in your mills. To my mind the ideal course is for there to be no break in the continuity of the university student's work. Give the student the practical work during the long vacation. In that way you will produce the ultimate efficient and progressive mill manager. First find capable students, second give them an efficient training, and third, give them opportunity. You can't do without any one of these three things. You will find you have not too many students with the necessary ability.

Then you may say European conditions are different from Canadian conditions. What are the requirements for the Canadian industry if satisfactory progress is to be made? Just one little difference we get here is very illuminating. You require a manager but you also require a pioneer, men trained for pioneer work. Was it Napoleon who said: 'Each private ought to have a Marshal's baton in his knapsack.' One would like to feel that each student should have a managership in his knapsack and that there should be some course mapped out for him to play the leading part in the industry.

Operatives Should be Happy

Hardly second to that you should have intelligent, interested and conscientious operatives and these operatives should be leading a happy life. You can't shut your eyes to the fact. I have sometimes wondered that men from the English slums had the spirit to fight for satisfactory conditions between nations. We realize what these men did and we are going to make conditions which will make them disposed to fight in the future if the call comes.

You must have well-equipped laboratories. In these days one cannot do without research. These laboratories and sheds must in some way be connected with other research equipments and that of course leads one to the idea that some association should develop between textile schools and the university. Also you require a bureau of standardization and a conditioning house, making possible scientific accuracy throughout the industry. Some people say we should not attempt to make it scientific, the industry being so diffuse. It is so diffuse that it is all the more necessary to develop it on scientific lines. Certainly you will find that a conditioning house established here would promote more scientific accuracy and ultimately your industry would be developed.

Erect Small Plants for Research Work

What equipment would be required to carry out all these points that I have suggested? I would suggest, in the first place, that you should start with your research plans, small plants where researches might be conducted with a view to pioneer work. You might certainly start with a small wool plant, combing and French drawing, and possibly silk. Supposing you were to develop a small combing plant and your manufacturers knew you could have batches of wool put through that plant to see if you could get what you required. If it proved satisfactory it would lead to your developing a plant on these lines and thus becoming pioneers in this industry. The hosiery industry requires large quantities of worsted yarn already produced here and practically as good as we spin it in England. It seems to me that McGill might very well take on cotton and, in view of the artistic merits of the French-Canadians, possibly the development of a designing school.

The first thing I suggest is small practical plants designed for experimental purposes and pioneer work, laboratories (physic and chemical) with the necessary classrooms. It need not be extensive. In some cases it might be advisable to refer to certain things to other departments of the university.

Then your standardization department. We have national laboratories doing excellent work. You will find a department here of that sort of great advantage. When wool is ten shillings a pound, and you know that wool as bought will vary from ten to forty per cent. in moisture, it seems to me that you would find a conditioning house and bureau of standardization would pay for itself in two ways. It would enable you to deal with expensive raw wool and silk, and it would also tend to get you on a really satisfactory, trite and definite basis.

Problems Being Worked Out

Some of the textile problems become enormous. In many cases from the individual point of view they are working out well. The result of development on the lines I have suggested would be that you would get some sort of income to the central institution and indirectly you would save a great deal of money. As to the scheme of working such an establishment, first of all you would have to take into account the prospective manager. The ideal training of course would be to go through such a school as I had the privilege of visiting this morning, working up to the university, and it seems to me that the university ought not to be entered before he reached the age of eighteen or nineteen, because what we want in the student later is the highest development of mathematics, physics and chemistry. So that if the student could be prepared in the industrial atmosphere such as you have in that school, still gaining that insight in the educational faculties to which I have referred, he could then be drafted into a three years science degree. I would not miss out the man trained otherwise. If a student can satisfactorily go through a three years course at the science school

then a post-graduate course in the textile industries would produce the man, not perhaps at once ready to become a pioneer but well on the way. In a very short time the industry would develop and I feel sure that very quickly it would be doing good work.

The Training of Textile Teachers

Get hold of the most intelligent men you can with the proper atmosphere, who knows what mathematical work is, who knows the atmosphere of a chemical lab. I would suggest that when the boy enters the university, he should say if he desires to go forward to textiles and, if he does, he should be given the opportunity and advantages of working in the mill during the long vacation.

I think you should also have the idea of training teachers on the lines of our university tutorial classes in the Old Country. We have between twenty or thirty tutorial classes in Yorkshire. In Sheffield and Manchester the same practice is in vogue. It seems to me the university ought to take in hand the training of these teachers to go out as pioneers and develop these classes.

Another point would be the institution of university internal classes in either cities, towns or villages or in the mills. If ten or twelve people want class in a certain subject we would be prepared to send a teacher to help them along. These classes should be of two types, vocational and technology taught as humanities with the idea of stimulating their interest and creating better workers, having more interest in life and having a larger outlook on life.

Then you have to deal with the matter of fundamental and technical research and you have to train your researchers. There is only one way to train them. Let the student researcher work alongside a trained researcher. We won't debate the matter as to whether research is connected with education; they go hand in hand and there are great advantages in running them side by side. Sooner or later you will find your factories able to take advantage of these researches. There is not the slightest use in finding out things if the industry is not ready to profit by what is found out. It is as important to train the men to go into the mills and apply the researches as it is to investigate and make researches.

Good Standardization Needed

I need not deal further with standardization. I think the manufacturers particularly will feel that standardization may have an influence in the evolution of the industry, and if you have a conditioning house, enabling you to have your goods standardized, you will have more confidence in your industry and finally evolve it upon the very best possible lines.

It is twenty years since I organized the first good exhibit of testing machinery in Bradford. One man said, 'Clear all that off; if people don't like to buy my cloth they can do without it.' The Bradford manufacturer to-day knows that the conditioning house has helped him to gain greater accuracy and better conditions. That is one of the things you could profit from our experience—greater confidence and greater protection in your work.

You gather then that the costs you would have to face would be the cost of building. Even your building should be put up to represent what the ideal should be. I feel in my department at Leeds though we never gave a lecture, that the effect of the buildings and the ideal conditions would have paid for itself. The truth is that in certain textile industries we have to fight against workhouse conditions. The woollen industry started in the workhouse. The cotton industry is entirely a machine-created industry. In some factories investigations are made to see to what pitch one machine can be tuned and all the other machines are tuned to the same pitch. Find out the best educational system and tune yours up to that. Fix the ideal first of all and make that the lowest that you are going to attain.

With reference to your equipment you will invariably find that machine makers would help you. Other expenses such as power, agents and materials, etc., might run to a considerable amount unless you adopt the line I suggest of carrying through experiments for outside firms. I warn you against trying to make income from running your plant because that might go against your research work. When I tell you that our expenditure at Leeds runs into thousands you will realize that it is a pretty big scheme. I would suggest, however, if you do anything at all, or no matter if your start be small, to develop it as part of a greater scheme. Don't make the mistake of starting with a too limited outlook. My department at Leeds is very picturesque but not well organized simply because it has been put together piecemeal. Have a large idea in mind.

Then the question is asked, "Is Canada justified in thinking of such a comprehensive scheme?" The real foundations of life have been changed. It is difficult to put it into words. Do not hope to get back to the conditions of 1914.

Conditions Different From 1914

The conditions we shall have to get back to will be very different from those of 1914 and when you realize the change in the outlook, the changes that are inevitable, you will realize that the prospective mill manager is going to have a great responsibility on his shoulders and the least you can do for him is to give him that training and education that will fit him to meet that responsibility and bear the burden. Then the foundations of education have been changed. I believe the strongest development has taken place recently. Mr. Saunderson, to whom I have already referred, has eliminated competition in his school. He has the idea that the competition of a boy should be with himself and not with his fellow student. I too believe there is something better than the present system. The word co-operation does not quite express it although it has something to do with it. It might be illustrated by the comradeship in the trenches. Canada and the Mother Country and other countries as well, will have to join together in working out these difficulties which we only partially see before us but which we feel coming on us.

It seems to me that you here on this continent have a great future before you if you face it in the right way. You must not face it in too commercial a spirit. I have tried to fix high ideals, not because they are the only thing, but because it is natural that we should overlook them. Bradford College brought into Bradford a business worth £300,000 a year. Bradford College brought into Bradford a man who gave an order for 1000 looms to one firm. Don't imagine that what I say regarding the growth of the student does not mean the other thing too. It means the other thing in a better way.

French Treaty

As regards the French Treaty, a telegram has been received, dated September 11th, 1919, from the authorities at Ottawa, in which it is stated that there is an understanding between the British Colonial Office, the Foreign Office and the French Government that the commercial treaty between France and Canada is to remain in existence, subject, however, to termination on three months' notice being given by either party.

Some of the Reasons for a Customs Tariff*

One of the Principal Advantages of Having a Tariff is that it Makes it Possible to Negotiate Conventional Tariffs with Other Countries—Failing this Foreign Markets Might Remain Closed Against Canadian Products

By J. K. R. BRISTOL
Manager, Tariff Department, C.M.A.

YOU have asked me to state some reasons to you for a Customs Tariff. There is the well known reason that he people in this country should be protected from the same iving conditions which prevail amongst the people in some f the world's great trading nations; but this reason for a ariff is so generally recognized and accepted that I shall not well upon it.

Those who will grant it was wise statemanship to invite he provinces into this Dominion; to federate the Australian tates, and to draw the several States to the south of us into ne nation, will also grant that it is wise statemanship to ring closer in bonds of national sentiment and national trade he respective countries which constitute the British Empire. No other practical plan has yet been evolved by which that an be accomplished so readily and efficiently as by each ritish country, in respect to its dutiable imports, fixing lower r preferential rates of duty to specially encourage the importation of products of other British countries. That important force for the development and strengthening of national ties is thoroughly employed between the United States and er overseas Dominions—the Philippines, Hawaii, Alaska, Porto Rico, the recently acquired Danish West Indies, and even in the case of Cuba. By this means last year over 70% of the total outside trade of the Philippines, imports and exports, was with United States countries. A similar policy toward their respective Dominions is followed by France and Italy, and was followed by Germany. There must be a tariff in order that this Dominion, by granting tariff preferences for British goods, may participate in the policy of strengthening national bonds between British countries through the development and consolidation of inter-Empire trade. This is one reason for a Canadian customs tariff that will appeal strongly to Canadians.

Mutual Tariff Concessions

Without a Canadian customs tariff it would not be possible for this country to negotiate conventional tariffs; that is, to negotiate with another country for mutual tariff concessions for the furtherance of desirable trade between each. Before the war the technical arrangement of the tariffs of most of the important European countries for the purpose of restricting conventional tariff concessions to the particular country with which a treaty was negotiated, became a fine art. I have a striking illustration of how such matters were worked out by Germany, which I will read, because it indicates the extent to which tariff specialization has been developed, viz.:

"Complaints have often been aimed at what is styled 'specialization' in the customs tariff. Specialization means making the wording of a tariff item so particular in matters of description that the item, while general in phraseology, confers a benefit on only one foreign country. Thus, Germany may be bound by commercial treaties to give other countries the same concessions which it makes to any one particular country, and it may want to make a concession to one country without extending it to all others. This is done by inserting a tariff item so worded that, in effect, it applies to only one country. Take the following example of specialization:

"Tariff item 103 of the tariff of the German Customs Union provides a duty of 8 marks per 100 kilos, live weight, for cattle. Then there is a sub-item that reads: "Large, dappled mountain cattle or brown cattle, reared at a spot at least 300 meters above sea level, and which have had at least one month's grazing each year at a spot at least 800 meters above sea level, may, according to certain other specifications, be imported at rates as low as 9 marks per head. A note, explaining further, under item 103 is as follows:

"Large, dappled mountain cattle is to be understood as meaning the dappled breeds belonging to the short headed variety. Brown cattle are those breeds which belonging to the long headed variety, especially to the races of Alpine cattle—have a silver gray to dark or very dark brown hide, with lead-colored muzzle bordered with very light brown, almost white; black hoofs and horn tips; and dark tail tuft. Every country that has a 'most-favored-nation' agreement with Germany is entitled to the benefit of that item in the tariff. Belgium, the Netherlands, England and other countries might, before the war, enter into Germany all the cattle they wished under that tariff item, to the extent that they had cattle for shipment which they could certify and convince the German customs authorities were up to the specifications. Within its own limits it was a general grant; no mention is made of preferring one country over another—in that item. Naturally the German authorities could do nothing more than shrug their shoulders when it was suggested by some foreign experts that the item referred to applied, and was intended to apply, exclusively to a neighboring mountain Republic."

Negotiate Fresh Conventions

Now, we have conventional tariffs with a number of countries for the purpose of developing foreign trade to the national advantage of this country. These conventional tariffs have been denounced by France and Italy for the purpose of freeing their hands to negotiate fresh conventions and they must be revised in the near future. The lines on which the French Government plans to negotiate new conventional tariffs are explained in the Trade & Commerce Report of September 8th as follows:

"The French Government have recently denounced their commercial conventions with foreign governments, which were based upon the most favored nation principle; and in the forthcoming negotiations for the conclusion of new arrangements, the new laws, it is stated, will give the French Government power to establish French commercial relations with each foreign country on a strict basis of reciprocity—that is, only to grant to each country certain tariff concessions in return for concessions which are considered to be of an equivalent value to French commerce."

Without a customs tariff in Canada foreign countries would have no inducement to concede lower conventional tariff rates in favor of Canadian products, whereby their purchases of our products, instead of the like products from some other country, would be promoted. Foreign markets which otherwise would remain closed against Canadian products may be opened up by means of conventional tariffs. This is another reason for a Canadian customs tariff that will appeal strongly to the business sense of Canadians.

In Europe, about 1,860, by treaty with France and other principal European countries, Great Britain seemed to have inaugurated an era of free trade that would long continue; but, within twenty years, these great trading nations, except

*An address delivered before the Purchasing Agents' Association of Toronto, on September 17th, 1919.

Great Britain, were under the full sway of protective customs tariffs and have been ever since. The financial success and increased commercial strength of all these nations that adopted protective tariffs has been phenomenal.

During the past year we have seen the United Kingdom, for the avowed purpose of protecting her industries, enforce strict prohibition against imports. Also, she has inaugurated protective customs duties of 33⅓% on behalf of certain of her industries with the prospect of extending protective legislation to various other groups. Even the matter of sterling exchange imposes a barrier equal to about 15% against manufactures from those countries whose products would naturally find their way into Great Britain. In these matters Great Britain is bound to consider her own particular Empire interests. Some may believe that it is not in the particular interests of Great Britain to protect her industries to-day. A striking illustration of Britain's need for stimulating domestic production appears in a sentence uttered at Vancouver on the 27th ultimo, by Mr. Robert Dollar of the Dollar Steamship Line. Here it is:—

"Great Britain, one of the greatest producing countries in the world prior to the war, is without an outbound cargo to-day. Two of our boats left there last week in ballast, and although there are cargoes offering from America to Europe, nothing is coming our way."

In these affairs Great Britain is not like a new country such as Canada is. In Great Britain the factories and organizations already exist. Their problem is to diminish costs, secure supplies of material, and to stimulate production. In a new country like Canada, struggling for industrial development, factories and organizations have to be created where before nothing existed. To those who wish to see this country develop and prosper within the British Empire, this is another strong reason for a Canadian customs tariff.

Protective and Scientific

The customs tariffs of France, Italy, Switzerland, Germany, Austria, Russia and the Balkan States are strongly protective and highly scientific—and intricate. The schedules of the tariffs of these countries contain lengthy and minute provisions for duties on manufactured commodities and upon extensive lists of so-called raw materials. One item in the yarn schedule of the French tariff, selected at random, contains 69 lines of reading matter and 36 different rates of duty, and many of these items in the French tariff and in the tariffs of these other countries, are much longer and more intricate. On wheat the French tariff is within a fraction of 37c. per bushel. Germany's minimum tariff on wheat is 34½c. and her maximum tariff 47⅛c. per bushel. The tariff of each of these countries primarily is compiled with the object of caring for the commercial interests of the particular country which frames it. And the height of its tariff fence on behalf of each industrial group is its measure of need for fiscal guards against that nation's exploitation by its commercial rivals.

The South American countries each operate under intricate tariff provisions which apply customs duties on imports, for the purpose of producing revenue and to provide protection to their industries. The Chilean Tariff Commission in 1916, when presenting the first draft of a tariff law then being introduced, stated that it had rounded out the protective system introduced by the tariff of 1897.

"No one," the Commission declared, "has advised any deviation from this policy, which has been followed, and is followed, by the majority of the countries of the civilized world, and especially by our neighbors with whom we have close commercial relations." The customs duties of these countries reduced to averages over all imports, free and dutiable, for the latest year I have been able to obtain statistics, compare as follows: Argentine, 20.8%; Bolivia, 17.1%; Brazil, 35.9%; Chili, 19.9%; Equador, 36.6%; Paraguay, 31.1%; Peru, 21.9%; Uruguay, 36.2%; Venezuela, 46.7%.

Newfoundland, Australia, New Zealand, Japan and the United States operate under efficient protective tariffs. South Africa has announced her intention of adopting a protective tariff. The United States Congress now is dealing with legislation sanctioned by the President, designed to grant further protection to various of her industries. A general upward revision of the tariff of Australia, according to an announcement of Acting Premier Watt, is to be made during the present session of the Australian Parliament. Many of these countries, like the United States, by levying fees for consular invoices or bills of lading at the point of origin of shipments from abroad into their country, further protect their own domestic markets.

Other Nations Fenced In

In these matters each of these countries is caring for its own particular interests. We cannot in reason find fault with them for that; nevertheless it is an impressive, incontrovertible truth of the very highest importance to Canadian growth in industrial development, that to-day, throughout the world, every great trading nation fences its borders by protective tariffs against the exploitation of its markets by its commercial rivals. Under these conditions, without a tariff, in normal times, the markets of this country would be filled with the overflow from protected foreign factories. And the markets of Canadian factories would be so reduced as to raise their productive costs above a competitive basis. Canadians are a sensible people, accustomed to squarely facing and weighing facts. In face of these conditions, for Canada to tear down her tariff walls would be like one prosperous farmer in our nearby townships who suddenly would tear down his fences, admitting wayside cattle to his farm. It would be like turning on to a flat country the overflow from all the power dams of the world. So long as the great trading nations of the world carefully fence themselves about to secure their own particular commercial needs, the reason for a Canadian customs tariff as a necessary guard against the commercial exploitation of this country will be obvious to Canadians.

Suppose, now, that the customs tariff of Canada be removed. Will it be necessary for most of our manufacturing population to take to farming, lumbering and the mines? It is by no means certain that India, the Argentine and Russia will not be able to furnish the world with agricultural products cheaper than we; that Norway, Sweden and Russia will not be able to furnish the world with forest products cheaper than we. Is it not evident that capital and labor would be compelled to seek more congenial conditions in other countries which do care for their own particular interests?

Countries are Backward

Let us consider the commercial tide of this country turned back to agricultural, minor lumbering operations, and mining, by taking away the customs tariff and the inter-Empire preferences that are being built up under it. One has only to glance at the history of nations to realize that countries which depend for prosperous conditions upon the unmanufactured resources produced from agriculture, the forest and the mines, never reach a high state. As a witness to this truth take the statement in 1885 of M. de Witte, once Prime Minister of Russia, and, though M. de Witte in referring to his country described it as an "agricultural country," Russia is the equal, if not the superior of Canada in mineral and forest resources, and he had these also in mind when he uttered the following words:

"In exclusively agricultural countries, neither intensive agriculture nor an accumulation of capital is possible. A large spirit of enterprise is never found there. Technical

knowledge is rare, and, as our own experience shows, even the food of the people depends upon circumstances now of one kind, now of another, against which agriculture cannot contend. . . . The best protection that can be afforded to agriculture consists in assuring for it a market at home for its products, and remunerative wages for labor which finds no occupation on the land. Unhappily, the amount of available Russian capital is insufficient; agriculture supplies almost none at all, and hoarded capital can hardly be attracted toward industrial enterprise. Beyond all question it is better to see foreign capital flowing into Russia than to witness the importation of foreign products." (From "All the Russias," by Henry Norman, M.P.).

The Position of Ireland

Outstanding proof of the accuracy of this statement of M. de Witte is before anyone who will open his eyes to consider world conditions to-day. There are other agricultural countries which one may study. One such agricultural country has the finest climate in the world; it is noted for the excellence of its soil; it lies alongside the best market in the world; it is inhabited by a virile race, people who step to the front like the Scot in countries all over the world. Ireland is that country, yet notwithstanding all its natural advantages it is noted all over the world for its poverty, except an extremely limited section in the north where factories flourish.

Still supposing the customs tariff of Canada removed, we must remember that an essential requirement of this Dominion is revenue—very large revenue. The following statement made by the Canadian Finance Minister in his budget speech this year indicates how gravely a lowering of the tariff affects the revenue:

"The total estimated loss in revenue from the tariff reductions which we have proposed aggregates seventeen million dollars. Owing to the estimated reduction in the total volume of imports into Canada due to diminished purchasing power during the current year, we may expect that, including the loss due to the reductions now proposed, we shall sustain a total loss in customs revenue for the present fiscal year of at least twenty-five million dollars. To partially offset this loss and close the gap of the deficit of fifteen million dollars between revenue and current expenditure which it would cause, we propose a heavy increase in income taxation."

American Competition

In studying this subject of tariffs, the overshadowing commercial weight of our cousins to the south of us cannot be overlooked. That country of one hundred and ten millions, looking after its own particular interests, buys from this country of eight millions of people goods aggregating only one-half the value of the goods which it sells us. In this connection I ask you to remember the fact that this Dominion at present represents a comparatively narrow ribbon of populated country stretching from the Pacific to the Atlantic Coast for three thousand miles along the northern border of the United States. In the United States, near this border, throughout its entire length, there are powerful industrial groups, with an immense domestic market, built up and nourished by high protection. These industries everywhere can strike the Canadian ribbon by means of a short northerly freight haul. But the domestic market for Canadian producers entails the longer and more expensive east or west freight haul. Moreover, Canadian production is enhanced in cost by customs revenue duties on machinery, plant, materials and fuel for manufacturing of a class and kind not obtainable in Canada. Shall this country remove those duties and level its tariff walls, whilst other countries sedulously maintain theirs out of a feeling of care for their own particular interests? Is it thus that the hundreds of millions of dollars that this country has invested in transcontinental railways, and terminal elevators, are to be brought to naught? Is it for such foreign exploitation of our markets that the five hundred United States branch factories, established in Canada, which employ 80,000 people here, are to be rendered valueless?

Valued as U.S. Goods

There is an important aid to our national development, that is little thought of, that would be swept away by a removal of our tariff. It is a provision in the Customs Act which provides in effect that goods imported into the United States and re-shipped thence to Canada shall be valued and rated for duty as United States goods. This provision prevents United States jobbers from importing goods into their warehouses from Europe, Africa, Asia and South America, and afterwards entering the same at our customs houses at the value at place of shipment in the country of origin. Without this provision United States wholesalers and jobbers could ship such goods into Canada from their warehouses, ex bond, by paying duty on the same value and at the same rate as would apply in respect to like goods imported by Canadian wholesalers direct from the country of origin. Thus, without this provision, United States wholesalers and jobbers would practically control the wholesale business of this country. You can realize in one flash of thought how that would draw business away from Canadian to United States ports; freight from our railways to United States railways; banking from Canadian to United States banks. Lest it be charged that I am magnifying the perils to this country, without tariff protection, let me read to you the views of two most eminent United States citizens in regard to a Canadian tariff proposal which fell considerably short of free trade. These gentlemen wrote their views during the progress of the reciprocity negotiations of 1911, and they were published by ex-President Taft in Boston on the 25th day of April, 1912:

Ex-President Taft to the late ex-President Roosevelt: "The amount of Canadian products we would take would produce a current of business between Western Canada and the United States. It would transfer all their important business to Chicago and New York, with the bank credits and everything else, and it would increase greatly the demand of Canada for our manufactures. I see this is an argument made against reciprocity in Canada, and I think it is a good one."

From the late ex-President Roosevelt's reply to ex-President Taft: "It seems to me that what you propose to do with Canada is admirable from every standpoint. I firmly believe in free trade with Canada for both economic and political reasons."

Investment at Stake

The factories of this Dominion represent an invested capital (1917) of more than two and three-quarter billions, having an annual output worth more than three billions, and furnish employment to about 700,000 people. A conservative estimate would give two million people obtaining a livelihood from our factories.

There are various groups of commodities, necessary to our national life, which without our present industrial development, at various stages of the war, could not have been obtained elsewhere.

Shall we forget what this industrial development achieved during the war in serving the national life in this Dominion, and in turning out absolutely essential manufactures for the Mother Country?

If we have honor and pride in this young country; if we have confidence in the wonderful possibilities of her future, if we believe in the development of a real Canadian spirit and genius, these are the strongest reasons for approving a Canadian customs tariff that will maintain and develop a national life.

The B.A. in Business—Is He a Genuine Success?

University Grads. Rally to the Support of Higher Education and Claim a Very Real Advantage for the Man with a Varsity Training—Some Notable Examples of Success that Lend Weight to the Argument

By GRANT BROWN

"I DON'T want any cigarette-smoking, college dude around my plant, telling me how I ought to run my business." That was what the average employer of fifteen years ago was apt to say if you suggested to him that there might be an opening for a university graduate in his factory. But the last decade has brought about a remarkable change. College men have been steadily winning both recognition for themselves and respect for their training. Nor has their success in business been confined to any one field. We find one university graduate at the head of the greatest railway system in the world; a second directs a great publishing corporation; a third manages a trust company; others are leaders in the packing industry, and so on.

Prominence in Industry

For the present, however, I am most interested in those graduates who have entered the manufacturing field, though even here it is necessary to make limitations. Not a few university men have attained prominence in Canadian industry by making law a stepping-stone to business success. These are so numerous and so important that they would almost require a separate article. The present sketch is more particularly concerned, therefore, with the man who takes an arts course and afterwards enters the industrial field in Canada.

Twenty years ago the church, the law, medicine, and teaching absorbed the bulk of graduating classes; in recent years the proportion who enter industrial corporations has steadily increased, and the last decade or so can point to some notable successes of university men in Canadian industry.

T. A. Russell was one of the pioneers of the movement, and that fact in itself goes to show how recent the drift into business is, for it was only twenty years ago that "Tommy Russell" was prone to lead the chorus which proclaimed:

> "Here we are,
> Right in line,
> Yell like h—ll,
> For Ninety-Nine."

First a scholarship man, later a fellow in political science, then a most successful secretary of the Canadian Manufacturers Association, next manager of an apparently moribund bicycle company—which, under his treatment, became a very lively corpse—then one of those able and daring manufacturers who gave Canada such an enviable record for the production of munitions in the Empire's sore need, now general manager of the Willys-Overland Company of Canada and President of the C.N.E.—not to mention other activities. T. A. Russell has made for himself a name to compare with both in industrial and university circles.

T. F. M. Stewart is another graduate of the University of Toronto who has won outstanding success in Canadian industry. As an undergraduate he foreshadowed later activities by showing marked ability in the University politics of the day. In business he found his opportunity as secretary of the C.M.A.; next he became Reform organizer for Toronto; after a short period of political work, he became manager of the Point Anne Quarries, Limited. In recent years he has acquired many additional interests, varying all the way from the manufacture of munitions and the building of ships to directorships in a trust company and two departmental stores.

There are two of several careers which might be chosen to illustrate the versatility of university men in business and the success many of them have obtained or are obtaining (for one must remember that the movement from the universities to the ranks of industry is still comparatively new). Some other names may serve to show the extent of the movement. Mr. George Henderson, general manager of Brandram-Henderson, Limited, is a graduate of Dalhousie University. Dr. W. W. White, of St. John, and Mr. E. Percival Burchill, of Nelson, N.B., are both graduates of the University of New Brunswick, who have attained prominence in Canadian industry. Sir H. B. Ames is a college graduate who has gained distinction both in industry and in politics. Among graduates of the University of Toronto who have won success in manufacturing, besides those already mentioned, one might refer to Mr. A. L. McCredie, of the Canadian Flax Mills, Limited, Mr. Jas. I. McLean of the Harris Abattoir Co., and Mr. H. D. Scully of the Russell Motor Car Co., not to mention the many prominent graduates who have entered the business world through the avenue of law. Instances enough have been given to show that university graduates have in many cases attained positions of leadership in the industrial world. It remains to examine the connection between university training and success.

Is university training of practical value in business? Is it better to grow up in a business or to go to college and enter business afterwards? If the youth, destined for business, goes to college, what course of study will profit him most? To obtain light on these and similar questions, I recently asked for suggestions from some representative university graduates who have been conspicuously successful in Canadian industry. The replies were decidedly interesting. A prominent N.B. manufacturer differs from most graduates in saying that his university course was not of direct financial benefit. However, he adds: "It has been of considerable value to me in my public life. It has contributed very largely to the pleasure of life from a social standpoint and rendered much of my work, particularly in connection with my public duties, easier and more effective. I would advise everyone who can afford it to get a university education."

A Prominent Graduate of Queen's University

A prominent graduate of Queen's University, Mr. Geo. C. Mackenzie, president and general manager of the Electric Steel and Metals Company, Limited, to question 1 (as to the value of university training for the business man), responds emphatically. "Yes, most assuredly. Because it has given me an opportunity of knowing and making friends with many educated men. It broadened my viewpoint of life and taught me the value of reading and of making an effort to understand and appreciate the opinions of other men." To question 2 he replies: "I do advise Canadian manufacturers to send their sons to a university, whether they intend ultimately to go into business or to enter a professional career." As to the most useful course, Mr. Mackenzie writes: "I would

consider the following of first importance—History, political economy, and also a modern business course, such as has been recently included in the curriculum of one or more of our Canadian universities. These are, of course, the foundations only of the superstructure which must be built to meet the future requirements of the student."

Mr. G. B. Chadrey, manager of the Brantford works of the Massey-Harris Co., Ltd., writes an interesting letter:

"When I first started in business, it seemed to me that my university course was a positive disadvantage. I found that I was placed in the category of theorists, and that workmen of long experience were suspicious and inclined to resent a little the presence of anyone who had college training. This prejudice is bound to exist and can only be overcome by the steady reliable work of the graduate himself. In many businesses the handicap extends somewhat beyond the relationship with the workmen. It extends also to the management in those concerns where the management has been drawn from uneducated men. There is less of the feeling abroad to-day than there was when I began, partly because of the advertising that the whole question of education has been receiving and partly because of the advent of more progressive men in the management of many concerns.

"You ask in what ways I have found university training to be of benefit. In replying to this, I would point out that in starting by a specific training in a line which has a point of contact with business, an opportunity is afforded for service in this particular capacity, and through it, in allied and broader capacities. In my own case, my university training was, as you know, scientific. Through this I was able to take up first a comparatively limited line of work which was broadened from time to time. In recent years I have found a very positive advantage in the university training, in that is has secured a confidence in the minds of some of the most progressive men in our business.

"Another advantage which is very evident is the fact that the university course opens many doors which to the graduate seem naturally to be opened, but which, as a matter of fact, would otherwise be closed. I refer particularly to the relationship which it establishes with many other educated people, classmates at one time or merely college friends, who, as time goes on, come to occupy positions of importance in different lines of life. The main advantage, however, I think to be the fundamental one, namely, that the man of education is enabled on the average, through his training, to approach more varied lines of activity than he could attempt to do without the training he has received. In other words, the training is of value, and the better such training has been used by the individual, the better the individual is fitted to form judgments and to take an active part in business life.

"In replying to your second question, I would certainly advise manufacturers to send their sons to a university, if those sons are intended eventually to go into business. It would appear to me that this is preeminently the time when we should have in business the best trained minds available. There has never been a time when business has been so disturbed. We are in the midst of a tremendous upheaval, the consequences of which we cannot see. It is much more difficult than it was some years ago to keep on the right track and to keep alignment with the current of industrial events." . . . "In such circumstances we need not only men of character and the power of leadership, but men whose powers have been reinforced by such training as can only be obtained through education.

"It is, of course, impossible to state which subjects are of most value, but I would like to place a little emphasis upon the need of the study of economics and modern industrial conditions." . . . "We need far more than we have of general economic knowledge. Indeed, I think, that a good deal should be done, in fact must be done, in our public schools to instruct the youth along the lines of industrial knowledge. So far as the course the man is to take, I really do not think that it makes very much difference. If it has some specific point of contact with business life there may be some advantage, as I have already indicated, but much depends upon the sort of work which the man expects to follow when he enters business. A general course at a university may be an excellent training, but I believe it should always be coupled with a fair study of economic conditions."

T. A. Russell

An outstanding example of the University graduate who has made a success in business. Mr. Russell is a graduate of the University of Toronto and is now president and general manager of Willys-Overland of Canada, Limited

Another graduate, who is rapidly forging ahead in the business world, points out very closely what may be expected of a university course:

"I do not know that one should claim that the university course in Arts is in every case of direct value in a business career. However, the training one gets in the university, in almost any Arts course, should increase one's facility in making a study of a variety of problems, not particularly related to each other, and to that extent I think a university course is of direct benefit in business. It should make it easy to turn from one subject (whether the study of it is completed or not) to another, and develop the power of concentration on the most pressing problems of the moment. I think it can be fairly said that this faculty of concentration and the ability to switch from one subject to the other, is most noticeable among the university men that I have come in contact with in business life. A university course also seems to develop the ability to investigate a new problem, and the university man seems to be able to find his way about in a new field a little better than the average man who has not had the prolonged course of training that the university gives.

"In reply to the second question, I answer strongly in the affirmative (*i.e.*, manufacturers should give their sons university training). It does not follow that a university training will enable a manufacturer's son or anyone else's son to make a material success more quickly than one who has not had a university training. In fact, the money-making instinct will not, perhaps, be particularly developed by a university course, but the ability to handle the work in which one is engaged, should be developed.

"In reply to the third question, I think any course requiring a good deal of investigating work, particularly in sociological, political, and economic subjects, and the preparation of the results in reports or essays, makes a pretty sound training. I think the political science course, with, per-

haps, the featuring of more or less immediate economic or social problems, or the old English and History course, are about as suitable as any for a man thinking of going into business.

"Generally speaking, it seems to me that a university training should enable one to plan one's work to better advantage, because some sense of relative values should be attained."

One of the most valuable letters comes from a very able university graduate who has already won for himself an important place in Canadian industry:

"I have quite strong views that Canadian manufacturers ought to send their sons who intend to go into business to a university. Two courses are open when they do so. One is to take a course along the lines of the business in which they are interested, such as a mechanical or electrical course, if the business is along the mechanical or electrical lines. I think this is the preferable course if the son shows adaptability to mechanical subjects. If not, I think it better that he should take a general university course in the subjects in which he is proficient.

"The benefits from a technical course are obvious. I feel, however, that the benefits of an Arts course are also assured, because it is the training the man gets rather than the direct knowledge, that he finds of so much use afterwards.

"I think there is only one point of danger in connection with boys going through university courses, and that is, they may feel too old to start in at junior work after graduation. They must recognize, however, that this is an almost indispensable part of their training and that they should not be afraid to make a start even though the position is junior. The outlook they have, and the training they have received, will nearly always give them the advantage necessary for rapid promotion afterwards."

University Women in Industry

If a university course is an advantage to the young man who goes into business, one would expect young women to profit similarly. And this is the case. One of the most recent developments in business is the opening up of opportunities to women graduates to act as employment supervisors, welfare workers, efficiency experts, etc. A woman graduate, who has made an outstanding success in this type of work, writes as follows:

"I feel strongly that there is a big place in Canadian industry for University women, if employers of labor, especially female labor, are going to be awake to the signs of the times and follow the example of advanced manufacturers in Great Britain and the United States.

"In this age of specialization, the handling of people has come to be one of the last fields to be specialized. In a great many, indeed in most factories, much more thought is given to the care and selection of machinery than to that of the people who can make or mar the machine's power. It is to change this attitude that I believe a university woman can come in—men, too, of course, for where hundreds of men are employed men are needed, but where as in this mill the employees are two-thirds women, a woman can do more than a man, because she understands feminine tears and temperaments better. This job, as you know, is called Employment Management and with it, if it is well thought out, go all sorts of schemes to make working conditions good and as attractive as anything can be under the present industrial system. You know the plans which can be tried—supervision of general conditions, hours, rates, ventilation, cleanliness, rest rooms, lunch-rooms, first-aid and medical attention, recreation, libraries, training classes, etc. College helps for all these things, it seems to me. You learn there to dig things out and how to keep up with new ideas—and they are constantly being offered in this new game in industry. You learn, or should learn, through fairly wide contact with people to judge and select men justly, keenly (here I might mention that a very good training is fraternity pushing); of course you are often fooled in people, as your labor turnover unfortunately proves.

"If you contemplate a job in industry, you are wise to take all the economics and history you can get—some understanding of economics is essential, and the more the better as it saves time.

"I shall end as I began—none of this is new, all is sketchy. It does convey the idea that a college woman should be more many-sided and able to take hold of this particular problem of industrial relations from more angles than any other type of woman. The technical knowledge of a business is really easily got; any person can pick up a fairly good working knowledge in a short time. Personally I would just as soon tackle candy, sales, or laundry work as cotton."

An American Opinion

Some remarks of Charles M. Schwab (quoted from an article in the American Magazine) bear on the general topic. The American steel magnate says: "Whatever may have been true in the past, there is no doubt that to-day industrial conditions favor the college man. Old conditions are disappearing; science is dethroning chance. Business is conducted on so vast a scale that the broadening effects of higher education, gained through proper application, write a large figure." . . . . "Higher education has its chance later, when the college boy has mastered all the minor details of the business. Then, if he went to college with serious purpose, and studied hard and systematically, he has the advantage of a thoroughly trained mind to tackle larger problems, a mind which should be broader and more flexible because of its greater powers of imagination and logical reasoning."

To sum up, then, on this phase of the subject. In the light of the evidence, university training for the prospective business man is not a waste of time. On the contrary, it is distinctly to be desired. Other things being equal, the youth who goes into business at an early age is likely to be passed in the race by the university graduate. The college man has less training in the details of business but he will have more in the connection of cause and effect and in fundamental principles. His outlook should be wider.

What is Proper Course

It is true, of course, that in Canadian industry are to be found many successful men who have not had a university training, and among them some whose broad vision and generous culture move many a university graduate to envy. But that is not an argument against university training. These men have won through in spite of handicaps, not because of them. Their determination and ability have given them 'at a great price' what the university man of the same calibre may obtain with far less friction.

Agreed, then, that we send the boy to a university. What shall he study there? Large doses of economics, history, modern languages, perhaps the scientific course most directly related to the industry the student has in view—these, in the light of the experience of successful graduates, seem most likely to produce the desired result, *viz.*, a trained intelligence prepared to grapple with each problem as it arises, but already equipped with some special knowledge of the principles on which business is based.

So much for the past and the present. What of the future? Will industry draw more and more largely from the universities? That seems to be the trend of things at present, and not a few universities are taking active steps to make their connexion with the business world more intimate. An excellent illustration is the recent announcement by a Canadian

university of a four weeks' special course in employment management. What promises to be an important factor in the establishment of closer relations between the universities and business is the organization of a Bureau of Appointments by the University of Toronto. The idea has already been tried out both in England, where Cambridge has a highly successful Bureau of Appointments in operation, and in the United States at Harvard and Yale and many other universities. The plan is to gain the co-operation of employers who are likely to have openings for graduates and to keep in touch with graduates who are looking for jobs. At present the Bureau of Appointments of the University of Toronto is chiefly occupied with the placing of returned men and women—ex-students of course—in business positions. Later, it is hoped, its scope will be extended to include all members of the university who intend to go into business.

Obviously such organizations can do much to promote closer relations between universities and the business world. Graduates will find it easier to estimate the opportunities available. Moreover, a bureau of appointments can render a very real service to the employer who keeps in touch with it. The right sort of man is often hard to find. The bureau with a considerable constituency to draw from will aid in the search; and the university should be able from its record of students to give the prospective employer a very fair idea of their character and capacity. Professor R. M. MacIver, head of the Social Service Department of the University of Toronto, sees great possibilities in the plan. "The rarest of talents seem to me to be those involved in organization and enterprise. In the ordinary routine of things, men naturally rise to positions without necessarily possessing these talents. I think it possible in some departments of university work to select men of this type. Four years work with groups of young men give very definite ideas of their qualities, character, and powers of initiative. We can select a few with considerable confidence."

This latest attempt to bring the university and business into closer touch will be watched with interest and sympathy. Its success will mean much both for higher education and for Canadian industry.

Recent Activities of Prairie Provinces Division

By G. E. CARPENTER
Secretary, Prairie Provinces, Division, C.M.A.

AT its meeting on September 9th, the Winnipeg Trades and Labor Council again refused to nominate persons for appointment upon the Industrial Tribunal authorized by an Act of the Legislature at its last session, for the purpose of investigating and reporting upon matters affecting labor and with reference to disputes between workers and employers. The Winnipeg Branch of the Association nominated its representatives for appointment and it was hoped that the Trades and Labor Council would view the matter in a different light and change the attitude that had been adopted towards the Government's efforts to bring about better relations between employees and employers, but apparently the members of the Council are not as yet willing to do this. However, it is possible that with the result of the National Industrial Conference before them they may decide to nominate representatives for appointment on the Industrial Tribunal in the near future.

Demurrage During Strike

Up to the present time it has been found impossible to reach any satisfactory conclusion with the representatives of the railways regarding assessments of car rental during the general strike, and it looks as though reference would have to be made to the Board of Railway Commissioners in a friendly way in order to dispose of this matter.

Members will be pleased to learn that the penalty system for delay to railway cartage teams referred to last month has, according to advice received from the cartage companies, materially increased their efficiency. A continuation of the co-operation of all members in Winnipeg is requested in the prompt handling of cartage teams so that the maximum service may be obtained therefrom.

Trade Enquiries

An arrangement has been made with the Department of Trade and Commerce, Ottawa, whereby the names of persons with respect to trade enquiries appearing in the weekly bulletin of the Department can be furnished direct from the Winnipeg office. Members are invited to avail themselves of this service.

Applications for membership have been received from the following firms:—

Globelite Battery Company, Winnipeg.
Giddings Limited, (additional), Winnipeg.
O-Ribo Manufacturing Company, (additional), Winnipeg.
Burgess Batteries Limited, Winnipeg.
The Dyson Vinegar Company, Winnipeg.
Central Tools and Forgings Limited, Winnipeg.

Paper Exports Increase

July Figures Recently Issued Show that Newsprint Exported Was Worth $4,000,000

Canadian exports of paper and paper products of all kinds for July show an increase in value of $1,007,984, as compared with those in July, 1918, although the value of the pulp and pulpwood exported during the month shows a decrease, that of pulpwood alone falling off by $1,019,357. The details show:

	July, 1918.	July, 1919.
Paper, etc.	$3,631,241	$4,639,225
Pulp, chem.	2,754,010	2,654,333
Pulp, mech.	459,868	436,604
	$6,845,119	$7,730,162
Pulpwood	2,253,884	1,234,527
Total	$9,099,003	$8,964,669

The quantity of newsprint paper, the industry's chief staple, exported during the month amounted to 57,323 tons, valued at $4,064,303.

For the first four months of the fiscal year exports of paper and paper products show an advance in value of $3,045,299, as compared with the corresponding period in 1918, and $6,321,373, as compared with 1917. There was a falling off of $5,225,530 in the value of chemical pulp exported during the period as compared with the 1918 returns and of $991,454 as compared with those of 1917. Mechanical pulp also fell off slightly while the value of the pulpwood exported in 1919 was about half that for the same period in 1918.

Catalogues and Booklets

Bawden Pumps

The Bawden Machine Co., Limited, of Toronto, have issued a well-illustrated booklet describing the Bawden line of pumps. By means of special sectional drawings, the principle of the pumps is thoroughly explained. The various designs and series of pumps are likewise illustrated, with full description and specifications. The booklet contains 42 pages and is full of information, which will be of value to those concerned with the power problem in factories.

Electric Arc Welding

The Canadian Westinghouse Company, Limited, Hamilton, present a useful publication of 48 pages, describing in detail the application of electric arc welding. During the last few years, they point out, an unusually rapid advance has been made in the process and it has now become recognized as an art very essential to a number of industries. The field of electric arc welding is unlimited and practically every industry employing iron and steel, or other alloys, can utilize it to advantage. All of which makes the description contained in the present booklet of value. There are copious illustrations, which add to the effectiveness of the treatise.

Manufacturing Facilities Offered

A handsomely designed booklet intended to illustrate the facilities afforded by the Leaside Engineering Company, Limited, for the handling of general engineering work on a large scale, is being circulated by the company. There are five companies associated with the organization, including the Leaside Engineering Company, the Leaside Munition Company, the St. Catharines Steel & Metal Company, the Laurentian Power Company, the Ferro-Silicon plant and the Canada Wire & Cable Company. The various plants are effectively illustrated and their equipment briefly described.

Industrial Development Farmers' Best Friend

(*Continued from page* 56)

idea. The community, in visualizing industrial development, had visualized only smoking chimneys and roaring machinery.

The rolling mill dismally failed. The community, having lost part of its money on the rolling mill enterprise, devoted the balance to the development of the stone. To-day that same stone industry in that community employs more men and turns out more product than was even promised in the prospectus of the rolling mill enterprise. If your industrial development is controlled by the laws of natural selection; if you undertake the things that are nearest at hand in point of raw materials and markets, your efforts will merit and receive a measure of success that will not be disappointing.

I have said your population will increase. An especially instructive comparison of immigration and population statistics has been recently compiled by Mr. Watson Griffin, in a book entitled "Canada, the Country of the 20th Century." In this treatise Mr. Griffin predicts that before the end of the present century Canada will have a population of over 75,000,000 souls.

It is further pointed out that your foreign trade to-day is greater than was that of the United States when our population was 50,000,000.

An interesting comparison might be made with reference to population and industrial production between your three provinces here, the so-called prairie provinces of Canad and the Northwest territory in the United States, includin the States of Ohio, Indiana, Illinois, Michigan and Wisconsi I am informed the population of your prairie provinces i 1916 was 1,698,220, and the value of your manufacture products in 1916 was $105,000,000. In 1860 the populatio of the States composing the Northwest territory was 6,919,00 and the total value of the manufactured products was $28 418,000. The value of manufactured products therefore t each inhabitant in the States composing the Northwest te ritory was, in 1860, $40; while the value of manufacture products in the prairie provinces under your last census $61. This is especially interesting in view of the fact tha the agricultural production of the territory I have name in the United States was in 1860 much larger in proportio to population than was the value of manufactured product

The advent of quick transportation, quick communicatio improved machinery, and equipment in both agriculture an manufacture, should and will increase the rate of you progress to a degree I should not dare to predict.

These, then, are some of your problems, and these ar some of the victories which will be yours for the solutio and yours for the winning.

Change in Control of Industry

Business of John Lysaght, Limited, Bristol, Passes Unde Control of Welsh Financiers

Controlling interest in the business of John Lysagh Limited, Bristol, England, has been secured by Mr. H. Seymou Berry, of Merthyr Tydvil, Wales, and his associates, Vi countess Rhondda and Mr. D. R. Llewellyn, known as th "Coal King" in South Wales.

The remarkable success of the Lysaght business, whic has been described as one of the romances of British industr had attracted the attention of Mr. Berry, who had for severa months been negotiating for the purchase of the stock hel by the heirs of the late Mr. John Lysaght. The deal wa finally carried through, and Mr. Berry becomes chairman o the company, Mr. Llewellyn, vice-chairman, with Viscountes Rhondda and two other new directors representing the Wels interests. The management, however, will be unchanged, a Messrs. S. R. Lysaght, the managing-director, W. R. Lysagh manager of the steel works and rolling mills, D. C. Lysagh and H. G. Hill, who have for years directed the company affairs, will remain on the board.

The cost of securing control is said to have been approx mately £5,000,000, although the total capitalization was onl £1,000,000. The actual value of the properties, however, immensely greater, the cost of the blast furnaces and ste works alone having been over £2,000,000, nearly all paid fo out of accrued profits.

The company has always paid special attention to th export trade, especially within the Empire, having branc houses in Australia, New Zealand, Canada, South Africa an elsewhere. In Australia, where they have a specially larg trade, they have been erecting their own iron and steel work in line with the Commonwealth's policy of developing its ow mineral resources. While they have not yet manufactured i Canada, they have had a branch of the company establishe for many years past, in charge of A. C. Leslie & Co., Limite Montreal, who have been agents for the company's product for over fifty years. Canadian users of sheets will, therefore be specially interested in this new development, and there i every reason to believe that the future policy of the compan will include an active campaign in Canada, whether the should decide to manufacture here or to continue shippin the sheets made in Great Britain.

New Customs Rulings

The Tariff Department reports that the principal Customs rulings and Board of Customs decisions issued by the Customs Department since the annual meeting are as follows:

One multiple three-drum inspecting spooler machine for fabric manufacture, ruled to be dutiable under item 468.

One 7-inch two-feed improve automatic sweater machine ruled to be dutiable under item 468.

Silver alloy ingot, per sample, for use for dental purposes, hitherto admitted free as sterling silver, ruled to be dutiable by the Board of Customs under item 711.

Jute cloth, paper lined, for the manufacture of bags, ruled by Ottawa to be dutiable under item 538 at 25 per cent.

Machine for rolling and measuring cloth, ruled to be dutiable under item 468.

One shearing machine and one traverse grinder, ruled to be dutiable under item 468.

Salt blocks, medicated, per sample, ruled to be dutiable under tariff item 220 at 25 per cent.

In connection with the recent tariff changes an amendment was reported to the law which admits crude cotton seed oil free of duty when for refining purposes.

Needles for Tricot and Milanese weaving or knitting machines, being of a class or kind not made in Canada, ruled to be dutiable under tariff item 468, at 10 per cent. ad valorem. Under this item foreign goods are subject to the war tariff, but British goods are not.

Velour hoods, per sample, ruled to be dutiable at 35 per cent. general tariff, under item 626.

Diarsenol, Bordet's Bacillus, Ampsalvs and Neo-Diarsenol (vaccines), ruled to be exempt from the war stamp tax.

Glaziers' diamonds, ruling obtained that they may be exported for repair conditional on return on payment of duty on the value of the repairs.

Ruling that certain hat braids, per samples, are free of duty.

Ruling that strawberry pulp, per sample, is dutiable under item 106, same as jam.

Pulley lagging, per sample, for covering the outside of pulleys, ruled to be dutiable as coated cloth under item 562.

Oil cans for agricultural implements, ruled to be dutiable according to material.

Unexposed moving picture films, ruled to be entitled to entry under item 696, when imported on orders from societies or institutions entitled to enter goods under this item.

Spraying machines, ruled to be dutiable under item 448 as being agricultural implements, n.op.

Oakite Composition No. 1, from the Oakley Chemical Co., New York, essentially a soap cream, and ruled to be dutiable under tariff item 228.

Raybestos brake lining, with brass wires therein, dutiable under tariff item 352.

Benzol, xylol, and solvent naphtha, ruled to be dutiable under tariff item 711.

National powdered wax for dancing floors from Candy & Company, Chicago, ruled to be dutiable under tariff item 252.

Old English floor wax from the A. S. Boyle Co., Cincinnati, Ohio, ruled to be dutiable under tariff item 252.

Essenkay tire filler from the Essenkay Products Co., Chicago, ruled to be dutiable under tariff item 711, and when tire setters accompany such shipments, setters are to be separately rated.

Bituminized paper or fibre conduit for carrying telephone wire, etc., ruled to be dutiable under tariff item 199, in accordance with the Board of Customs decision of 12th August, 1919, ruling creosoted fir duct or conduit under tariff item 506. Ruling on this material in Appraiser's Bulletin No. 327, page 11, should therefore be cancelled.

Silver alloy in powdered form, per sample, composed of silver, tin, copper and zinc, declared to be dutiable under tariff item 711.

Wire, under tariff item 403*a*, when imported for use in the manufacture of wire ropes, declared that such rope should be composed of wire in strands, and the strands woven or twisted together.

Tariff status of locomotive and car wheel tires of steel, partly machined, declared that locomotive or car wheel tires of steel, wholly or partly machined are dutiable under tariff items 393 or 454.

Creeper belts, if malleable sprocket chain and link belting chain or steel, for the manufacture of farm tractors, declared to be dutiable under tariff item 411, in effect from 6th June.

Transmission belts used to connect engines with separators, etc., declared to be dutiable as belting under tariff items 609 and 610—in effect from 6th June.

Belts (other than transmission belts, connecting engine with separator, etc.), imported for repairs of articles enumerated under item 447, declared to be dutiable under tariff item 447, in effect from 6th June.

Miller feeders, for Gordon presses and folding machines declared to be dutiable under tariff item 453.

Garters and hose supporters declared to be dutiable according to material.

Finished parts of garters and hose supporters declared to be dutiable according to material.

Steam road rollers declared to be dutiable under tariff item 448.

Slate slabs, per sample, imported to be re-sized, milled and finished for electrical and other purposes, declared to be dutiable under tariff item 310.

Slugs and leads in strips, to be used in printing, declared to be dutiable under tariff item 340.

Creosoted fir duct or conduit, for carrying underground telephone wires, declared to be dutiable under tariff item 506.

Hickok automatic paper feeders, for use in connection with bookbinders' ruling machines, declared to be dutiable under tariff item 453.

Rings and novelties, per samples, for placing on candy sticks, or in popcorn or prize packages, declared that such rings and novelties of base metal only, for the above purposes, dutiable as toys under tariff item 624.

"Oxone," dry, per sample, manufactured by Roessler and Hasslacher Chemical Co., New York, declared dutiable under tariff item 220.

Automobile bodies (metal) unfinished, per illustration and description, declared to be dutiable under tariff item 454.

Order-in-Council for the extension of the preferential tariff on tea, to include teas now in excise bond. Where tax has been paid on such teas entered ex-excise bond on or after the 6th day of June, 1919, a refund of three cents per pound may be applied for.

Referring to Order-in-Council of March 26th, 1918, which provides:

> "That all machinery, plant and material of whatsoever nature or kind required in the construction of the necessary mill, power facilities, steel making equipment, etc., to produce the steel plates covered by this proposal, shall be admitted into Canada free of all Customs duties."

In view of these provisions the Customs Department will grant a drawback of duty on materials entering into the manufacture of articles sold by Canadian manufacturers to the Dominion Steel Company, to be used in connection with the plate mill referred to.

Transportation Items

Service to Roumania

Space for Commercial Shipments Will be Available on Boats Sailing in November

The Canadian Trade Commission, who have been handling certain shipments for various manufacturers consigned to the Roumanian Government, advise that there may be space available on vessels chartered by the Roumanian Government to handle the Government orders mentioned, which can be utilized for commercial shipments. This being so, we have been requested to make this announcement so that our members may, if they wish to do so, take advantage of this space for any commercial business which they desire to ship to that country. The sailings on which this space may be available will be in November and January, the November sailing from Montreal, and the January sailing from Halifax, ocean rates to be on about the same basis as those in effect from New York. The boats will touch at Galatz, Roumania.

Any interested members desiring to use this service should get in touch with the Shipping Department of the Canadian Trade Commission at Ottawa.

Vancouver to Australasian Ports

Canadian Government Merchant Marine to Put Boat in Service from Vancouver to Australia and New Zealand Early in December

The *Canadian Raider* will be placed on the berth at Vancouver to load for Australasian ports about the 1st of December. It is suggested that members in a position to supply cargo for this sailing should get in touch with Mr. A. Brostedt, Assistant General Freight Agent, Canadian National Railways, Vancouver, or with Mr. D. O. Wood, Traffic Manager, Export and Import Department, C.N.R., Royal Bank Building, Toronto. These gentlemen will be pleased to arrange for space and supply any other information including rates.

It is understood that the rates will probably be in the neighborhood of $40.00 per 1,000 sq. ft. for lumber, and $20.00 per ton, weight or measurement ship's option, for general merchandise. All rates are subject to change without notice until confirmed.

Steamship Sailings from Montreal

Ships Scheduled to Sail for Various Points During Early Part of October

The following useful information regarding the sailings of steamships from the port of Montreal to various trans-Atlantic ports is furnished in a bulletin issued by the Canadian Pacific Railway. It will doubtless prove of service to exporters:—

To Liverpool.

Scandinavian	C.P.O.S. Line	A'bt	Sep. 23
Metagama	C.P.O.S. Line	A'bt	Sep. 24
Canadian Miller	Can. Govt. Merchant Marine, Ltd.	Ab't	Sep. 27
Canadian Ranger	Can. Govt. Merchant Marine, Ltd.	Ab't	Sep. 30
Megantic	White Star-Dominion Line	Ab't	Sep. 30

To St. John's (Newfoundland).

Canadian Volunteer	Can. Govt. Merchant Marine, Ltd.	Ab't	Sep. 30
Canadian Adventurer	Can. Govt. Merchant Marine, Ltd.	Ab't	Oct. 15

New Steamship Service

Canadian Pacific Ocean Service Announces a Line to Scandinavian Ports

The Canadian Pacific Ocean Services, Limited, have recently announced that they had been appointed agents for the Norwegian-American Steamship Line, which intends to inaugurate a service of one sailing per month from Montreal for the balance of the season of navigation, and one sailing per month from St. John for the winter, to be followed next summer by two sailings per month. The first steamer will sail from Montreal about the end of October, the name of this boat being the *Renenfjord*, sailing direct to Christiania, Norway, and probably to Bergen and Stavanger of the same country.

Interested members having any cargo to offer, or being in a position to use this service, should get in touch with the representatives of the Canadian Pacific Ocean Services, Lim-

ited, Mr. J. R. Clancy, General Agent, C.P.R. Building, Toronto, or Mr. G. D. Robinson, European Freight Agent, Board of Trade Building, Montreal. Shipments for Gothenberg, Danzig and Helsingford can also be handled via this service.

The worker's smile is a big asset for you. Cultivate it!

SHOW workers that their wages are infallibly protected for EVERY MINUTE of service given and you will establish a basis of understanding and harmony which can not be attained in any other way.

Such a positive guarantee of payroll accuracy and satisfaction is made possible by

INTERNATIONAL TIME RECORDERS

The confident smile of the worker who records his time on an International is a genuine asset for you. It means freedom from payroll disputes. It stands for close, profitable co-operation between employees and management. It is the mark of a satisfied, capable producer.

All manually-controlled timekeeping systems are subject to uncertainties. They depend for success upon unerring human attention---*and we humans are not unerring.*

Internationals, on the other hand, are *automatic.* They leave nothing to chance. They keep all necessary payroll data, correct to-the-minute, clearly printed for quick, errorless computation.

Internationa's are made in 260 models, either electrically-operated or spring-driven, and adapted to all lines of business. May we show you how YOUR requirements can be filled perfectly?

Other INTERNATIONAL *Products*

In addition to the Card Time Recorder, shown in the accompanying illustration, the International Business Machines Company, Limited, manufactures

- Card Time Recorders
- Dial Time Recorders
- Job Recording Devices
- Electric and Self-Winding Master Clocks
- Autograph Recorders
- Secondary Clocks
- Time Stamps
- Key Recorders
- Program Devices
- Recording Door Locks
- And a full line of kindred devices.

We will gladly send full data concerning any of the above instruments on request

"..... not worth the paper they are written on"

International Job Recorder
"Made in Canada"

We refer to Production Cost Figures that depend on pencil records.

What pencil records?

The time-cards on job work that your workmen or foreman now fill out in pencil.

Why aren't they good in pencil?

Because pencil records can be changed and a working-time balance can be forced.

And, as we have said, if your factory production costs are "leaky" the whole question of your costs, your overhead, etc., is "up in the air."

The International Job Recorder absolutely corrects this condition. It enforces a printed, machine-made, unchangeable, infallibly accurate record of the time spent on any job.

It does many other profitable things for its users. Let us tell you more about them.

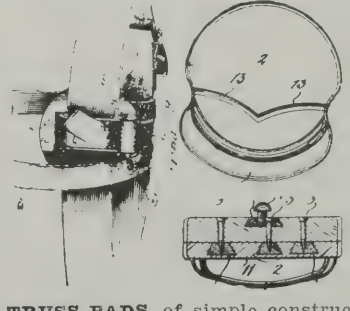
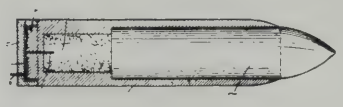
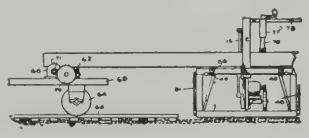
PATENTS FOR SALE



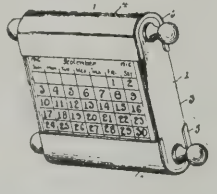
PIPE POLISHING MACHINE, whereby the polishing mechanisms are automatically shifted to operative position by the pipe during its travel, increasing the output as well as reducing the cost of production, and is provided with means for the continuous feed of the pipe. For further particulars apply to the inventor, E. C. Straub, R. 905, 7th Ave., Beaver Falls, Pa., U.S.A., who offers pat. rights in the Dom. for sale.



WRINGER SUPPORT, provided with a novel bracket for holding the wringer so that it may be swung backward or forward as desired and having a device for locking the wringer in wringing position. Pat. rights in the Dom. are for sale by Andrew J. Steel, Box 473, Needles, California, U.S.A.

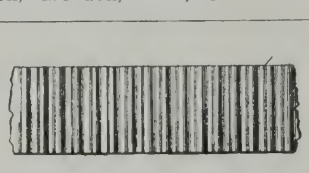


POCKET KNIFE, of durable construction, attractive design; may be cheaply manufactured, and should prove a good seller. The inventor, Mr. John T. Peters, Tilting, Newfoundland, is open to negotiation for disposal of his pat. rights. John T. Peters, Tilting, Newfoundland.

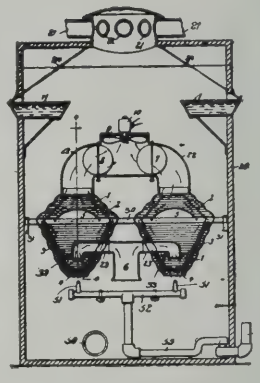


TRUSS PADS, of simple construction, light and cheap to manufacture, adaptable and comfortable. Consists of analogous material strongly reinforced by aluminum or other suitable metal or alloy, with improved means for strongly and comfortably mounting it on the body. For further particulars apply to the inventor, Mr. James W. Embree, Box 236, Manhattan, Kansas, U.S.A., who offers patent rights for sale.

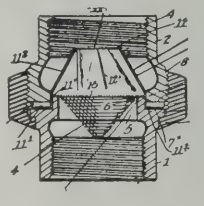
SHELL of high velocity, having a variable range; is simple in construction and provided with means whereby its range can be automatically regulated. Parties interested should address communications to Mr. J. M. Nurmi, 882 Putnam Ave., Detroit, Michigan, U.S.A., who is open to arrange for the disposal of his interest in same.



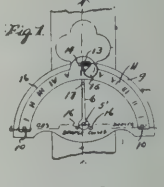
JIG SAW, a strong, durable and efficient saw. It is easily manipulated and may be placed on the market at a minimum cost in view of its simplicity construction. The inventor, James DuLaney, 159 Melrose Avenue North, Seattle, Wash., U.S.A., is desirous of getting in touch with a reliable manufacturer with a view to disposing of his interest in this invention or arranging manufacture of same.



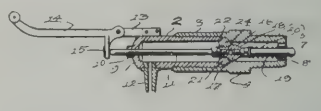
ROLL CALENDAR, a simple, attractive and ingenious calendar, may be cheaply manufactured and placed on the market at a minimum cost, with reasonable profit. Patent rights are for sale by Isaac W. Townsend, Lake View Hotel, Port Arthur, Texas, U.S.A.



NEEDLES, for use in connection with the sewing of Leather, Rubber, Belting, canvas or the like. May be cheaply manufactured and is superior to any that has yet been placed on the market. It eliminates the difficulties now found in the use of the present device of this character, is simple and convenient. Patent rights are for sale by Martin Larson, Glendon, Alta., Canada.

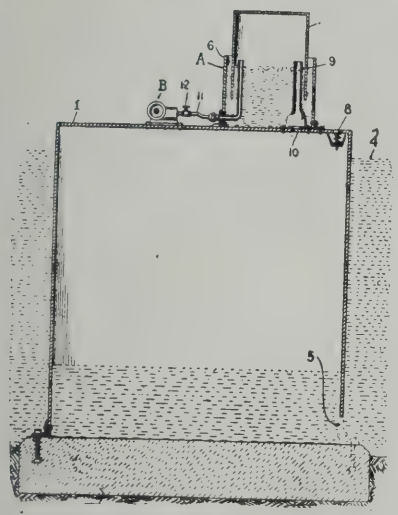


MARGINAL STRIP FOR BOOTS, composed of strong corrugated paper, which is attached to the outside edge of the vamp, tip or foxing with zigzag or over-edge stitching, thus increasing the area to the desired size. The patent rights in the Dominion are for sale by Hiram Holden, 561 East Spruce Street, Manchester, N. H., U.S.A.

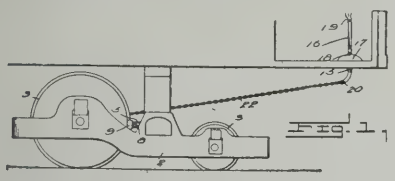


NEW MEANS AND SYSTEM OF HEATING, invented by Mr. Terry, is pronounced the Wonder Heater of today. Provides absolutely free heating in the home, is based on strictly scientific methods. Interested parties should address all communications to the inventor, Mr. A. Terry, 74 Grenada Terrace, Springfield, Mass., U.S.A., who is open to negotiations for the disposal of his interests or rights to manufacture his invention in the Dominion.

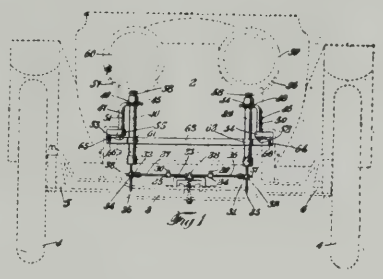
GAS CONTROLLER AND PURIFIER, to be interposed in the supply pipe between the meter and burner, which will increase the velocity of the gas flow and draw in a greater supply of air into the gas through the burner at the point of consumption and at the same time will eliminate gas hammer in the pipe due to sudden checking or stopping of the flow. Patent rights in the Dominion are for sale by Harold E. Thatcher, 119 Front St., Sarnia, Ont., Canada.



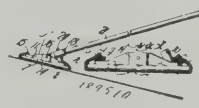
LOCK DAMPER, a device to eliminate the difficulty experienced in finding out the exact position of the damper in a pipe used in connection with stoves, furnaces, etc., by the use of this ingenious device the position of the damper may be at any time ascertained, no chance of overdraft or vibration displacing the position of same, provides a convenient indicator, safety device and fuel saver. Patent rights in the Dominion are for sale by Madison Hamm, Box 218, Glen Cove, Nassau County, Brookside, L.I., N.Y., U.S.A.



VALVE, a simple, durable and efficient device, may be manufactured and sold at comparatively low cost. Consists of a valve seating having beveled valve engaging surfaces or faces upon each side whereby the valve seat may be readily reversed when the valve engaging surface has become worn. For further particulars apply to Mr. V. A. Lang, 406 Willard St., Houston, Texas, U.S.A., who offers patent rights in the Dominion for sale.

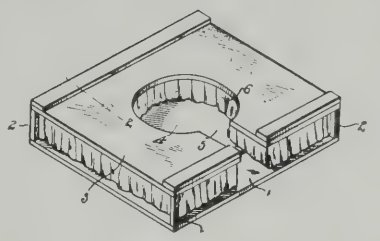


PATENTS FOR SALE

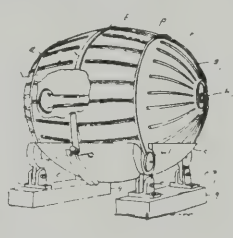


AIR COMPRESSOR, providing a simple and powerful means for compressing air; provides for free and unlimited power and eliminates the cost of fuel; is entirely automatic in operation and cost of up-keep is very small. Patent rights in the Dominion are for sale by F. E. Renouf, Bowsman River, Man., Canada.

CAR BRAKE, particularly adapted for use on trolley cars, easily applied, and when in this normal position is in locking engagement with the wheels of the car, the movement of the controlling lever by the motorman serves the purpose of rendering the brake inoperative. Patent rights in the Dominion are for sale by Mr. Geo. W. Leach, P.O. Box 203, Pittsboro, N.C., U.S.A.



DIRIGIBLE LAMP, so arranged that the part of the roadway in front of the automobile, while going around curves, will be illuminated. May be thrown into and out of operation when desired. Patent rights in the Dominion are for sale by S. J. Welch, Hotel Welch, Troy, Pennsylvania, U.S.A.



MOP, for cleaning and polishing surfaces with a minimum of labor and fatigue, obviates the arduous task of scrubbing and polishing by hand, and will give the efficient effect of hand labor. May be used with water for washing floors, with oil for polishing, or simply as a duster. The inventor is desirous of disposing of patent rights on his invention in the Dominion or to arrange with a reliable manufacturer for manufacture of same. Inquiries should be addressed to Messrs. McInerney, McInerney & Williams, 89 Queen St., Melbourne, Australia, or Harold C. Shipman & Co., Ottawa, Ont., Canada.

PATENTS

OFFICE AND FINANCE

The Necessity of Knowing Manufacturing Costs

Unless the Exact Cost of Each Department is Known, Waste of Materials, Inefficient Help, or Careless Supervision in Buying Will Not be Reported

By ROLAND H. ZINN
Chief, Cost Accounting Bureau, Tanners' Council, New York

(From "American Industries")

SINCE the beginning of the great war, which has just been brought to a conclusion, the entire industrial world has been awakened to the necessity of increased efficiency in all directions.

Probably not least among these has been the interest and impetus which has been given to the establishment of real practical systems of cost finding.

During the war, it was the writer's privilege to represent the Government in many investigations, attempting to ascertain the cost of producing various commodities. It was apparent that in many cases little attention had been given this subject by manufacturers, with a consequent inability to assist the administration in a time of utmost need, without first having an extensive and costly audit made. For this reason the Government has since done a great deal to encourage and assist manufacturers in establishing accurate and correct cost accounting methods.

In times past, cost finding has been greatly feared, and probably justly so, for it is a fact that in many instances efficiency experts have evolved systems so intricate and detailed that the operation of the same required so much "red tape" as to make it not only burdensome but entirely worthless. On the other hand, a cost system by which merely an average cost of production or an approximate cost is arrived at, is likewise inadequate.

What Cost Data Should Show

A cost finding system should, in all cases, be so constructed that it is in absolute control with the general accounts of the company, otherwise the accuracy of the costs are questionable. It might then be asked, "What value are the figures if they are only accurate, what do they mean, what information do they give to those who wish to use them?" Cost data should show an executive not only that he is making or losing money, but the articles on which, or the department in which, he is making a profit or showing a loss. Accurate costs therefore are fundamentally and essentially necessary to all manufacturing efficiency.

One value therefore, of cost accounting is to secure the final and complete cost of any given article of production, which can safely be used as a basis for selling the same, with a definite knowledge that a profit will be realized. There should, however, be a further purpose, to give those in authority a comprehensive idea of the inner operations, where improvements should be made, where waste and excess can be curtailed. Unless the exact cost of each department is known, the department which needs special attention in order to reduce expenses by waste of materials, inefficient help, careless supervision or waste in buying will not be known. It is true, however, that the more the detail can be eliminated and the fewer reports necessary, the more effective the operation of the system, provided that the reports do show the busy executive at a glance all the information necessary in which he is interested and which he needs in order to increase the efficiency of his organization, which naturally will increase his profits. Such a cost system, one which has the tendency of increasing profits, is never and should never be feared.

It has often been said by manufacturers, that their business is unique or different and while cost systems are all right they could not be adapted to their business. It makes no difference what the character of the business is, the cost of production can be secured; however, it is unquestionably true that some cases are more difficult than others.

Installation an Investment

The expense of installing such a system and the continued operation of the same has also been an objection. This expense is but a fractional part of the actual saving which a system should develop, and I have heard it said after an installation has been made, that "they would never again be without it." The installation really becomes an actual investment which of itself returns more than any other investment of like amount, and usually appreciates with age. It is also often stated, by conscientious objectors, that they know what their costs are, so why install expensive methods to obtain the same. It will be found in most cases of that kind, that their costs are based on estimates made by foremen or superintendents. Estimates are invariably treacherous and unsafe, especially during a period when labor and materials fluctuate as greatly as they have been. Cost being the sum total of all labor, material and overhead expense necessary to produce a given article, it is a definite amount and indicates the exact point between profit and loss. You cannot, therefore, change a cost by merely changing figures. It is first necessary to go to the source and correct the conditions which made it before the cost changes.

We are at the present time in a period of high prices, when the margins between cost and selling price are large enough, so that from a fraction of a cent, to even a dollar, in some cases does not mean much, but when this margin again grows closer, and both domestic and foreign competition becomes keener, the closest analysis and most efficient management will be necessary to reduce the cost to the small fraction of a cent. And how are you going to do this unless you know where and how?

Data Should be Accurate

The operation of a cost system may virtually be termed a science, which is governed by fixed laws and rules, not only for securing the data, but for using it. To sum it all up, the data secured should be accurate and connected with the general books; it should be made adaptable to all local conditions and simple, consistent with the information required

The Imperial Bank offers exceptional banking facilities to Canadian Manufacturers. Branches throughout Canada. Agents and correspondents in all the world centres.

Collections made at all points in Canada and in foreign centres.

Drafts—Money Orders and Letters of Credit issued, available throughout the world.

Exchange—Domestic and Foreign Exchange bought and sold.

Government and Municipal Securities dealt in at all branches.

Savings received at all branches—interest credited half yearly at current rate.

Accounts of Merchants and Manufacturers solicited.

HEAD OFFICE - TORONTO

without being burdensome. To install such cost accounting methods requires time and a thorough analysis and study of the conditions, and cannot be taken theoretically from any published volume on the subject.

What is cost? As defined, it is the equivalent paid for anything—expenditure, outlay, etc. The cost to manufacture, therefore, is composed of the three distinct elements, labor, materials and overhead or burden expense. The problem, of course, is to ascertain the amount of each of these elements applicable to the various articles produced. It is essential to secure the cost of each element separately so that in cases of necessity the executive can see just where any trouble may lie and correct it immediately.

Averaging of costs will not accomplish the results in obtaining cost of production, especially not, where a number of different articles are produced. While such an average, taken at the end of any period might show the profit or loss on the entire business during that period, yet it may be true that during the period there may have been some articles on which there was actually a loss, and these losses were carried by the articles which produced profits. But there would be no information to show which was which. Furthermore, if it became necessary to quote a very close price on a large contract the average cost would form merely a guess, whereas an actual cost would give exact data whereon any quotation made would realize the exact profit anticipated. I have often heard it said, "We sell only at the market price and cannot get any more than the market, why go to the trouble of getting costs." It is unquestionably true that if an actual cost, which is above the market at which the manufacturer is forced to sell, is continually before him, sooner or later he will either use every effort to reduce his cost or stop manufacturing that article..

Distribution of Overhead

The distribution of the overhead or burden expense is a widely discussed subject. Included therein, there must be all indirect charges, fixed charges, maintenance and miscellaneous expense, other than labor and materials. To distribute this properly, requires study and analysis of conditions. The method used should be illustrative, as far as possible, of the actual expense incident to the production of any given article manufactured. General average percentages should be avoided.

The reports or data accumulated should be concise and not voluminous, in fact a graphic chart showing the actual rising or falling of any element of cost of any given article or department, frequently shows more conclusively the actual conditions than would masses of figures.

As for the leather industry, the officers of the Tanners' Council of the United States of America, the national association of the tanners in this country, immediately at the close of the war, appreciated the benefits which would result in not only figuring costs accurately, but figuring them in a uniform way as far as possible throughout the industry.

With this purpose in mind they created the Cost Accounting Bureau of the Tanners' Council, to act in a constructive as well as consulting capacity for the industry.

The tanning industry is divided principally into eleven major groups, viz., sole and belting; harness; bag and strap; side, calf and kip upper, Eastern and Western divisions; upholstery; glazed kid; sheep and lamb; patent, glove and general utilities leathers. Each group has been organized into groups of accountants who are employed by the various companies making the respective kinds of leather. Periodically, meetings are held in Chicago, New York and Boston, as well as Philadelphia, with the head of the bureau, and the best methods are recommended and thoroughly discussed, with

an ultimate view of establishing, in detail, one method which could be adopted as the uniform method in each group. Thus far, many fundamentals have been decided upon, but naturally, a work such as this is of such great magnitude that it requires much time and study in which to meet and overcome all of the obstacles, many of which are met in all cost accounting work. There are, however, probably more complex situations arising, in obtaining accurate cost of tanning than in most other lines of manufacture. The membership has been most co-operative in this work and are practically unanimous in the thought that once the uniformity is established much good will result.

Much Better Competition

It is obvious that uniformity in the method of arriving at cost of tanning leather or uniformity in any other industry, would undoubtedly result in much better competition, because each manufacturer will at all times know that each and every competitor will be figuring his costs on the same basis and be including therein every item which is really a part thereof. It remains then only for each one to reduce his expense in his own plant to the minimum. By such methods the greatest efficiency is instituted in the entire plant, materials used, which are often very expensive, are no longer wasted and the employees throughout are educated to better and more economical methods and practices. Such practice will unquestionably sooner or later place any industry on a better and more stable basis.

There are, of course, many other detail phases, too numerous to mention here, which will be and should be analyzed and studied, such as the taking of proper inventories, especially of stock in process, the operation of storerooms, the depreciation of plant and equipment, etc., all of which form an important part in the cost of production.

Paying Wages Through Banks

Money is Deposited to Credit of the Worker Who May Pay it Out by Check

Not long ago the manager of a big industrial plant in England saw several hundred of his employees crowded around the paymaster's window, drawing their wages. It struck him that this was not only a waste of their time, but that it was an undignified scramble for the money they had earned. He would not have liked to get his own salary that way. It seemed as though a more modern method of paying wages might be contrived.

Going back to his office, he worked out a plan that combines dignity, time saving and thrift. This has been approved by the company, and is now optional with employees, many of whom are taking advantage of it.

Instead of asking employees to congregate around the pay window and wait their turn, they may open a checking account at any bank selected by themselves, and the company deposits wages each week to the employee's credit, in his own bank. The employee then pays household bills by check, draws out whatever cash is needed, and leaves the balance in the bank as savings. The company makes a further contribution to his account, representing about five per cent. interest, on all the money which he is able to save.

Before the war, a dollar belonging to an employee and a dollar belonging to the employer were seldom on speaking

terms. They represented two entirely different kinds of money and had no association with each other on the employer's books, nor ever combined for teamwork.

But war finance broke down this "class consciousness" between the two dollars. When employees bought Liberty bonds or pledged themselves to take a certain number of thrift stamps weekly, the employer volunteered to do the accounting, deducting bond payments from wages and slipping thrift stamps or war savings stamps into the pay envelope. This brought a new viewpoint to both parties. The wage earner often saved money for the first time in his life, and the employer felt that thrift had a stabilizing value in his work force. That was a value worth paying for, and presently the employer was adding money to employees' savings in the form of additional interest or a bonus. Now the idea is being carried further, as in this English plan of paying wages, extending decent banking facilities to wage earners.

For lack of a checking account hard-earned money is often frittered away, stolen, lost or handed over to fraud promoters. But any man or woman who banks money and pays bills by check, and accumulates savings for investment, soon learns to manage money matters skilfully. The common distrust of banks disappears. The banker's counsel is sought in matters of investment. There is an improvement all around.

Laurentide Profits Increase

Figures for Last Year's Business Show that Record Profits Were Earned

At the annual meeting of the Laurentide Company, held in Montreal on September 2, a statement was presented showing that for the year ended June 30 last, after all deductions had been made, net profits of $1,823,656 were earned, an increase of $119,001 over 1918. Earnings were equivalent to 19 per cent. on the outstanding capital shares. The net revenue of the year totalled $2,955,978, against $2,593,834 in the previous twelve months, and $2,220,660 in 1917, the moderately lower gain in profits being due to more generous allowances for depreciation and the deduction from the year's earnings of $175,554 as a reserve for the depletion of the company's timber limits, which, in the statement under review, appears in the working account, instead of in the balance sheet, as heretofore. The allowance for depreciation for buildings and plant was made with an even more generous hand than in the past, $329,841 being written off in the 1919 exhibit, against $271,883 in 1918 and $116,670 in 1917.

After the payment of dividends and the bonus declared several months ago, which aggregated $1,392,000 in the 1918-19 period, compared with $960,000 in 1917-18 and $864,000 in 1916-17, there remained a balance of $431,656 to carry into the current year's accounts, being total surplus of $2,857,204, equal to over 28 per cent. of the combined capital and funded obligations of the pulp and paper enterprise. The disclosing of a strong financial position as regards working capital is little in the way of a novelty in an annual statement of the Laurentide Company, but the 1919 exhibit is notable for an even more comfortable showing in this respect, working capital as at June 30 last standing at $5,355,670, compared with $4,679,669 last year. Current assets of $7,238,086 are nearly $1,000,000 in excess of those of 1918, although current liabilities also show an increase of almost $266,000. The latter is more than accounted for, however, in the increased dividend and initial bonus paid shortly after the end of the company's fiscal year, but shown in the 1919 statement.

A. B. JARDINE & CO., Limited
HESPELER - ONTARIO

Canadian Locomotive Company

Profits for the Past Year Were the Largest in the History of The Company

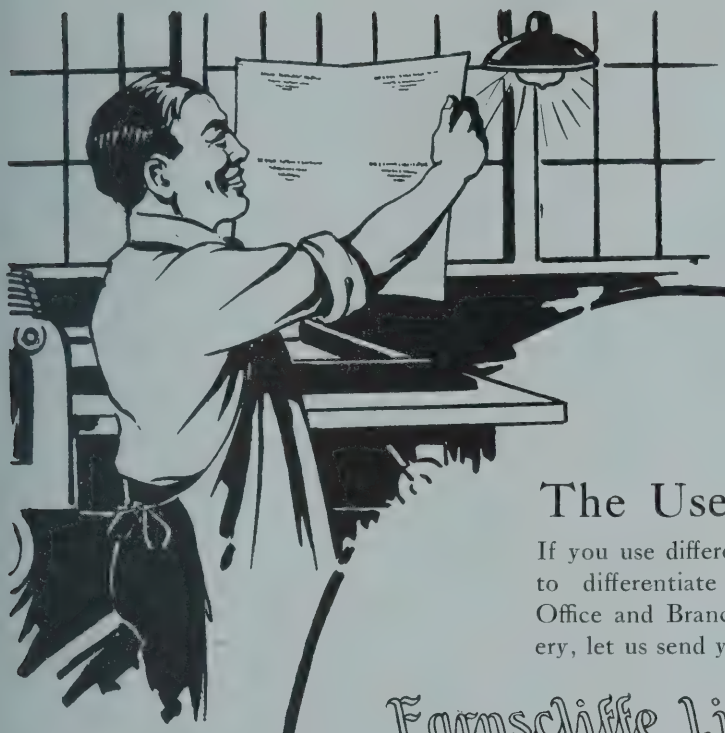
The report presented to the annual meeting of the Canadian Locomotive Company, on September 17, recorded profits for the year of $892,976, an increase of about $215,000 over 1917-18, and the largest in the history of the company. This fact is especially gratifying because for the last two months of the year's operations, the plant at Kingston was experiencing a strike. Of the total profits, $44,292 was obtained from interest on investments. After meeting all charges and providing for depreciation and replacement, there remained a balance of $427,377, which added to the previous balance, brings the profit and loss account up to $1,348,800.

Cockshutt Plow Co.

Further Marked Increases in Profits for Past Year Shown by the Company

Profits of $571,586 for the year ended June 30 last, are reported by the Cockshutt Plow Co., Limited, of Brantford. These are the largest profits since 1913, when $753,298 was earned. Referring to the company's present position, Col. Harry Cockshutt, the president, says: "The position of the company has materially improved. We have been able to pay four quarterly dividends of one per cent. on the preference capital and we expect to continue the dividends until conditions become more settled. We further hope to declare at an early date a dividend of 3½ per cent. on account of deferred dividends on the preferred stock."

Baldwin's Limited



Capital to be Increased in Order to Carry Out Industrial Developments in Canada

At the annual meeting of Baldwin's, Limited, recently held in Birmingham, England, a resolution was moved increasing the capital of the company by the creation of 3,000,000 "B" preference shares of £1 each. A portion of the money will be used for the development of property acquired in Canada. The company enjoys trade in the Dominion which requires further enterprise if it is to be maintained and increased. For this reason the directors desire to utilize their special knowledge and facilities in order that they may actually manufacture on a considerable scale in Canada itself. Baldwin's, Limited, have purchased the plant of British Forgings, Limited, on Ashbridge's Bay, Toronto.

Universal Tool Steel Co.

Annual Report for the Year 1918 Shows a Net Revenue of $278,382

The Universal Tool Steel Company, of which Sir Donald Mann is president, has issued its report for the year ending December 31, 1918. Gross profits on shell-making amounted to $540,876, while on the manufacture of a bolt, which was taken up after munition business ceased, a loss was incurred of $30,146. The net income was $278,382, out of which there was paid a dividend of 2 per cent. on the common stock and 6 per cent. on the preferred.

From the Angle of your Filing Clerk

You probably look on your filing system as a place where so many letters and papers are stored.

But your filing clerk? She isn't fortunate enough to be able to look at it in such an easy, buoyant manner. With her it's a serious part of routine.

She knows that when you ask for a certain paper you want it quickly, without any waste of time.

With her the *proper system* means the difference between a slow, cumbersome, inaccurate way, fraught with many delays—and a speedy, accurate and efficient method of filing.

"Office Specialty" Systems of Filing and Record Keeping are fundamentally right. A proper principle of organization underlies each one of them. Each system is designed for a specific purpose and it achieves that purpose in a way that extensive study has demonstrated to be the best.

"Office Specialty" System Service, Dominion-Wide in its scope, is offered to any business organization without fee or charge.

Good Things from Other Magazines

Why Suggestion Systems So Frequently Fail

In most cases suggestion systems are apparently failures, but employers, who have given the subject a more careful trial and have thoroughly studied methods that enable them to use to best advantage the ideas which employees turn in, think differently. In the following interesting article some of the essentials necessary to make a suggestion system successful are outlined and experiences recorded.

By NEIL M. CLARK

(Reprinted from "System")

IDEAS are the good red blood of business, provided, of course, they are the right kind of ideas . . . . those or example, which have to do with better machines, methods, r policies. Ideas evolve in the minds of human beings by ome process usually difficult to follow; and the concern of nanagement with them lies in the fact that probably the ypical employee has about as many ideas, taking one with nother, as the typical employer. Many of these ideas of mployees are, in the nature of things, bound to relate to the mployer and the work. It rests largely with the manage- nent whether this potentially tremendous brain force, which an never be merely neutral in its effects, is directed into onstructive or destructive business channels.

Ideas from Unexpected Sources

The owner of a string of department stores tells that the est business idea he ever got came from a delivery boy, ged fourteen. That is one of the peculiarities of ideas. No ne can safely prophesy just where they are going to turn p. It is clearly the part of wisdom, therefore, to provide or their cordial consideration when even they do happen to ut their heads above the surface.

That is merely good business. But there is another side o the matter. Management needs to provide some kind of utlet for the dark ideas and gloomy thoughts that tend to rew and stew in the mind of the man who does not let the unlight of intelligent intellectual companionship into his oul. Such ideas and thoughts, if they do not find ultimate xpression in hostile acts against the management, are retty sure in the majority of cases to "sour a man" on his ork and prevent him from being—in the fine sense of the ord, and probably in any sense—an efficient producer.

An interesting story could be woven around the trials of ne business suggestion box. Great numbers of employers, ell aware of the facts enumerated, have sought to garner the harvest of ideas. The history of one of these attempts ill serve to indicate the fate of many—I think perhaps a ajority.

The campaign for suggestions was started in this concern ith the roll of drums, as it were. Each employee received notice explaining the company's desire to receive ideas, nd carefully defining the nature of suggestions to be sub- itted. Cash prizes of $5, $2.50, $1, and honorable mention, ere promised the winners in the contest, which ran for ur weeks. At the end of that period a new contest started. he employees were given special forms on which to write out their suggestions, and they were told to deposit them in a locked box specially devised for the purpose.

So far, good!

Then the employees began to respond. It turned out that nearly everybody had at least one suggestion which he thought should reach the manager's intelligence . . . . . some plan which he supposed might save the company money, simplify procedure, or increase profits. When the first contest period closed, the committee in charge of awards had an abundance of ideas from which to select winners. They made their decisions, and on the appointed day called all the workers together in a large hall, where songs were sung, speeches made, and finally, amidst considerable interest, the prizes were handed to the winners.

This programme was repeated through three or four contest periods. But as the day approached for each new award of prizes, the committee found that the number of suggestions of any value dwindled so rapidly that they were not worth the bother and time spent in getting them. The "suggestion system" silently passed into oblivion.

Now, what was wrong? Who was to blame? Were the employees' minds such arid wastes that no further ideas could be coaxed to grow in them? Or, was the management somehow at fault?

In this instance, as in many similar cases, I believe the blame rested wholly with the management. In the first place, the general manager was not seriously concerned about getting ideas from the workers that he could *use*. He was, in the last analysis, fairly confident that he and the executives associated with him, were competent to run the business all right. The suggestion system he considered as more or less of a game, which might amuse the employees.

Difficult to Keep up Interest

As a result of this attitude, no serious effort was made to apply the suggestions, even though some of them gave indications of constructive thought on the part of employees. Not many workers can be kept continuously interested in the moderately remote chance of winning a rather slender prize, particularly when the purpose of the contest is so obviously farcical.

Many employers can relate an experience closely resembling this. And the opinion of most of them seems to be that the results do not warrant the effort and money spent in getting suggestions. Employers who have given the subject a more careful trial, and have thoroughly studied

methods that enable them to use to best advantage the ideas which employees turn in, think differently. From the experience of these successful users of suggestion plans, it seems fairly clear that it is essential, if a suggestion system is to be successful, to demonstrate to employees—

1. The open-mindedness of the management, and the serious desire for the ideas of employees;

2. The willingness to consider thoroughly the ideas that are offered, no matter whether they seem good or bad at first glance; and the intention in any case to let the employee know the decision and the reason for it;

3. The desire to reward fairly the man who makes the suggestion, if it has any value.

The best proof that the management wants suggestions is of course to use those it gets, when they are worth using. When that is done, the news of it spreads rapidly through an organization. It gives the worker a genuine feeling of pride to point to a machine or method and say, "That's my idea!" And if he is rewarded fairly, it is an incentive to others to turn in their suggestions also. These may seem to be little things. But good management after all is the sum of many little things, which are handled in the right way.

Merely to ask employees for suggestions may have the same effect as asking a small boy to define the moon. He has no definition. So far as he is aware, it is just a moon! A hint as to the kind of suggestions wanted often proves valuable in helping employees to concentrate on the kind of problem where they are most likely to be of help. A New York company which has been unusually successful in developing the habit of suggestions, goes to considerable pains to let its employees know what a good suggestion really is. When, for example, a worker suggested an improved part for a machine, which was adopted, the manager had photographs of both the old and new plan made and mounted on cardboard, with a full explanation of the improvement. Accompanying it was a brief text explaining that his idea exemplified the kind of suggestions which the management especially wished to encourage.

The Kind of Suggestion Wanted

In other words, the employee was not asked for "suggestions"—a large word, the exact meaning of which he might fail to comprehend; but he was shown an example of a suggestion and told, "Maybe there's something about your work on which you can suggest improvements in somewhat the same way." Unless there is concrete, constructive direction of the workers' thought, some of them are likely to recommend, as one man did, "make the truckers load faster." He happened to be a machine tender with plenty of opportunity to observe the foibles of truckers! His recommendation was not utterly devoid of value, for it suggested a direction for possible investigation; but it did fall short in all the elements that make a suggestion really valuable to the management.

In any plant where the manager has succeeded in convincing the workers that he welcomes suggestions, and treats them fairly, there is usually no lack of them. And here enters a danger: namely, the risk of slighting suggestions, or turning them down without letting the originators know the real reasons for doing so. This is also an opportunity. If a man has a suggestion rejected, and he knows why it is rejected, he is in a better position than before to avoid further bad suggestions.

The danger is delicate and common. In business two minds or two groups of minds are constantly meeting, one of which says "let's do *this*," while the other insists, "let's do *that!*" Given equal force of character, lung power, and

logic, the two sides quickly reach an *impasse*. It is usually true, however, and this is commonly the case as between the management and the men, that one side has a subtle weapon, reserved for finally putting an end to the discussion. That weapon is authority.

The boss "has the say." In the last analysis he depends on his judgment for making his decision "yes" or "no"; and always, when he says "no," he runs the risk of seeming arbitrary, thereby arousing resentment in the mind of the employee, or at least destroying some of his initiative.

When "No" is Necessary

The best way to say "no," as a rule, is to give all the reasons with complete frankness. During the hottest period of summer, a year ago, a battery of new machines for use on some Government work was being installed in an Ohio factory. The manufacturers of the machines had been unable to develop a self-feed attachment. It was imperative to deliver the product to the Government. The needed capacity could practically be reached by hand feeding; but this required an operative on each machine, and men were scarce.

One employee, not a mechanic by trade, but a man of unusual ability in that direction, was positive he could develop an automatic feed, and he set himself to the task of doing so, working incessantly through the days and far into the hot nights. Finally, late one evening the manager was called to the factory by telephone to see a practical demonstration of the device. It functioned, and it functioned well; but the manager could see where there was a chance that the device might frequently throw the machines out of working order. The loss of time from this cause, he feared, might result in a smaller weekly production from each machine than through the method of hand feeding. Delivery dates were imperative. Since they could just about be met by the hand feeding process, the manager, after thoroughly considering the advantages and disadvantages of the two methods, felt compelled to reject the feeding device.

It was a crushing blow to the man, whose creative genius had developed a novel and workable attachment. Money alone could not overcome his disappointment. The case naturally had to be handled with a little more than usual care. Says the manager:

"I did not, however, find it difficult to convince our employee that in demonstrating his ability along lines which were bound to be useful to us in the future, he had in reality accomplished a great deal for himself, and that the time and energy he had thrown into this thing had not by any means been wasted."

The Eastman Kodak Company uses an analysis sheet by means of which those responsible for looking into the suggestions of workers measure the cost of changes against the savings they may effect. The worker is taken into the confidence of the management, and if an idea cannot be used with practical results, the reasons as they are shown by the analysis sheet are fully explained to him. Mr. A. Stuber, of this company, says of the plan:

Should be Handled Diplomatically

"The answer to the suggestion which is not approved can, if not worded properly, discourage the suggester so that no further suggestions will be received from him. Or, if proper advertising thought is given to the answer, he can be stimulated again to offer another suggestion. I believe that this point is one of the main factors in the success or failure of a suggestion system.

"There are several other big points in the suggestion system which up to the present time have been overlooked, and

which I believe are of considerable benefit to the management. One of these which I am experimenting with and watching very closely, is using the suggestion system as a means of improving the so-called human relation in industry.

"I find that the average employee when in my office for the purpose of discussing one of his suggestions, is in a better frame of mind to tell me his troubles and the troubles which other employees are experiencing, than when brought to my office for any other purpose. By tactful questioning I am able to get more information on actual conditions in the shop than at any other time. I am also able to take some of those grievances which he believes very serious, and show him that he is wrong.

"At this time, if properly handled, the management can establish a real get-together spirit with these employees, and mutual understanding and trust can be developed, which is of considerable benefit to both the employee and the management."

The reward that the worker receives for a good suggestion should justly have some relation to its dollars-and-cents value to the company. A man who turns in an idea, does something that can hardly be recompensed in his regular wage. If his idea is for machinery, or equipment that will save the company perhaps hundreds or even thousands of dollars—there have been such suggestions!—he can hardly, in the interest of justice, be fairly rewarded by the mere payment of a hard-and-fast sum, such as $5 or $10, or even $25 or $50.

His reward may not be directly in money at all. It may be wisest to give him a chance at a bigger job, or the opportunity and facilities to pursue a course of study to fit himself for larger tasks. One employer I know of, rewarding an employee who had made an especially valuable suggestion, handed him a cheque for a little better than a thousand dollars, to clear the mortgage on his home!

The co-operation that the company is forced to give in perfecting an idea may also enter as an element into the consideration of the just reward. Often a man will have in his head the germ of an idea, which he has neither the skill nor the facilities to perfect. When other heads combine with his to attain the final result, he can readily be made to realize that his reward is bound not to be as great as if, with his own resources, he developed the idea to its final shape.

Put a Padlock on Suggestion Box

Men are inclined to be jealous of their idea. This is natural. A brief experience in a few plants usually teaches a worker how easy it may be for one man—a foreman or subexecutive, perhaps, or even those in higher authority—to appropriate his thought, and seek to take the full credit. That is why it is important, if a suggestion plan is to succeed, to make provision so that every man's suggestion will reach those fully qualified and willing to place full credit wherever credit may be due.

Most suggestion boxes need a padlock with a key in the hands of the man designated as the representative of the management to consider all of the suggestions.

So much for encouraging the workers to submit their constructive ideas. It is safe to say that when the minds of workers are turned in the direction of building up, there is not much room left for those ideas which tend to tear down and destroy . . . . ideas that often lie hidden, making the workers disgruntled and gloomy of temperament, inefficient of hand, and fertile soil for seeds of unrest, dissatisfaction, or industrial strife. Such ideas are seldom expressed except in snarls.

The Canadian Appraisal Company
Limited

Appraisals of physical assets are of particular, if not paramount interest, both to the manufacturer and to his auditor:

Where property is acquired under abnormal conditions of cost, through trade, by the issue of stock, or for services rendered.

Where a property has been so altered that neither the original cost nor value would have any relation to present value.

Where expenditures for betterments, additions, etc., have been charged to expense, or where excessive depreciations have been written off and have not been credited to specific reserves.

In determining the amount of obsolescence, particularly of machinery.

In the preparation of Prospectuses which offer for sale Bonds and other Securities of a business enterprise.

In all such circumstances the appraiser's services are necessary if the true facts as to values are to be determined, even though, for particular reasons, such values be not incorporated into the books of account.

RECONSTRUCTION NEEDS OF FRANCE

Of all the belligerent nations on the side of the Allies, France suffered most. In loss of population, in drain on financial resources, in decline of export trade and in destruction of material wealth and productive agencies, the burdens imposed by the war on France far exceeded those of any of her Allies.

By C. W. A. Veditz, Ph.D.
(From the "American Review of Reviews.")

The first problem that France has to meet after the signing of peace, next to the demobilization of her troops, will of course be the reconstruction and re-equipment of her devastated regions—the task of putting her productive machinery into normal working order. The mere replacing of damaged and destroyed plants, the rebuilding of wrecked dwellings, the resuming of farming operations upon the shell-torn soil, will call for large expenditures of money, for a generous supply of labor both skilled and unskilled, for materials of all sorts, and for a high order of organizing genius and of financial ingenuity.

It must not be overlooked that France has in most respects been the greatest sufferer from the war. In her loss of population, in the drain upon her financial resources, in the decline of her export trade, and in the wholesale and wanton destruction, by the enemy, of her material wealth and her productive agencies, the burdens which over four years of war have imposed upon France far exceed those which any of her allies has been called upon to bear.

The Human Wastage of the War

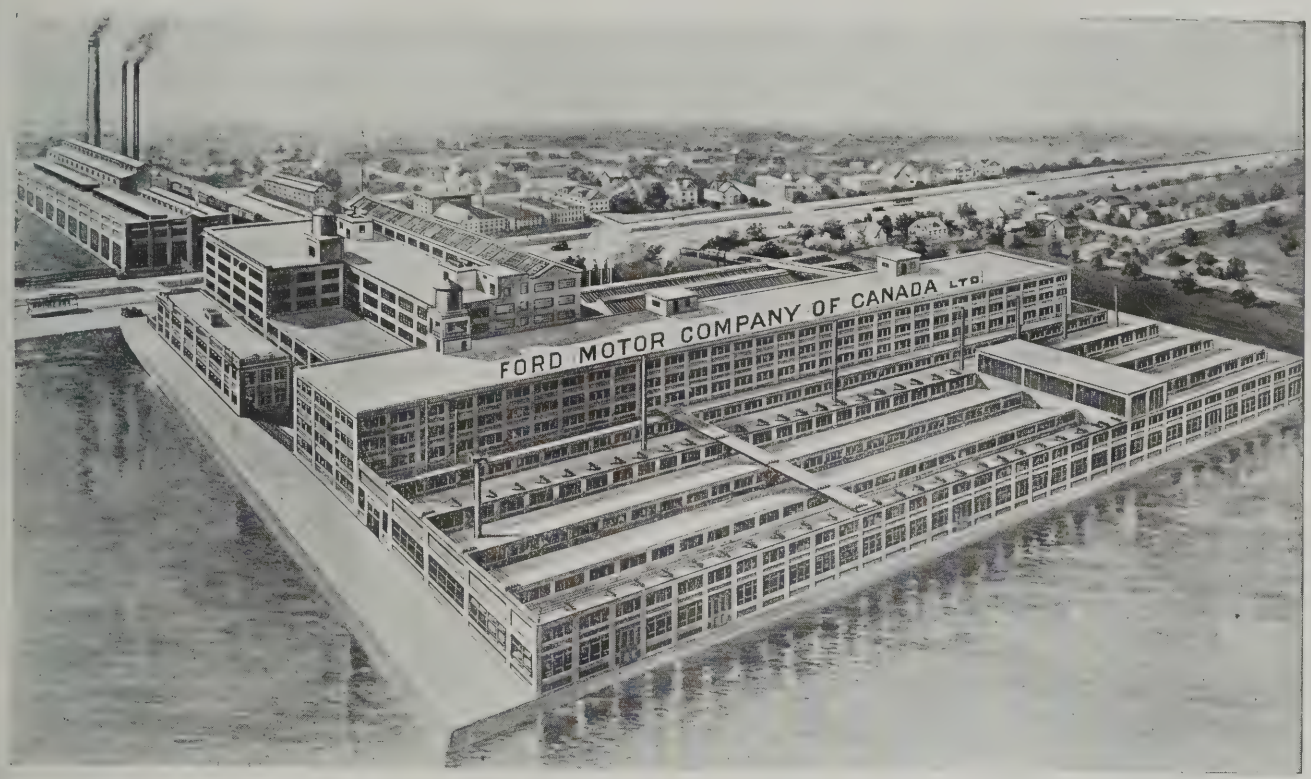
Of the great European nations France is the only one which for years has had a stationary population (approximately forty million) and her shortage of labor has for years been such that hundreds of thousands of foreign workers have been attracted across her frontiers by the lure of higher wages. In direct loss of human material the war has cost France about two million men. Figures given by the Under Secretary for War, as of November 1st, 1918, are as follows:

	Officers.	Men.
Killed	31,300	1,010,000
Disappeared	3,000	311,000
Prisoners living in enemy countries or in Switzerland	8,300	438,000
Now receiving pensions		76,000
Réformés No. 1 (incapacitated)		113,000
Réformés No. 2 (released from service)		2,374,000
Temporary réformés (temporarily unfit for service		131,000

It is certain that the total number of killed, and of those who have been sent home with wounds or diseases that make them partly or wholly unfit for productive services, and transform them from active to passive factors in the economic life of the nation, will not fall short of two million male adults. Indeed, from a purely economic point of view the disabled and incapacitated soldiers and sailors represent a liability rather than an asset. The military pension bill now before the French national legislature involves expenditures so gigantic that one deputy, in discussing the probable effects of a proposed slight increase in the rate of allowances, admitted that the change would make a difference, in the annual total payments, of "several hundred million francs." The former Minister of Finances, Ribot, in a remarkable speech in the French Senate on December 17th, 1918, estimated that the pensions that would be paid to the sick and disabled, the widows and orphans of the war, would amount to two and a half billion francs, or about $500,000,000 per annum.

Are you, ***Mr. Manufacturer,*** satisfied with the **Quality** and **Delivery** of your Malleable Iron Castings?

Another satisfied customer writes us:



"Your service and material has been satisfactory for 1918 and we are very well pleased with both. You have at all times been able to give us the very best of castings and your service has been admirable.

We are only too glad to tell you this and hope that your other customers are as well satisfied as we are."

MAY WE EXPECT AN ENQUIRY FROM YOU?

Another factor in French population that should not be overlooked, and to which I have seen no reference in the American press, consists in the startling decline in the French birth-rate, which even in normal times is barely sufficient to maintain the total population at a level of about forty millions. In the 77 "departments" of France that were not invaded—that is to say, excluding the war-swept regions—the birth-rate fell off, from August, 1914, to the end of the year 1917, by 883,160. Hence it may be said without exaggeration that, in addition to the two million adult males killed, or incapacitated beyond hope of redemption, at least one million children (more if we take into account the figures for 1918, and the inevitable subsequent effects of the lower birth-rate), who would have been born to France in normal times, failed to see the light of day. For France this is a matter of literally vital importance, her birth-rate having fallen from 19 per thousand in 1911-1913, to 10 per thousand in 1915-1916, whereas the birth-rates of England, Holland, Denmark, Spain vary from 21 to 31 per thousand. It was the shortage of man-power in France that led to the introduction before the war of the three-year compulsory military service instead of the two-year service

To Manufacturers CANADIAN MANUFACTURERS, LTD., Box 1881. Johannesburg, South Africa, wish to inform all Manufacturers they are open to negotiate for representation in South Africa. ANY LINE CAN BE HANDLED SUCCESSFULLY

For Germany, with her population of 67,000,000 in 1914, increasing at the rate of about a million a year, had no difficulty in maintaining a considerably larger standing army.

As for the financial cost of the war through government expenditures, the national debt of France amounts to approximately 170 billion francs, instead of the 32 billion francs at the outbreak of the war (over 30 billion dollars instead of 6 billion dollars). Ribot estimates that the annual expenditures of the government, together with the interest charges on the debt, will reach a grand total of about 18 billion francs, or $3,500,000,000. This amounts to approximately 6 per cent. of the national wealth, which is variously estimated by the leading authorities at from 250 to 300 billion francs. The present sources of public revenue yield about seven billion francs per annum ($1,400,000,000).

Trade Losses

Quite distinct and apart from the heavy obligations which the increased public debt imposes on France, is the very unfavorable "balance of trade" during the war. Of all the belligerent nations on the side of the allies, France has probably had least regard for the maintenance of her export trade, and during the long period in which she sold less goods than usual to foreign countries, because her productive forces were diverted from their usual channels and turned to the tasks of war, the value of all goods imported into France, from the first of August, 1914, to the close of the war, exceeded the value of all exports from France by more than 40 billion francs (approximately $8,000,000,000). This so-called "unfavorable balance of trade" must obviously be offset sooner or later by the transfer of a corresponding economic value; that is to say, France will either have to pay this balance in gold, the only international money, or in goods of corresponding value. A third possible solution consists in the acceptance, by Americans and other creditors of France, of French securities; that is to say, by large-scale American investments in France.

Health of the Invaded Districts

In making an inventory of the consequences of war in France, it should also be noted that until a few months preceding the armistice the enemy still controlled, in whole or in part, ten of the eighty-odd "departments" or administrative sub-divisions of France, including the richest and industrially most important regions. The invaded Northern and Eastern departments furnished in normal times one-fourth of the government revenues. They contained one-fifth of the buildings and of the industrial establishments of the nation, outside of Paris. The Nord and the Pas-de-Calais departments alone produced 27 per cent. of the national wheat crop. Five of the invaded departments furnished 80 per cent. of the beet alcohol distilled in France. Of the 206 manufactories of beet sugar operating in 1913, 142 were located in four of the invaded departments—68 per cent. of the total.

The coal basins of Lens, Douai, Anzin, together with the other coal mines of this highly industrialized region furnished 68 per cent. of the coal mined in all of France. The famous iron ore basin of Briey-Longwy, of which the Germans acquired control early in the war, and the exploitation of which (many authorities contend) enabled Germany to carry on the war as long as she did, yielded 90 per cent. of the French iron ore. The metallurgical establishments of the East and of Hainault were responsible for 70 per cent. of the steel products and 80 per cent. of the pig iron made in France. The steam engines in the industrial plants of this section represented a total horse-power of 1,236,500, in the nation's total of 3,235,200, or 39 per cent. In France's total of 7,525,000 cotton spindles, 4,475,000 were located in these regions. Of spindles running on wool, 64 per cent. were either in these

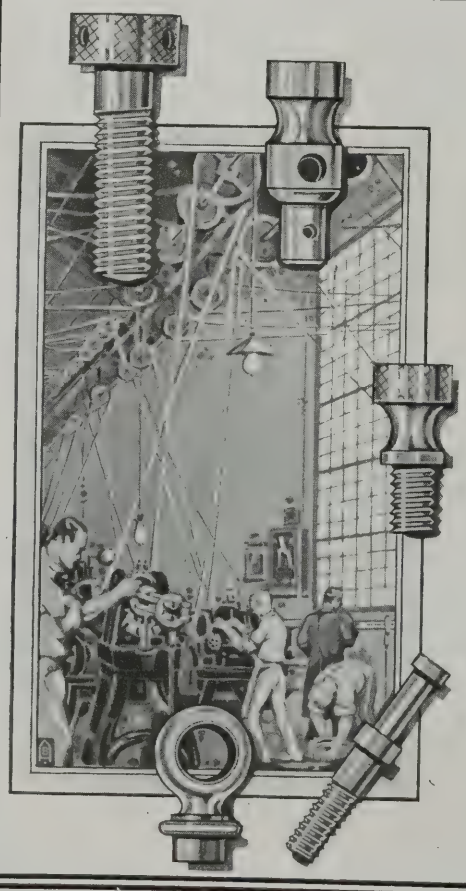
New York, N.Y.

sections held by the enemy, or so near the firing lines that they could not safely be operated.

From all of these regions the Germans have of course recently withdrawn in conformity with the terms of the armistice, and it has thus become possible for the French authorities to appraise, at least approximately, the amount and character of the damage done by the invaders during their unwelcome sojourn.

Some places were so entirely destroyed that it is impossible to fix even the sites of what had previously been prosperous and peaceful towns—like Bouchavesnes and Sailly-Saillisel. Of 841 communes in the Aisne department, says Senator Touron, barely 40 have been spared from German occupation, and whole cantons have been literally wiped out of existence. Elsewhere the damage is confined to a small part of the town or to the larger and more conspicuous edifices. But even in the localities not completely razed, the Germans stripped mills and workshops of their equipment, and the farms of their buildings, their cattle, and their implements of production. At Roye, for example, where the actual fighting caused no irreparable damage, they burned the sugar mills, removed the bronze, zinc, lead, copper, and other metallic parts of the machinery, and smashed into fragments the parts that were left. Some localities suffered the effects of repeated and violent bombardments; others were deliberately set on fire, from house to house, as in the case of Gerbévillers, in Lorraine.



Reduction of the Coal Supply

The condition in which the coal mines have been left by the Germans is such that after extensive repairs the output can scarcely be expected to exceed half that of the normal output of this region; whence it is evident that France's need to import coal from abroad, will be greater after the war, by at least ten million tons than it was before the war. The transfer of the coal mines of the Sarre region, while it will increase considerably the national output of coal, will do this only approximately to the extent of supplying the coal required by the Sarre region itself.

The mining expert selected by the French Government to inspect and report upon the condition of the mines in the liberated regious—Lieutenant-Colonel Weiss—has declared that in some cases it will take five years to put the coal mines in full working order. The most important of them have been flooded; the workers' houses destroyed; the buildings and equipment, both overground and underground, either carried off or demolished; and the local means of transportation made unutilizable and irreparable. In the few mining localities in which the Germans permitted the workers' dwellings to stand, they stripped the dwellings of all furnishings and made them uninhabitable.

Destruction of Buildings

The 1,223 "liberated" communes covered by the investigation of May, 1917, had a total of 50,754 buildings completely destroyed, and 52,043 partly destroyed. The terms "partly destroyed" and "completely destroyed," as used by the French authorities in this inquiry, have apparently been strictly interpreted, and no account taken of buildings which have undergone no more serious damage than broken window-panes and shell-scratches on the outer walls. But whereas in many cases some of the stones, bricks and wood in damaged and destroyed structures can be used again for building purposes, there are localities in which even this is not possible. At Gerbévillers, the mayor, Dr. Camus, assured me that the greater part of the heaps of building stones lying over that martyred village, have been so calcined by the fires with which the Germans destroyed the place, that they are unfit for

Stamped Metal Parts and Automatic Screw Machine Products

Years of experience have taught us that the best results are obtained in a modern plant, modernly equipped, by employing skilled workmen handling material of superior quality.

Production thus obtained submitted to rigid inspection insures accuracy which gives to every article manufactured in our shops this distinctive mark of superiority that guarantees satisfaction to our customers.

further use. In this small town with about two thousand inhabitants, Dr. Camus appraises the damage at fourteen million francs, basing the estimate on prices prevailing at the outbreak of the war.

The results of the investigation in May, 1917, have very recently been completed and brought up-to-date, at least in the form of approximations, by a committee of the Chamber of Deputies with M. Louis Dubois as chairman. According to the report of this committee there have been destroyed in all the devastated sections a total of approximately 250,000 edifices, and a somewhat larger number have been more or less seriously damaged. This figure thus represents a vast increase over the totals for May, 1917, and no small part of the increase is due to the fearful ravages wrought by the enemy in many of the larger cities near the firing line, or actually under German control. The figures for Arras, with a total of 4,907 edifices, show 1,311 in ruins, 1,227 partially destroyed, 1,499 damaged, and 870 fairly intact. Reims, with 14,000 edifices, has 12,000 destroyed, and of the other 2,000, damaged more or less seriously, only 500 are said to be readily reparable. At Lens, with 11,000 buildings, not one has remained intact, and few have even their outer walls standing; the sites of the local church and of the town hall are barely determinable.

In places like these, the mere task of removing the débris will require considerable time and labor. In contracts which were shown me for the cleaning up (*déblayage*) of Rheims, it is stipulated that navvies (*terrassiers*) shall be paid 2.50 francs per hour for ten hours per day, and in addition 10 francs per day as indemnity for the high cost of living. This makes a total daily wage of 35 francs, or approximately six to seven dollars a day.

Soil Made Useless for Agriculture

Apart from the damage to buildings (and it is interesting to note that Paris, as a consequence of air raids and the long distance guns, also had her share of the damage to buildings, inasmuch as 463 structures were destroyed or seriously damaged in the capital city), an important item is furnished by the literal destruction of the soil itself. In those sections in which fierce battles were carried on—as around Soissons, at the Chemin-des-Dames, on the plateau of Champagne, at Albert and at Bapaume—the trenches, zigzagging across the soil, the shelters and dugouts, the underground defences of re-inforced concrete, the shell craters—all these will make the utilization of the soil for farming purposes well-nigh inconceivable during many years to come. So thoroughly has the fertile upper soil been churned up, that no crop would grow. In the department of the Somme alone, there are 28,500 hectares (70,000 acres) in this condition; and in the devastated sections as a whole there are certainly not less than 100,000 hectares (247,000 acres) fit for nothing but possibly the planting of forests after the ground has been cleared, filled up and levelled. In a much larger area, which may possibly amount to three million acres, it will be necessary to clean up the soil, and to remove barbed-wire fences and similar obstacles, as well as the effects of four years of neglect. In many sections, the forests and orchards have been systematically burned, cut down, or otherwise destroyed by the Germans, notably in the Ardennes.

Industry Dismantled

Concerning industrial machinery and equipment in the devastated regions the report of the parliamentary committee gives interesting details. Many of the machines the Germans dismounted, labelled carefully, and transported to German plants engaged in the same branches of production, and there

ANNOUNCEMENT: FOLEY TRACTION RIMS
NOW AVAILABLE FOR EASTERN CANADA TRUCK OWNERS

THE MANITOBA BRIDGE and Iron Works, Limited, Manufacturers of Foley Traction Rims announce the appointment of **COMMERCIAL CARS LIMITED**, 88 Adelaide Street, East, Toronto, as Sole Representatives for Eastern Canada.

TRUCK OWNERS—With your truck equipped with Foley Traction Rims it will be available for service every day regardless of road conditions. They give 100% road efficiency.

FOLEY TRACTION RIMS are made of the highest grade electric crucible steel. They are indestructable and will out-last the life of your truck.

ARE INDISPENSABLE—Wherever Foley Traction Rims are in use Truck Owners have found them of incalculable value.

NOTE—Foley Traction Rims are patented in Canada. Infringements will be prosecuted.

DEALERS—The securing of an agency means a certain amount of sure business. Send now for full description: testimonials and dealer contract.

put them up again for use, in the methodical fashion to which they are accustomed.

The textile industries furnish a good illustration of the German practises. In the woolen manufacturing region of Fourmies (which does not lie in the zone of actual warfare) the association of woolen manufacturers has reported on the condition of 74 plants in this section. These plants consist of 55 worsted spinning mills, with 735,500 spindles, of which 651,500, or 88 per cent., have been destroyed; of 13 weaving mills with 3,550 looms, of which all have been destroyed; three woolen spinning mills, in which 75 per cent. of the spindles have been destroyed; two woolen weaving mills, with 100 looms, all destroyed; a jute spinning mill with 1,800 spindles, all destroyed; and a jute weaving mill with 70 looms, likewise all destroyed. It is furthermore reported that the Germans, during their occupation or just before their withdrawal, had destroyed or removed in all a million spindles producing fine woolen and worsted yarns, and that for the French to replace these machines will require three years.

Financial Estimates

The parliamentary committee estimates the amount of destruction to dwellings, at present prices, as 20 billion francs, an estimate which coincides with those made by several national associations of builders and architects. It is furthermore estimated by the committee that the furniture, household effects, linen, bedding, and the like, which has been destroyed or which has disappeared in the invaded sections, should be valued at least at five billion francs.

These figures take no account of public buildings, churches, public monuments, and obviously no money value can be fixed for such edifices as the Cathedral of Reims or of Soissons. As for paintings, sculpture, and other works of art susceptible of removal, many of these were carried off, but most of them may be traced to their present locations; for the Germans went so far as to arrange expositions of these works of art and to issue catalogs of them. It may therefore be an easy matter to enforce their restitution.

To put the war-ridden soil into something like its original condition is estimated as requiring not less than ten billion francs, without regard for lost crops or for future declines in the yield of the land.

The damage to mines and to industrial establishments throughout the devastated regions is placed at 20 billion francs. This includes mines, metallurgical establishments of all sorts, textile mills, manufactures of machinery and tools, breweries, sugar factories, distilleries, and, in general, all industrial establishments.

Finally, fairly complete and reliable figures have been obtained concerning public works and utilities—railways, tram lines, canals, bridges, light and power plants, etc.—and these indicate damages amounting to not less than nine and one-half billion francs.

Thus the estimated amount of all the above damages gives a grand total of 64,500,000,000 francs.

Rebuilding from Local Materials

Of the total number of approximately half a million buildings destroyed or damaged, a very large number were devoted to agricultural purposes. The typical French devastated town is not the industrial centre like Lille, but the village centre of a farming region, containing the homes of the farmers and their families, and of the local tradesmen and mechanics. Their homes will for the most part be rebuilt of the same material as before—of the materials obtainable locally. The farm houses and barns, of *pisé*, stone, bricks, with but little wood, will require no far-fetched materials as a rule. Although wood will be scarce and dear, it is improbable that concrete

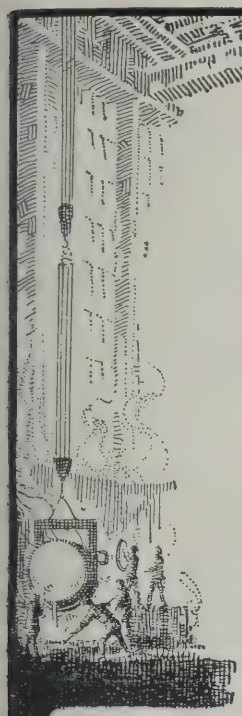
and steel will be used for other buildings than for the larger factories and shops. There will probably be considerable demand for standardized wood-work (doors and windows), despite the general French aversion to them, because of the urgency of the need for homes and the lower cost of standardized wood-work.

Cement for building industrial establishments will admittedly be in great demand. Before the war the total output of cement in France was three million tons a year. During the war it fell to less than one-sixth of this quantity, and it will be no easy matter to again raise the output to the normal level, or to increase it sufficiently to meet the new requirements.

Structural iron and steel will figure largely only in the industrial edifices, and there will be a great demand for bars for re-inforcing concrete. Whereas there will in general be little importation of the heavier building material, there will certainly be a large demand for the machinery and equipment of all sorts of industrial plants—especially textile mills, sugar manufactures, metallurgical plants, mines, manufactures of machinery and machine tools.



Big Mill for Calgary

Alberta Flour Mills, Limited, Are Proceeding With Erection of Plant in East Calgary

Among the important developments in the industrial field during the past few weeks, states the *Monetary Times* of Toronto, is the organization of the Alberta Flour Mills, Ltd., the stock of which is being sold by the Manitoba Finance Corporation. The company has under construction what will be a very large flour mill in Calgary, Alta. The new plant will have a capacity of 6,000 barrels of flour a day and the storage elevator will have a capacity of one million bushels. The capital of the company is fixed at $5,000,000. Of this sum $2,500,000 will be in the form of bonds, and this amount will be supplied from London, England, by a corporation known as the Investment Registry. The balance of $2,500,000 is in the form of common stock, and it is the intention of the directors to place all this stock in the prairie provinces, with the exception of such amounts as may be incidentally placed by the directors among personal friends in other parts of the world.

It was the original intention of the Alberta people who are interested in this enterprise, to secure practically every dollar needed for the purpose in the Province of Alberta. This was found impracticable owing to successive crop failures, and it was decided to endeavor to place at least $500,000 in the Province of Manitoba. The Province of Alberta has already, in spite of conditions which obtain there, subscribed a million. If Manitoba takes at the present time half a million, there will remain one million still to be sold, and it is expected that this will be distributed among the four western provinces. Vancouver is interested, since the city hopes that a considerable quantity of the grain ground in Calgary may be shipped through that port, and people there have volunteered, if given the chance, to push the project along.

The stock is being sold at $100 a share, 25 per cent. on application, 25 per cent. on allotment, and the balance within 90 days. Considerable of the work has been done on the mill and elevator. The site is on ten acres in east Calgary, and connection is made with all three transcontinental railways there. It is the expectation that the $500,000 worth will be placed in Manitoba within thirty days and that the campaign will be over before the selling of Victory Bonds begins. The president of the company is Mr. George Lane, and the vice-president is Mr. A. E. Cross, two well-known Alberta residents.

BETTER LIGHTING FOR FACTORIES

Good electric lighting speeds up production, reduces spoilage, prevents accidents and conserves man power. General requirements of good lighting are set forth and its economic advantages explained. A record of tests that were made in Canadian factories.

By Thomas F. Chantler.
(From "Safety Engineering.")

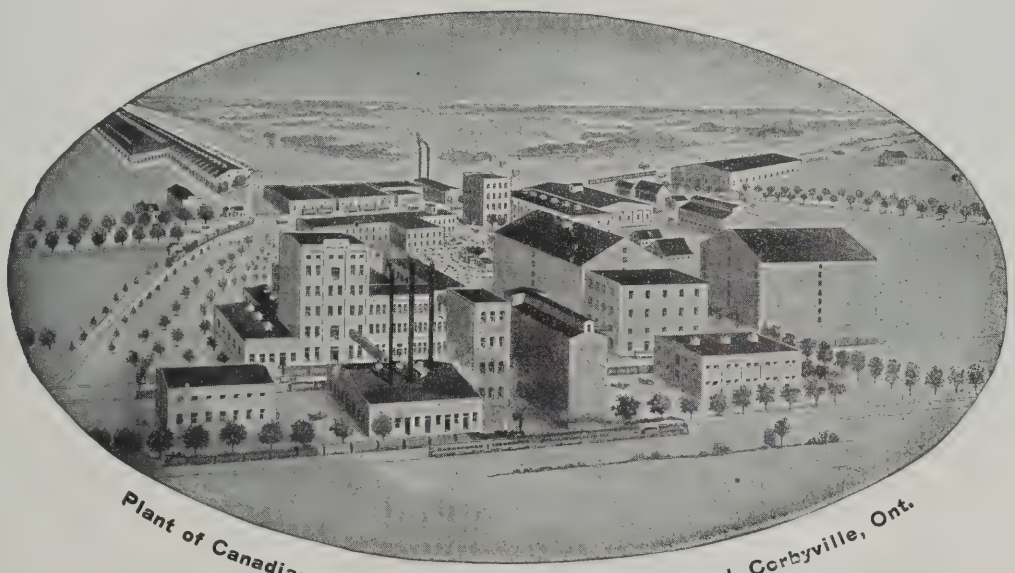
Without sight, manufacturing would be impossible. Without light man's efforts at manufacturing would be worthless. And with only a "dim, religious light" to guide his efforts man's manufactured product proves to be almost as much of a liability as an asset.

These are things so obvious that no manufacturer would care to confess that he had not known them always. Nevertheless, it required the repeated urgings of our Allies in the war for more and yet more speed in furnishing supplies to arouse employers generally to a recognition of the criminal extravagance of poor lighting in shop, factory, mill, mine and shipyard.

Four States, Wisconsin, New Jersey, Pennsylvania, and New York, already have lighting codes supported by the legislation necessary for their enforcement. And from the art of aiding man's efforts by truly good illumination a definite science of lighting is rapidly being evolved. Also insurance companies writing workmen's compensation policies are advocating good lighting as a safeguard against accidents. Scientific bodies are pointing out the injuries to the eyes and health of the worker traceable to poor lighting. Finally, it is being shown by facts and figures deduced from actual tests that good lighting actually does serve to speed up production, reduce spoilage, prevent accidents and conserve man power in manufacturing and industrial lines.

No Denying Importance of Question

Few men if any are in a better position to recognize the requirements of American manufacturing as a whole than the Hon. William C. Redfield, Secretary of Commerce, and he has been quoted as saying:



"I confess it seems to me somewhat surprising in this day that anyone should doubt the necessity of proper industrial lighting. Lighting of the very best kind has a double value in industry. It has, in the first place, a direct bearing upon the quality and quantity of output and it has, secondly, quite as important, perhaps more so to the community, a direct effect upon the man who does the work. If he must work under eye-strain, he not only cannot do as good work and can only do less work than otherwise he would, but he does it with direct injury to his own future working capacity. From a human standpoint, therefore, it is a social wrong not to provide ample light. From an industrial standpoint, the investment in light is one of the most sensible a manufacturer can make."

And when it comes to expressing the sentiments of labor itself regarding the workers' need for adequate lighting what could be more illuminating than this utterance by the venerable Samuel Gompers:

"Good factory lighting has proved a sure means of forestalling accidents to workmen, and I am glad that American industry is waking up to this fact."

But in addition there are what might be termed dollars-and-cents reasons why the manufacturer should do everything possible to supply his workers with the best illumination available. Good lighting has been definitely shown to contribute to the prevention of accidents and the consequent reduc-

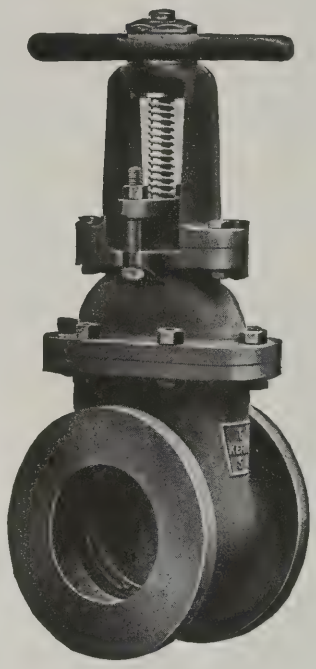
ALCOHOL

Plant of Canadian Industrial Alcohol Company Limited, Corbyville, Ont.

With a capacity of 450,000 (proof) gallons per month we are the largest producers of Alcohol in Canada.

Manufacturers of vinegar, perfumes, essences, pharmaceutical preparations, etc., are invited to write us for prices of Alcohol suitable for their particular line of business.

We make a special feature of contracting for the requirements of manufacturers for the year or season, thus providing not only a uniform cost but also a steady supply as needed.



Those who are using Duty Paid Alcohol in their manufacturing processes would do well to consult us with a view to using it "In Bond," thus avoiding the use of two-year-old Alcohol. Under the rules and regulations of the Department of Inland Revenue, newly made Alcohol may be used "In Bond." This Alcohol is much cheaper than two-year-old.

METHYLATED SPIRITS or Denatured Alcohol is sold only by the Department of Inland Revenue, Ottawa, Ont., but any other kind of Alcohol may be secured from us.

Eastern Sales Offices:
Hall Machinery Co., Sherbrooke, Que

tion in insurance company rates for workmen's insurance. President Butler, of the Travelers Insurance Company, says:

"Insufficient or improper illumination is a direct or contributory cause of many accidents in workshops. This is a proven fact which is recognized by the Travelers Insurance Company in its rating schedules under workmen's compensation practice."

Again, and referring to New Jersey, one of the States boasting a Lighting Code, Lewis D. Bryant, Commissioner of the Department of Labor, has been quoted as saying:

"If a workman is injured, and poor light is the cause, he will surely receive compensation. On the other hand, if a workman ruins his eyes by constant work under poor light so that he is incapacitated for further work, it will be difficult for him to obtain fair compensation. He is disabled because of his occupation just as surely as if he had lost an arm or leg at his daily task. It is the duty of every employer to provide good light as a guard against accidents and eye trouble."

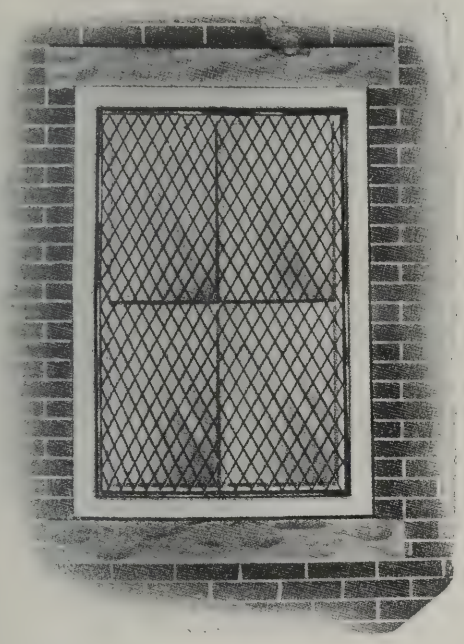
By way of substantiating the foregoing opinions regarding the need for better lighting it is pertinent to refer to the statements of R. E. Simpson, of the Travelers Insurance Company, in a paper presented before the Illuminating Engineering Society on October 10, 1918 :

"A survey of 91,000 accidents from the records of the Travelers Insurance Company for the year 1910 showed that 23.8 per cent. were due to improper or inadequate illumination."

The same authority explains that it is hardly possible that this percentage prevails at present, due to the progress in illumination, but he goes on to say:

"There is some foundation, however, for assuming that 18 per cent. of our industrial accidents are due to defects in the lighting installation. On that basis the services of 108,000 men for one year are lost anually, because the illumination provided is not adequate for the safety of the workman."

What constitutes good lighting? That, doubtless, is the question uppermost in the mind of the reader who has grasped the significance of the opinions and the figures given. And doubtless one's unaided answer to that question would be, "Light without stint." But the sun's light is without stint, so to speak; and we all know of the many instances when it is too intense and too abundant, is a definite source of pain and injury to the eye. So a more nearly correct definition would be: An equivalent of diffused daylight, both in intensity and color of lighting. But we still fall short of the mark. Daylight is of many degrees and varieties, some of which occasion almost as much eye-discomfort as direct sunlight.



When the Light is Ideal

Now it is generally conceded that the ideal lighting occurs on a cloudy day when light from the sun must pass through a screen of vapor and clouds before reaching us. So it would seem that Nature, herself, is at her best when supplying a *semi-indirect* form of lighting.

When, as on a clear day, the suns rays fall directly upon us Nature might be said to be supplying a *direct* form of lighting. And when man and Nature combine to have the direct rays from the sun reflected from outside a building through windows against which actual rays do not strike, an *indirect* system of lighting is obtained.

The lighting codes of New York, New Jersey, Pennsylvania, and Wisconsin all vary somewhat, one from the other; and other States as they come to adopt codes may make certain conditions peculiar to their own interpretation of the requirements. However, the general requirements of good lighting may be given simply and briefly.

1. There must be on all working surfaces, whether in horizontal, vertical or oblique planes, a steady light of sufficient intensity for all working requirements.
2. A light on areas and walls adjacent to the working area comparable in intensity to the light on the working areas.

HARRY F. MOULDEN, Winnipeg, Man.

(Note: When a lighted area is too sharply in contrast with darker surrounding areas the worker's eyes are taxed unduly every time he has occasion to look away from the lighted area, the eyes being required to focus violently in accommodating themselves to the transition.)

3. The light must be of a color and specular character suited to the purposes for which it is employed. (Note: An object is seen by the light it reflects, rather than by the light falling upon it. A white or light-colored surface reflects more light than a dark one. But all classes of work do not require the same intensity of lighting. Again, red and yellow light rays have greater penetrating power than blue rays, and that fact must be observed in lighting places like foundries having heavy cloudy atmosphere. But, on the other hand, the moulder requires less light than the tool maker. The actual lighting requirements according to the character of the work, may range from ½ to 15 foot candles.)

4. There must be freedom from glare and from glaring reflections. (Note: The meaning of glare can be suggested easier than it can be defined. According to the dictionary one is experiencing what is meant by "glare," as used in the terminology of lighting, when such conditions as these are to be noted: (1) To shine with fierce intensity, (2) to be unpleasantly brilliant or gaudy, (3) emitting an excessively brilliant light, (4) having a glossy, smooth surface, (5) a dazzling light. However, those definitions are not wholly above criticism. For example, the automobile headlight which dazzles, and at night may truthfully be said to "shine with fierce intensity, to be unpleasantly brilliant and to constitute a dazzling light." But when that same automobile headlight is viewed against a background of daylight it is not to be recognized by any such definitions. Also, there are conditions under which glare is present in sufficient degree to work injury to the eye without the mind being acutely conscious of its effect. Someone, too, has said that just as dirt is matter out of place glare is light out of place.)

6. The lighting equipment should comprise a system which is reliable, simple, easy of maintenance and reasonable in initial and operating cost.

Now the spirit and letter of those six stipulations are easily within the financial reach of all employers of labor, and the rewards to those providing truly good lighting are certain.

The Lighting Committee of the Commonwealth Edison Company, of Chicago, recently conducted tests to secure figures which would establish the value of good lighting in definite terms. Four of those tests have become, temporarily at least, classics in the annals of progress in illumination.

Tests in Iron Pulley Finishing Shop

This shop finishes iron pulleys, both large and small, and is some 40 by 80 feet in extent, giving an area of 3,200 square feet. As found, the illumination was largely by 60-watt lamps on drop cords, a few only being fitted with miscellaneous tin shades of the cheapest varieties. The consumption of electricity amounted to 0.27 watt per sq. foot; and the illumination therefrom averaged about 0.2 foot candle. But this light, of course, varied tremendously in intensity; one operator having something like 22 ft. cdl., while others groped about in a "spooner's" light of about 0.07 ft. cdl. The daylight effect, except on one or two machines, was negligible, the windows being few and dirty.

The installation the lighting committee installed consisted of 200 watt, reflector-equipped units mounted some 10 feet above the floor. The electrical consumption was increased almost 7 times, and the average illumination approximately 25 times.

The testing engineer's own records showed an average increase in production of 20 per cent. The proprietor also kept a set of records; and according to his figures the increase in production amounted to 35 per cent.

The cost of the improvement, with due allowance for depreciation, upkeep, etc., added 5½ per cent. to the monthly

payroll. In other words, from 20 to 35 per cent. increased production at a cost of 5½ per cent. of the payroll.

This shop measures 48 by 50 feet. Practically the only change found necessary had to do with increasing the size of the lamps, the equipment and layout of the lighting system being declared satisfactory.

Test in a Soft-Metal-Bearing Machine Shop

In this shop, to begin with, 25 deep-bowl reflectors were equipped with 100-watt lamps giving an illumination of 4.6 ft. cdl., the consumption of current being about 1 watt per sq. foot. The shop was run with this equipment, for one month, the management's regular records proving quite sufficient to show output accurately.

At the end of one month, the 100-watt lamps were replaced by 200-watt gas-filled lamps, raising the consumption of current to 2 watts per sq. foot. But because of the greater efficiency of the lamps the illumination was raised to nearly 13 ft. cdl.

It was the intention to revert to the original lighting intensity for the third month, and then back to the increased inensity for the fourth month. But after the second month's experience, using the daylight level of improved lighting, the management flatly refused to go back to the original equipment of 100 watt lamps. They held that the increase in their production as made possible by the improved lighting was vastly more important than the testing engineer's desire to secure entirely unbiased data.

The increased efficiency and production was determined by a study of eight operations. The increase ranged from 8 to 27 per cent., the average increase being 15 per cent.

The high percentage of increase secured through improved lighting is of particular significance in this instance, because the original equipment of 100 watt lamps supplied a measure of illumination held to be at least 20 per cent. superior to that of industrial lighting generally.

Test in Machine Shop Handling Heavy Steel Parts Used in Truck

This shop measured 40 by 58 feet. The same number of lighting units, reflectors and accessories were used for the improved lighting as had been employed originally. The only change was from 100 watt gas-filled lamps requiring a consumption of 0.6 watt per sq. ft. and having a lighting intensity of 3 ft. cdl. to 300 watt lamps consuming 1.7 watt per sq. ft. and giving nearly 12 ft. cdl.

The improved lighting resulted in an increase of from 6 to 14 per cent. in three operations, the cost of productive intensity being 1½ per cent. of the pay-roll.

Test in Carbureter-Assembling Shop

This shop measured 50 by 80 ft. In the work of assembling carbureters the operators handle rather small parts and make delicate adjustments. The management fully appreciating the importance of good lighting had installed equipment well above the average even before the test was made.

The old equipment comprised 100 Mazda lamps, principally of the 40 watt size giving an average illumination of a trifle over 2 ft. cdl. For the productive intensity runs, the 100 units were replaced by 29, nearly doubling the consumption of current, but increasing the intensity nearly six times.

This test was made just after the signing of the armistice, but despite the previous efforts of the management to speed production and the uncertainty regarding the need for continuing to speed production occasioned by the cessation of hostilities, the productive intensity of the shop was increased

12 per cent. Because the number of workmen was large and the rate of wage high, the increased production was secured at a cost of only 0.9 per cent. addition to the payroll.

The Candle as a Unit of Measure

Doubtless all are familiar with the term "candle power," but probably few aside from those having made a study of lighting are precisely informed as to the exact significance of that term. Nevertheless, the explanation is within the understanding of even the school boy and may be given in a few words.

When new light sources began to take the place of the candle it was but natural that their superior illuminating power should be expressed in terms of the candle familiar to all. Doubtless early comparisons were made by setting up the candle and the lamp in the line of vision and gauging them by means of the eye, the most natural direction in which to look at the illuminants being the horizontal. The strength of the new illuminants were rated as being the equivalent of so many candles. Thus when we say to-day that a lamp is of 10 candle power we really mean that its lighting intensity or strength in a horizontal direction is equal to that of a group of 10 standard candles. The one essential to remember in this connection is that the stated candle power of a lamp represents the intensity in one direction only, it does not indicate the total quantity of light emitted by that source.

The mean spherical candle-power of a lamp means simply the average of all the candle powers in all directions about that lamp. That is to say, a source giving 1 candle-power of light in every direction would have a mean spherical candle power of 1. Or if the intensity of light in different directions varied but the average of all was the equivalent of 1 candle in intensity, then this source, too, would have a mean spherical power of 1.

The foot-candle is the unit of measurement most intimately associated with the popular understanding of lighting. A foot-candle represents an intensity of illumination equal to that produced at a point on a plane which is 1 foot distant from a source of 1 candle and which is perpendicular to the light rays at that point.

How Light is Measured

A crude idea of the foot-candle of illumination can be obtained by considering the intensity on a newspeper being read by the light of 1 candle, the paper being held 1 foot away from the candle. Two candles would give 2 foot candles of light under similar conditions; 3 candles would give 3, and so on.

The lumen is the unit for measuring the quantity of total flux of light emitted by a source. This can be explained by imagining a sphere measuring 2 feet in diameter on the inside and painted black, so that light falling upon the inside surface of the sphere from a candle placed exactly at the centre will be absorbed and none of it reflected. Now if an opening measuring one square foot be cut in the sphere the amount of light that escapes is considered to be the unit of quantity, and is called a *lumen*. If 2 candles are used then 2 lumens of light will be emitted, and so on. By geometry it is known that the total surface of a sphere having a diameter of 2 feet is 12.57 square feet. Thus if the mean spherical candle power of a lamp is known we have only to multiply this value by 12.57 in order to obtain the number of lumens emitted by that lamp.

By the foregoing operations it is shown that the intensity of light falling upon 1 square foot of the inside surface of a sphere 2 feet in diameter and having a candle placed directly

at its centre is 1 foot candle. We also know that the quantity of light direct from the candle which falls upon 1 square foot of the surface of that sphere is 1 lumen. This gives us the important law that when 1 lumen is so utilized that its total light is spread over a 1 foot square surface, that surface is lighted to an average intensity of 1 foot candle. Through this relation the designing of a lighting installation is greatly simplified. Because once the number of square feet to be lighted and the required intensity of illumination are known, it is easy to determine how many lumens must fall on the working plane. To illustrate, should it be necessary to illuminate a working surface of 100 square feet to an intensity of 5 foot candles, 500 lumens must be utilized.

Facts the Man Interested in Better Lighting Should Know

The methods of artificial lighting have been mentioned previously in connection with Nature's way, but it will not be amiss to point out that lighting, to begin with, is either local or general. Sometimes, too, both systems are combined. The form of light-distributing may be either (1) indirect, (2) semi-indirect, (3) direct.

Indirect lighting screens source of light and allows only reflected light to reach the working plane.

Semi-indirect lighting screens source of light but allows a certain amount of light to diffuse through shade.

Direct lighting requires that a shade or reflector be placed around the light so that direct and reflected light are thrown on the working plane.

Diffusion of Light is Essential

Adequate diffusion is held to be absolutely essential to good lighting. That is to say, the light at any one point should come from a number of different directions so that shadows are soft and transparent. Also, the lighting must be in sufficiently large areas to occasion only soft shadows and at the same time be small enough in area to afford ample direct light. As a general rule, too, light walls and ceilings add to the general efficiency of the lighting, and save eye-strain by minimizing contrasts between working light and that which lies about it.

Daylight of Winter Seldom is Adequate for Inside Work

The outside light on a bright summer day has been estimated to equal the equivalent in intensity of 5,000 foot candles. Work is generally possible inside a building with a daylight factor of 1/10 of 1 per cent. or 5 foot candles. But British tests have shown that on the average December day the outside daylight does not exceed 750 foot candles even at noon. Hence on the basis of 1/10 of 1 per cent, the inside factor will be less than 0.75 foot candles during practically all daylight hours during the winter. It is estimated by the way, that the proportion of outside light which reaches the inside of a building through windows seldom reaches 10 per cent., and very frequently is as low as 1/10 of 1 per cent. at various points.

Light Required Should be Determined by Competent Authority

One thousand foot candles doubtless would be insufficient illumination for threading a needle if the needle be held against a steel-gray background. But if the needle be held against a white background, ½ foot candle light is ample. The man best equipped to determine the details of the lighting equipment is of course the man best informed regarding the available lighting expedients and requirements—the illuminating engineer, that is to say.

SALVAGING THE SCRAP HEAP

A good deal of attention is being given in up-to-date plants to the reclamation of materials and supplies that were formerly regarded as useless scrap, and which were sold at an insignificant figure. There are many instances of savings, secured by an intelligent study of this problem, which vary in value from a few hundreds to hundreds of thousands of dollars.

By Johnson Heywood.

(From "Factory, the Magazine of Management.")

After everything possible has been done to prevent making scrap, it becomes necessary to realize the greatest possible value out of such material as has found its way to the scrap pile.

This can be done in one of three ways, depending upon the product and the nature of the scrap:

1. A way may sometimes be found to utilize the waste material in the product.

2. New products may be added for which the scrap can be used as the raw material.

3. Steps may be taken to make the scrap worth more when they are sold.

The way one shop utilized its cast-iron chips and borings is an example of the first method. It had been the custom to dispose of this waste to the junkman, but when the price of No. 2 pig iron went to $48 a ton, and the borings brought only $8, even before freight was deducted, a serious attempt was made to remelt this scrap in the shop cupola.

It was soon found, though, that chips and borings thrown into the cupola burned up instead of becoming molten. All castings poured from a mix containing even 5 per cent. of such borings were either badly pitted or else filled with spots so hard that to machine them was impossible.

Handling Chips and Borings

The problem this shop faced, therefore, was how to heat the chips and borings slowly enough to cause them to melt, but not burn. Borings could, of course, be heated separately from the pig and scrap iron in a small blast furnace, but the additional cost of this double handling made the method inadvisable.

It was decided to put the borings under pressure and press them into a solid mass resembling an ingot, so an experimental press was rigged up. A hollow steel container about 20 inches long, with an inside diameter of 6 inches, and open at both ends, is secured to a movable slide, which keeps the container always centred below the ram which is attached to the headblock. A steel slab, 1½ by 7 by 15 inches, in one end of which is a circular opening, 6¼ inches in diameter, is so placed on the ram-cap of the press that either the opening or the solid end may be slid under the container.

This container is charged by means of a sheet-metal hopper which contains several hundred pounds of chips and borings. The flow is actuated by gravity and controlled by a simple sliding gate. After the container has been filled, a small quantity of salt water is added and the contents rammed by hand. Pressure of approximately 6,000 pounds to the square inch is then applied. When compression has ceased the pressure is removed, the steel slab on the ram-cap moved so that the opening in the slab is directly below the opening in the container. Pressure is again applied and the borings are forced out of the container through the opening in the slab to a receptacle below. The salt water causes

rapid oxidation of the iron and in 12 hours the borings are dry, the mass hard and in a shape that is easily handled.

Borings in this form were made the object of several experiments, and a mix containing 25 per cent. of pressed borings was poured with excellent results.

From this small and rather crude arrangement a 50-pound block is pressed every two minutes, or approximately seven tons a day, at a total labor and expense cost of $1.10 a ton. When this method was first put into effect, loose borings brought only $8 a ton. Therefore, considering the total cost to be $9.10 a ton, we have the following cost of the new mix containing pressed borings.

In an average daily "pour" of 30 tons, there is used:

55% No. 2 pig iron	16.5 tons at	$48 00	=$792 00
25% pressed borings	7.5 tons at	9 10	= 68 25
20% scrap iron	6.0 tons at	15 00	= 90 00
100%	30.0 tons		$950 25

Prior to using the pressed borings, the mix contained:

60% pig iron	18 tons at	$48 00	=$864 00
40% scrap iron	12 tons at	15 00	= 180 00
100%	30		$1,044 00

This gives an average daily saving of $93.75 by this simple plan.

Widely different in method but the same fundamentally is the way one automobile manufacturer used the packing cases in which some parts of his car are received. When he realized the great amount of good lumber being thrown out daily after these cases were unpacked, he drew up a careful set of drawings and specifications, and demanded that his supplier make all further cases to meet his needs.

He made slight changes in the dimensions, insisted that the cases be put together with screws instead of nails, and even specified the size of screws to be used and the exact location of every screw hole. When the accessory supplier received the specifications covering the cases, he agreed to ship in them but at a considerable increase in price.

Putting Boxes to Good Use.

The automobile maker was willing to pay extra for them, for by simply disassembling the packing cases, he is now able to use the sides, tops, and bottoms for floor boards for his cars without performing an operation on them. They fit even to the screw holes and the screws come with them. Thus he not only is saved the expense of making the floor boards but does not have a lot of practically worthless packing cases to dispose of.

In a hat factory waste ribbon is now used to take the place of material that formerly was purchased.

After the band of ribbon is put around the crown, a bow is sewed on the left side as a finishing touch. This requires two kinds of ribbon—what is known as 11-line and 12-line—one for the banding and the other for the bow.

Ribbon for the bands comes in rolls of approximately six yards, which leaves over a piece from four to six inches long on each roll which ordinarily is either thrown away or collected and sold for scrap.

Investigation showed that this piece could be used in making the cross-piece of the bow in place of the bow ribbon which was formerly used. Since a roll of ribbon bands a dozen hats, it is now possible to use the waste piece on one out of every four hats. In this hat factory, which turns out a normal production of 200 dozen hats a day the year

round, the saving is about 6,000 yards of bow ribbon in a year.

In some instances material is so completely wasted that the scrap or waste is not even visible. The sewer or the river is the scrap pile.

That is particularly true in those industries using acids, chemicals and sundry materials of that sort. The savings to be made by reclaiming them is often well worth while because of their ordinarily high cost.

Waste of Enamel

A recent experience in an enamelware factory illustrates quite forcibly the undeveloped possibilities that often exist.

It was noticed that after the second coat of enamel had been applied, a girl wiped, with a wet sponge, the beaded edge of the various articles coated, so as to make it possible to apply an enamel of some other color on the bead.

The sponge was continually rinsed, and the enamel that had accumulated on it allowed to run to the sewer.

To prevent this, separate pails filled with water are now given to each operator, with instructions that she rinse her sponge in the pail. Several times a day the contents of the pails are poured into a larger receptacle. The enamel settles to the bottom, making it easy to siphon off the water.

A test was made for several weeks and it was found that 2.87 per cent. of the enamel used was reclaimed in this fashion. Furthermore, the enamel was ready for immediate reuse. It loses none of its properties.

Such a method is applicable to many industries. In fact, one superintendent says that in his business running water and the sewer are the greatest encouragers of material waste.

Quite similar is the saving of ink made in some printing plants. It may be worth telling to show how nearly universal the method is.

In large printing establishments the ink is "dipped" out of cans and applied to the ink plate of the presses. This "dipping" process almost invariably leaves a fraction of the ink, which is of a heavy consistency, in the can, around the sides and on the bottom. The cans can be soaked in a solution, which in turn is poured into a concentrating tub or larger can. When the ink has settled to the bottom the solution can be poured off and the ink used.

Intensive Study Brings Results

Usually a little intensive study of the product, keeping in mind the waste, will show many ways of utilizing the waste. For example, there is the tinware manufacturer who punches the spouts for tea-kettles from the odd-shaped pieces of metal that come from the blanking presses. This same plant had been cutting sheets of metal into strips to bind its export cases, while at the same time strips made in the plant were being baled and sold as scrap, as described in the last article.

In a wagon factory a sawyer stood all day at his cut-off saw, making short pieces of wood out of long ones for spokes. In another part of the plant another man was cutting other long pieces into very short ones for another purpose.

The first operator could cut very few of his pieces exactly without waste. Every night the janitors carted out hundreds of short ends to the boiler room. And all the time these short ends could, depending on their length, have been used for any of a half-dozen parts that other sawyers were cutting from long lengths. This is not an uncommon occurrence elsewhere.

To-day each sawyer is given a list of the length of pieces used throughout the shop and he plans his cutting of each

length with this in view. Practically nothing goes to the furnace now but sawdust and pieces an inch or two long.

It must be remembered, however, that sometimes it costs more in labor to use the odd left-over pieces of material than they are worth. This is easy to determine if the concern has a proper cost system.

Frequently it is desirable to take on a new line of product solely to use up the odd scraps of material that cannot be used in the principal product.

A glove maker, for instance, found that no matter how carefully his cutters planned to use up the skins, it was impossible to avoid leaving over great numbers of small pieces that could not be used in gloves. So he now makes them up into leather penknife cases, watch covers and small change purses and gets a higher price for them per square inch of skin than he gets for his gloves. Formerly these scraps of skin had absolutely no value.

A counterpane manufacturer cut from each corner of his counterpanes a nearly square piece of cloth, containing about 70 square inches, so that the counterpanes would fit around the bedposts. That is 280 square inches for each unit of product and amounts to many hundreds of dollars a year in raw material. The corners were formerly sold to paper mills.

A few cents labor on each now turns them into babies' bibs and they bring nearly 100 times as much a pound of material as he formerly received from the paper mill.

Putting Wood Waste to Use.

Farm implements and butchers' blocks may seem to be products too diversified to go well together; yet a farm implement manufacturer gets a handsome price for his wood waste in the form of blocks. The wood is all in very small pieces of high quality hardwood. These pieces are covered thoroughly with glue and compressed in heavy presses to make the butcher blocks.

Some furniture manufacturers use short ends and scraps of wood to make children's tops, alphabet blocks and other wooden toys. One showcase concern has a waste of a great deal of broken glass and small pieces left over after cutting. This is used to make leaded glass fronts for bookcases, as well as windows. There is as much profit in these leaded panes as in the regular product.

It is perhaps trite to refer to the often mentioned outlets the meat packers have found for the hair, hoofs and other wastes incident to manufacturing meat. But the fact remains that nothing which comes into the packing plants as raw material leaves as waste or scrap. It is all finished product which sells at a good price, whether it be lamb chops, fertilizer, porterhouse steak, hair mattresses, sweetbreads or violin strings. It might pay any manufacturer to visit a packing plant in the hope that he would be inspired to see new ways to utilize his waste materials.

The opportunity for taking on new lines of product to match the material wasted in making the existing one is present in nearly every industry. The trouble is that most manufacturers cannot be expected to know all about every other product different from his own that finds a sufficient demand in the market.

Therefore it frequently pays to call in outside help. A few hundred dollars spent for the services of a consulting chemist will frequently result in finding a use or a profitable outside market for a seemingly useless scrap or by-product.

A gas company, for example, had a waste liquid analyzed and found it to be the basis for the new high explosive, TNT, and worth several dollars a pound. It had been going down the sewer.

GLOBE

Made in Canada by

A tanner had been allowing a waste product to go into the river until a chemist told him that it was a coagulant which is used in filtration plants.

Industrial engineers, too, are often able to point out uses for scrap because of their familiarity with other industries and their knowledge of the raw materials used in most products.

Selling the Scrap

This brings us to the third method of salvaging—that is to sell the scrap for the most that it will bring. As just shown, it is sometimes possible to find that the, to you worthless scrap is the valued raw material of another industry. That means that by selling it direct to those who need it, it is often possible to get a considerably higher price than the junkman will give.

For instance, spring steel of high quality is an expensive material to throw away. Automobile springs are pointed by cutting two triangular pieces from each end. This waste amounted to many thousand pounds a year, which as scrap brought comparatively nothing.

It happened that this spring maker employed an industrial engineer who had had experience in a farm-implement plant. He suggested that these triangular pieces of spring steel could be well used for the teeth of spring-tooth harrows. Negotiations were opened, resulting in a permanent agreement that the harrow concern would take the entire output of spring steel scrap. It not only served the purpose but the shape of the pieces saved considerable cutting and other labor in the harrow plant. This is one way to realize a higher price on scrap that must be sold.

A good deal of attention is being given in up-to-date plants to the reclamation of materials and supplies that were formerly regarded as useless scrap and which were sold at an insignificant figure. There are many instances of savings secured by an intelligent study of this problem, which vary from a few hundred dollars in smaller plants up to the hundreds of thousands salvaged annually by some of the larger industries.

It is safe to say that no plant is entirely free from a constant accumulation of miscellaneous "junk," such as discarded tool steel, wornout shafting, broken castings, bolts and nuts with bruised threads, and a thousand and one things which are cast aside because they do not serve any useful purpose in their existing condition. An examination of the typical shop usually shows piles of such discredited articles lying under machines and in out-of-the-way corners, where they sometimes remain unmolested for years. Also many storerooms are simply junk piles of obsoleted or worn-out tools and jigs.

How Junk is Handled

One plant has solved this problem by establishing an enclosure near the storeroom, where all discarded articles are delivered before any disposition is made of them. No foreman is allowed to retain in his department any tools, equipment, materials, or supplies which are not serving, or capable, in their existing form, of serving some necessary useful purpose.

All such articles are sent to the scrap room, where they are examined by the master mechanic. He determines their value and decides what can be salvaged and what must be disposed of as scrap.

The plant operates a repair department, where a number of machine tools are installed. Damaged bolts are cut off, or turned down or rethreaded; discarded pieces of shafting are selected for work requiring smaller diameters; broken drills are cut off and repointed; and an endless number of other articles are converted into useful forms.

Here again judgment must be used, for it is easily possible to spend more on reclaiming the scrap than the tool would cost new. A simple formula will show wheher it pays to rework old tools and supplies of this nature. It is: If the labor cost of reclaiming, plus the scrap value of the material, is greater than the cost of new tools or supplies, it does not pay.

Materials and supplies which cannot be reclaimed if sorted out can usually be sold at prices much above those which could be obtained for miscellaneous unsorted scrap.

This plan of classifying scrap yields a high return often. Take rags, for instance, which are readily salable to paper mills. Some kinds of selected rags are worth four or five times what the same rags are worth mixed with others. On one day this year, for instance, the quotation on "new shirt cuttings" was $12.25 per hundred pounds; "blue cottons," $8.25; while mixed rags sold for about $3.

Waste paper is another instance. When certain grades of waste paper sell at from $1.50 to $6 per hundred pounds, the same papers mixed sell at 65 to 75 cents.

In the metals the same holds true. Tool steels worth several dollars a pound will bring but a few cents if mixed with other grades of steel and iron.

As a low grade of common labor suffices to sort out scrap, it is usually well worth the expense involved. Of course it is well to consult trade papers or those conversant with the trade to determine just what classification and selection of scrap should be carried out.

In nearly any plant it is worth while to study the scrap pile closely and decide which of the three methods of getting a higher price for scrap shall be used. Often, in fact usually, all three may be used successfully to yield dollars.

Promoting Good Feeling

J. A. Marven Co., Limited, of Moncton, N.B., Believe in Giving Employees Good Time

An outing in which over two hundred of the employees of the J. A. Marven Co., Limited, and the Havelock Mineral Springs Co., Limited, of Moncton, N.B., participated, was held at the Marven Farm, near Anagance, on September 15. The party went to the farm by rail and spent a most enjoyable day. Dinner and supper were provided by the company, and a programme of sports was indulged in.

In replying to a vote of thanks, Mr. Marven referred to the good feeling that prevailed between the company and its employees. "It has been especially gratifying to me," he said, "during these busy months, to note the earnest endeavor of each and all of you, to give his, or her, very best, in the interest of the J. A. Marven Co., Ltd. I am proud of the spirit of hearty co-operation, evidence of which I see every day in our plant, and which I know, not only exists in the manufacturing departments, but throughout the various branches of our business, the engineers, electricians, shippers, delivery men and the office staff, as well as our very efficient superintendent and sales force. I wish to take this opportunity to thank you one and all. I hope this is only the beginning of many such happy gatherings, and that next year we may be able to arrange another such outing."

Among the Industries

Under this heading are published items of news of current interest concerning the activities of Canadian manufacturers. Information about changes of interest, enlargement of plants, and plans for future developments are welcome, and are published free of charge, provided they should not be properly classified as advertisements

ALBERTA.

Edmonton.—The Massey-Harris Co. and the J. I. Case Threshing Machine Co. have taken out permits for the erection of new warehouses.

BRITISH COLUMBIA.

Murrayville.—The Murrayville Toy Co. propose to make extensions to their plant.

New Westminster.—Ratepayers of New Westminster have approved of a free site for the Western Canada Cordage Co., a concern composed of returned soldiers, and the company will immediately proceed with building operations. This is the company to which the Provincial Government, acting upon the recommendation of the advisory board of the new Department of Industry, recently authorized a loan of $200,000 from the $2,000,000 fund which was created by legislation passed at the last session of the Legislature. Tenders for the new buildings will be immediately called for. The company is capitalized for $300,000, of which $100,000 is subscribed by returned men. Each shareholder holds the same amount of shares and each has but one vote. The shares are held on the profitsharing plan.

Orchard City.—The Orchard City Evaporator have purchased the aerated water manufacturing and bottling plant of Western Canners, Limited.

Princeton.—It is stated that work will start shortly on the erection of a mill and concentrating plant for the Canadian Copper Corporation at Allenby, at a cost of about $200,000.

Vancouver.—The Canada Western Woollen Mills, Limited, have been incorporated with a capital stock of $200,000. It is proposed to produce worsted yarns, blankets, rugs and flannels at the start and later to manufacture cloths, etc. The company has been primarily incorporated with the idea of employing returned soldiers and having them become stockholders. The president is Gordon Jonah, of Jonah, Prat Co., Limited, gents furnishings, Vancouver, and the general manager, J. L. Clark, a woollen manufacturer of thirty years' experience.

The Maple Leaf Iron Works are building a new machine shop at 425 Alexander Street.

The Pacific Box Company have started the manufacture of pails.

It is understood that a plant to manufacture and assemble marine machinery will be located on Burrard Inlet on water frontage adjoining P. Burns' packing plant. Estimated cost $1,000,000.

The Gregory Tire and Rubber Co., Ltd., of Akron, Ohio, are having plans prepared for the first unit of the large factory which they propose to erect. The building will probably be two stories of reinforced concrete construction, 200 feet by 80 feet.

White Rock.—The White Rock Packing Company will shortly commence operations, devoting attention principally to the canning of crabs by a special process.

MANITOBA.

Winnipeg.—The Red River Paper Mills, Ltd., have been granted a charter by the Provincial Government, and will probably construct a new mill soon.

The Burgess Battery, Ltd., have opened a factory at 701 Wellington Avenue for the manufacture of dry cell batteries. The head office of this company is at Madison, Wis. L. R. Baker, who was formerly associated with the Canadian Dry Cell Co., has been engaged as manager of the new plant.

NEW BRUNSWICK.

St. John.—The Corona Candy Co. is planning to enlarge its plant.

NOVA SCOTIA.

Halifax.—The completion of buildings for the Halifax Shipyards is being pushed ahead at a great rate and in the meantime excellent progress is being made with the keels already laid for steel freighters for the Government programme. The company has four building berths and is also equipped to carry out all kinds of repair work, for which it gets a great deal of business.

Sydney Mines.—It is announced that the Nova Scotia Steel & Coal Co. will shortly proceed with the erection of a by-product plant, costing over $2,000,000. The erection of the new ovens will mean a further enlargement of the present plant and the necessity for the erection of an additional blast furnace.

ONTARIO.

Belleville.—Ruttan & Ellis' planing mill and factory were badly damaged by fire on September 24, the loss sustained being three or four thousand dollars.

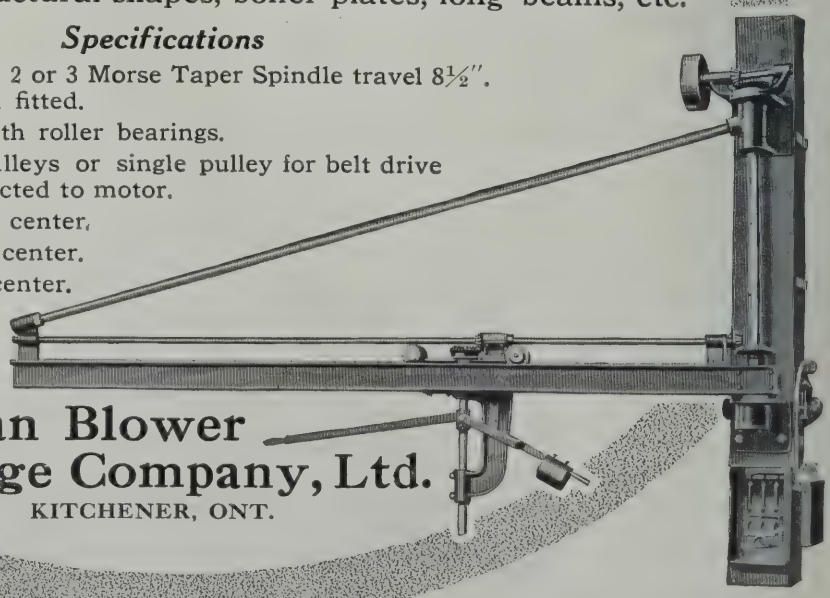
Brantford.—A building for the purpose of manufacturing small motors and electric fans will be put up in Brantford by the Robbins & Meyers Co., of Springfield, Ohio.

The Brantford Computing Scale Co. will make additions to their plant.

Contract has been let by the Slingsby Co. for additional buildings at an estimated cost of $200,000.

The Robbins & Meyers Co., Springfield, Mass., will locate its Canadian plant at Brantford, where it recently purchased a site of ten acres and will erect a plant to employ 350 hands. The company manufactures small electric motors and fans, etc.

The Brantford Scale Co. has awarded a contract for erection of an addition to their present plant. Plans are being prepared to double the capacity of the plant for further additions.



Built for Service

The Canadian Radial Drill is designed particularly for work in structural shops. For reaming and countersinking large surfaces such as structural shapes, boiler plates, long beams, etc.

Specifications

Spindle 2-3-16" diameter No. 2 or 3 Morse Taper Spindle travel 8½".
All gears accurately cut and fitted.
Carriage wheels equipped with roller bearings.
14" x 14" tight and loose pulleys or single pulley for belt drive to motor, or direct connected to motor.
15 ft. beam will drill to 13' 6" center.
12 ft. beam will drill to 10' 6" center.
7 ft. beam will drill to 5' 6" center.

At the top!

THAT'S where Butterfield Taps have been for many years—in the very forefront of leadership in quality and highest in the estimation of expert machinists.

Butterfield Taps

always do their work well. They assure both speed and accuracy, being made from the highest grade of tool steel, and always absolutely standard in gauge. When you buy taps, look for the name "Butterfield" on the shank. If it's there, you can buy the tool, and put it to work in the complete assurance that it will do its work unfailingly.

MADE IN CANADA BY

Butterfield & Co. Inc.

Rock Island, Quebec

It is stated that the Cockshutt Plow Co. will make extensive additions to their plant at an estimated cost of $100,000. Construction has commenced on an additional storage warehouse and a new experimental building.

The Dominion Steel Products Co. has announced that, on account of objections by Mayor Macbride against the closing of Leonard Street for a large extension of the company's plant, the firm has decided not to go on with the contemplated work.

Chatham.—The springs building at the plant of the Dowsley Spring & Axle Works was gutted by fire on September 11, with a loss of over $50,000. The building was a one-storey brick structure, 400 feet long. It will be restored at once and a contract has been let for the purpose.

Dundas.—Alexander Motherwell of Canada, Ltd., are making extensive improvements and enlargements to their plant. Two large grain storage bins are being constructed to the rear of the plant and considerable new machinery is being installed. Enlarged capacity of plant, ten cars per day.

Dunnville.—Canadian Engines, Ltd., manufacturers of stationary and portable gas and gasoline engines, grain grinders and saw frames, who were practically closed down during the war, have resumed operations and are taking on a full complement of men.

Fergus.—Beatty Bros., Limited, manufacturers of barn equipment, plan extensions to their factory to cost around $35,000.

Ford City.—The Imperial Oil Company's new distributing plant is almost completed. From this plant practically the whole of the western peninsula of Ontario will be supplied with oil.

Fort Frances.—It is stated that negotiations are under way for the establishment of a plant by the International Insulation Company.

Galt.—A branch factory for the manufacture of ladies' and girls' coats, under the name of the York Manufacturing Co., has been located here by Mr. A. Goldhamer, of Toronto. Machines have been installed in the loft of the Buchanan Block on Mill Square.

Goderich.—The Convertible Tractor Corporation, of St. Paul, Minn., contemplate the erection here of a plant for the manufacture of their tractor attachments.

Guelph.—Contracts have been let recently for additions costing $40,020 and $50,000, respectively, to the factories of the International Malleable Iron Co., Limited, and the Guelph Worsted & Spinning Co.

Hamilton.—In connection with the erection of a plant for Poitts & Spencer, Limited, contracts have been let for the construction of one four-storey reinforced concrete factory, 56 x 146 ft.; three buildings, 63 x 362 ft., 123 x 144 ft. and 81 x 62 ft., respectively, and an office building 62 x 45 ft.

The T. Eaton Co. are ereting a factory building costing $100,000 on Hughson Street North. A $15,000 building is being put up by the Smart-Turner Machine Co.

Contracts have been let for a $27,500 addition to the factory of the Frost Steel & Wire Co., Limited; a $12,000 addition to the plant of the Burlington Steel Co., Limited; an $8,000 addition to the factory of Meakins & Sons, and a $23,000 addition to the factory of the Dominion Sheet Metal Co., Limited.

Kitchener.—Permit for the erection of a two-storey felt factory, 100 x 145 feet, has been granted to the Ames-Holden Company.

A B. Pollock Mfg. Co. will build an extension to their plant.

The Lang Tanning Co. will erect two warehouses at an estimated cost of $24,000.

Negotiations are under way between W. N. McEachern and Sons, Ltd., house builders, and a number of manufacturers in this city to have from twenty to thirty houses built this fall in each of the five wards of the city.

Mimico.—As a result of a series of conferences between the Goodyear Tire and Rubber Co. and the Mimico Housing Commission, twenty new brick houses will be built under the provincial scheme on Murrie Street, and tenders will be called for immediately. The launching of a more comprehensive programme along similar lines is being contemplated for 1920.

Midland.—The Midland Whitewear and Costume Co. contemplates additions to factory and installation of new machinery.

Niagara Falls.—Contracts have been let for a $60,000 factory for the Niagara Wire Weaving Company.

Orillia.—The head office of Carriage Factories, Limited, which has been located for some time in Toronto, has been moved here and is now to be found in the Tudhope Carriage Co.'s building.

Oshawa.—About a mile of new sidings will be built to furnish shipping facilities for General Motors of Canada, Ltd.

A plant may be established here by the Ibex Tire & Rubber Co. of Canada, Limited.

The Pedlar People, Limited, are adding five new buildings to their plant, these being of steel construction with brick walls and concrete floors.

Owen Sound.—Lee's Mattresses & Cotton Products Co. is the name of a new company which starts operation in October. The company will make a full line of mattresses, awnings and tents and later will turn out re-covers for auto tops. The plant will be located in the two upper flats of David Rutherford's carriage works and will start in a small way. Messrs. Charles and Percy Lee are the promoters.

Petrolea.—The Board of Trade, assisted by Mr. E. Hyatt, has succeeded in getting another industry. Mr. Frank A. Halstead, of Port Huron, has purchased the Stevenson boiler works, and will remodel it for the manufacture of soaps and greases. The concern will employ 25 to 40 hands.

Renfrew.—The Renfrew Refrigerator Co. will construct immediately new additions which will double their present floor space.

St. Thomas.—The St. Thomas Cabinets, Ltd., will establish a factory to manufacture gramaphone cabinets.

Sarnia.—The Sarnia Woollen Mills Co. propose to erect a store and office building at a cost of $15,000.

The International Bushings Co., of which C. E. Calvert, Toronto, is president, will erect a plant in the near future.

The Loughead Machine Shop here has been purchased by the Seagrave, Ltd., manufacturers of motor trucks and firefighting apparatus. The new concern, which has several establishments

in the United States and Canada, will be capitalized at $200,000, one-quarter of which will be open to local investors.

Toronto.—The Anchor Cap Company, Brooklyn, have commenced construction of a factory on Wallace Avenue, at an estimated cost of $45,000.

The Quaker Candy Co. have obtained a permit for an addition to their factory at 420 Queen Street.

The Toronto Wool Scouring Co., Limited, have recently removed their plant from Lake Street to the former Reinhardt Brewery Building on Dundas Street at the Don. The new quarters afford greatly increased production, the capacity being 15,000 lbs. of wool per day.

The Canadian John Wood Manufacturing Co., Limited, which purchased a plant on Hillingdon Avenue, adjoining the Grand Trunk Railway, expects to start production this month. The company will manufacture all types of welded steel tanks and containers by both the electric and oxy-acetylene method.

A factory and warehouse costing a quarter of a million dollars are being erected by the Northern Aluminum Co., Limited, 158 Sterling Road.

An extension to their present plant in Weston is being made by the Canada Cycle and Motor Co.

The Sunbeam Chemical Co. of Canada, Limited, a branch of the Sunbeam Chemical Co., Chicago, are opening a plant at the corner of Lombard and Jarvis Streets for the manufacture of dyes, dye products and disinfectants and will employ forty hands.

Trenton.—Repairs are to go ahead to the Cold Storage Building to put it into shape for a paint factory. It is proposed to manufacture from the ore found in Ontario, and will include the full process of crushing, grinding and mixing. E. James and W. W. Young, negotiating with an established paint concern at Montreal, are the interested parties.

Walkerville.—Contracts have been let for a $65,000 branch plant for the American Auto Trimming Co., Detroit, and for two additions costing $500,000 for the Peabody Sales Corporation, Limited..

Windsor.—The Peninsular Machine Co. and the Helbring-Wright Chemical Co. of Detroit, plan to establish branch plants here.

The Fisher Body Co., Detroit, will build a five-storey factory for the manufacture of closed automobile bodies, which will employ 200 men when completed. The company has a plant at Walkerville, Ont., where it manufactures open automobile bodies. The new plant will cost $350,000. A by-law has been passed granting a ten-year fixed assessment of $10,000.

The Champion Spark Plug Co. of Canada is erecting a $60,000 extension to its plant.

Brantford.—The latest local industry to announce an extension is the Brantford Oven & Rack Co., which will double its plant, owing to increased demand for its output.

PRINCE EDWARD ISLAND.

Charlottetown.—Bruce, Stewart & Co., Limited, have let the contract for a new machine shop.

QUEBEC.

Calumet.—The North American Magnesite Company, Limited, have let contracts for a plant to cost $100,000.

Grand Mere.—The Laurentide Co. have decided to install three more grinder units, each consisting of one 2,800 horse-power motor directly connected to two magazine grinders. The ground wood building will be extended for the purpose. The new grinders will increase the capacity of the groundwood department to a total of about 400 tons, air-dry weight, of groundwood pulp per day.

Montreal.—An addition to the plant of the National Breweries, Limited, will be erected at a cost of $450,000.

Bovril, Limited, 27 St. Peter Street, plans the erection of a factory.

Tooke Bros., Limited, are erecting an addition to their factory at 302 De Courcelles Street..

Contract has been let for a $50,000 factory for the Anglo-Canadian Wire Works, Limited.

B. J. Coglin Co., Limited, 2050 Ontario Street, plan the erection of an addition to their plant. .

Additions to mills and bins at a cost of $160,000 are being made by Dominion Flour Mills, 302 St. Ambroise Street.

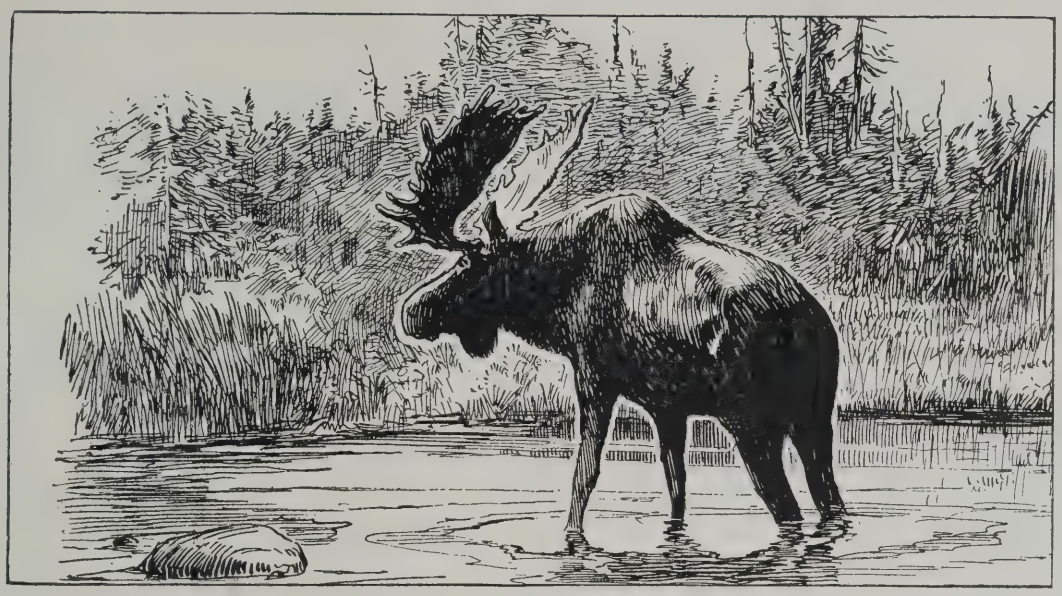
The Montreal Locomotive Works are erecting several additional buildings at their plant at Longue Pointe.

Quebec.—Contracts have been let for a $35,000 extension to the factory of John Ritchie Co., Limited, 496 St.. Valier Street, and $20,000 factory for Imperial Tobacco Co. of Canada.

St. Johns.—Plans have been prepared for an addition to the plant of the Belding Paul Corticelli, Limited.

Sherbrooke.—A factory costing $240,000 will be erected by Julius Kayser & Co., Frontenac Street.

The Connecticut Cotton Co. have under consideration the erection of an addition to their plant..



Three Rivers.—A large plant will be erected here by the Lava Cement, Clay and Silicate Products Co.

The International Paper Co., Ltd., is erecting a plant, consisting of eighteen buildings. Total estimated cost, $6,000,000.

SASKATCHEWAN.

Moose Jaw.—The Robin Hood Mills have let the contract for an office building to be erected on High St. and Fifth Ave. West. The building will be 40 by 80 feet, three storeys with basement.

Recent Trade Enquiries

A List of Enquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

137. Reconstruction.—A firm with reliable business references has been established in Manchester for the purpose of representing Canadian interests in Europe. They have on their staff fully qualified engineers, travellers, and salesmen, and are regularly going back and forward to the continent for the purpose of securing contracts for reconstruction work.

138. Pianos, Organs, etc.—A Glasgow importer asks to be placed in touch with exporters of the above.

139. Bolts and Nuts.—A Glosgow firm asks to be placed in touch with exporters of the above.

140. Wire Nails.—A Glasgow firm asks to be placed in touch with exporters of the above.

141. Kraft Brown Papers.—A Glasgow firm asks to be placed in touch with exporters of the above.

142. England.—A London firm in a position to sell large quantities of chocolates of all kinds, and cocoa, wish to get into touch with Canadian manufacturers able to fill orders.

143. Metal and Engineering lines, Foodstuffs, Chemicals, etc.—A London firm of importers and exporters, with branches in China, India, and the United States, who are mainly interested in metal manufactures, machinery, railway equipment, and engineering supplies, but also maintain a department for handling foodstuffs, chemicals, and raw materials, would be glad to hear from Canadian manufacturers and shippers seeking export connections. A full list of articles and terms, conditions, etc., is on file at the Department of Trade and Commerce.

144. England.—A jam manufacturing company in the South of England is open to purchase raspberry and strawberry pulp in barrels, and invites offers from Canadian packers experienced in this trade.

145. England.—A manufacturers' agent is desirous of fixing up sole commission agencies for this country with Canadian manufacturers of confectionery, biscuits, and grocers' sundries.

146. Foodstuffs.—A firm in Scotland is open for several agencies for Canadian manufacturers of foodstuffs.

147. Tramways and Light Railways.—A correspondent in London is anxious to get in touch with a few Canadian firms for such materials who are not already represented on this side.

148. England.—A London firm possessing a selling organization among the wholesale trade throughout the United Kingdom, desire the representation of Canadian manufacturers of woollen piece goods, (suitings, serges, costume, cheviots, tweeds, etc.), hosiery, underwear, knitted goods, woollen and silk jerseys and sweaters; also gloves.

149. Hosiery.—A London firm already representing a Canadian manufacturer, desires the agency, upon a commission basis, of Canadian manufacturers of hosiery lines, i.e., women's stockings, men's half hose, and children's socks and three-quarter hose, in wool, cotton, lisle, and artificial silk. Canadian reference.

150. England.—A London company which claims a connection among shipbuilders, is desirous of securing the agency of Canadian manufacturers of goods suitable for this trade, including: bolts and nuts, chains, cables, ships' brass work, iron, steel, brass and copper tubes, copper and brass wire, wire ropes, sheet steel, railway material, locomotives, waggons, carriages, rails, cast iron pipes, semi-rotary pumps.

151. Electric welding wire.—A Midlands firm of manufacturers are open to purchase steel electric welding wire (size No. 2, No. 4 and 5-16 in.) and invite offers from Canadian manufacturers.

152. Cuba.—An agent in Havana who is closely connected with the principal importers and merchants and whose salesmen cover the entire island of Cuba is desirous of getting in touch with firms who might be interested in securing representation there. This gentleman states that there is a large demand in Cuba for the following Canadian goods: cheese, codfish, crystallized fruits, canned goods, paper, glassware, and chemical products. References are good.

153. Italy.—A correspondent is anxious for Canadian manufacturers to send catalogues of the following: electrical articles, machinery, electric railway supplies, high tension transport lines, etc.

154. Greece.—A firm in Salonica is interested in foodstuffs in general, as well as in chemical products and dyestuffs.

155. Agency.—A buyer in Amsterdam is desirous of getting into communication with Canadian fruit driers, especially driers of apples.

156. Spain.—A firm with branches in Milan and Brussels expects to open an office in Barcelona, Spain, and are desirous of getting in touch with manufacturers contemplating export to Europe. They are interested in the following articles: shoes, automobiles, trucks, silk hosiery, machinery, and automobile tires.

157. Agency.—An agent, who is well and favorably acquainted with the wholesale trade and its requirements, is desirous of securing agencies from reliable manufacturers and dealers in food products and kindred lines. He is prepared to sell goods on a commission basis.

158. Italy.—A firm in Cirenaica wishes to get in touch with important Canadian dealers in sugar and flour.

159. Trinidad and Demerara.—An agent with twenty years' experience of the West Indian trade and who has for the past six years acted very successfully as selling agent for several well-known British and American houses, wishes to act for Canadian manufacturers of manufactured iron goods, in fact, all light and heavy hardware goods. There is a growing demand for Canadian goods in this market.

160. Food Products.—A young man of good education, just returned from three years' overseas service, is desirous of representing Canadian manufacturers of jams, marmalades, biscuits, canned fruits and condensed milk in the United States or England. He has considerable selling experience and is quite prepared to undertake any reasonable proposition that will give him the opportunity of introducing Canadian goods in foreign markets. His references are good.

161. England.—A London firm of wholesale and manufacturing confectioners would be glad to receive offers of chocolates and other confectionery from Canadian manufacturers.

162. Doors.—A Liverpool firm of builders' merchants, who expect to have large requirements of imported doors early next year, ask to be placed in touch with exporters.

163. Halifax.—A firm in Halifax asks to be placed in touch with exporters of annealed No. 14 wire for re-drawing.

164. Hickory Squares.—A West Hartlepool firm makes inquiry for hickory squares 45 in. by ⅞ in. by ⅞ in., and 42 in. by ⅞ in. by ⅞ in.

165. Dowels.—A West Hartlepool firm makes inquiry for birch and maple dowels 12 in. rising by 6 in. lengths to 72 in., and in diameter 3-16 in. rising by 1-16 in. to 1 in.

166. Wire.—A Warrington firm asks for quotations on the following classes of wires in 50 to 100 ton lots: Netting weaving wires, 19 to 22½ S. W. G., tinned mattress wire 22½ to 24 S.W.G., hard drawn wire from 6 to 12 S.W.G.

167. England.—A Liverpool firm asks to be placed in touch with exporters of the above.

168. Wire Rods.—A Lancashire firm ask for quotations on open hearth basis wire rods .50 per cent., .60 per cent. carbon, in 5 or 6 standard gauge, which is .212 in., or .192 in. diameter, in coils of not less than 120 lbs.

169. Tinned Wire.—A Warrington firm asks to be placed in touch with exporters of tinned bottling and mattress wire.

170. Belgium.—A Belgian company which are large and regular buyers of counter-veneered three-ply birchwood panels and other veneers, would be glad to negotiate with Canadian manufacturers who can supply what is required. Sample and specifications available at the Department of Trade and Commerce.

Moving to Japan

Breweries Located in British Columbia Are Being Transferred Across the Pacific

According to *Industrial Progress* of Vancouver, machinery is being removed from the plants of the old Vancouver Breweries Company, Vancouver, and the Union Brewing Company, Nanaimo, to be shipped immediately to Japan for use in a big brewery that will be erected there shortly with Canadian and Japanese capital. The new company in Japan, known as the Anglo-Japanese Brewing Company, has been organized with a paid-up capital of $1,000,000. Mr. George Reifel, son of Mr. Henry Reifel, head of the British Columbia Breweries, formed the concern after a year's residence at Tokyo. The plant will be located between Tokyo and Yokohama, and will manufacture principally for export to Calcutta, Singapore, Bombay and other Far Eastern points. The capacity of the plant will be 3,000,000 gallons annually.

HON. FINLAY G. MACDIARMID,
Minister of Public Works

W. A. RIDDELL, M.A., Ph.D.,
Superintendent

TRADES AND LABOUR BRANCH
DEPARTMENT OF PUBLIC WORKS

THE TRADES AND LABOUR BRANCH administers the following:

The Trades and Labour Branch Act
The Bureau of Labour Act
The Stationary and Hoisting Engineers Act
The Building Trades Protection Act
The Factory, Shop and Office Building Act
The Steam Boiler Act
Employment Bureaus
Investigation and Research

Employment offices are in operation in 35 cities and towns of the Province, and are the Ontario units of the recently organized "Employment Service of Canada."

Are you getting your help through the medium of the employment service, which you as a taxpayer are helping to support?

The value of these bureaus will increase in proportion to the extent to which they are used by employers.

NOTICE TO STEAM USERS:

At the last Session of the Legislature, the Act respecting Stationary and Hoisting Engineers was amended, said amendment requires that on and after January the 1st, 1920, all stationary steam plants in the Province of Ontario must be registered with the Board of Stationary and Hoisting Engineers. Application forms for this purpose will be forwarded on request. The boiler horsepower and other information contained in these application forms is to be used for statistical purposes.

A Registration Certificate will be issued to each applicant.

Barrett Specification Roofs

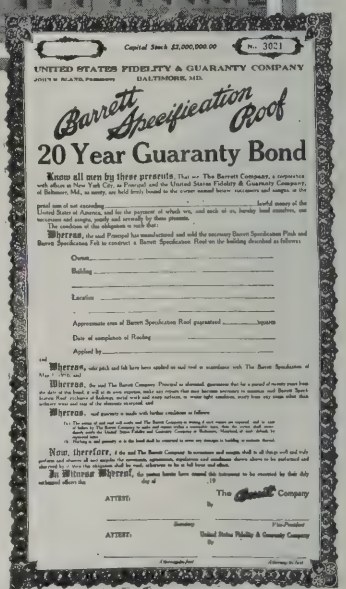
20-year Barrett Specification Roof on St. Marc's School, Montreal, Owners: Catholic School Board, Montreal. Architects: Vautrin & Bernier, Montreal. Gen. Cont.: Ulric Boileau, Limited, Montreal. Roofers: Canada Roofing & Paving Company, Montreal.

20-year Barrett Specification Roof on Old Orchard Avenue School, at Notre Dame de Grace; Owners: School Commissioners of Notre Dame de Grace, Montreal. Architects: Audet & Charbonneau, Montreal. Roofers: Tremblay & Francoeur, Montreal.

The *modern* way to buy a roof—

When the two school buildings shown above were completed, we handed their owners, the Catholic School Board of Montreal, Surety Bonds which *guarantee* the roofs against trouble or maintenance expense for a period of *20 years.*

The probabilities are that these roofs will last for nearer 30 *years* without attention.



This is the *modern* way of buying a roof, not merely purchasing so many square feet of roof at so much per square foot, but investing in a long and definite period of *guaranteed service.*

The Barrett Specification first made it possible for building owners everywhere to obtain, through their local contractors, *a standardized roof* built according to the most scientific principles of roof construction.

Guarantee 20 Years of Service

Now we offer to go a step further and actually *guarantee* a Barrett Specification Roof *for a period of at least 20 years.*

This guarantee, obtainable on any roof of 50 squares or more, in any town of 25,000 or over, and in smaller places where our Inspection Service is available, is in the form of a Surety Bond, issued by a well-known fidelity company.

UNITED STATES FIDELITY & GUARANTY COMPANY
JOHN M. GLOYD, PRESIDENT BALTIMORE, MD.

Barrett Specification Roof

20 Year Guaranty Bond

Know all men by these presents, That we, The Barrett Company, a corporation with offices at New York City, as Principal and the United States Fidelity & Guaranty Company, of Baltimore, Md., as surety, are held and bound to the owner named herein, successors and assigns, in the penal sum of not exceeding ... lawful money of the United States of America, and for the payment of which we, and each of us, hereby bind ourselves, our successors and assigns, jointly and severally by these presents.

The condition of the obligation is such that:

Whereas, the said Principal has manufactured and sold the necessary Barrett Specification Pitch and Barrett Specification Felt to construct a Barrett Specification Roof on the building described as follows:

Owner ...
Building ...
Location ...
Approximate area of Barrett Specification Roof guaranteed ... square
Date of completion of Roofing ...
Applied by ...

and

Whereas, said pitch and felt have been applied on said roof in accordance with The Barrett Specification of May 1, 1916; and

Whereas, the said The Barrett Company Principal as aforesaid, guarantees that for a period of twenty years from the date of the bond, it will at its own expense, make any repairs that may become necessary to maintain said Barrett Specification Roof exclusive of flashings, metal work and coping surfaces, in water tight condition, made from any cause other than ordinary wear and tear of the elements excepted; and

Whereas, said guaranty is made with further conditions as follows:

1st. The owner of said roof will notify said The Barrett Company in writing if such repairs are required, and in case of his failure to do so, this bond shall be void; and 2nd. The owner of said roof will keep a contract in force at all times with the United States Fidelity and Guaranty Company of Baltimore, Maryland, or such other Company as approved by ...

Now, therefore, if the said The Barrett Company its successors and assigns shall in all things well and truly perform and observe all and singular the covenants, agreements, stipulations and conditions above shown to be performed and observed by it upon the assignment shall be void, otherwise to be in full force and effect.

In Witness Whereof, the corporate seals have caused this instrument to be executed by their duly authorized officers this ... day of ... 19...

ATTEST: The Barrett Company
By ...
Secretary Vice-President

ATTEST: United States Fidelity & Guaranty Company
By ...

This is the bond that guarantees your roof for 20 years.

To obtain the Bond you have only to insert in your building specifications the following:

"The roof shall be laid according to The Barrett Specification dated May 1, 1916, and the roofing contractor shall secure for me (or us) the 20 - Year Guaranty Bond therein mentioned."

The guarantee costs you nothing. We merely require an opportunity to send our Inspectors to watch the job during construction.

You get a roof that will cost less per year of service than any other type of permanent roof, and that takes the base rate of insurance. We get the satisfaction of knowing that our materials are creditably used.

We should be very glad to send you further details and copy of the Barrett 20-Year Specification, with diagrams, ready for insertion in your building plans.

Editorial Comment

A Tariff Board

THE experience of the United States in creating a Tariff Commission should encourage Canada to follow the example set. Since the creation of the Tariff Commission in the United States, questions relating to the tariff seem to have almost disappeared from the controversies of politics. Fiscal questions are studied by this body in a disinterested and detached manner. All the facts bearing on each question are assembled and the decision is made with reference to the best interests of all classes in the country. Such a procedure must tend to produce economic stability, which is of the greatest possible advantage to trade and commerce. The Canadian Government should appoint a permanent tariff board to act in an advisory capacity to the Government. This board should make a scientific study of the Canadian customs tariff and also the tariffs of other countries with which Canada trades. It should familiarize itself with cost of production and other factors affecting manufacturing. Much depends upon the personnel of such a board, but if the right men are selected, they, with all the facts before them, should be able to frame such a tariff as will safeguard the best interests of the country.

The Victory Loan

THERE is little use in advancing arguments why Canada should do something which must be done. Canadians have no option about supporting the Victory Loan of 1919. Expenditures have already been incurred and must be met. It is better to borrow from our own people than from abroad. One of the questions which is asked is, "What was done with the last Victory Loan?" The Victory Loan Committee have issued a circular explaining very concisely how the last loan was spent. The 1918 loan amounted to $610,000,000. Of this amount $312,900,000, or 51.3 per cent. was paid for war and demobilization expenses in Canada; $59,000,000, or 9.7 per cent. was paid for war service gratuities. These two items account for three-fifths of the total loan. The sum of $207,750,000, or 34 per cent. of the total, was advanced to Great Britain and her Allies for the purchase of Canadian wheat and other foodstuffs; $9,000,000 was advanced to Great Britain for the purchase in Canada of the salmon pack; $8,400,000 was advanced to Great Britain for imperial shipbuilding and sundry accounts, and for interest on loans made Great Britain for munitions bought in Canada; $3,950,000 was advanced to the Allies for the purchase of Canadian raw materials and manufactures; $9,000,000 was voted to the Halifax Relief Fund. Every dollar of the 1918 Victory Loan was spent in Canada and every dollar of the 1919 Victory Loan will be spent in Canada.

Transportation for Prince Edward Island

WHEN Prince Edward Island entered Confederation the Province was promised continuous and adequate communication with the mainland. That promise has never been fulfilled to the satisfaction of the Islanders. Up to a few years ago, the transportation system of Prince Edward Island and connection with the mainland was inadequate and unsatisfactory and the Islanders had sufficient cause for complaint. While millions of dollars were being wasted on railway enterprises in other parts of Canada which have not yet begun to pay a return on the cost of construction, one of the oldest Provinces, which is a most fertile country and completely settled, was unjustly treated in the matter of transportation.

During the past few years the Dominion Government has gone a considerable distance in remedying this unfortunate state of affairs. A splendid car ferry and ice breaker was constructed to operate across the Straits of Northumberland between Cape Tormentine and Borden Extensive breakwaters and landing docks were built, and the old narrow gauge road on the Island was standardized from Borden to Charlottetown. While this action has greatly improved the situation it is still far from being entirely satisfactory. In the event of the car ferry being laid up for repairs, Prince Edward Island will be temporarily isolated from the mainland. The people of Prince Edward Island claim that a second car ferry should be put into operation to insure the continuous and adequate service to which they are entitled. It seems an extraordinary thing that a hundred thousand people of British

descent, inhabitating one of the oldest Provinces of Canada, should be denied a proper transportation service, in view of the fact that millions have been spent on providing transportation for aliens who have been distributed through some of the more inaccessible parts of Canada. The people of Prince Edward Island have long had a grievance on this transportation question against the rest of the people of Canada, and this should be remedied to their complete satisfaction without further delay.

Super Commissions

THERE is now pending before the United States Senate a bill which is designed to establish a Federal Industrial Relations Commission. Employers in the United States believe that this Bill would give the Commission wide powers over the conduct of industry, including such questions as the length of hours, the amount of wages, output and collective bargaining. The avowed object of the Bill is to try to prevent industrial disputes, strikes and lock-outs. The experience of employers in the United States in relation to various Commissions dealing with such matters is probably very similar to that of employers in Canada. During the war, the various arbitration and conciliation boards kept labor satisfied, chiefly by giving them nearly all they asked for. It is easy enough to arbitrate industrial disputes if this method is followed. It is the simplest method for a commission which desires to achieve temporary popularity. If the experience of the past is any guide, employers will anticipate that when they and employees appear before a commission possessing anything like final powers, disputes will be settled by their being forced to yield. The majority of "settlements" will simply mean that the employers give up something. Employers have learned by bitter experience how unreliable is the third, or presumably disinterested party, in a commission. Instead of being a non-partisan, fair-minded and able judge, he is too often a political appointee who promptly sides with the employees and becomes their advocate rather than their judge. When the employers are forced to deliver themselves into the hands of a super-commission which can decide arbitrarily how business should be conducted, there appears to be little difference between that position and the direct control of industry by the Government.

Germany and the Rate of Exchange

REPORTS coming out of Germany indicate that Germany has thrown over the doctrines of Karl Marx. Most of the false economic thinking which is prevalent at the present time can be traced to the pernicious teachings of this German socialist. The Marxian school of political economy emphasize class distinction, preaches the doctrine of restricted output and the control of industry by workers without regard to their qualifications. These doctrines spread over the world and secured a following in most civilized countries. After the armistice in Germany they were tried out to some extent and failed utterly. The Germans, who are above all things a practical people, now realize that the only way they can survive the catastrophe which has overtaken them is to work harder than they have ever worked before. Consequently, they have thrown over the eight-hour day, restriction of output, unreasonably high wages and other false economic doctrines. They have determined to produce goods in vast quantities as cheaply as possible and to throw them on the markets of other countries. They believe that this is the only way they can pay their huge debt and keep their nation as a seperate entity.

The present condition of exchange is helping them, especially in regard to those articles for which they have the raw material within their own boundaries. They sell to Great Britain and are paid in sterling which has not depreciated to any extent in comparison with the mark in international exchange. They can sell to the United States where the dollar is at a premium. They have an even greater advantage in respect to goods which are based on raw material purchased in Russia where the ruble has depreciated comparatively more than the mark. It is obvious that when Germany buys raw material in Russia, manufactures it in Germany, and sells it in the United States they have a tremendous advantage and benefit to the fullest possible extent from the present abnormal exchange situation. Germans are already boasting that while they have lost the war they have won the peace.

Industrial Conference—United States

AT the time of writing the labor delegates have withdrawn from the Industrial Conference which was summoned by President Wilson at Washington on October 6th. This Conference consisted of representatives from the following three groups: capital, labor and the public. The labor delegates withdrew because the Conference would not adopt their resolution on collective bargaining which involved the recognition of trade unions and collective bargaining and, according to the delegates of the employers, meant the establishment of the closed shop.

At the National Industrial Conference in Ottawa, the employers and employees differed over the same points, but they agreed to disagree, and placed their respective resolutions covering the points at issue on the records of the Conference. The employers of the United States have taken the same attitude as that taken by the employers at the National Industrial Conference at Ottawa. If industry is to remain free, no other attitude could have been taken by United States employers in the interests of the country as a whole.

Organization of Divisions

THE sixteenth of October is an important date in the history of the Canadian Manufacturers Association. On that date simultaneous meetings were held in Montreal and Toronto for a common purpose. In Montreal, the Quebec Division of the Association was organized. In Toronto, the Ontario Division of the Association was organized. These Divisions under the constitution will deal with matters having an entirely provincial applica-

tion. The formation of the above mentioned Divisions completes the new organization scheme of the Association which was authorized at the last Annual Meeting. The Pacific Division, including the Province of British Columbia, the Prairie Division including the Provinces of Saskatchewan, Alberta and Manitoba, and the Maritime Division, including the Provinces of New Brunswick, Nova Scotia and Prince Edward Island, have already been organized and are in operation. Additional Branches within the territories of the respective Divisions will be organized as quickly as circumstances will permit. Consequently, the Association now has highly centralized machinery for dealing with matters of national importance and in addition has local machinery for dealing with local matters.

The Maritime Provinces

IN the United States the bulk of manufacturing has never shifted far beyond the New England States and New York State. Great cities have sprung up in the centre and west to provide for the needs of a rapidly increasing population, but what might be termed the centre of industrial gravity has remained in the north-eastern section of the United States.

In Canada we find that the centre of industrial gravity is located between Toronto and Windsor, or south-western Ontario. In the United States manufacturing started in the east and spread gradually westward. In Canada, owing to the geographical position of the St. Lawrence River, manufacturing centred in south-western Quebec, developed there gradually, and then shifted to south-western Ontario. Many people believe that the centre of Canadian manufacturing may in time move still farther west, possibly to Winnipeg. Others believe that while manufacturing will greatly develop throughout the whole of western Canada as the population of that part of the country grows, there will be an even greater development in eastern Canada, including Ontario, Quebec, and even more markedly the Maritime Provinces.

These Provinces appear to have nearly all the essentials of a great manufacturing area. They have four magnificent seaports, St. John, Halifax, Sydney and Charlottetown. St. John is the terminus of the Canadian Pacific Railway; Halifax is the terminus of the Canadian Government Railways. The Maritime Provinces are the logical location for industries exporting to Europe, the Eastern States, the West Indies and part of South America. The Maritime Provinces are especially fortunate in their population, which is nearly all of British and French descent. The standard of education and living is high and the best educational facilities are available. There is no better material anywhere for apprentices than in the Maritime Provinces.

The Maritime Provinces possess nearly all the great basic materials for manufacturing. They have coal and iron in close proximity. They have great stores of timber and their farms produce cheap and abundant food for an industrial population. Up to the present they have lacked one thing, namely, cheap power, but committees are now investigating the possibility of remedying this defect with a fair hope of success. Possessing all these advantages, is it unreasonable to expect that some day the Maritime Provinces may stand in the relative industrial position to the rest of Canada that the New England and New York States stand in regard to the rest of the United States?

The Metric System

THE advocates of the metric system have been making determined efforts to secure the adoption of their system in English-speaking countries.

The British Committee on Commercial and Industrial Policy after the War carefully investigated the system and reported as follows:

> "We are not convinced that the metric system is upon the whole even theoretically superior to the British system, and we are satisfied that the practical objections to the proposed change are such as to decisively outweigh any advantages which are claimed for it."

The National Association of Manufacturers of the United States at their Annual Meeting on May 20th, 1919, in New York, endorsed the finding of the British Committee. The Canadian Manufacturers Association at its Annual Convention on June 12th, 1919, approved of the stand taken by the National Association of the United States in endorsing the British Committee's findings.

Consequently, it would appear that there is little chance of the old and tried British system of weights and measures being replaced by the metrical system.

Imperial Preferential Tariffs

CANADA was the first country to adopt the principle of granting a preferential tariff to other countries within the British Empire. At the present time, the British tariff preferences provided by the Dominion of Canada are more extensive than the preferences provided in the fiscal policy of any other British country. It is hoped that the Government will do all in its power to secure the adoption throughout the Empire of substantial customs preferences for British products corresponding to the preferences now provided in the customs tariff of Canada.

The Closed Shop

THE closed shop was first applied on a national scale in the British Isles. All attempts to apply it in a national way to industry have failed on the North American Continent.

The chief reason for this is that the conditions in Great Britain are entirely different from the conditions in North America. In Great Britain there has been for many years a surplus of population. Consequently, the great fear of the wage-earning classes is that there would not be enough work to go round. Further, they argued that the work available should be divided up. They felt that the most effective way to accomplish this purpose would be to close up the shops and exclude all who were

Membership Campaign Week

A great national campaign to secure additional members for the Canadian Manufacturers Association will be held during the week December 1st to December 6th. The slogan of the campaign is "ONE HUNDRED PER CENT. MEMBERSHIP IN EVERY CITY, TOWN AND VILLAGE." Remembering President Howard's appeal at the last Annual Meeting of the Association in Toronto, in June, for each present member to secure one new member this year, when you receive further details of the organization of your division will you please do all you can to make the membership campaign week a success?

not members of trade unions. They also practised the restriction of output.

On the North American Continent the reverse has been the case. Instead of having a surplus of population we have a shortage, and vast sums have been spent to attract immigrants who are necessary to do the constructive work on a new continent. Instead of a shortage of work, this Continent as a rule has not had enough men to do the work which is waiting to be done. Here the workman of yesterday is the employer and capitalist of to-day. He looks forward confidently to the time when he can get into business for himself and secure the rewards of his own initiative in industry. The attempt to apply the old world theory of a closed shop to this Continent cannot succeed because it is opposed to the spirit of freedom and the natural desire of a man to improve his condition in life.

The closed shop tries to limit the number of apprentices in order that those who are already in the trade can keep it to themselves. The closed shop system tends towards an equal wage to the highly skilled and efficient men and the inefficient and unskilled men. This operates severely against the better class of workman. Obviously if a poor workman is getting a dollar a day more than he earns, some better workman will be getting a dollar a day less than he earns. A good workman does not want to be tied to the wage paid to the poorer workman. Moreover, in the closed shop the individual production tends to be fixed by the efforts of the least efficient man in the shop. If a skillful and industrious man works hard in the hope of getting higher wages and promotion, he is quickly told to go more slowly, because the poorer man cannot keep up with him. Broadly speaking, the aim of the closed shop is to give each man in the trade the same amount of money for doing the same limited amount of work. In other words, the poorer men control the better men. In the end the closed shop tends to operate against the welfare of the wage earners themselves. As soon as a shop is closed and a monopoly thereby created, the natural tendency is towards shorter hours, still greater restriction of output and higher wages. The result is the cost of production is increased and the wage-earners, who are also consumers, have to pay more for what they buy. Restriction of output creates scarcity and scarcity increases prices. When goods are produced in great quantities they become cheap and there is no sound way to decrease the cost of living except to increase production so that there will be more goods to divide. Because the closed shop is inimical to individual initiative, to the encouragement of skill, to greater production of goods and to lowering the cost of living, it can never be applied on this Continent in a national way without injury to the whole population.

The Peace Treaty

PART of the gigantic scheme for disseminating socialistic propaganda now operating in civilized countries, is to misinterpret the text of the Labor Features of the Treaty of Peace. For example, the inference is drawn that these Labor Features make obligatory the adoption of an eight-hour day. Further, the eight-hour day is assumed to mean a forty-four hour week. They deduce further that changes are to be brought about by legislation.

There is no expression of opinion in the general principles of the Labor Features of the Treaty of Peace that economic principles should be set aside and that legislation should be substituted for them. The Peace Treaty only speaks of "methods and principles" and even these are to be applied with certain reservations, as the following extracts from the text of the Labor Features of the Treaty of Peace indicate:

"They (the high contracting parties) recognize that differences of climate, habits, and customs of economic opportunity and industrial tradition make strict uniformity in the conditions of labor difficult of immediate attainment. But, holding as they do, that labor should not be regarded merely as an article of commerce, they think that there are methods and principles for regulating labor conditions which all industrial communities should endeavour to apply, so far as their special circumstances will permit."

The high contracting parties have enumerated certain principles which they consider to be of special importance. In connection with the eight-hour day they set forth this principle:

"The adoption of an eight-hour day or a forty-eight-hour week as the standard to be aimed at where it has not already been attained."

Consequently, the Peace Treaty very clearly stipulates that in speaking of an eight-hour day a forty-eight-hour week is meant and not a forty-four-hour week or forty-hour week. They further indicate that they only mentioned the forty-eight-hour week as the "standard to be aimed at." There is no suggestion that even the forty-eight-hour week should be established anywhere by law. Another principle is stated as follows:

"The right of association for all lawful purposes by the employed as well as employers."

The right of association for all lawful purposes is one that is fully admitted by the employers. The Labor Features of the Treaty of Peace, however, do not say anything about "recognition of unions" or "collective bargaining." The general principles set down in these Labor Features of the Treaty of Peace merely indicate an ideal which may be reached through economic evolution in the future.

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Executive Council Meeting

A well-attended meeting of the Executive Council was held in the Board Room of the Head Office on Thursday, October 30th, at 2.15 p.m. Mr. J. S. McKinnon, first vice-president, occupied the chair and the usual reports from committees were presented and considered. The Council again voiced its appreciation of the services rendered by Mr. C. H. Carlisle, chairman of the Industrial Relations Committee, and the other manufacturers and officers of the Association who did such good work in connection with the National Industrial Conference at Ottawa.

Annual Meeting, 1920

The Executive Committee of the Association has made a recommendation to the Executive Council that the next Annual Meeting should be held in Western Canada and that the place and date of the meeting should be determined by a committee consisting of the President and General Manager. Early action was suggested so that members could make necessary arrangements to attend.

New Members' Executive Committee

At the meeting of the Executive Council in St. John, on October 1st, Messrs. C. Howard Smith, Howard Smith Paper Mills, Limited, Montreal, and Angus. McLean, Bathurst Lumber Co., Bathurst, N.B., were appointed members of the Executive Committee, in succession to Messrs. John R. Shaw, Canada Furniture Manufacturers, Woodstock, and H. H. Champ, Steel Co. of Canada, Limited, Hamilton, whose term of office had expired.

Prince Edward Island Service

The Transportation Committee at its last meeting gave consideration to the complaints regarding inadequate service to and from Prince Edward Island, which were made by the manufacturers and Board of Trade of Charlottetown during the recent visit there of Association officers. The Committee were of the opinion that the Island was entitled to better service and that the Association should try to help them. The General Manager was therefore requested to take up the question direct with the president of the Canadion National Railways.

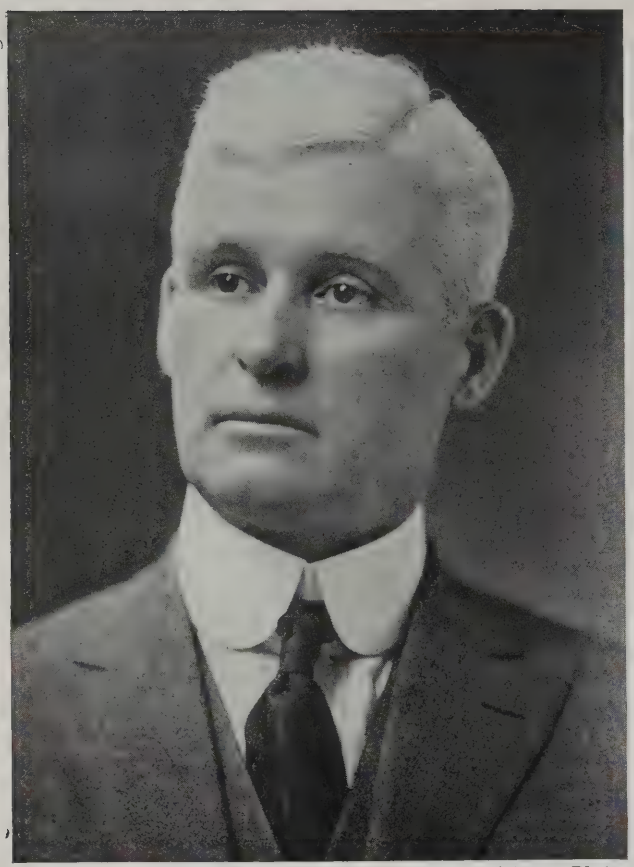
Delegates to Conference

In connection with the first International Labor Conference, which was opened in Washington on October 29th, the Association was asked to nominate one person to represent all the employers of Canada and five other persons who would act as his advisers. The Executive Committee at its last meeting considered the selection of the delegate and his advisers and the matter was referred for action to the President and General Manager who selected Mr. S. R. Parsons, British American Oil Co., Toronto, as delegate with Mr. Sam Harris, Harris Lithographing Co., Toronto, and Mr. J. R. Shaw, Canada Furniture Manufacturers, Woodstock, as substitutes. For advisers, Mr. J. E. Walsh, General Manager; Mr. J. T. Stirrett, General Secretary; Mr. E. Blake Robertson, Ottawa Representative; Mr. J. G. Merrick, Secretary Employers Association of Toronto, and Mr. J. B. Hugg, K.C., Winnipeg were named.

Federation of British Industries

Through the good offices of the Canadian Mission in London, England, a reciprocal agreement has been made between the C.M.A., and the Federation of British Industries, a highly organized body which includes nearly all the manufacturing industries in Great Britain and has a membership of over 17,000. Under the arrangement both organizations will enjoy a free interchange of statistics, information and services.

Insurance Department Service



During September the Insurance Department received and dealt with 36 inquiries on the following subjects,—Standing of Companies, 2; examination of policies, 1; sprinkler equipment, 1; policy wordings, 11; rates, 11; building construction, 2; inspection service, 8.

Meat and Canned Food Act

During the recent tour of Association officers and members through the Maritime Provinces, the Canned Fish Section of the Association expressed their dissatisfaction with the amendment to the Meat and Canned Food

Help the Returned Men

Attention of the members of the Canadian Manufacturers Association is directed to the valuable work being done by the Professional and Business Section of the Department of Soldiers Civil Re-establishment in placing men in business positions. The Section, with branches in the principal cities of the Dominion, has a list of returned men qualified to undertake any nature of work in the offices of industrial establishments and, when members are in need of such assistance, they should get in touch with the nearest office of the section and then help to absorb the returned soldiers at present out of employment.

—*International Press Photo.*

Mr. Angus McLean

Chairman of the Maritime Division who has been appointed a member of the Executive Committee. Mr. McLean is head of the Bathurst Lumber Co., Bathurst, N.B.

Act passed in 1917, regulating the sizes of tins of canned lobster. As the entire lobster industry of the Maritime Provinces was seriously affected, the matter was considered to be of such importance that the full services of the Association were extended on behalf of the Section. As a result the Act has been amended by the House of Commons to the entire satisfaction of members concerned.

Board of Commerce

On October 22nd a deputation from the Association interviewed the Government at Ottawa relative to the Board of Commerce. Objections to the present method of procedure adopted by the Board in making its investigations were set forth in detail and the cabinet ministers who heard the deputation promised to give them consideration.

Fire Prevention Day Results

Reporting on the results of the observance of Fire Prevention Day on October 9th last, Mr. E. Grove Smith, Dominion Fire Commissioner, states that:—"As the result of the joint efforts of all organizations, Fire Prevention Day, 1919, was observed in about 26,000 schools, demonstrations, clean-up campaigns and other effective methods were employed by over 300 fire chiefs; 79 municipal councils passed resolutions approving the official observance of the day; special inspections on forms supplied by this office were conducted in over 6,000 factories, warehouses and large properties, and suitable literature was distributed to the employees of these concerns; 785 newspapers carried matter issued by this office and by the provincial fire marshal departments; 423 made editorial mention of the campaign and 64 dailies in the larger cities and towns of each province gave a full page spread on October 8th. Up to date, (Oct. 18th), 735 factories have signified their intention of instituting a permanent monthly inspection system under our direction, and 405 have undertaken to use our leaflets in all employees' pay envelopes during the next twelve months.

"While the tide is at the flood, it is deemed advisable to give some definite direction to the general interest awakened by Fire Prevention Day. To this end it is the intention to visit all the larger cities in Canada and with the co-operation of the provincial fire marshals, hold conventions and organize local committees to carry on the work. An itinerary is being arranged to commence at Victoria, B.C., on November 10th, and conclude in the Maritime Provinces about the middle of December."

Gain in Membership

Since the annual meeting, according to a report submitted to the Executive Council by the Membership Committee, 93 applications for membership have been accepted and 46 resignations received, a net gain of 47. The Committee points out with satisfaction that none of the resignations were submitted through dissatisfaction with the policies or services of the Association but were due to amalgamations, cessation of business operations and similar causes.

Winnipeg Branch Meets

A general meeting of members of the Winnipeg Branch was held on October 6th, when the delegates to the National Industrial Conference at Ottawa made a report upon the proceedings there. The delegates urged that members individually do everything in their power to give effect to the position taken by the employers' delegates at the Conference.

Ontario Insurance Report

The manager of the Insurance Department has recently prepared a detailed analysis of the report of the Ontario Insurance Commission by Hon. Mr. Justice Masten, copies of which have been mailed to all members of the Insurance Committee. The analysis was discussed at the last meeting of the Committee and favourably commented upon. The manager was asked to prepare a second condensed analysis setting forth briefly a summary of what might be considered to be the attitude of the C.M.A., towards Judge Masten's report and this will be submitted to the Executive Council at an early date for approval.

Ontario Division Executive

A meeting of the Executive Committee of the Ontario Division was held in the King Edward Hotel, Toronto, on October 30th, with the following members present:—Messrs. W. C. Coulter, Chairman, Toronto Branch; Geo. Brigden, Thos. Roden, E. J. Freyseng, and W. M. Inglis, Toronto; S. J. Williams, Kitchener; Fred Hatch, Whitby; W. Cowan, Galt; G. S. Rutherford, Amherstburg, and G. C. Cockshutt, Brantford.

In the unavoidable absence of Mr. Geo. H. Douglas, Chairman, Mr. W. C. Coulter presided. The Committee considered the organization of sub-committees for the ensuing year, and directed the Chairman and Secretary to consult with representative manufacturers in the various zones of the province, inviting nominations before final adjustment.

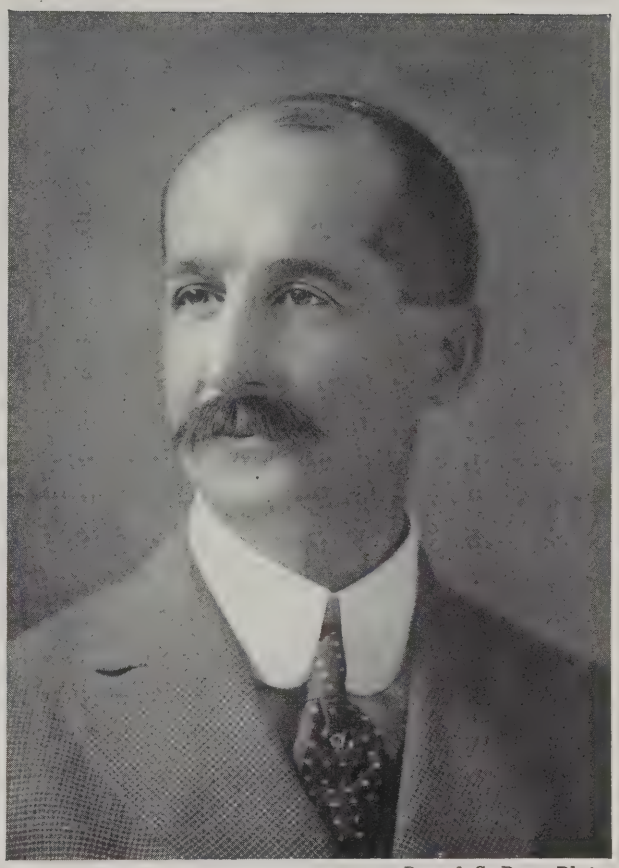
It was unanimously agreed that a representative membership committee should be appointed—one member of

such Committee to be chairman of each district or zone in the province, the campaign to correspond with the general membership campaign of the Association decided upon during the week, December 1st-5th. After the campaign opens on December 1st local Committees will be expected to wire or mail each night to the Division Secretary the number of members secured during the day—the aim being 100 per cent. membership in every city, town and village.

The following resolution was passed and ordered to be submitted to the Executive Council of the Association: "Resolved that the Ontario Division Executive urge the Executive Council of the Association to send a further deputation to Ottawa to press upon the Dominion Government the immediate appointment of a permanent Tariff Board and that the members of this Board accompany the proposed Investigating Committee of Cabinet Ministers, if the same is appointed."

Information re Exhibitions

Useful service has been performed by the Trade Sections Departments in investigating the various exhibitions which are announced for the next year or two in Great Britain, the United States, South America, South Africa and elsewhere. A memorandum has been prepared dealing with each of these undertakings and showing whether or not they are deserving of the support of Canadian manufacturers. Any one interested in securing information about any proposal for the holding of international exhibitions should communicate with the Department. The exhibitions dealt with in the present memorandum are,—



(*a*) A permanent exhibition of samples or photographs (in duplicate) to be used in connection with the propaganda of the Canada Trade Mission in London, England.
(*b*) The British Empire Exhibition to be held in London, England, in 1921.
(*c*) The British Industries Fairs to be held in London, Birmingham and Glasgow, in 1920.
(*d*) A Canadian Exhibition to be held in Agricultural Hall, London, England, in June 1920.
(*e*) A permanent exhibition in the Grand Central Palace, New York.
(*f*) A floating exhibit to be sent to South American ports.
(*g*) A national exhibition to be held in Pretoria, S.A.
(*h*) A sample fair to be held in Brussels, Belgium, in 1920.

Fire Protection Survey

With the approval of the Insurance Committee of the C.M.A., a campaign is at present being conducted by the Dominion Fire Commissioner, Mr. E. Grove Smith, specially directed towards the improvement of factory properties from a fire protection point of view. 5,000 copies of a blank form, with explanatory letter, have been sent to the more important industrial establishments in the Dominion asking for data upon which to base further action. More than 70 per cent. of the forms were promptly returned and large numbers were accompanied by urgent requests for advice. Addressing the members of the Dominion Fire Prevention Association on the campaign, Mr. Smith says:—

"After roughly classifying the returns, it was apparent that in the majority of cases inspection was essential before proper guidance could be given. As this Department is not provided with a staff to carry on such work, arrangements were made with the Canadian Automatic Sprinkler Association whereby the competent engineers of that Association resident at various points throughout the Dominion will, as far as possible, inspect and report upon properties to the Department. While acting under the authorization of the Department, these inspectors will not advise or otherwise influence property-owners in regard to improvements but the Department will directly supply particulars of such improvements and changes as may appear desirable. Where the installation of automatic sprinkler protection is advised, a voluntary agreement entered into between all the automatic sprinkler contracting companies and the Department makes possible the very minimum cost. All items and charges are filed in detail and are carefully scrutinized by the Department.

"From the foregoing it will be recognized that the task undertaken is one of magnitude and importance. At the present time (Oct. 22nd.), thirty-five plants are undergoing inspection and these will be followed by others as rapidly as inspectors are available to do the work. To accomplish the ultimate aim, the co-operation of every fire protection engineer and insurance expert in Canada is urgently needed. The money at present available for fire prevention work by the Department is less than $5,000. This limited amount must meet all contingencies, including salaries, travelling, printing and office expenses, and cannot be further supplemented. While considerable work has been accomplished, it is obvious that the multitudinous demands upon our services cannot be even partially met unless we have the voluntary and willing co-operation of every person qualified to render assistance."

—*B. and C. Press Photo*

Mr. C. Howard Smith

Chairman of the Montreal Branch and vice-chairman of the new Quebec Division, who has also been appointed a member of the Executive Committee

Membership Campaign

To assist in the membership campaign which will take place during the week of December 1st, a list of non-members has been compiled from the information secured for the Trade Index. This list has been classified according to the five Divisions of the Association, and the names forwarded to the Division Secretaries as a basis for work. The Membership Committee, which has been planning the campaign recommends the following plan,—

(*a*) Each Division should immediately call a meeting of the Division Membership Committee to discuss the organization of the Divisional campaign.
(*b*) Division Secretaries should communicate with a member of the Association in each locality where there are

manufacturers who are not members, asking him to form a local committee for the campaign, to which a list of non-members in the locality will be sent.

(*c*) A circular to be mailed from Head Office in sufficient time to reach all members prior to December 1st, featuring President Howard's appeal to the Annual Meeting for each present member to try to secure one new member this year.

(*d*) After the campaign opens local committees to communicate each night with the Divisional Secretary, stating the number of members secured during the day and the Divisional Secretary to wire the total each night to Head Office.

(*e*) The slogan of the campaign to be "One Hundred per cent. Membership in every City, Town and Village."

Our New Members

At the September meetings of the Membership and Executive Committees, a list of 46 applications for membership was favourably disposed of. Of these, 33 represent new firms, and 13 additional members from companies already members. The new members are as follows,—

P. McA. Carrick	B. C. Pharmacal Company, Ltd., Vancouver, B.C.
E. Fred Simmons	Cravat & Regalia Co., Limited, Vancouver, B.C.
Wm. H. Davies	Davies Paper Box Co., Ltd., Vancouver, B.C.
R. L. Cliff	Dominion Canners, B. C., Limited, Vancouver, B.C.
G. Kostman	Famous New York Cloak Suit Co., Vancouver, B.C.
Geo. E. Herrmann	Vancouver Creosoting Co., Ltd., Vancouver, B.C.
J. C. Pendray	British America Paint Co., Ltd., Victoria, B.C.
Wm. H. Munsie	Shawinigan Lake Lumber Co., Ltd., Victoria, B.C.
H. R. Savage	Standard Steam Laundry Limited, Victoria, B.C.
A. F. Pamenter	Davison Lumber & Mfg. Co., Ltd. Bridgewater, N.S.
D. H. McDougall	Nova Scotia Steel & Coal Co., Limited, New Glasgow, N.S.
A. J. Morrison	Sydney Milling Co., Limited, Sydney, N.S.
L. C. Archibald	Crushed Milk & Cream Co., Ltd., Truro, N.S.
L. R. Baker	Burgess Batteries, Limited, Winnipeg, Man.
L. T. Walls	Central Tools & Forgings, Ltd., Winnipeg, Man.
David I. Dyson	Dyson Vinegar Company, Winnipeg, Man.
A. C. Jones	The Canadian Sander Mfg. Co., Limited, Brockville, Ontario.
Reginald L. St. Clair	St. Clair Brothers, Galt, Ontario.
John C. Breithaupt	The Hastings Tanning Co., Ltd., Hastings, Ont.
F. S. Brown	The Brown Boat Company, Lakefield, Ont.
E. Coleman	Regal Manufacturing Company, London, Ont.
James Mitchell	W. & J. Mitchell, Toronto, Ont.
J. S. Ramsay	Hall Manufacturing Company, Ltd., Summerside, P.E.I.
	Rugg Ball Mfg. Co., Ltd., Ayers Cliff, Que.
Edmund F. Richards	Salem Oil & Grease Co. of Canada, Limited, Farnham, Que.
C. Eug. Marchand	La Manufacture de Matelas, Enrg., Isle Verte, Que.
Thos. V. Bell	Thos. V. Bell, Limited, Montreal, Que.
O. Marchand	La Compagne Marchand Freres Ltee., Montreal, Que.
Travice A. Tod	The Herald Press, Limited, Montreal, Que.
W. J. Carrigan	International Machinery & Supply Company, Montreal, Que.
Ewart G. Horne	Lockwood, Greene & Co. of Canada, Limited, Montreal, Que.
Joseph Murphy	Lymburner Brass Works, Inc., Montreal, Que.
Gerald M. Smith	Precision Tool & Machine Co., Limited, Montreal,

The additional members accepted were the following,—

A. P. Tynan	Giddings, Limited, Winnipeg, Man.
Fred J. C. Cox	Oribo Manufacturing Co., Ltd., Winnipeg, Man.
W. E. Sprague	Canadian Westinghouse Co., Ltd., Hamilton, Ont.
Chas. W. Corbett	W. T. Rawleigh Co., Limited, Toronto, Ont.
J. G. Perrin	Willys Overland, Limited, Toronto, Ont.
J. F. MacKay	Willys Overland, Limited, Toronto, Ont.
R. S. Chilvers	Berliner Gramophone Co., Ltd., Montreal, Que.
J. T. Dohm	International Machinery & Supply Company, Montreal, Que.
R. J. Hiller	International Machinery & Supply Company, Montreal, Que.
C. H. Lyons	The Nichols Chemical Co., Ltd., Montreal, Que.
A. D. Huff	Riordon Pulp & Paper Co., Ltd., Montreal, Que.
Chas. Ritz	Robin Hood Mills, Limited, Montreal, Que.
G. A. Irwin	Algoma Steel Corporation, Ltd., Montreal, Que.

At the October meetings of the Membership and Executive Committees, the following companies were admitted to membership.—

Steel Ships	J. Coughlan & Sons, Vancouver, B.C.
Barrels, etc.	Bridgewater Cooperage Co., Ltd., Bridgewater, N.S.
Shirts, collars	John Forsyth, Limited, Kitchener, Ont.
Wiping cloths	E. Pullan Wipers & Waste Co., Toronto, Ont.
Mineral waters	J. E. T. Morris, Charlottetown, P.E.I.
Canned goods	J. W. Windsor & Co., Ltd., Montreal, Que.
Ships	Tidewater Shipbuilders Ltd., Three Rivers, Que.
Wool stock	British Wool Stock Co., Ltd., Toronto, Ont.
Paints, stains	Sturgeons Limited, Toronto, Ont.
Flour, butter, etc.	Dauphin Milling & Creamery Co., Dauphin, Man.
Sash, doors, etc.	Dauphin Sash & Door Factory, Dauphin, Man.
Sash, doors, etc.	The Fusee McFeetors Co., Ltd., Neepawa, Man.
Sweaters, etc.	S. Coleman, Winnipeg, Man.
Talking machines	Melotone Talking Machine Co., Winnipeg, Man.
Dresses	Sterling Mfg. Co., Ltd., Winnipeg, Man.
Lightning rods	Shinn Mfg. Co. of Canada, Ltd., Guelph, Ont.
Ships fittings	Ontario Specialties, Ltd., Ottawa, Ont.
Electric fixtures	Ottawa Brass Mfg, Co., Ottawa, Ont.

Additional members accepted in October were as follows,—

Ashley A. Colter	Smith Foundry Co., Ltd., Fredericton, N.B.
W. S. Kilburn	John Palmer Co., Ltd., Fredericton, N.B.
W. K. Ganong	Ganong Bros., Ltd., St. John, N.B.
Walter Booth	Booth Coulter Copper & Brass Co., Ltd., Toronto, Ont.
Daniel Strachan	Imperial Oil, Limited, Toronto, Ont.
G. A. Myers	Borden Milk Co., Limited, Truro, N.S.
Andrew Sangster	Canadian Ingersoll Rand Co., Ltd., Sherbrooke,
Frank S. Hodgins	Williams, Greene & Rome Co., Ltd., Kitchener,

Winnipeg Income Tax

A special committee of the Winnipeg Branch has under consideration the application of the city of Winnipeg for power to assess an income tax on the incomes of individuals and corporations. In the case of individuals the tax is graduated from one per cent. on the first $1,000 of taxable income up to 8 per cent. on all income in excess of $10,000. On the taxable incomes of corporations the rate is 5 per cent. When this matter was discussed before, the Branch took the position that the Dominion Government's requirements to meet liabilities incurred, would be so heavy that this field of taxation should be left to that Government and that civic or provincial governments should not encroach thereon, until it was known what income taxes the Dominion Government would have to assess to meet its liabilities.

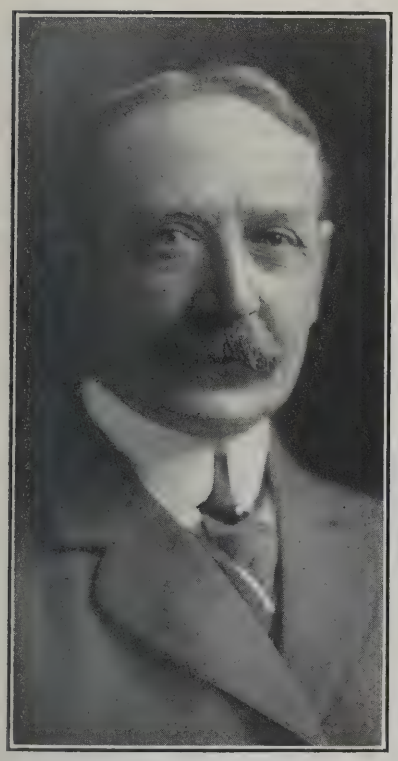
Laying Ground for Kitchener Branch

Formation of a branch organization at Kitchener, Ont., in connection with the Canadian Manufacturers Association was emphasized at a meeting of the Kitchener and Waterloo Manufacturers Association, held in the Canadian Club, Kitchener, on Monday, October 27. In addition to a large attendance of local manufacturers there were present a delegation of Canadian Manufacturers officers and officials, including Messrs. J. S. McKinnon, 1st vice-president of the general Association; George H. Douglas, Chairman of the Ontario Division; J. E. Walsh, General Manager; J. R. K. Bristol, Manager Tariff Department, and H. Macdonold, Legal Secretary and Secretary Ontario Division. Mr. H. M. Snyder, chairman of the local Association, presided, and having welcomed the visitors, vacated the chair in favor of Mr. Sam J. Williams.

Mr. J. S. McKinnon delivered an address and pointed to the war achievement of Canada as an augury of the industrial development, which was certain to follow if the manufacturers took advantage of their opportunity. He bore testimony to the enterprise and progressiveness of the manufacturers of Kitchener and Waterloo, whose factory products were known far beyond the limits of their province. He referred to the services rendered by patriotic manufacturers like Mr. Sam J. Williams, whose enterprise had contributed so much to the prosperity of Kitchener and whose welfare organization had won the appreciation of all. Mr. McKinnon also referred to the value of the Canadian Manufacturers Association, urging that all manufacturers should be active members. He quoted specific instances of direct benefit obtained by his own firm.

Mr. J. E. Walsh gave a comprehensive resumé of the progress of the Association for the past thirteen years. A recent visit to the East had convinced him of the healthy optimism pervading all the industries. Mr. Walsh then

reviewed the services rendered by the various departments of the Association, showing that it would be impossible for a local or sectional organization to command services such as the Canadian Manufacturers Association was able to furnish. The organization of an office in Ottawa had been of immense service, enabling them to obtain quick action in regard to important matters affecting many branches of industry. The allocation of the Dominion into five divisions would ensure in a special manner the organization of district branches, so that the most efficient services would be at the command of all sections.



Mr. Bristol urged that they should begin to organize groups of industries. He spoke of the relation of the tariff to the industries, explaining that all civilized countries had found the adoption and application of the tariff in some form an absolute industrial necessity, and that if Canada was to maintain her industrial supremacy it must proceed along similar lines.

General emphasis was laid by all the speakers on the expediency of Kitchener at once organizing as a District Branch of the Canadian Manufacturers Association, and it is expected that this will be consummated at an early date.

The speakers being accorded a hearty vote of thanks, a highly successful meeting was brought to a close by the singing of the National Anthem.

Meetings Held in the Maritime Provinces

By J. T. STIRRETT
General Secretary, Canadian Manufacturers Association

Mr. W. S. Fisher
Second Vice-President, C.M.A., who did good work in connection with the Maritime Tour

A VERY successful tour of the Maritime Provinces has just been completed by a number of members of council and heads of departments of the Association. The tour was arranged in connection with the Executive Council meeting which was held in St. John, N.B., on October 1st, followed by the semi-annual meeting of the Maritime Division of the Association in St. John on October 2nd. Council decided to hold the October meeting in St. John in order to allow Western and Central Canadian members the opportunity of meeting our members in the Maritime Provinces, and also to bring the services of the Association to those provinces.

The party left Toronto on September 28th. On the following day the Executive Committee met in the Association's Montreal offices, and left for Fredericton on the night of September 29th. A business meeting was held in Fredericton followed by a trip of inspection to various industries. Manufacturing appears to be in a prosperous condition in the City of Fredericton, and a considerable number of plants are making extensions to their premises in order to take care of increased business.

Arrangements for the Executive Council meeting in St. John had been completed by the local members under the direction of Mr. W. S. Fisher, Second Vice-president of the Association. The following is a complete list of those who were present at the meeting of Council:

T. P. Howard	Phoenix Bridge & Iron Works, Ltd., Montreal, Que.
C. Howard Smith	Howard Smith Paper Mills, Ltd., Montreal, Que.
W. H. Shapley	Sterling Action & Keys, Ltd., Toronto, Ont.
S. Harris	Harris Lithographing Co., Toronto, Ont.
H. A. Telfer	The Telfer Mfg. Co., Toronto, Ont.
H. W. Fleury	J. Fleury's Sons, Aurora, Ont.
Geo. H. Douglas	Thornton & Douglas, Ltd., Hamilton, Ont.
M. R. Meldrum	Herbert Morris Crane & Hoist Co., Niagara Falls, Ont.
G. D. McKinnon	McKinnon Steel Co., Ltd., Sherbrooke, Que.
P. E. Joubert	Lamontagne, Ltd., Montreal, Que.
F. W. Stewart	Cluett, Peabody & Co., Montreal, Que.
Joseph Picard	Rock City Tobacco Co., Ltd., Quebec, Que.
Geo. Fleming	Phœnix Foundry Co., St. John, N.B.
R. H. McKay	McKay & Fraser, New Glasgow, N.S.
Rufus E. Dickie	————, Stewiacke, N.S.
A. D. Ganong	Ganong Bros., St. Stephen, N.B.
Jas. F. Cumming	Jas. W. Cumming & Son, New Glasgow, N.S.
Alex. L. Fowler	Fowler Milling Co., St. John, N.B.
C. S. Christie	Christie Woodworking Co., St. John, N.B.
R. A. McAvity	T. McAvity & Son, St. John, N.B.
Cheslie Peters	C. H. Peters & Sons, St. John, N.B.
Lewis Connors	Connors Bros., Black's Harbor, N.B.
A. L. Foster	T. S. Simms Co., St. John, N.B.
J. D. Palmer	Hartt Boot & Shoe Co., Fredericton, N.B.
W. S. Fisher	Enterprise Foundry Co., Sackville, N.B.
W. F. Knoll	Jas. Pender & Co., Ltd., St. John, N.B.
Alex. Wilson	Wilson Box Co., St. John, N.B.
W. A. Christie	Christie Bros. Co., Amherst, N.S.
C. E. Barnard	Burnham Morrill Co., Portland, Me.
Wm. Knight	Amherst Foundry Co., Amherst, N.S.
W. C. Newcombe	Eastern Linen Mills, Moncton, N.B.
F. C. Beatteay	Stetson-Cutler Co., St. John, N.B.
J. F. Walsh	Canadian Manufacturers Association, Toronto.
J. T. Stirrett	Canadian Manufacturers Association, Toronto.
J. R. K. Bristol	Canadian Manufacturers Association, Toronto.
H. R. Thompson	Canadian Manufacturers Association, Amherst.

The decision to hold the Council meeting in conjunction with the semi-annual meeting of the Maritime Division was very satisfactory, as it made possible the transaction of a great deal of business of peculiar interest to the three Maritime Provinces. Visitors were taken through some of the principal industries of the city and made an extensive trip of the harbor. Special interest was taken in the very extensive harbor developments at Courtenay Bay. The visitors were impressed with the magnificent advantages which St. John possesses as a winter port and as the terminus of the Canadian Pacific Railway.

The party arrived at Moncton on October 3rd, visited a number of industries and held the usual business meeting. The City of Moncton has doubled its population within the past few years and now includes with its suburbs over 20,000 people. Those who had not visited Moncton for ten years scarcely recognized the city, so great has been the development in the building, not only of factories and business establishments, but also of dwellings. About seventy-five persons attended a luncheon in Moncton given in honor of the Association's delegates. These included members of the Board of Trade, manufacturers, and other business men.

The party arrived in Truro on October 4th, inspected the industries and noted with gratification two or three comparatively new factories.

In Halifax, where the party remained two days, they had an excellent opportunity not only to visit the industries, but

to inspect the harbor developments and the new freight handling facilities which are being established in connection with the Canadian Government Railways. A joint meeting was arranged by the Halifax members, including the Lieutenant-Governor of Nova Scotia, representatives of the banks, railways, business interests and also members of the Association.

In Sydney the party went through several plants and were agreeably surprised at the remarkable growth of this ocean port. The party also visited North Sydney for the purpose of studying the transportation arrangements to Newfoundland.

In New Glasgow, where the party arrived on October the 8th, they had the pleasure of witnessing the launching of the Canadian sealer which was built in New Glasgow. They also made the usual inspection of the principal industries. New Glasgow is one of the most thriving manufacturing towns in the Maritime Provinces.

Probably one of the best meetings of the trip was held in Amherst, the headquarters of the Maritime Division of the Association. There was practically a complete attendance of all the manufacturers in the vicinity. The party were glad to see that the city was continuing the extraordinary rapid growth which it has enjoyed during the past ten years.

The last meeting of the trip was held in Charlottetown and was successful in every way. Local members had invited the Premier of Prince Edward Island and other leading business men to meet the visitors, and the problems of the Island were fully discussed.

The delegation were unanimous in considering the trip through the Maritime Provinces an unqualified success, at least from their point of view, and from assurances which were received throughout the journey they were lead to believe that our members in the Maritime Provinces had received some benefit. The meetings which were held at the places mentioned above were unusually interesting and instructive. The heads of departments of the Association who were with the party, took up in detail the various technical matters upon which members wished to secure information, but, in addition to this, national problems and problems affecting the Maritime Provinces as a whole were very fully and frankly discussed, with the result that a great deal of useful information was elicited. The visiting party were greatly impressed with the prosperity of the Maritime Provinces from one end of these provinces to the other. There appeared to be no poverty whatever. The towns and cities visited gave unmistakable evidence of steady and substantial growth. Trade conditions generally were very satisfactory and the average prosperity of city and country was high.

Canadian exports of pulp and paper during August, 1919, amounted in value to $8,348,179, as compared with $7,118,398 in August, 1918, a gain for this year of $1,229,781. Exports of pulpwood amounted to $944,877, against $1,978,012 a year ago, a falling off of $1,033,135. The paper exports included 57,817 tons of newsprint, valued at $4,140,812, the importing countries including the United Kingdom, United States, Argentine Republic, Australia, Brazil, British South Africa, Cuba, New Zealand, Peru and other countries.

THE TOURING PARTY AT FREDERICTON

Front row, left to right—H. W. Fleury, J. Fleury's Sons, Aurora; W. H. Shapley, Sterling Actions & Keys, Toronto; G. D. MacKinnon, MacKinnon Steel Co., Sherbrooke; H. R. Thompson, Secretary Maritime Division, Amherst; P. E. Joubert, Lamontagne, Ltd., Montreal.

Second row—H. A. Telfer, Telfer Bros., Ltd., Toronto; J. T. Stirrett, General Secretary, Toronto; J. R. K. Bristol, Manager Tariff Department, Toronto; C. Howard Smith, Howard Smith Paper Mills, Montreal; T. P. Howard, Phœnix Bridge & Iron Works, Montreal; J. E. Walsh, General Manager, Toronto; F. W. Stewart, Cluett, Peabody & Co., Montreal; Sam Harris, Harris Litho Co., Montreal.

Third row—H. S. Campbell, president of Board of Trade, Fredericton; C. K. Palmer, John Palmer Co., Fredericton; J. D. Palmer, Hartt Boot & Shoe Co., Fredericton; G. H. Douglas, Thornton & Douglas, Hamilton; M. R. Meldrum, Herbert Morris Crane & Hoist Co., Niagara Falls; R. H. Simmonds, secretary Board of Trade, Fredericton; R. H. Bennett, Gleaner Limited, Fredericton; Mr. Campbell, Fredericton; W. S. Kilburn, John Palmer Co., Fredericton.

Back row—E. J. Kingsley, Canadian Cottons, Marysville, N.B.; Dr. C. C. Jones, Chancellor Univ. of N.B.; W. T. Chestnut, Chestnut Canoe Co., Limited; J. A. Reid, Hartt Boot & Shoe Co.; Jas. S. Neill, Jas. S. Neill & Sons; F. B. Edgecombe, F. B. Edgecombe Co.; R. P. Allen, Fredericton Mail; Mr. Smith, Fredericton.

Quebec Division is Organized at Montreal

Enthusiastic Meeting Was Held in the Windsor Hotel on October 16 —Officers and Committees Elected—Several Interesting Addresses Delivered and Discussions Held—A Good Augury for the Future

By W. P. HUGHES
Secretary, Quebec Division

THE keen interest displayed by members of the Association located outside of the City of Montreal, and the bright, instructive nature of the discussions throughout the sessions were the outstanding features of the Quebec Division Organization Convention that was held in the Windsor Hotel, Montreal, on Thursday, October 16th last.

When the President, Mr. T. P. Howard, called the morning session to order there were present representative manufacturers from nearly all of the principal industrial centres of the Province, and from the opening moments it was evident that the divisional organization would commence its career under most auspicious conditions. Mr. Howard welcomed the members, touching on the importance to them of co-operation in dealing with their common problems. He intimated that the formation of a Quebec Division was aimed at providing machinery for such study, and expressed the earnest hope that the members within the Province would make the most out of the opportunity which was thus offered. He explained that they were fortunate in having with them Mr. J. E. Walsh, the General Manager of the Association, and Mr. J. R. K. Bristol, the head of the Tariff Department. He then called on Mr. Walsh to outline to the meeting what the Association Executive had had in mind when the re-organization into divisions had been passed last June.

To Give More Efficient Service

Mr. Walsh reviewed the development of the plan. It had been felt for some time, he said, that means should be evolved for bringing the services of the Association into closer touch with the members and also bringing the members into closer touch with one another. It was a matter of better administration of the Association's affairs. There had been the criticism that there was too much centralization in the past, and that members located outside of the two centres of Montreal and Toronto had had little to say in the formation of the Association's policies. Such criticism had been particularly levelled against Toronto, no doubt due to the fact that as the head office of the Association was located in that city and most of the Committee meetings were called in that centre, such meetings had been attended for the most part by Toronto members. This, Mr. Walsh maintained, fully explained the part played by such members and denied that there had been any conscious endeavor to keep the control of the Association's policies in the hands of a few. About a year ago there had been considerable agitation to have the head office of the Association moved to Ottawa. A compromise had been effected whereby a representative had been appointed in that city, and Mr. Walsh paid a high tribute to the effective work which Mr. G. M. Murray and his assistant, Mr. Blake Robertson, had accomplished. In fact, the value of their work had been such as to make the Executive wonder how the Association had ever got along without it. It had been still felt, however, Mr. Walsh explained, that the re-organization of the members in the various provinces into divisions, would co-ordinate and facilitate the whole work of the Association. The keynote of the whole plan was service to the members, and it was hoped that through such machinery the members would use this service. He then outlined briefly the work which would properly come under a Division, mentioning police work and the development of industries.

Branches to Carry On Still

In the discussion which followed it was pointed out that the branches within a Division would still carry on and would have within their territory sections of the provinces as at present. Connecting and unifying the work of all the branches would be the provincial Executive Committee and officers.

The chairman then explained to the meeting that it was open for them to decide what number would constitute the Provincial Executive Committee. He intimated that 23 nominations had been received by the Secretary for nomination to this Committee and suggested that if it met with the views of the meeting this number would not be in any way too large for the important work which would be carried on by it.

On motion of Mr. Paul E. Sise, seconded by Mr. S. J. B. Rolland, the meeting unanimously decided to elect a committee of 23, to which would be added the chairmen of the various branches within the Province. Mr. Howard then announced that the only nominations which had been received for chairman and vice-chairman were Mr. G. H. Duggan and Mr. C. Howard Smith, and they were declared elected by acclamation. In the absence of Mr. Duggan (which was unavoidable, owing to a special convocation at Queen's University, where he was the recipient of an honorary degree), Mr. Smith was called to the chair. Mr. Smith thanked the members for the singular honor which had been conferred upon him, and expressed his confidence in the future usefulness of the Division.

The secretary then read the list of nominations which had been received for the Executive Committee—these were as follows:

Coghlin, B. J. .....Montreal.	Warrington, J. E. ....Quebec.
Grothé, Raoul .....Montreal.	MacKinnon, Geo. D. ..Sherbrooke.
McMaster, R. H. ....Montreal.	Welsh, H. W. .....Sherbrooke.
Ramsay, Walter B. ..Montreal.	Laframbroise, C. J. ..St. Hyacinthe.
Richard, J. A. .....Montreal.	Fraser, D. J. .....St. Johns.
Stewart, F. W. .....Montreal.	Alain, J. E. .....Victoriaville.
Sise, Paul E. .....Montreal.	Paradis, A. A. .....Victoriaville.
Smardon, Walter ...Montreal.	Bodden, W. F. .....Victoriaville.
Fortier, J. H. .....Quebec.	Rolland, Jean .....St. Jerome.
Gignac, O. A. .....Quebec.	Miner, W. H. .....Granby.
Picard, Jos. .....Quebec.	Matheson, W. H. ....Shawinigan.
Ryan, Robert .....Three Rivers.	

Ex Officios:

Sadler, W. J., Chairman Montreal Branch.
Sangster, Andrew, Chairman Sherbrooke Branch.
Letourneau, Louis, M.P., Chairman, Quebec Branch.

These were declared elected and thus became the first Executive Committee of the Quebec Division.

Noon Luncheon

The "out-of-town" members were the guests of the Montreal branch members at a luncheon served immediately

after the morning session. Among those present as guests were:

Renault, Raoul	Secretary, C.M.A., Quebec Branch, Quebec.
Picard, Jos.	Rock City Tobacco Co., Quebec.
Gignac, O. A.	J. H. Gignac, Ltd., Quebec.
MacKinnon, Geo. D.	MacKinnon Steel Co., Ltd., Sherbrooke.
Boivin, P. E.	Granby Elastic Web Co., Granby.
Trotter, W. C.	Standard Clay Products Co., Ltd., St. Johns.
Fraser, D. J.	The Singer Mfg. Co., St. Johns.
Gareau, J. O.	The E. T. Corset Co., Ltd., St. Hyacinthe.
Bodden, W. F.	Mica Insulator Co., Ltd., Victoriaville.
Alain, J. E.	The Victoriaville Furniture Co., Ltd., Victoriaville.
Paradis, A. A.	Victoria Hide & Skin Co., Victoriaville.
Farand, J. A.	The Plessisville Foundry Co., Plessisville Sta.
Savoie, J. A.	The Savoie Guay Co., Plessisville Sta.
Kirouac, O. F.	La Cie des Industries Cantin, Warwick.
Bellavance, A.	La Cie de Lainage de Rimouski, Rimouski.
Ball, H. S.	The Domnion Snath Co., Waterville.

Lieut.-Col. W. J. Sadler, Chairman of the Montreal Branch, extended a hearty welcome to the visitors, and a cordial spirit of friendliness was in abundant evidence throughout the function.

Afternoon Session

Three very interesting subjects occupied the attention of the afternoon meeting. "Needed Tariff Changes" was the subject of an instructive address by Mr. J. R. K. Bristol, head of the Customs Department of the Association. A thoughtful presentation of the present day question of "Profit sharing" was given by Mr. J. H. Sherrard and Mr. F. W. Stewart.

In opening his address on "Needed Tariff Changes," Mr. Bristol alluded to the last report of the Minister of Finance to the effect that the country was ripe for a revision of the tariff. He pointed out, however, that the economic conditions of European and other countries had been such as to have prevented them arriving at the stage of stability to permit of Canada attacking the tariff problem this autumn at least. He referred to the resolutions which had been adopted by the annual meeting urging the Government to promote preferential tariffs applicable within the United Kingdom and possessions, and the appointment of a Tariff Commission. He pointed out that all other countries are uniformly in favor of a high tariff, and thought it would be rank folly to even talk of lowering the tariff at this time.

Offset the Advantages

Asked as to the effect of the preferential tariff already established, Mr. Bristol thought that it had been very beneficial in increasing trade between Great Britain and the colonies, but that United Kingdom manufacturers had stated that they had not derived the benefits that they should have by reason of the increased ocean rates which offset the advantages obtained by the tariff.

Mr. Bristol's main point was in the urging of the appointment of a Tariff Advisory Board to study and deal with matters appertaining to the tariff. To show the need for the establishment of the preferential tariff the speaker showed that Canada had imported $800,000,000 worth of goods during the past year from the United States, while that country had only imported $400,000,000 worth from Canada, and that the average *ad valorem* duty of the United States with its 110,000,000 of people is from 17 to 46 per cent., while that of Canada is less than 17 per cent.

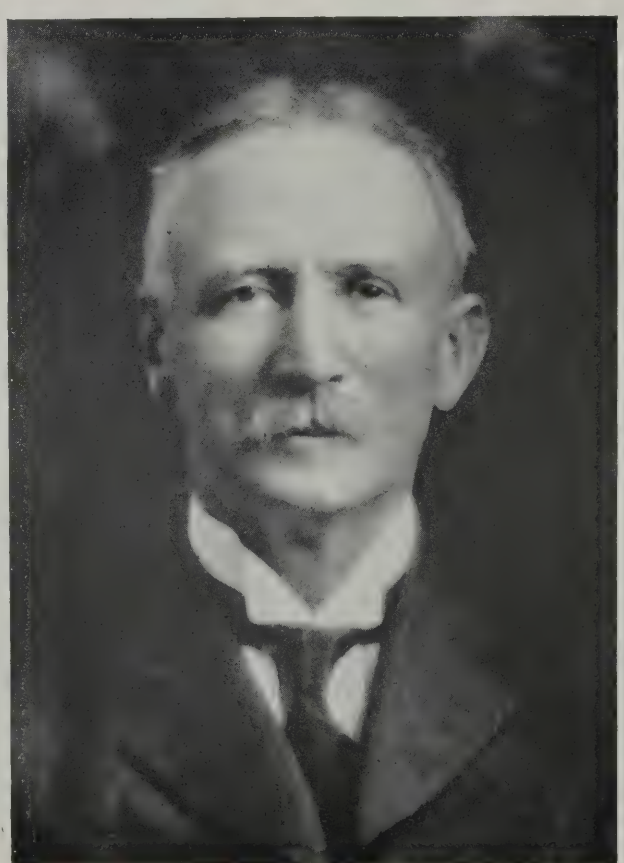
Mr. D. J. Fraser thought that the Association should fight strongly against any reduction in the tariff, as he does not see how most Canadian manufacturers could carry on with less than at present.

The question of German competition was also raised, and it was urged that steps be taken to protect those manufacturers who, during the war, started making lines of commodities which had hitherto been supplied by German manufacturers. It was shown that German and Austrian manufacturers were already entering the field with a sharp challenge to Canadian manufacturers of these lines, in spite of the economic conditions obtaining in Central Europe.

Profit-Sharing

Mr. J. H. Sherrard, of the Alaska Bedding Co., Ltd., outlined a plan which has been in operation in his company for nine months for obtaining greater production and a general improvement of conditions through profit-sharing with employees. Mr. Sherrard stated that early last year his company came to the realization that the dollar was no longer an incentive to greater production by its workers and therefore carefully studied plans for increasing production along different lines. Under the scheme which was decided upon each employee of the company receives a yearly dividend upon his yearly earnings on the same basis as the common stockholders of the company.

An arbitration board has been established to pass upon the cases of any employees discharged. It was promised that no employee would be discharged without cause, and any one discharged could go before this board for a hearing as to the justice of his dismissal.



Mr. Sherrard stated that the plan was successful up to date in increasing production, decreasing waste and promoting efficiency generally.

The Plan Submitted

Mr. F. W. Stuart, of the Cluett-Peabody Company, submitted the following plan which General Manager Walsh proposed that he hand to the incoming Executive to be submitted to the Industrial Relations Committee:

"The weak point of all profit-sharing plans which I have examined, is the condition created by the non-distribution of profits during periods when there are no profits to distribute.

"Possibly 75 per cent. to 85 per cent. of wage-earners live up to their incomes, whether

—B. and C. Press Photo

Mr. G. H. Duggan

Who enjoys the distinction of being the first chairman of the Quebec Division, C.M.A.

such incomes are straight wages, or wages and bonus, or wages and share of profits.

"When shares of profits are received over a term of prosperous years, and a period of depression is reached, and the distribution of a share of profits is discontinued, many employees, anticipating their share of profits, and having possibly undertaken obligations which they figured upon liquidating with their share of profits, are placed in a very undesirable and serious position, in not being able to meet these obligations.

"Dissatisfaction, suspicion and discontent is therefore created, to the detriment of the industry in which this condition has been brought about.

"So far as I can learn, the wage-earner with a family or dependents to support, wishes a plan or a system which will assure him or her a regular income from year to year, no matter what the economic conditions may be. It is, therefore, desirable to devise a plan which will enable this to be done, without being too great a charge on the resources of the industry concerned, or increase the fixed charges to too great an extent.

Organizers of the Quebec Division

Group of well-known manufacturers present at the recent organization of the Quebec Division in Montreal

"Having this in mind, I submit the following as a basis, or plan, to work upon, to perfect a system which would be fair and in the interests of employers and employees alike:

"First, a fair wage, commensurate with the cost of living, must be paid. A per cent. of the total amount of wages paid, equivalent to the per cent. of dividend paid on preferred stock, be placed in a fund and invested in Government or similar securities; this fund to be the property of the employees and administered by a committee comprised of members of the executive of the company and of the employees.

"If 7 per cent. is paid on preferred stock, 7 per cent. of wages would be a fixed charge on the business and placed semi-annually or annually in this fund.

"If the wages of a company totalled $1,000,000, the annual contribution to the fund would be $70,000. The interest, say 5 per cent., on this amount, would give an additional revenue of $3,500.

"This amount added to the fund covering a period of, say five to ten years, could reasonably be assumed to serve its purpose during a period of depression, of say two to three years.

Object of the Fund

"The object of the fund would be to take care of such conditions, or others, as follows:

"During times of depression, if the factory is running on short time, the difference between short running time and regular running time would be paid from the fund.

"If the plant is closed for repairs, vacation, or any other reason, partial or full wages would be paid from the fund.

"The fund would be used for paying accident and sickness insurance—the latter possibly to include illness of any member of an employee's family, who may be too young or too old to earn a wage.

"A fixed amount would be paid for every birth or death in the family of an employee. The fund could also act as a pension fund, assuring an income to retired aged employees.

"The big problems which face the average wage-earner, are the periods of unemployment, working on short time, illness in the family with its additional expense, the closing down of the plant for repairs, vacation, or other reasons, and cutting off his income for periods which run him into debt, which means months or years of saving to wipe out.

"The plan, which, in my opinion, will do away with the anxieties, troubles and conditions which are created during periods such as these, will be the one which will tend to go far towards making living conditions of the average family satisfactory to them, and bring happiness and contentment to employees in factories, offices, and warehouses.

"Assure a regular wage from year to year with provision for illness, accident, old age, etc., and I believe there will be very few industrial disturbances amongst employees. I am sure that such a plan as I have outlined, carefully worked out, and covering all the good and bad features which might arise, will be acceptable to employees generally, and do away with the weak features of weekly, monthly, or annual cash or stock distribution of profits, which are usually spent as received and no provision made for the meeting of unusual or extraordinary conditions, over which the wage-earner has no control."

One of the most lively discussions which took place during the day followed the addresses of Messrs. J. H. Sherrard and F. W. Stewart, which in itself was evidence of the fact that the subject of "Profit-sharing" was being seriously studied by a great number of the members present.

Executive Committee Meeting

Following the afternoon session, the first meeting of the Provincial Executive Committee was held with Mr. C. Howard Smith presiding. The chief business concluded was the appointment of a Sub-Executive Committee, consisting of the chairmen of the Montreal, Quebec and Sherbrooke branches, together with Messrs. B. J. Coghlin, F. W. Stewart, J. A. Richard, Jean Rolland, Walter B. Ramsay, and G. H. Duggan, and C. Howard Smith as ex-officios. It was decided that five members of this sub-committee would constitute a quorum. A Legislation Committee was also appointed, consisting of Messrs. Louis Letourneau, R. H. McMaster, J. A. Richard, Geo. D. MacKinnon, Robt. Ryan, W. H. Walsh, J. E. Alain, and G. H. Duggan and C. Howard Smith, ex-officios. The quorum for this committee was fixed at four.

After a general discussion as to the work which might be expected to come before the Executive this year, the meeting was adjourned subject to the call of the Chairman.

At the informal dinner given in the evening, which was one of the most pleasant features of the day, a strongly-worded resolution presented by Mr. F. W. Stewart, seconded by Lieut.-Col. W. J. Sadler, opposing any acquisition of the G.T.R., was unanimously adopted. The text of this resolution was as folows:

"In view of the grave financial responsibilities already assumed by the Dominion of Canada through the acquisition

and operation of railroads, which responsibilities, added to a public debt enormously increased by war expenditure, necessitates a heavy burden of taxation on the country, and in view of the actual results of such Government operation of railroads both in Canada and the United States;

"Be it resolved that this general meeting of the members of the Province of Quebec Division of the Canadian Manufacturers Association, held in Montreal, on October the 16th, places itself on record with the Dominion Government as being unalterably opposed to the contemplated acquisition and operation by the Government of the Grand Trunk Railway."

The Secretary was instructed to communicate the same by wire to Sir George Foster, the Acting Prime Minister, and this was done immediately.

Compulsory Education

Prof. J. A. Dale, of McGill University, gave a scholarly address on compulsory education in Quebec Province, in which, while avoiding racial and religious differences, he pointed out the necessity for a general compulsory system of education, in order that all children might be given equal opportunity, not merely in their own interests, but in those of the State.

His argument was ably seconded by Mr. W. E. Patenaude, who told of the work of the Board of School Commissioners in securing a proper attendance at school, especially of children of the earlier grades. Mr. Patenaude supported the idea of compulsory education, as designed to give all the youth of the country opportunity to develop their talents to their own interests and those of the State.

Following these addresses the President, Mr. T. P. Howard, spoke most eloquently to the members on Association matters. In part he said: "Our Association is looking for peace, not fight. But if a fight should come we want to be ready, whether it is a fight on the tariff or on the buying of the Grand Trunk. When I was elected your president I said we had been doing too much pussy-footing, and I repeat it now. We represent the largest and most important body in Canada, and we should be prepared to take a decided stand, whether on matters of compulsory education, industrial relations or the labor problem. As to the latter, some people think we are out to fight labor interests. We are not. On the contrary, we are out to do everything we possibly can to work harmoniously with them. Our Industrial Committee is doing everything possible for peace, but if we must fight we will fight standing up, not lying down. If the Canadian Manufacturers Association is to be licked it will be licked standing up, not lying down."

Proceeding, Mr. Howard sketched the growth of the C.M.A. from its organization in 1872 to its present membership of 3,700, with divisions in Ontario and Quebec, and hoped for a membership of 5,000 for which he asked those present to work. As to the divisional organizations, Mr. Howard stated they had been formed for provincial purposes. The Quebec division would work for Quebec interests, and the Ontario division for its interests, subject to the general jurisdiction of the Association. In this Mr. Howard drew special attention to the manner in which the French and English-speaking members in the Province were working together.

Brief addresses were given by others connected with the C.M.A. work. Throughout the dinner an excellent entertainment programme was enjoyed by one and all, and expressions of opinion were heard on all sides to the effect that the day's work had been highly satisfactory, and that the first convention augured well for the future of the Division.

Organization of Ontario Division Completed

By H. MACDONALD
Secretary, Ontario Division

THE organization meeting in connection with the formation of the Ontario Division of the C.M.A. was convened in the King Edward Hotel, Toronto, on Thursday, October 16. There was a large and representative attendance of manufacturers, including quite a number from points outside Toronto.

Mr. Thos. Roden, Chairman of the Organization Committee, presided, and after luncheon explained that by amendment of the Association by-laws passed at the last annual meeting of the Association, members located within the Province of Ontario were created an Ontario Division of the Association. This, however, did not affect the branch organizations as at present constituted. The chief reasons for the change were uniformity in district organization. There were now the Maritime, the Quebec, the Ontario, the Prairie Provinces and the Pacific Divisions, and closer co-operation among the members so located was desirable. As a result of the new organization, members within a Division will be enabled, through their duly elected officers and committees, to deal with matters of common interest, such as provincial legislation, industrial conditions within the Province, policies of the Association as they affected the Divisional members, etc.

The scheme had been inaugurated at a meeting of representative Ontario manufacturers held in Toronto, on 20th March last, which had carefully considered the situation, and after submitting a report to the Executive Committee of the Association, it had been referred to, and had received the unanimous approval of the Association at the last annual meeting.

Apologies for absence having been intimated from: Senator Nicholls, Canadian General Electric Co., Limited; Arthur Hewitt, Consumers' Gas Co. of Toronto, Ltd.; Adam Hall, Pres. Adam Hall, Limited, Peterborough; Ingersoll Packing Co., Ltd. Ingersoll; John Goodison Thresher Co., Ltd., Sarnia; Cyrus A. Birge, Steel Co. of Can., Ltd., Hamilton; A. W. White, Geo. White & Sons Co., Ltd., London; Geo. D. Forbes, A. R. Forbes Co., Ltd., Hespeler; the Chairman submitted the following report of the Organization Committee:

At a conference of representative Ontario members held in Toronto on March 20, 1919, it was unanimously agreed that the Association should now begin a period of intensive organization. During the past seventeen years, a frame work has been created from coast to coast, with branches covering all the provinces; now the frame work needs a certain amount of enlargement and consolidation, in order to achieve its maximum effectiveness. A proposal to group the membership of the Association for administrative purposes into divisions, was accordingly considered and after full discussion, the following motion was unanimously carried:

"That this meeting, having regard to the problem of increasing the membership of the Association, recommend to the Executive Committee the advisability of creating a Provincial organization, to be known as the 'Ontario Division' of the Association, to include present branches or subbranches in Toronto, Hamilton, Niagara Falls, and Brantford, and any additional branches which may subsequently be organized, to deal with matters having a Provincial application, leaving to the local organizations such matters as affect

them locally, and that the by-laws of the Association be amended and enlarged accordingly."

This resolution being approved by the Executive Committee, was submitted to the annual general meeting, held in Toronto in June last, and unanimously adopted, the membership of the Association being divided into five divisions; and by amendment of the Association by-laws then passed, members located within the Province of Ontario were created an Ontario Division of the Association, without, however, affecting the branch organizations as at present constituted.

Your Committee believe that the formation of branches in all the chief industrial centres will do much, not only to increase the membership of the Association, but also to stimulate thought on industrial matters.

All of which is respectfully submitted,

THOS. RODEN,
W. R. BREYFOGLE,
A. KINZINGER,
H. H. CHAMP,
H. W. FLEURY.

Toronto, October 16, 1919.

The Chairman then laid emphasis on the necessity of more intensive provincial organization for the purpose of dealing with purely provincial matters, such as Education, Workmen's Compensation, and Fire Prevention, which were largely administered under provincial law; also prospective legislation, such as Minimum Wage Law, Factory Legislation, etc.

On motion by Mr. Coulter, seconded by Mr. J. P. Murray, the report was unanimously received and adopted.

On motion by Mr. Coulter, seconded by Mr. J. P. Murray, the following resolution was submitted, and unanimously passed:

"Whereas by amendment of the Association by-laws passed at the last annual meeting, members in the Province of Ontario were created an Ontario Division of the Association (without affecting the branch organizations as heretofore constituted), to be operated under the said by-laws;

"Therefore, be it resolved, that a Division Executive Committee be and is hereby constituted, consisting of a Chairman, a Vice-Chairman and twenty elected members, together with the Chairman of each branch within the Province of Ontario, seven to constitute a quorum for meetings of such Executive Committee."

The Committee on Nominations having submitted a list of thirty-three nominees, Messrs. J. M. McIntosh and W. J. Larkin of the head office staff were appointed scrutineers.

The Chairman announced, upon a report by the scrutineers, that the following officers had been returned, and they were accordingly declared elected:

Chairman:

Douglas, Geo. H. ..... Thornton & Douglas, Ltd., Hamilton (by acclamation).

Vice-Chairman:

Shaw, J. R. ..... Canada Furniture Mfrs., Ltd., Woodstock (by acclamation).

Division Executive Committee (20):

Brigden, George ..... Brigdens, Ltd., Toronto.
Carlistle, C. H. ..... Goodyear Tire & Rubber Co., Ltd., Toronto.
Cockshutt, Gordon C... Slingsby Mfg. Co., Ltd., Brantford.
Cowan, W. ..... Cowan & Co., Ltd., Galt.
Dillon, T. J. ..... Canada Foundries & Forgings, Ltd., Welland.
Fleury, H. W. ..... J. Fleury's Sons, Aurora.
Freyseng, E. J. ..... Freyseng Cork Co., Ltd., Toronto.
Gray, Robert ..... Wm. Gray Sons Co., Ltd., Chatham.
Harris, Sam ..... Harris Lithographing Co., Ltd., Toronto.
Hatch, Fred ..... The Hatch Mfg. Co., Whitby.
Inglis, Wm. ..... John Inglis Co., Ltd., Toronto.
McGregor, G. M. ..... Ford Motor Co. of Canada, Ltd., Ford.
Millar, John ..... Lever Bros., Ltd., Toronto.
Monypenny, T. F. ..... Imperial Varnish & Color Co., Ltd., Toronto.
Paige, J. F. ..... Pt. Arthur Shipbuilding Co., Ltd., Pt. Arthur.
Roden, Thomas ..... Roden Bros., Ltd., Toronto.
Waddie, H. J. ..... Canadian Drawn Steel Co., Ltd., Hamilton.
Williams, Sam. J. .... The Williams, Greene & Rome Co., Ltd., Kitchener.
White, A. W. ..... The George White & Sons Co., Ltd., London.
Whitton, Frank ..... Steel Co. of Canada, Ltd., Hamilton.

Chairmen of Ontario Branches, Members Ex Officio:

Coulter, W. C. ..... Booth-Coulter Copper & Brass Co., Ltd., Toronto.
Douglas, Geo. H. ..... Thornton & Douglas, Ltd., Hamilton.
(Note.—Mr. Douglas is Division Chairman.)
Blew, E. R. ..... Spirella Co. of Canada, Ltd., Niagara Falls.
Waterous, C. H. ..... Waterous Engine Works Co., Ltd., Brantford.
(25 members.)

On motion by Mr. Douglas, seconded by Dr. D. Strachan, the following resolution was submitted and carried unanimously:

"That the Ontario Division Executive Committee be and is hereby authorized and empowered to elect committees as follows, that is to say:

(1) Educational Committee,
(2) Legislation Committee,
(3) Transportation and Power Committee,
(4) Publicity Committee.

"And such further or additional committees and sub-committees as it may deem proper or necessary with such powers, and consisting of such number respectively, as it may agree upon for the due and proper discharge of the business of the Division.'"

Sir Henry Drayton, K.C., M.P., Minister of Finance, being introduced by the Chairman, addressed the manufacturers on the financial standing of Canada and invited their co-operation in completing the projected Government loan, which he characterized as essentially a war loan. He bore ready testimony to the devotion and patriotism of Canadian manufacturers and felt sure that their co-operation would be not less hearty than on all former occasions. In reply, Mr. Roden assured Sir Henry of the fullest support of the Association.

On motion by Mr. Frank H. Mutton, seconded by Dr. D. Strachan, the following resolution was submitted and carried unanimously:

"Whereas it is expedient that the Association should at once consider the organization of a permanent Department of Industrial Relations to study the relations existing between employers and employees, to gather data to supply industrial statistics and other information, and to be prepared to furnish expert advice and assistance in connection with any further Industrial Conferences or otherwise;

"Therefore, be it resolved, that the Ontario Division of the Canadian Manufacturers Association in general meeting assembled, recommend to the Executive Committee of the Association, that the Industrial Relations Committee be requested to report fully on the desirability of such an organization and outline a plan for its operation."

Mr. J. F. MacKay stated that the Publishing Committee of the Association, of which he is Chairman, would welcome any assistance from the Ontario Division. He also emphasized the value of publicity, urging that this matter should receive full consideration.

Mr. T. F. Monypenny suggested that the co-operation of Mr. J. F. MacKay and Mr. J. J. Gibbons should be enlisted in furtherance of a substantial publicity campaign. All rival interests were active in this respect—this Association alone excepted.

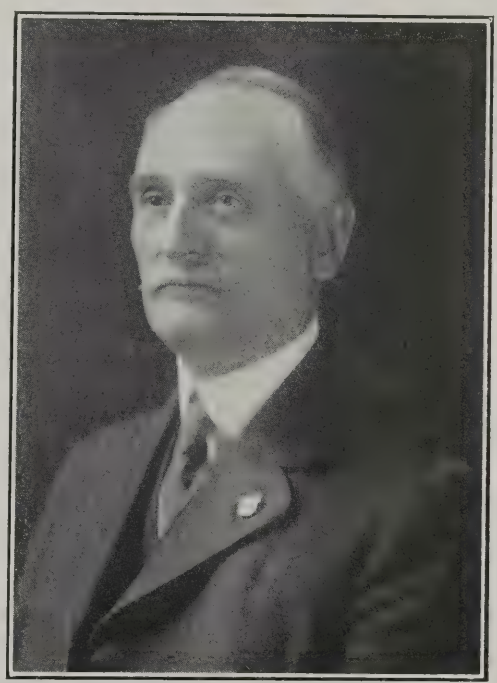
Mr. Douglas pointed out, however, that the operation of a Publicity Department required funds, and that the Executive must be careful not to conflict with the function of the Executive Council in its operation, but assured the meeting that the matter would receive full consideration.

Mr. Freyseng strongly urged the desirability of increasing the membership, and expressed the hope that there would be a large accession to the membership in the Ontario Division as the result of the new organization.

Mr. Roden then welcomed Mr. George H. Douglas to the Chairmanship of the Division for the ensuing year, who on taking the chair, was received with hearty applause. Mr. Douglas stated that he had just returned from taking part in a highly successful trip to the Eastern provinces, and that he had received ample evidence of the appreciation with

which all the Departments of the Association were regarded by members generally. The Ontario Division especially offered prospects of very great development. It was the chief centre of Canada's industries and might well be described as the banner Province of Canada. With such a representative and well-distributed Executive, he was quite sure that they were capable of performing excellent service to the manufacturers. He looked forward to the organization of branches in the chief centres, and whatever co-operation he and his Executive could give in this direction would be heartily at the command of all the members in their territory.

On motion by Mr. J. P. Murray, seconded by Mr. Parsons, a hearty vote of thanks was accorded to Mr. Roden for his valuable work as Chairman of the Organization Committee, leading up to this convention, and also for the active and intelligent interest he took in all matters affecting the welfare of the Association. Mr. Roden expressed his sincere thanks for this expression of appreciation of his co-members. Mr. G. H. Lees, at the same time, moved a hearty vote of thanks to the members of Toronto branch for their hospitality in entertaining the out-of-town members to luncheon.



At this stage, a telegram was read from President T. P. Howard, conveying congratulations to the Chairman of the Ontario Division, intimating the election of Mr. G. H. Duggan as Chairman, and Mr. C. Howard Smith as Vice-Chairman of Quebec Division. The Chairman intimated that he had also wired congratulations to Mr. Duggan on his election as Chairman of Quebec Division at its first organization meeting held in Montreal that day.

Mr. C. H. Carlisle, of the Goodyear Tire & Rubber Co., Limited, Chairman Industrial Relations Committee, delivered an interesting address in which he reminded the manufacturers that Socialism had been often tried in the United States and other countries, as well as in the British colonies, and had proved a failure. Referring to the question of publicity, Mr. Carlisle stated that the Association is behind every other organization in the city in this respect. One of the largest payers of taxes and reflecting the industrial life of the country—yet they have no adequate publicity! They had a great work in reaching the people of this country by well-directed publicity and inculcating the view that by production, fair-dealing and saving alone, could success be achieved. If this requires money, his advice was "Get it." It would be given and it would be a good investment. To such subjects as wise legislation, a system of scientific tariffs and discriminate consideration of the claims of labor, careful and systematic attention must be given. Only by letting people know what we are doing, could we hope to get a better co-operation.

Mr. J. S. McKinnon, 1st Vice-President, stated that much of the criticism to which they were subjected in the past was due to lack of knowledge of the aims and aspirations of the Association. What we want most of all is production, and it should be recognized and appreciated that an Association of business men, embracing from 3,000 to 4,000, devoting their time and brains to develop the industries of this country, was a very important factor towards present and future prosperity.

We are interested in the tariff because we are interested in Canadian industries. He hoped some good would come out of the National Industrial Conference recently held in Ottawa. It was not expected that a solution of all questions could be reached in one conference in the course of five days. Responsibility rested on labor equally with employers. The wheels of industry were being clogged by the uncertainty created in the various parts of the Dominion, owing to labor disputes, and the sooner all classes realized that only by whole-hearted co-operation and production could we finally win, the better for the country.

Ex-President S. R. Parsons spoke on the statesmanship-like conclusions being reached by the present Industrial Relations Committee sitting at Washington. When all classes looked to the public welfare rather than to selfish interests, then would the country assuredly reach the goal of prosperity.

Mr. G. H. Douglas

Well-known Hamilton Manufacturer who was honored with election to the chairmanship of the new Ontario Division, C.M.A.

The Secretary announced that the National Conference on Character Education in relation to Canadian citizenship, would be held in Winnipeg from October 20th to 22nd and members of the Association were invited. Mr. W. J. Bulman, Ex-President of the Association, it was explained, was the originator of the Conference which was certain of a large attendance.

The Ontario Division Executive Committee met immediately after the Organization meeting.

Present—Messrs. Geo. H. Douglas (Chairman), Thos. Roden, W. C. Coulter, T. F. Monypenny, Ed. J. Freyseng, and Sam. J. Williams.

Mr. H. Macdonald, Legal Secretary of the Association is also Secretary of the Ontario Division.

The meeting discussed the appointment of sub-committees and questions of general policy.

Mr. C. H. Carlisle of the Goodyear Tire & Rubber Co., Limited, was appointed a member of our "Committee of Approval" of the Hydro-Electric Power Commission, to deal with the question of approval of electrical fittings, fixtures, devices, etc., as representing consumers.

The following members from outside Toronto were present at the meeting:

Bertram, Henry	John Bertram & Sons Co., Ltd., Dundas.
Breyfogle, W. R.	The De Laval Co., Ltd., Peterboro.
Douglas, G. H.	Thornton & Douglas Co., Ltd., Hamilton.
G. T. Dunn	Canadian Steel & Wire Co., Ltd., Hamilton.
Gain, J. H.	Brantford Roofing Co., Ltd., Brantford.
Gernandt, F. J.	International Harvester Co., Hamilton.
Gormely, F. P.	Union Carbide Co. of Canada, Welland.
Harmer, R.	Sawyer-Massey Co., Ltd., Hamilton.
Hatch, F.	The Hatch Mfg. Co., Ltd., Whitby.
Hatt, H. L.	Welland Machine & Foundries, Welland.
Hodgins, F. S.	Williams, Greene & Rome Co., Kitchener.
Lees, Geo. H.	Geo. H. Lees & Co., Ltd., Hamilton.
Lees, W. W.	Geo. H. Lees & Co., Ltd., Hamilton.
Lovejoy, F. C.	Cross Press & Sign Co., Woodstock.
McCormick, B. J.	Canada Foundries & Forgings, Welland.
McCredie, A. L.	A. L. McCredie, Ltd., St. Marys.
Notman, J. C.	McKinnon Dash Co., St. Catharines.
Piper, J. C.	Robert H. Hassler, Ltd., Hamilton.
Ritchie, C. N.	Ritchie Cut Stone Co., Ltd., Hamilton.
Schultz, W. D.	Schultz Bros. Co., Ltd., Brantford.
Westbye, P. B.	Wm. Hamilton Co., Ltd., Peterboro.
Williams, S. J.	Williams, Greene & Rome Co., Kitchener.
Waterman, H. E.	Secretary, Hamilton Branch. Hamilton.

Statement of Principles by U.S. Employers

As Submitted to the Industrial Conference at Washington, D.C.

President Wilson of the United States summoned a National Industrial Conference to meet at Washington, D.C., on October 6th, 1919. The Conference was divided into three groups, one representing employers, one labor and one the public. This Conference was conducted along different lines to that of the National Industrial Conference held in Ottawa, September 15th to September 20th. The Canadian Conference was more in the nature of a small parliament called together to discuss certain industrial subjects. The United States Conference appears to have been a conference consisting of a small group from each of the three interests involved, who were summoned into personal conference with the President. This arrangement, owing to the President's illness, was changed to some extent. The subjects under discussion, however, were very similar. The Employers' Group, consisting of the representatives of the Chamber of Commerce of the United States, the Investment Bankers' Association, the Railroad Executives, the National Grange, the American Society of Equity, the Farmers' Co-operative Union and the National Industrial Conference Board, prepared and presented a statement of principles which they submitted should govern the employment relation in industry. This statement of principles was as follows:

SOUND industrial development must have as its foundation productive efficiency, and high productive efficiency requires not only energy, loyalty, and intelligence on the part of management and men, but sincere co-operation in the employment relation, based upon mutual confidence and sympathy.

This is true of all producing industries, large and small, of the farming industry as well as the manufacturing. While there are differences between the different branches of industry which call for special application of the underlying principles, these principles are the same in all.

Without efficiency in production, that is to say, without a large product economically produced, there will be no fund for the payment of adequate compensation for labor, management and capital, and high cost of living will inevitably continue. Moreover, without such efficiency it will be impossible for American industry successfully to compete in foreign markets or with competition in this country. The larger and more effective the production, the greater will be the return to all engaged in the industry and the lower the cost of living.

The requisite efficiency in production cannot be secured unless there is effective co-operation between employer and employee, such as is only possible where, with a full understanding of each other's point of view, management and men meet upon a common ground of principle and in a spirit of co-operation based upon good understanding and a recognition of what is fair and right between the two. Then only can there be that harmony which will insure the prosperity of those engaged in industry and of all the people.

With full recognition of the vital importance of these conditions, and with due realization of the great responsibility resting upon management to secure their practical application in industrial affairs, we submit the following principles which we regard as fundamentally sound in the interest of industry, of those employed or concerned in industry, and of the people as a whole.

1. *Production.*—The industrial organization as a productive agency is an association of management, capital, and labor voluntarily established for economic production through co-operative effort. It is the function of management to co-ordinate and direct capital and labor for the joint benefit of all parties concerned and in the interest of the consumer and of the community. No employment relation can be satisfactory or fulfil its functions for the common good which does not encourage and require management and men to recognize a joint as well as an individual obligation to improve and increase the quantity of production to as great an extent as possible, consistent with the health and well-being of the workers.

There should be no intentional restriction of productive effort or output by either the employer or the employee to create an artificial scarcity of the product of labor in order to increase prices or wages; nor should there be any waste of the productive capacity of industry through the employment of unnecessary labor or inefficient management.

It is the duty of management on the farms and in industry and commerce, as far as possible, to procure the capital necessary for the increased production that is required, and of both management and labor to co-operate to promote the use of capital in the most efficient fashion.

2. *The Establishment as a Productive Unit.*—Recognizing the co-operative relationship between management and men essential to productive efficiency as a prerequisite for national and individual well-being, the establishment rather than the industry as a whole or any branch of it should, as far as practicable, be considered as the unit of production and of mutual interest on the part of employer and employee. Here, by experimentation and adaptation, should be worked out and set up satisfactory means for co-operative relations in the operation of the establishment, with due regard to local factors.

Each establishment should develop contact and full opportunity for interchange of view between management and

—"American Industries"

The Up-to-date Engine Room

men, through individual or collective dealing, or a combination of both, or by some other effective method, always predicated on both sides on honesty of purpose, fairness of attitude, and due recognition of the joint interest and obligation in the common enterprise in which they are engaged.

Mere machiney is not enough for this purpose. There must also be sympathy and good will, with earnest intent that, whatever the means employed, they must be effective.

Safe and Satisfactory Conditions

3. *Conditions of Work.*—It is the duty of management to make certain that the conditions under which work is carried on are as safe and as satisfactory to the workers as the nature of the business reasonably permits. Every effort should be made to maintain steady employment of the workers both on their account and to increase efficiency. Each establishment should study carefully the causes of unemployment, and individually and in co-operation with other establishments in the same and other industries should endeavor to determine and to maintain conditions and business methods which will result in the greatest possible stability in the employment relation.

4. *Wages.*—While the law of supply and demand must inevitably play a large part in determining the wages in any industry or in any establishment at any particular time, other conditions must be taken into account such as the efficiency of the worker, and the wage standard of the industry in the locality. The wage should be so adjusted as to promote the maximum incentive consistent with health and well-being and the full exercise of individual skill and effort. Moreover, the business in each establishment and generally in industry should be so conducted that the worker should receive a wage sufficient to maintain him and his family at a standard of living that should be satisfactory to a right-minded man in view of the prevailing cost of living, which should fairly recognize the quantity and quality of his productive effort and the value and length of his service, and reflect a participation on his part in the prosperity of the enterprise to which he is devoting his energy.

Many plans are now under consideration for adding to the fixed wage of the worker, such, for example, as bonus payments, profit-sharing, and stock ownership. All such plans should be carefully studied in each establishment. It may well be that in many instances the employer and the employee could work out an arrangement of such a character to their mutual advantage.

Employment Suited to Ability

In order that the worker may in his own and the general interest develop his full earning capacity and command his maximum wage, it should be a primary concern of management to assist him to secure employment suited to his abilities, to furnish him incentive and opportunity for improvement, to provide proper safeguards for his health and safety, and to aid him to increase the value of his productive effort.

Where women are doing work equal with that of men under the same conditions, they should receive the same rate of pay as men, and should be accorded the same opportunities for training and advancement.

5. *Hours of Work.*—Hours of work schedules should be fixed and his right to an adequate period of leisure for rest, recreation, home life, and self-development. To the extent that the work schedule is shortened beyond this point the worker as well as the community must inevitably pay in the form of a reduced standard of living.

The standard of the work schedule should be the week, varying as the peculiar requirements of individual industries may demand. Overtime work should, as far as possible, be avoided, and one day of rest in seven should be provided.

6. *Settlement of Disputes.*—Each establishment should provide adequate means for the discussion of all questions and the just and prompt settlement of all disputes that arise between management and men in the course of industrial operation, but there should be no improper limitation or impairment of the exercise by management of its essential function of judgment and direction.

7. *Right to Associate.*—All men have the right to associate voluntarily for the accomplishment of lawful purposes by lawful means. The association of men, whether of employers, employees, or others, for collective action or dealing confers no authority and involves no right of compulsion over those who do not desire to act or deal with them as an association. The arbitrary use of such collective power to coerce or control others without their consent is an infringement of personal liberty and a menace to the institutions of a free people.

8. *Responsibility of Associations.*—The public safety requires that there shall be no exercise of power without corresponding responsibility. Every association, whether of employers or employees, must be equally subject to public authority and legally answerable for its own conduct or that of its agents.

Principle of Individual Freedom

9. *Freedom of Contract.*—With the right to associate recognized, the fundamental principle of individual freedom demands that every person must be free to engage in any lawful occupation or enter into any lawful contract as an employer or an employee, and be secure in the continuity and rewards of his effort. The freedom of a man to work is as sacred as is his freedom to religious worship and must not be subject to restriction or menace.

The only qualification to which such liberty of contract is subject lies in the power of the state, within limits imposed by the Constitution, to regulate in the public interest, for example, for the promotion of health, safety, and morals.

10. *The Open Shop.*—The principles of individual liberty and freedom of contract upon which our institutions are fundamentally based require that there should be no interference with the "open shop," that is, the shop in which membership or non-membership in any association is not made a condition of employment. While fair argument and persuasion are permissible, coercive methods aimed at turning the "open shop" into a "closed union" or "closed non-union shop" should not be tolerated.

There should be no denial of the right of an employer and his workers voluntarily to agree that their relation shall be that of the "closed union shop" or of the "closed non-union shop." But the right of the employer and his men to continue their relations on the principle of the "open shop" should not be denied or questioned. No employer should be required to deal with men or groups of men who are not his employees or chosen by and from among them.

Under the organization of the "open shop" there is not the same opportunity for outside interference on the part of other interests to prevent close and harmonious relations between employer and employee. Their efforts to continue or secure such harmonious relationship are not complicated to the same extent by intervention of an outside interest which may have aspirations and plans of its own to promote, which are not necessarily consistent with good relations in the shop.

11. *The Right to Strike or Lockout.*—In the statement of the principle that should govern as to right to strike or lock-

(Continued on page 142)

Extent and Scope of the C.M.A. Organization

Illustrated by a Series of Twenty-Five Views

FOR the benefit of the many members of the Canadian Manufacturers' Association who have been unable for various reasons to familiarize themselves personally with the appearance and work of the several offices and departments of the Association, a series of photographs has recently been taken illustrating the extent of the organization. These photographs appear on the following pages. They will undoubtedly be found impressive by reason of the manner in which they portray the widespread activities of the C.M.A. and the varied services rendered by this great national Association.

Since similar illustrations were published five years ago, there have been notable developments in the organization. At that time the membership was 3,100; it is now 3,615. There were then exclusive of the Insurance Department, 25 persons on the pay-roll, giving their entire time to the work; there are now 40 persons similarly employed. With the exception of the Montreal office, the various branch offices now located in Montreal, Winnipeg, Vancouver, Amherst and Ottawa had not yet been organized on their present comprehensive basis nor had the formation of provincial divisions even been contemplated. The facilities provided and services rendered were in practically every respect inferior to those of the present day.

The Association is on the eve of further intensive organization. With the formation in October of the Ontario and Quebec Divisions, each with its own chairman, vice-chairman, executive committee and special committees, the task of organizing the Association by provinces has been completed. There now exists the Pacific Division, comprising the province of British Columbia; the Prairie Division, taking in the provinces of Alberta, Saskatchewan and Manitoba; the Ontario and Quebec Divisions, covering these two provinces respectively and the Maritime Division, extending over the provinces of New Brunswick, Nova Scotia and Prince Edward Island.

It remains to round out the work by forming branches in all the important industrial centres where such branches do not now exist. A good start has been made but much remains to be done. The following cities have already been organized---in the Pacific Division, Vancouver and Victoria; in the Prairie Division, Winnipeg, Brandon, Regina, Medicine Hat, Saskatoon, Calgary and Edmonton; in the Ontario Division, Toronto, Hamilton, Brantford and Niagara Falls; in the Quebec Division, Montreal, Quebec and Sherbrooke. There are no branches so far in the Maritime Provinces, though several will likely be formed in the near future.

THE GENERAL MANAGER

MR. J. E. WALSH AT HIS DESK

THE senior officer of the Association's salaried staff, under whose direction all other paid officers carry on their work, bears the title of General Manager. His duties, as defined by the constitution, require him to keep a correct list of the members and their addresses and a true and accurate record of all proceedings. He is required to conduct the correspondence of the Association and collect and carefully preserve all books, papers, letters and documents relating to or of interest to the Association. To him is entrusted the custody of the seal of the Association, and it is incumbent on him to perform all duties which the nature of his office may require or the Executive Committee may order.

Since its creation at the first of the present year, the office of General Manager has been held by Mr. J. E. Walsh, who was formerly manager of the Association's Transportation Department. Mr. Walsh commenced his business career with the Canada Atlantic Railway and remained in the service of that road for twenty years, passing through all departments. Then he served for a time as assistant to the general manager of the Richelieu & Ontario Navigation Company, obtaining experience in the field of water transportation. On leaving the R. & O. he was engaged by the Federal Government on the Georgian Bay survey. Finally his connection with the C.M.A. began in 1907, when he was invited to take charge of the newly-created Transportation Department. His work in this connection is too well known to the members to require any elaboration. He has made the department of great service to the membership and has demonstrated the advantage of having available the services of an expert. Mr. Walsh, in addition to his other duties as General Manager, continues to supervise personally the work of the Transportation Department.

THE GENERAL SECRETARY

MR. J. T. STIRRETT

ON the institution of the office of General Manager, a new position was created, to which was given the name of General Secretary. The duties of this office embrace the oversight and correlation of all the secretarial work of the Association divisions, its branches and committees, The position is held by Mr. J. T. Stirrett. Mr. Stirrett is a graduate in Arts of the University of Toronto. After completing his college course he spent three and a half years in daily newspaper work, which included one session in the Press Gallery of the House of Commons. In 1912 he joined the staff of the Association as editor of INDUSTRIAL CANADA. He enlisted in the Canadian Expeditionary Force in November, 1915, and, after going through the usual course of training in Canada and England, served one year in France. He was discharged on demobilization in January, 1919. After receiving his discharge he resumed his duties on the staff of the Association, and following the reorganizaton of the office staff which took place at that time, was appointed to his present position as General Secretary at the head office.

THE TARIFF DEPARTMENT

MR. J. R. K. BRISTOL, MANAGER

THIS photograph shows the office of the Manager of the Tariff Department, Mr. J. R. K. Bristol. This Department can be of great service to members in handling the many difficult and complicated problems arising in connection with the Tariff. The Manager is in a position to assist with all questions connected with departmental rulings, decisions of the Board of Customs, orders-in-council entries, post entries, dump duties, refund, drawbacks, seizures, etc. Mr. Bristol has had life-long experience in tariff matters, having been twenty-three years in the Customs Service at Ottawa before becoming Manager of the Tariff Department in 1912. He acted as private Secretary to Hon. N. Clark Wallace and Hon. John F. Woods, comptrollers of customs, was later member of the Board of Customs, has served as an Inspector of Customs, as Chief Dominion Appraiser and as member of the Statistical Commission which classified the statistics issued by the Dominion Government. His exceptional qualifications for his work in the Association are too apparent to call for explanation.

THE LEGAL DEPARTMENT

MR. H. MACDONALD, SECRETARY

THE Association's Legal Department performs numerous useful functions. It makes a careful study of all legislation passing through the Dominion and Provincial Parliaments, and where necessary advises action in the interests of manufacturers. It is always available for consultation on any legal point and its services are at the disposal of members for advice on company law, the incorporation of companies, and all matters affecting the transaction of business. The Secretary of the Department is Mr. H. Macdonald, whose legal training was obtained in the Universities of Aberdeen and Edinburgh. After practising for some years in Edinburgh, Mr. Macdonald came out to Canada, and for a time practised law in Toronto. He joined the C.M.A. as assistant general secretary in 1915, and for a time acted as general secretary during the absence of Mr. Murray.

THE COMMERCIAL INTELLIGENCE DEPARTMENT

MR. ALEX. MARSHALL, MANAGER

A DEPARTMENT of the Association's work which has been increasing very noticeably in importance during the past few years is that devoted to the compilation and dissemination of Commercial Intelligence. This Department had its nucleus in the CANADIAN TRADE INDEX, a volume published by the Association every two or three years and containing a classified list of all articles manufactured in Canada. In addition to the important task of preparing the INDEX, the Department provides a storehouse of information on many phases of the industrial life of the country and is particularly well posted on problems of export trade. Its services are at the disposal of members whenever trade questions are under consideration. The Department is managed by Mr. Alexander Marshall, a graduate of the University of Toronto, who has been engaged in this work since 1912.

INDUSTRIAL CANADA DEPARTMENT

MR. D. B. GILLIES, BUSINESS MANAGER; MR. W. A. CRAICK, EDITOR

AS the medium through which the policies of the Association are advocated, its work made known to the membership and the industrial progress of the country recorded, INDUSTRIAL CANADA plays an important part in the work of the organization. There is here shown the joint office of the business manager and the editor. Mr. D. B. Gillies, the business manager, is a graduate of the University of Toronto, who has had lengthy experience in the publishing field, first in daily newspaper work, then with magazine and specialized class publications. Mr. W. A. Craick, the editor, also a graduate of the University of Toronto, has had many years' experience in journalism, both as a writer of special articles and in the editing of magazines and class publications.

THE ACCOUNTING DEPARTMENT

MR. JOSEPH WINFIELD, OFFICE MANAGER

IN a big organization like that of the C. M. A., the accounting department naturally occupies an important place. The task of collecting the fees and handling the accounts for an institution of such proportions is no small one. The man in charge of this work and who, in addition, acts as office manager, is Mr. J. W. Winfield. Mr. Winfield enjoys the distinction of being the oldest employee of the Association in point of service. He joined the staff in 1900 as office boy, and in the interval has risen to his present responsible position. Besides keeping the accounts, Mr. Winfield looks after the membership roll and performs various other necessary duties in the organization.

THE TRANSPORTATION DEPARTMENT

MR. S. B. BROWN, ASSISTANT MANAGER

THIS is the department which deals with the transportation problems of the manufacturers of Canada. Freight and express rates, bills of lading, demurrage and other rules, freight classification and conditions of carriage, minimum carload weights, siding agreements, telegraph forms and many other matters are constantly arising and calling for attention. As the adjustment of such problems is extremely technical, the work of the department is entrusted to recognized experts. Mr. J. E. Walsh, though now general manager of all departments, still holds the position of manager of this particular department, giving members the benefit of his long experience in transportation matters. The bulk of the work, however, falls on the shoulders of Mr. S. B. Brown, the assistant manager, and his staff, now numbering five persons. Mr. Brown entered the service of the Association in 1912 as assistant to Mr. Walsh, becoming assistant manager of the department when the latter became general manager. Prior to joining the Association, he had eight years of valuable experience first in Ottawa in the local freight and freight traffic departments of the Ottawa and New York Railway and later in New York in the freight traffic department of the New York Central & Hudson River Railway.

The work of the department comes under the direction of the Transportation Committee of the Association, which is empowered to give attention to all matters affecting transportation and communication which may from time to time become of importance to the trade and commerce of Canada. Especially is it required to protect the interests of members in regard to the classifications and tariffs of freight and conditions, contracts, practices and regulations under which freight is weighed, handled, moved, stored, loaded and unloaded.

MR. G. P. RUICKBIE, TRAFFIC REPRESENTATIVE

One of the important duties performed by officers of the department is to represent the interests of manufacturers before the Dominion Board of Railway Commissioners and other bodies concerned with transportation matters. Both Mr. Walsh and Mr. Brown frequently appear before these boards, and in the past have achieved valuable results for the membership.

In the lower illustration is shown the office of Mr. Ruickbie, who is the traffic representative of the Canadian Pulp & Paper Association and works in close conjunction with the Transportation Department of the C.M.A. Mr. Ruickbie was appointed to this office in 1919, after twenty years in the service of the freight department of the C.P.R.

THE TRADE SECTIONS DEPARTMENT

THE Trade Sections' Department stands ready to supply a secretarial and organizing service to any group of manufacturers who may desire to organize along lines of production for the purpose of dealing with common problems incidental to the trade. All that is required to start the ball rolling is the indication of a motive incidental to a particular trade upon which united action may be considered desirable. If members report such matters to the Department, meetings will be speedily arranged in any of the cities in which the Association maintains a staff. The manager of this Department is Mr. J. M. McIntosh, who was for several years prior to the war secretary of the Toronto Branch, and who on his return from active service was appointed to his present position. Prior to entering the employ of the Association Mr. McIntosh was engaged in banking. He entered that business early in life and rose through the various departments to the managership of the Dominion Bank at Brandon, Man., where he was stationed for five years. He also saw considerable service in Winnipeg and Toronto, spending nineteen years in all in banking.

MR. J. M. McINTOSH, MANAGER

The lower illustration shows a section of the general office, with the library in the background. In the foreground is seated Mr. F. R. Allward, chief clerk of the Transportation Department. Mr. W. J. Larkin, filing and tariff clerk of the same department, stands at the filing cabinet, and seated in the background is Mr. T. M. Kerruish, assistant to the manager of the Commercial Intelligence Department. Mr. Kerruish saw active service with the Royal Air Force. In the library are filed government reports, reference books of all sorts, text books bearing on economics, magazines, newspapers, trade and class publications.

SECTION OF GENERAL OFFICE

It may be interesting to note that the space shown in this picture comprised practically the whole of the general office in 1914 and, in fact, was so occupied up to two years ago, when the business of the Association grew to such proportions that the space shown on the following page had to be taken in to provide necessary additional room. As it is, the Association to-day occupies all but a small corner of the entire fourteenth flour of the Bank of Hamilton Building (formerly the Traders Bank Building), the private offices extending along the south side of the building and the general offices, board room and insurance department, the rest of the space. All the office equipment in the way of desks, typewriters, filing cabinets and other apparatus are of the most modern and efficient design and each private office has its own telephone.

THE INSURANCE DEPARTMENT

GENERAL OFFICE OF THE INSURANCE DEPARTMENT

BY arrangement with the insurance firm of Willis, Faber & Co., members of the Association are entitled to receive expert advice on all matters pertaining to insurance as part of their Association privileges. One of the three offices occupied by this firm is shown in the illustration, the manager, Mr. Slater, being seen standing in the background. These offices form part of the head office suite of the C.M.A. and are in effect a department of the organization. Quite a large staff of assistants and stenographers are employed.

THE GENERAL OFFICES

SECTION OF GENERAL OFFICE IN TORONTO

STENOGRAPHIC work in connection with an office like that of the Canadian Manufacturers' Association is no light task, and, to handle the correspondence and other work passing through the office, quite a large staff of stenographers is required. The illustration takes in one section of the general office, with Miss Woodcock, the chief stenographer, in the foreground. About twelve capable young ladies are employed in this work in the head office, each department having one or more stenographers specially employed in its work.

THE PRAIRIE DIVISION

MR. G. E. CARPENTER, SECRETARY, WINNIPEG

IN Winnipeg are located the headquarters of the Prairie Division, taking in the provinces of Manitoba, Saskatchewan and Alberta. This office is in charge of Mr. G. E. Carpenter. Mr. Carpenter started work in 1892 as call boy with the Grand Trunk at Stratford, Ont. After experience in freight work in Stratford, Toronto, Hamilton and Winnipeg, he was appointed in 1906 traffic manager for the Winnipeg Shippers' and Jobbers' Association, which later merged with the Board of Trade. He joined the C.M.A. in 1915.

THE MARITIME DIVISION

MR. H. R. THOMPSON, SECRETARY, AMHERST, N.S.

THE work of the Association in the Maritime Provinces centres in Amherst, N.S., where the head office of the divisional secretary, Mr. H. R. Thompson, is located. Mr. Thompson's experience, prior to accepting his present position in 1916, was largely in manufacturing. He was born in Sussex, N.B., but moved to Amherst as a boy, becoming messenger at the plant of the Rhodes, Curry Co., Limited, later the Amherst works of the Canadian Car & Foundry Co., Limited. He was with these companies for 14 years, in various capacities.

THE QUEBEC DIVISION

MR. W. P. HUGHES, SECRETARY, MONTREAL

IN Montreal, the Association occupies a suite of offices in the Board of Trade Building, and these are the headquarters of the newly-formed Quebec Division and the Montreal Branch. The secretary in charge is Mr. W. P. Hughes, whose private office is herewith illustrated. Mr. Hughes was born in Arnprior, Ont., in 1888, the son of the Rev. S. J. Hughes, M.A. He attended Athens High School and McGill University, graduating in Arts in 1912. For two years he acted as assistant sporting editor of the *Montreal Daily Mail*, and in 1916-17 taught English and History in Westmount High School. He became acting secretary, Montreal Branch, C.M.A., in March, 1917, and secretary in July, 1917. Last year he took his B.C.L. degree from McGill. During his college career Mr. Hughes took a prominent part in athletics, being a member of the Intercollegiate championship football and hockey teams. Under his guidance the work of the Association in Montreal, and Quebec Province, has been progressing most satisfactorily. Standing beside Mr. Hughes is Mr. E. J. Davis, manager Montreal Branch, Graphic Arts Section.

THE PACIFIC DIVISION

MR. H. DALTON, SECRETARY, VANCOUVER

PICTURED in this illustration is the private office of Mr. Hugh Dalton, Secretary of the Pacific Division, in Vancouver, B.C. Mr. Dalton has been in charge of the Association's work in British Columbia since 1917. He received his business training with the Canadian Pacific Railway Company, having been in the employ of that corporation in different departments in Winnipeg, Calgary and Vancouver, from 1900 to 1909. Between 1909 and the time he entered the service of the C.M.A., Mr. Dalton was in charge of the transportation, stores and purchasing departments of the Western Canada Power Co., in Vancouver.

THE MONTREAL OFFICE

THE Montreal offices comprise four rooms, consisting of a committee and consulting room, board room, general office and the secretary's private office. The plant is well adapted for Association purposes, as is evidenced by the large number of group meetings which are held each month by branch members. Complete tariff files, applying between the Branch territory and all points in Canada are kept in the office for the use of Branch members. Customs rulings and memoranda and other information are collected and made constant use of. During the past twelve months the office has been particularly active in disseminating commercial intelligence. In the accompanying illustration is shown the general office, with Mr. Hughes' assistant, Miss Emma T. Gauvreau, at her typewriter. Miss Gauvreau has been in the employ of the Association since 1907, during which time the personnel of the secretaryship has changed four times. The Montreal offices of the Association are located in the Board of Trade Building, which stands in a central position in the business district of the city.

GENERAL OFFICE, MONTREAL

THE VANCOUVER OFFICE

SECTION OF GENERAL OFFICE, VANCOUVER

A VERY prominent part of the work done in the Vancouver office of the Association has been in connection with the building up of export trade through the port of Vancouver and in placing British Columbia manufacturers in touch with this business. Apart from the usual services rendered to members, it has been the special aim of this office to co-operate with all local organizations in furthering British Columbia's industrial interests, as well as those of Canada as a whole. The illustration shows a corner of the general office.

THE ASSOCIATION'S BOARD ROOMS

HEAD OFFICE BOARD ROOM, TORONTO

COMMITTEE work forms a very important part of the Association's activities, and each office contains suitable provision for the holding of committee meetings or meetings of groups of manufacturers. In this illustration is shown the large board room in the Toronto office, where many important meetings, from those of the Executive Council down, are held each month. On its walls hang a series of portraits of past presidents.

BOARD ROOM, WINNIPEG OFFICE

THE extent of the work undertaken in the Winnipeg office is indicated by this view of the Winnipeg board room. This apartment is capable of accommodating fifty people, and is available for, and is used by, members in different lines of business, for conferences. It is a commodious and well-lighted room and is decorated with portraits of officers of the Association. The Winnipeg office is located in the Northern Crown Bank Building.

THE ASSOCIATION'S BOARD ROOMS

COMMITTEE ROOM, MONTREAL OFFICE

IN this photograph there is shown the committee room in connection with the Montreal office. This room is not only utilized, when needed, for committee meetings, but serves as a consulting office when the heads of the Transportation and Tariff Departments visit Montreal to give members there the benefit of their advice and other services. It is furnished with desk and telephone for the use of members or visiting officials, besides other equipment.

BOARD ROOM, MONTREAL OFFICE

THE board room itself in the Montreal office, as illustrated in this picture, is a pleasant, well-furnished room, with adequate provision for the holding of any committee or other meetings that may be required. Branch members make good use of the equipment provided by the office as evidenced by the number of meetings that are held, scarcely a day passing without one or more gatherings taking place.

THE OTTAWA OFFICE

MR. E. BLAKE ROBERTSON

THE BOARD ROOM

IN 1918 the Association opened an office in Ottawa for the purpose of assisting members of the Association in dealings which they may have with the Government or Government departments, and also of holding a watching brief over Dominion legislation affecting, in a business way, members of the Association. Mr. G. M. Murray, formerly general secretary, was named Ottawa representative, while in January last, Mr. E. Blake Robertson was placed in charge of the office. Mr. Robertson was formerly assistant superintendent of immigration, holding that office from 1904 to 1911, and then assistant controller of Chinese Immigration from 1911 to 1919. The illustrations show Mr. Robertson's private office and the board room. The Ottawa offices are located in the Booth Building.

THE HAMILTON BRANCH

MR. H. E. WATERMAN. SECRETARY

IN Hamilton, the Association occupies an office jointly with the Hamilton Harbour Commissioners, Mr. H. E. Waterman being secretary both of the Harbour Board and of the Hamilton Branch, C.M.A. This office is located at 65½ James Street South. Mr. Waterman has always been connected with freight and transportation work, having started with the Grand Trunk Railway and later joining the Traffic Department of the International Harvester Co. of Canada, when that company located in Hamilton. In 1912, he accepted the secretaryship of the Harbour Commission, and in 1913 assumed the duties of secretary of the Hamilton Branch, C.M.A.

Canada's Industrial Expansion

A Record of Progress

INDUSTRIALLY, Canada is not marking time. From all parts of the country come intimations that manufacturing capacity is on the increase. Here a new plant is being established; there an existing factory is being enlarged. Taken in the aggregate these new developments constitute an imposing total--- a total that inspires confidence in the industrial future of the Dominion. In the following pages some of the more important developments of the day are described in greater or less detail with a series of interesting illustrations.

New Undertaking for Canada

Manufacture of Paper Mill Machinery on Large Scale to be Embarked Upon by Montreal Company

No small importance attaches to the announcement made recently that the Dominion Bridge Company, Limited, were about to enter upon the manufacture of paper mill machinery on a large scale. Orders placed with them by the Laurentide Company, Howard Smith Paper Mills and Interlake Tissue Mills for immense paper machines have determined them to extend their organization and equipment and embark seriously in this important business.

During the war the Dominion Bridge Company developed a large machinery capacity in the manufacture of munitions, marine engines and equipment. After the cessation of war work they have been endeavoring to use their equipment and organization on the higher grades of machine shop products, including steam turbines, of which they have shipped a number, and paper making machinery. Up to the present the latter line has only been regarded as an incident, but the big orders recently taken, which will occupy their present capacity for a considerable time, have led to a change of ideas which will involve pretty extensive additions to both plant and organization. However, plans for enlargement are not yet quite matured.

Acquires Huge Plant

Columbia Graphophone Company Gets Possession of Factory of Canadian Aeroplanes Limited

Engineers of the Columbia Graphaphone Company are now at work preparing plans for the re-arrangement of the big plant of Canadian Aeroplanes, Limited, on Dufferin Street, Toronto, recently acquired by them to accommodate their growing business in Canada and the export market. The plant, which was erected in 1917, consists of eight permanent buildings occupying twelve acres of ground. The exterior walls of the buildings are of steel, faced with red pressed brick. All the windows have steel sash and the buildings are protected by automatic sprinkler systems, fire signal systems, etc. The largest structure, formerly the fusilage building, is 680 feet long, with 42,570 feet of floor space. The next largest building, formerly the mill building, is 420 feet long, with 39,180 feet floor space. Between them is the wing-building, 580 feet long, with 35,200 feet floor space. At the east end of the property is a two-storey building containing 44,360 square feet of space and a storage building with 27,600 square feet. The former propeller building has an area of 18,880 square feet. In addition there is boiler house and kilns, garage, repair shop, lumber shed, time office, etc.

It is the intention of the Columbia Graphophone Co. to utilize this whole plant in the manufacture of Columbia Grafonolas and records. This will give them a greatly enlarged output and will enable them to go in on a big scale for export trade. About 2,000 hands will be employed, and the Company will make a portion at least of the cabinets for the grafonolas. The capacity in records will be increased 500 per cent., and in grafonolas 400 per cent. It is understood to be the intention of the company to form a Canadian corporation.

Start on Developments

International Paper Company Proceeds with First Unit of Its Canadian Programme

The International Paper Co. of New York have started the construction of a 50-ton sulphite pulp mill at Three Rivers. Work was begun on August 28 and as of November 1 the foundations were all in, 25 per cent. of the brick work was finished and 25 per cent. of the steel erected. The company hope to have the mill in operation by next September. As soon as the power is ready they expect to proceed with the erection of a 160-ton groundwood mill and a 200-ton paper mill, which they hope to have ready for production by September 1, 1921.

A long-term contract for power has been made by the International Paper Company with the Shawinigan Water & Power Co. At the outset some 20,000 horse-power is to be supplied, but as the plant is enlarged from time to time additional energy will be taken. After a thorough survey of the power situation, the executive of the International Co. decided that it would be more advantageous to enter into a long-term arrangement with the Shawinigan Co. than to develop their own powers.

To Make Clocks in Canada

Western Clock Company, an American Industry, is Locating a Canadian Plant in Peterboro'

An interesting newcomer among American branch plants locating in Canada is the Western Clock Company, whose home industry is located in La Salle, Ill. This company have selected Peterboro' as the scene of their Canadian operations. They have acquired the building on George Street

Where Motors and Transmissions will be made

Two up-to-the-minute plants of Canadian Products, Limited, Walkerville, now nearing completion

South up to the present owned and occupied by the Canadian Chicle Company and will secure possession about the end of the year. In the meantime they have rented space in the Barrie Building and have started operations. The Chicle Company's building into which they will move as soon as possible is 80 x 33 feet in size with three storeys and basement. It is their intention to build up their organization as rapidly as possible and within a year they hope to be giving employment to about 200 hands.

Walkerville Plants Near Completion

Two Factories of Canadian Products, Limited, Will be Put in Operation During the Winter

With the completion of the two plants being erected and equipped at Walkerville by Canadian Products, Limited, subsidiary of General Motor of Canada, Limited, there will be manufactured in Canada two component parts of automobiles not hitherto made to any extent in this country, viz. motors and transmissions. Both factories now under erection are 600 feet long by 160 feet wide, single storey, steel and concrete construction, saw-tooth design, and when completed will constitute two of the most modern automobile production plants in America. Machine tool equipment is throughout of the most advanced type and all the machines are provided with individual motor drive. In the motor plant, for example, there will be 750 motors in use. One plant will be used for the manufacture of motors; the other for transmissions and axles. Together they will represent an investment of over $5,000,000.

Canadian Woollens Expand

Three Buildings Going Up at Peterboro Which Will Increase Production by 200%

The new textile corporation, Canadian Woollens, Limited, which merged the Auburn Woollen Co. and Bonner-Worth Co., Peterboro, and the Standard Woollen Mills Co., Toronto, has already embarked on a programme of plant extension. Near the Bonner-Worth plant a building, 140 x 56 feet, three stories and basement, is under construction at a cost of approximately $50,000 to house a French spinning plant, which will spin extremely fine worsted yarn on the French or dry-spun system, a new departure for the company. Near the Auburn plant, a building, 140 x 70 feet, one story and basement, costing about $35,000, is going up to be used as a weaving shed. Accommodation will be provided for 100 additional looms. Both buildings are of brick, with stone foundation. The company are also erecting an office building, 66 x 36 feet, two stories and basement, near the Bonner-Worth plant, also of brick construction. Additional equipment, when installed, will increase production over 200 per cent. In the meantime the company report that they are unable to take care of all the business offered.

Cement Mill Expansion

Fifty per Cent. More Capacity from the Plant of the St. Mary's Cement Company

As an indication of how the cement manufacturing industry in Canada is expanding, the enlargement of the plant of the St. Mary's Cement Co., Limited, St. Mary's, Ont., is significant. This company is now about seven years old, and ever since the plant was established, enlargements have frequently been required. During the present year a third kiln has been installed and a corresponding enlargement of plant effected, which will bring the output up from 600,000 to 900,000 bbls. per day. Operations on the larger scale were commenced about November 1 and the company see sufficient business in sight to warrant the extension. The demand for cement in construction work of all sorts is now very heavy.

Its First Gas Engine Factory

Winnipeg Will Shortly Have a Plant at Work Producing Small Gas Engines

A plant is at present being equipped in Winnipeg for the manufacture of what is known as the Hafa-Hors gas engine. It is being established by the Elgin Gas Motor Company, a Manitoba incorporation, closely connected with the Elgin Gas Motor Co. of Elgin, Ill. The plant, which will be producing about fifteen engines a day by December 1, is being equipped with all the latest machinery and about $65,000 has been spent in getting it ready. It will be the first gas engine factory in Winnipeg and will give employment to about 45 hands. Mr. F. J. Grout, manager of the Twin City Separator Co., Limited, is one of the promoters of the new industry.

Bedding Plant to be Enlarged

Fifty Thousand Additional Square Feet of Floor Space for factory of the Ideal Bedding Co.

By adding two storeys to their original building, now a two-storey structure, the Ideal Bedding Co., Limited, Toronto, will increase their floor space by 50,000 square feet. The company's business has grown so rapidly in the past few years that the present equipment is entirely inadequate. As the factory is caged in on all sides by other industries and there is no more land available, it has been found necessary to

extend upwards in order to secure needed space. The building to be enlarged is 50 x 300 feet with an "L" at one end 185 feet long. The construction of the new storeys will be brick throughout with steel sash wherever possible, and the addition with its equipment will cost in the neighborhood of $150,000.

The new floor space will be utilized for the manufacture of brass bedsteads; coil, woven wire and link fabric bed springs. In the space released, a mattress plant will be laid out that will increase output by 100 per cent. From 75 to 100 additional hands will be needed to operate the increased equipment. The company believe that, when the plant is enlarged, they will have the largest bedding factory in Canada, enabling them to take care of the increasing demand for "Ideal" products and undertake the manufacture of the new process electro-welded steel bedsteads.

New Industry for Winnipeg

Parkhill Bedding Limited Are Erecting Plant for the Manufacture of Mattresses and Other Bedding

With the capacity of existing factories reported to be unequal to meet the present heavy demand for beds and beddings, a new company has been formed in Winnipeg to engage in the manufacture of mattresses and other bedding. This is Parkhill Bedding, Limited, of which J. H. Parkhill, for fourteen years president and general manager of Alaska Bedding Co., Limited, is president and manager; A. B. Jones, formerly sales representative of Alaska Bedding Co., vice-president and sales manager, and Reg. C. Young, also a former official of the Alaska Company, director and superintendent.

Parkhill Bedding, Limited, have purchased a considerable piece of property on Notre Dame Avenue West, and are now erecting the first unit of their factory. This is a brick and stone building, 60 x 125 feet, three storeys high. It is designed for the addition of two more storeys as required. Work has been progressing favorably and it is expected that manufacturing will start this month. It is the intention of the company to operate on a partial co-operative basis and all employees will be interested more or less in the distribution of profits. All employees holding responsible positions will be shareholders of the company.

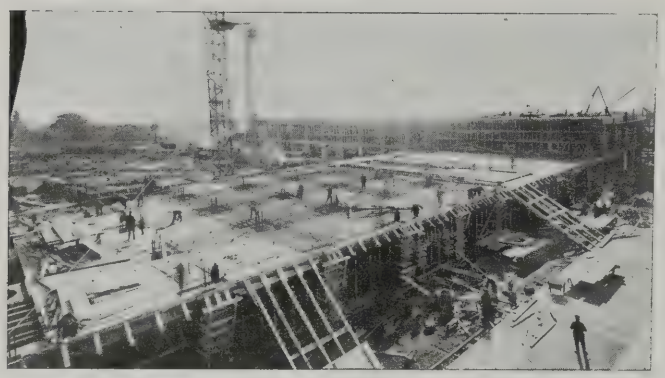
It is interesting to note that Mr. Parkhill was a former chairman of the Winnipeg Branch of the C.M.A., and promises again to take an active part in the affairs of the Association.

Doubling Their Plant

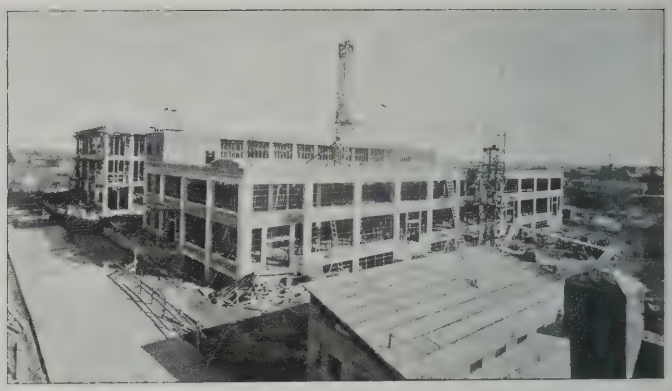
Cowan Company, Limited, Are Erecting New Building Which Will About Duplicate Present Plant

Construction work was recently started by the Cowan Company, Limited, of Toronto, on the erection of a new building which will practically double the capacity of their plant. The new structure, which is going up to the north of the present buildings, will be 80 x 245 feet, of brick and concrete construction, seven storeys high at the front and six at the rear. It represents an investment of about half a million dollars. The extension of facilities was made necessary by the great demand for the company's product—cocoa and chocolate—in Canada, England and other parts of the world.

Belleville's New Industry



Company Formed for the Purpose of Engaging in the Manufacture of Woodworking Machinery



There has recently been formed in Belleville a company capitalized at $300,000 and known as the Elliott Woodworking Machinery Co., Limited, for the purpose of taking over the business and assets of the Elliott Woodworker Co., Toronto. A half-interest in the new company has been taken by Grahams, Limited, Belleville and Mr. R. J. Graham has become its president. The plant in Belleville, formerly occupied by the Burrell Rock Drill Co., which ceased operations following the death of the proprietor two years ago, has been secured and, as it was in good shape, it was possible to start

New Plant of the Cowan Co., Limited, Toronto

With the erection of the seven-storey building in the foreground the capacity of the company will be practically doubled

Extensive Developments of General Motors of Canada at Oshawa

On the left work proceeding on erection of storage and shipping building; on the right the nearly-completed enamelling shop and assembly plant for Oldsmobiles

operations immediately. The product manufactured consists of portable woodworking machinery, such as sawing, planing and boring machines, which can be operated by electric motor. The plant is L-shaped, consisting of two wings each about 100 x 50 feet. When operations reach their maximum in November, from 30 to 50 hands will be employed.

Automobile Plant Extensions

Three Large Buildings at Oshawa for General Motors of Canada Are Rapidly Being Completed

The programme of extensions which was embarked upon this summer by General Motors of Canada, Limited, will shortly be completed. This includes three buildings situated to the north-east of the present plant. The first of these is the shipping and storage building through which the whole product of the plant will be handled. It is a building 444 x 300 feet, two storeys high, of reinforced concrete, with 119,000 square feet of floor space. Attached is a train shed of structural steel work with corrugated iron roof, containing six tracks. On the first floor there will be live storage while on the second and third cars will be piled two high, giving a storage capacity of 1,000 cars. The building will be completed about December 1.

The second building is the Central Enameling Plant in which all makes of cars manufactured by General Motors of Canada will be treated. It consists of a reinforced concrete structure, 221 x 80 feet, two storeys and basement, and contains 52,800 square feet. It also will be completed about December 1.

The third building is the Oldsmobile assembling plant, where the Oldsmobile car will be put together. Hitherto this car has not been made in Canada. This building is 302 x 80 feet, three storeys and basement, reinforced concrete and will have a capacity of 5,000 cars annually. It will be in operation by about November 5.

Two More Stories Needed

Northland Knitting Company of Winnipeg Forced to Build Because Crowded for Room

Two additional stories are now being superimposed on the present three-story factory building of the Northland Knitting Company, Limited, Arlington Street, Winnipeg, in order to give the company much-needed elbow room. The original building, erected in 1912, was at the time far too large for requirements. Since then business has grown to such an extent that the turnover is now six times what it was in 1913.

The company's principal product at first was sweaters; in 1914, they started to make workmen's mitts and gloves on a larger scale and two years ago they bought out a moccasin plant and have now developed it into a thriving department. For the last two years operations have been carried on at a decided disadvantage and, in spite of high building costs, it has been found desirable to add two stories.

The addition, which is costing between $25,000 and $26,000, will be ready by about December 15, and will give 11,000 feet more floor space. The extra space will be used to extend the present plant with a view to increasing production of the three lines of goods now being manufactured. It is interesting to note that part of the space on the third floor of the building will be set apart for rest room, locker room, dining room and smoking room for the use of employees.

Make Pancake Flour in Canada

Branch of United States Industry Locates in Belleville and Starts Manufacture of Flour

A half interest has recently been taken by Grahams, Limited, Belleville, with the Ekenberg Co. of Cortland, N.Y., manufacturers of Teco Pancake Flour, in a new Canadian company to be known as the Ekenberg Co., Limited. The new industry has been located for the present in the Grahams, Limited, building in Belleville, and they have already started to manufacture two different grades of pancake flour for the Canadian market. Later on they propose to extend their operations, but details of their expansion plans are not yet available for publication.

Tissue Paper Mill Expanding

Interlake Tissue Mills Have Launched Out on Important Programme of Plant Expansion

At Merritton, Ont., the Interlake Tissue Mills have commenced the erection of additions to their plant in order to accommodate the equipment required in connection with the installation of a second tissue paper machine. The latter, which is on order with the Dominion Bridge Co., Lachine, will have a width of 148 inches, being the largest machine of its kind in use in America. With an output of from fifteen to twenty tons per day, according to the weight of the stock, the capacity of the mill will be increased to around twenty-five tons per day by the addition of the new equipment.

An extension, 125 x 100 feet in size and four storeys high, is being added to the beater room for the accommodation of five new beaters, while an extra storey is being placed on the finishing room. A new boiler house, with the latest coal unloading facilities, and a new system of railway sidings are included in the programme of betterments. It is expected that the enlarged mill will be ready for operation by next midsummer. While the management are not issuing any

figures as to the cost of the work, it will probably run in the neighborhood of half a million dollars.

At the present time Interlake Tissue Mills are about three months behind in filling orders, while domestic demands are so pressing that they are unable to take on any export business. With the new equipment they hope to be in a position not only to give improved service at home, but to secure a share of the export orders which are now very extensive.

Restored on Larger Scale

Spring Plant of Dowsley Spring & Axle Co., Limited, Rebuilt After Recent Fire

Quick work in plant restoration is recorded by the Dowsley Spring & Axle Co., Limited, Chatham. Their spring plant, a building 339 x 45, was destroyed by fire on Sept. 11. They immediately commenced reconstruction, and by Oct. 20th were producing in the new building. The latter is 339 x 75, of brick and steel with large windows, 11 ft. 6 ins. square. There is no machinery in the building, it being used as a heat-treating plant. The machinery is now in the former axle plant, a building 186 x 45, one storey. The Company have decided to go out of axle making, as the demand has decreased with the increasing use of automobiles. The estimated cost of the new spring building is $80,000.

More Shoe Capacity

Plant of Clark Bros., Limited, St. Stephen, N.B., is Being Very Considerably Enlarged

Clark Bros., Limited, St. Stephen, N.B., are building an addition to their factory to take care of added production and provide storage and office space now located in their main building. They have been making about 600 pairs of shoes a day, but with the addition hope to be able to make from 1,800 to 2,000 pairs a day. The enlargement is being financed by an issue of $250,000 preferred stock, which has been underwritten by a Boston banking house, and is meeting with a ready sale.

Tire Plant for Hamilton

Over Million Dollars Will be Invested There by Firestone Tire & Rubber Co. of Akron, Ohio

With the passing of by-laws by the Township of Barton, granting fixed assessment, etc., the Firestone Tire & Rubber Co. of Akron, Ohio, are proceeding with their plans to locate a branch plant on the bay shore just east of Hamilton. Their first unit will have a capacity of 3,000 tires a day, and will give employment to about 1,500 people. The initial investment will be all told over a million dollars.

Mr. T. Clements, Comptroller, states that it is the intention to form a Canadian corporation which will be operated entirely separate and independent from the U..S. company. "Our plans are to send a few men with experience into Canada, more as instructors, but the manning of the new company and its operation will be by Canadians."

The property acquired by the Company consists of 135 acres, of which 80 will be used for industrial purposes and the balance for housing. In preparation for equipping their plant, they have leased the buildings and some of the equipment of the Canadian Cartridge Co., which has been idle since the signing of the armistice, and are using it for the making of their machinery.

Confectionery Manufacturers Extending

A St. John Industry Carrying Out Programme Which Will About Double Its Capacity

Expansion in the confectionery manufacturing industry is indicated by the plans of the Corona Company, Limited, of St. John, N.B., who have been in business in that city for several years. At the present time an additional storey is being placed on their building, while it is proposed next spring to make an extension to the plant, the two enlargements about doubling its capacity. Most of the company's trade is in the Maritime Provinces and Western Canada, but they expect to go into other parts of Canada. When enlargements are completed they will have about 250 hands, who will be employed in the manufacture of all kinds of confectionery.

A Woollen Mill Enlargement

Plant at Lindsay of Horn Bros. Woollen Co., Limited, Being Extended for Efficiency Purposes

At Lindsay just now the Horn Bros. Woollen Co., Limited, are putting up an extension to their plant, 86 x 60 feet, two storeys and basement, of reinforced concrete. The building will be used for wool scouring, dyeing raw stock as well as piece goods and also for picking and blending. New machinery will be installed for the purpose and the work will be finished about the first of the year.

The company state that they do not expect production to be increased materially as a result of the enlargement, but the advantage will be that they will be enabled to handle

Quick work on Factory Restoration at Chatham

On the left appears the spring plant of the Dowsley Spring and Axle Co., Chatham, as it appeared after the fire on Sept. 11; on the right the restored building in process of erection. The latter was completed and in operation by Oct. 20

Plant to Make Parchment Paper

Building going up at Merritton for Canadian Vegetable Parchment Paper Co.

Big Addition Completed

Showing Plant of Imperial Cotton Co., Limited, Hamilton, as recently extended

the same amount of work with less labor and at the same time deliver the stock in better condition. The Roumanian order on which the company has been working is now practically completed. They are now operating on goods for home trade and report domestic business as very brisk.

A New Canadian Product

Company Now Completing Plant Which Will Manufacture Vegetable Parchment Paper

An interesting addition to the ranks of specialized industries is that of the Canadian Vegetable Parchment Company, Limited, who are erecting a plant between Merritton and St. Catharines for the manufacture of vegetable parchment paper. Hitherto this has not been a "Made in Canada" commodity, the supply used in this country being imported from the United States and abroad. It is the intention of the new company to supply the Canadian demand and also to do some exporting, as they expect to have some extra tonnage to offer.

The plant now under erection is 80 x 144 feet with extension 50 x 80 feet. It will contain one 80-inch parchmentizing machine, with slitters, rewinders, printing presses, etc., giving a capacity of 16,000 lbs. daily of vegetable parchment paper, both plain and printed. It is hoped to be able to start operations by the first of the year and at the outset about 50 hands will be employed. The company, which has an authorized capital of $150,000, is closely associated with the Garden City Paper Mills Co., Limited.

Will Make Springs In Oshawa

Fine Large Plant of Ontario Steel Products Co., Limited, is Nearing Completion at This Point

In close proximity to the new buildings of General Motors of Canada, Limited, in Oshawa, there is being erected a large spring factory by the Ontario Steel Products Company, Limited, of Gananoque. This plant, which will have an initial capacity of 4,000 tons of springs per annum, will be in operation about January 1, and will give employment to 150 hands. The product will be entirely motor and motor truck springs. The building at present under erection is 360 feet long by 80 feet wide, one storey high. It is of steel and concrete construction, with roof of saw-tooth construction, having "pond" monitor in the centre. The over-all height from ground to saw-tooth portion of roof is 30 feet 6 inches, with height to pond roof, 41 feet. The building is constructed with temporary wall on the east side so that it can be doubled, trebled or quadrupled in size without inconvenience, meaning eventually a building 360 feet square.

Imperial Cotton Enlargements

From 10 to 15 per cent. More Production from Extension to Plant in Hamilton

During the past season considerable enlargement has been made to the plant of the Imperial Cotton Co., Limited, Hamilton. An addition, 70 x 106 feet, three storeys and basement has been made to the main plant, and in addition a new power house, cotton storage shed, sub-station, waste house and service room have been built. Machinery throughout the plant has been entirely re-located and an increase in production of fully 10 to 15 per cent. is anticipated.

Car Wheels for the West

Dominion Wheel & Foundries, Limited, Are Establishing a New Plant in St. Boniface, Man.

Under the name of the Western Wheel & Foundries, Limited, the Dominion Wheel & Foundries, Limited, of Toronto, are erecting a plant in St. Boniface, Man., which will be devoted to the manufacture of car wheels for Western consumption. The capacity of the plant will be about 100,000 car wheels a year and it is expected that operations will commence before the end of the present year. The location of this industry in Winnipeg will tend to eliminate the heavy transportation charges imposed on wheels shipped West from the Toronto plant. While there is no immediate prospect of an increased demand for car wheels, indications are that eventually, with the construction of more cars, the demand will become stronger.

Spending a Million

Canadian Consolidated Rubber Co., Limited, Doubling Capacity of Kitchener Plant

About one million dollars has been appropriated by the Canadian Consolidated Rubber Co., Limited, for the enlargement of the Dominion Tire Factory at Kitchener, and this work is now going on. Extensions are being erected at both ends of the factory, each being 110 x 130 feet, four storeys high and giving 143,000 square feet additional floor space. This will give the factory more than double the present capacity for the production of ties.

Turn to Page 123 for Additional Industrial Expansion Information

A Unique Enterprise for British Columbia

By HUGH DALTON
Secretary, Pacific Division, C.M.A.

FIRST of its kind in the Empire, because it is composed solely of returned soldier shareholders, the Canada Western Cordage Company, at New Westminster, B.C., enters a field of operations without a single competitor established in the Province of British Columbia, the field which it aims primarily to cover.

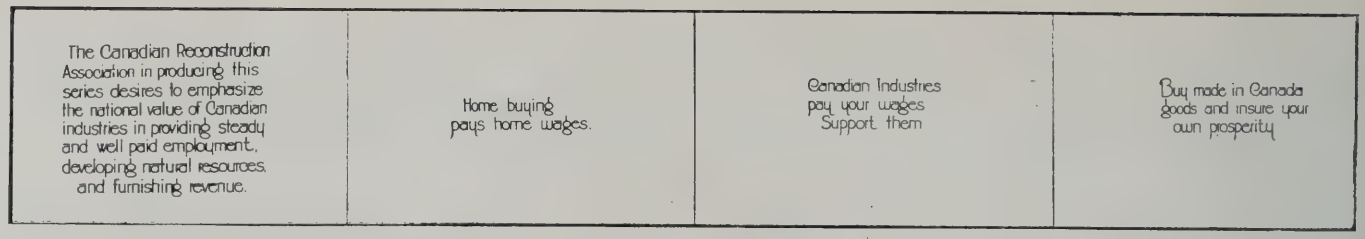
The Company has an authorized capital of $300,000, of which $150,000 has been issued to veterans who have seen service overseas, the balance being held in the treasury. It is strictly a returned soldiers' enterprise, and no others can hold shares in the Company, and only returned veterans will be employed by it in any capacity except in positions for which special training is required and for which no veteran is available. Organized on the basis of protection to the individual, it is a "one-man one-vote" company, each shareholder having but one vote regardless of his holdings of stock, being strictly co-operative and profit-sharing.

Government endorsation of the soundness of the Company's plans has been given to the extent of a loan of $200,000 for the construction and equipment of its plant. This is under an enactment of the last session of the Provincial Legislature, by which a fund of $2,000,000 was created to assist in the establishment of new industries by returned soldiers in British Columbia; an Industrial Commissioner was appointed to administer the fund; and the strictest scrutiny has been made of the hundreds of applications for loans; the Canada Western Cordage Company being the first, and one of the few, meeting with Government approval. In addition to this the Company has been given a seven-acre site, valued at $8,000, with excellent trackage and power facilities, by the City of New Westminster.

No other industrial enterprise in Canada can claim the signal honor of having the Prince of Wales perform the first act of actual construction, when by turning the first sod on the Cordage Company's site he proved the reality of his interest in the rehabilitation of the soldiers. This pleasing ceremony, performed with the Prince's usual absence of formality, took place on September 29th, the Prince being presented with an engraved silver spade as a souvenir of the occasion by the little daughter and son of the president and vice-president respectively.

The President of the Company is Mr. E. A. Paige, who served in France with the 47th Battalion, and founded the *B.C. Veterans' Weekly*, of which he is editor-in-chief. The Vice-president is Mr. J. C. Thorn of the 7th Battalion, who was a prisoner in Germany. The directors are Mr. F. C. Brown of the 29th Battalion, and R. Pat Foster, M.C. of the 1st Canadian Pioneers. The Secretary is Mr. G. G. Hulme of the 2nd Canadian Machine Gun Brigade.

The plant will have a capacity of 10,000 pounds per day of hard fibre, using in this class of material chiefly manila hemp, sisal and New Zealand flax. The Philippine Islands are the chief source of supply of hemp, and most of the sisal comes from Yucatan.



The Prince of Wales Lends his Support to a Returned Soldiers' Industrial Enterprise

On the left, the Prince chatting with the Vice-President; in the centre, the Prince receiving silver spade from little Miss Lilian Paige, daughter of the President; on the right, the Prince turning the first sod

About 65 male employees will be required. The main factory building will be 150 by 200 feet, and this will contain the most modern types of the ingenious machinery used in the manufacture of ropes and cords for general commercial purposes, consisting of preparing machinery, breakers, spreaders, draw frames, spinners and finishing machinery capable of "laying" rope from three-eighths of an inch in circumference to ten inches; the latter size being to meet the requirements of marine towing, of which so much is done on the Pacific coast. Twine and other forms of cordage products will also be manufactured.

Two administration blocks will be required; one 60 by 120 feet, for the office and warehouse for the finished products; the other 60 by 90, for tow room, tar room, boiler room and machine shop. The raw material warehouse will be 40 by 120 with a storage capacity of 480 tons. In addition to these will be the rope walk 1,326 feet in length, with reel room and bobbin room at the ends, each 40 by 60 feet.

Mottoes Appearing on the Industrial Films

Motion Pictures Promote "Made in Canada"

Instructive Series of Films Illustrating Processes in Various Canadian Industries have been Prepared by the Canadian Reconstruction Association, and are being Shown in Theatres Throughout the Dominion

By SIR JOHN WILLISON
President, Canadian Reconstruction Association

WHILE the Canadian Reconstruction Association has been conducting general campaigns for the development of domestic and foreign markets, for the retention of an adequate tariff, and for scientific investigation and utilization of natural resources, it has also been active in the stimulating of public interest in the national value of industrial development. To this end it has made extensive use of motion pictures, and it now has half a dozen films being shown in theatres throughout the Dominion. The pictures deal with various industries and illustrate not only final processes of manufacture but also stages of progress from the employment of raw materials to the finished products. The variety of the subjects is illustrated by the titles which include the iron and steel, woollen, agricultural implements, pulp and paper, sugar, and cocoa and chocoate industries. The pictures are being shown in seventy-five per cent. of the cities, towns and villages throughout the Dominion which have moving picture theatres, and it is estimated that they are seen by over three-quarters of a million people weekly.

The last census of Canadian manufacturers, in 1917, showed 34,380 manufacturing establishments in the Dominion, representing an aggregate capital investment of $2,772,517,680. These establishments gave employment to 700,000 persons, and paid over $550,000,000 annually in wages and salaries. The value of their products was in excess of $3,000,000,000, of which $1,602,820,631 represented the cost of materials used, and $1,412,686,238 the additional value given to the products by the manufacturing processes. It has been estimated that over two million Canadians are directly dependent for their livelihood upon the continued prosperity of Canadian industries, and the following titles have been inserted in the films prepared for the Association, showing the number of employees, the wages paid, value of the product, and capital invested, in specific industries:

Title of the Series

CANADIAN AGRICULTURAL IMPLEMENT INDUSTRY.

Capital invested	$80,000,000
Value of product	50,000,000
Salaries, wages, and commissions paid annually	20,000,000
Number of employees	20,000

CANADIAN IRON AND STEEL INDUSTRY, 1917.

Capital invested	$307,407,980
Value of product	400,385,086
Salaries and wages paid	78,737,983
Number of employees	77,159

CANADIAN WOOLLEN MANUFACTURING INDUSTRY, 1917.

Capital invested	$64,472,747
Value of products	78,800,202
Number of employees	25,332

CANADIAN PULP AND PAPER INDUSTRY, 1917.

Capital invested	$186,000,000
Value of product	96,340,327
Salaries and wages paid	20,500,000
Number of employees	25,000

Two additional films will shortly be issued by the Association, one dealing with the grain and milling industry and the other with the electric lamp industry. Recent figures issued by the Dominion Bureau of Statistics give the following:

CANADIAN MILLING INDUSTRY, 1917.

Capital invested	$ 72,573,982
Value of products	224,191,735
Salaries and wages paid	6,292,797
Number of employees	6,914

The character of these industrial films have made them acceptable to moving picture houses throughout the country. Being only a thousand feet in length they can be shown without any pronounced interruption in the general programmes, and they have been so well received by the public that they are in demand by film exchanges. In a letter to the Patheoscope Company, Limited, producers of the films, Mr. C. Hague, General Manager of the Canadian Universal Film Company, Limited, expresses his satisfaction that the industrial series is to start at the rate of one every week this fall, and continues:

"I was very much surprised to note the interest taken by a great number of exhibitors in this series, due to our cutting them off during the summer months. It has convinced me that they are greatly in demand at the present time. . . .

"I would thank you very kindly to advise me as far in advance as possible the list of the subjects, so that we can advise our customers the names of the subjects in advance of their showing."

MADE IN CANADA

TRADE Gillette MARK

KNOWN THE WORLD OVER

OUR MARKET

The shaded portions of the map indicate the various countries in which Gillette Safety Razors are used to-day, justifying the Gillette's famous

"The Shaving Service for Every Man ---Everywhere"

Equally true, too, the wording of our trade mark, MADE IN CANADA--- KNOWN THE WORLD OVER, for wherever men shave there is a possibility of Gillette sales, and our efforts have not gone unrewarded.

And best of all, our Export business has not been achieved at the expense of the home markets, which were never so well served as they are to-day.

Transportation Items

New S.S. Service

Line from Vancouver to Genoa, the Levant, Black Sea Ports and Egyptian Ports Inaugurated

The Transportation Department has just received advice that the "Societee Generale de Transports Maritime a Vapeur," at Marseilles, France, will inaugurate a service from Vancouver to Marseilles, France, and Genoa, Italy, as well as issuing through bills of lading for shipments to Piraeus, Smyrna, the Levant, Black Sea ports and Egyptian ports. This service was commenced with a steamer loading on October 20th, known as the S.S. *Mont Cenis*, and other steamers will follow at monthly intervals. It is understood that the Vancouver agents of this line are the firm of Dingwall Cotts & Company.

South African Service

Steamships from Canada to South Africa Being Put on by the Elder Dempster Co.

The Transportation Department has received advice from the Elder Dempster Company, Limited, Montreal, that the steamship *New Toronto* will sail from Montreal for South African ports about November 5th, and that this sailing will be followed by another steamer about November 25th. Commencing with the December steamer a monthly service will be inaugurated from St. John, N.B., during the winter months, December to April inclusive, to ports in South Africa. It may be interesting to know that the Elder Dempster Company have been quoting for some time rates from Canadian Atlantic ports to South African ports of 50c. per ton lower than from New York.

Freight Car Shortage

Members Are Urged to do Everything Possible to Facilitate the Quick Movement of Cars

The attention of members of the Association is directed to the present serious shortage of box and coal cars in Eastern Canada and Eastern United States. It is claimed that the situation is even worse in Canada than in the United States. At the present time, or quite recently, there are 44,019 Canadian-owned box cars on roads in the United States, and 20,650 United States-owned box cars on roads in Canada. This makes the balance against the Canadian roads, 23,369.

The Canadian Railway War Board have this matter under active consideration with the U.S. Railroad Administration authorities for the purpose of securing some of the Canadian-owned cars returned to home roads. The latest reports would indicate that an improvement along this line is developing.

In the latter part of September the coal car shortage in the United States was approximately 100,000, or in other words this is the number of cars short at the mines for carrying coal. On September 1st over 12,000 coal cars of U.S. lines were located on Canadian railways.

It is well known that members of the Canadian Manufacturers Association have done everything they can in the way of prompt loading and unloading cars as well as heavier loading of all equipment. However, the car situation in the early part of this year was entirely opposite from what it is to-day. That is, there was quite a surplus then, whereas there is now quite a shortage. The above information is therefore placed before members so that they may be fully advised of the importance of carrying on the efforts which were put forth during the war. In other words, it is urged that every member load and unload every car in the quickest possible time; also that all cars be loaded to their full capacity where possible.

On October 4th the Transportation Department received a report of foreign coal cars held under load as of September 30th by certain consignees at various points throughout Eastern Canada. The commodities loaded in these cars are coal, plates, machinery, pipe, scrap, steel, lumber and tubes, and the number of days held, over free time, ranged from 2 to 28. The majority, however, seem to have been held from 4 to 5 days.

It is interesting to note, on examination of the information, that very few of the consignees were members of this Association.

Steamship Sailings from Montreal

Ships Scheduled to Sail for Various Points During Early Part of November

The following information regarding the sailing of steamships from the Port of Montreal to various trans-Atlantic ports is taken from a bulletin issued by the Canadian Pacific Railway:

To Liverpool.

To St. Johns (Newfoundland).

A Steamer	Gulf St. Lawrence Shipping & Trading Co.	Ab't Nov. 3

Committee Recommended Tariff Board

Special Senate Committee on Machinery of Government Dealt with this Question in its Report

INDUSTRIAL CANADA deals editorially this month with the great desirability of the establishment of a Tariff Board which will make a scientific study of all tariff questions and thus helps to remove them from the field of political controversy. In this connection, the recommendations of the committee appointed by the Senate last May to report on the Machinery of Government should be given careful consideration. Sections 33-40 of the Committee's report contain the following remarks on the subject of a Tariff Board:

"33. We recommend a Tariff Board with powers to investigate (both as directed by Parliament and of their own motion), all problems connected with production, transportation and living conditions in Canada, and in those countries the production of which competes with Canada, either in home or foreign markets, in so far as tariffs are an element in these questions.

"34. It would be inadvisable in our opinion if such a Board be established to limit the scope of its powers of investigations. The effect of tariffs on the cost of production, and therefore on the well-being of the whole people, as well as on the capacity of Canadians to compete with foreigners in the markets of the Dominion, and with other nations in common markets, is far reaching and complex.

"35. It is within the knowledge of those who have followed the course of industrial development that industries have through inadequate or inaccurate information been established, languished and died, with loss of capital and dissipation of energy. It is probable on the other hand, that there are industries which might be with advantage transplanted to Canada. The Board might by its investigations and the dissemination of its findings prevent loss, and make easier new forms of production.

"36. At no time more than the present have industrial and economic conditions changed more rapidly. At no time has the avoidance of failure and of the increase of stable production been more important. We therefore think it for the advantage of Canada that this Board be established to prepare and have available information on all phases of these questions for the guidance of the Government, of Parliament, and for the information of the public.

"37. We wish with emphasis to state that it is not our intention to propose the establishment of a Board with other powers than investigation and statement of facts. To confer on any Board powers to frame a tariff would be a devolution of a function of which a Government should not debarrass itself.

"38. We believe, however, that in a matter which excites such lively passions, which threatens the unity of the people, a full statement of the facts of each phase of this complicated question, by an independent Board would be of great value. We say this without any doubt that the minister concerned has an organization which ascertains to his satisfaction conditions affecting tariff questions. These facts are not usually disclosed. It does not tend to allay unrest to take on trust his decisions, whereas the reports of this Board would be open to all and would convince the fair-minded.

"39. The composition of such a Board should represent the consumer, the producer, labor, and the expert in these matters. It should be appointed by Parliament and be permanent.

"40. We are aware that the above indications of the scope of the duties of the Tariff Board would trench on those of a Trade Board, or any other organization to increase the volume of Canadian trade.

"We are not concerned with the precise form of organizations to be established. That form must be arranged by the Government. We are confident, however, that the Tariff Board would produce good results, and we are equally confident that conditions require the wholesome stimulation of Canadian production and commerce to the highest degree."

Cellboard is the proper name for what is commonly called corrugated board

Established 1909

OUR SPECIALTY
FOLDING CELLBOARD
FREIGHT BOXES

We tell you how much production you are getting in the working time you are paying for

That's really what you need to know to determine your costs. Isn't it?

In and out time records at the entrance are absolutely essential, of course.

But after the man has reached his machine or bench, what then? Is his time occupied with a steady stream of work? Is it necessary to burden a foreman or superintendent with the duty of seeing that every minute possible is spent on production?

Or can this mighty useful duty be left to a machine?

It can, and here is the machine.

IT'S AN INTERNATIONAL JOB RECORDER.

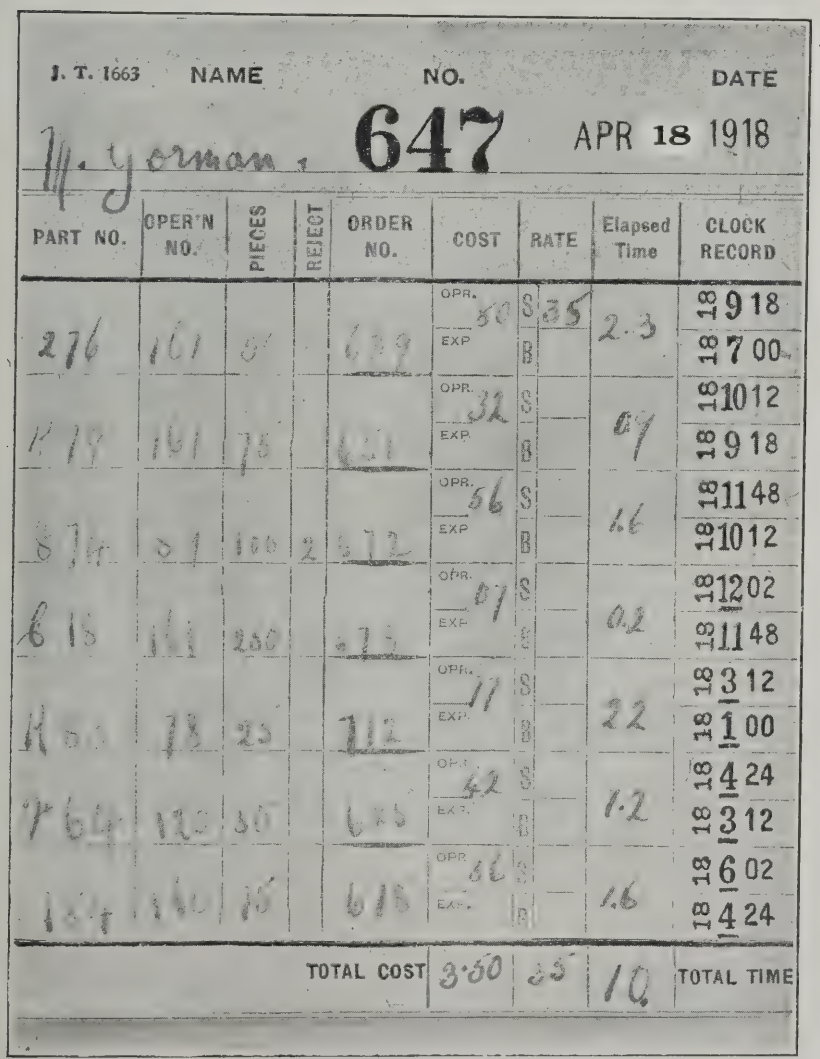
It prints in plain, unchangeable figures the starting time and finishing time on any job or operation.

What Advantage is That?

1. It enables you to get the absolute cost on each and every job that goes through your shop.

2. It does the work of a foreman without using the foreman's time in seeing that the men do not waste your valuable minutes.

3. It shows the management who are the workers and who are the shirkers.



The famous International Job Recorder

4. It acts as a positive check on your pay-roll. You can check your total number of hours spent on different jobs during the day with the time registered on your In and Out Time Recorders.

5. It gives you your total cost, therefore your total profits.

A sample "Job Card" used in the International Job Recorder, Any size or shape card can be used.

For convenience in computing the time, the Recorders are made to record in hours and hundredths of hours, or hours and tenths, or hours and minutes. Prints either date or day. Can be obtained with an elimination device to eliminate the noon hour or any non-working period. Can be operated electrically if so desired. The letters S. and B. indicate the Stopping and Beginning time.

What is Profit?

It is the difference between your cost and your selling price.

Intelligent cost-keeping insures real profits.

In fact, the life-blood of business is "accurate costs."

How long can you carry on without profit?

How can you determine your profit without accurate costs?

International Job Recorders are showing the way to accurate costs for hundreds of satisfied users. Why not you?

Sound judgment is the greatest asset in business. If you look around you will find men of sound judgment are using International Time and Job Recorders. Why? Because sound judgment knows Internationals will protect payrolls and production costs.

Our pride is founded on an ever-increasing list of satisfied users. The absolute reliability of our Time and Job Recorders has made it necessary for us to increase our output many times in the last few years.

May we have an interview?

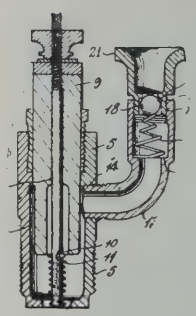
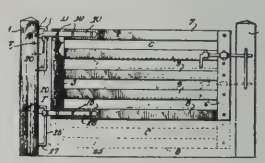
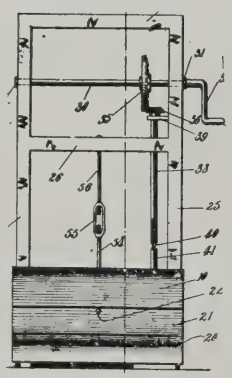
PATENTS FOR SALE



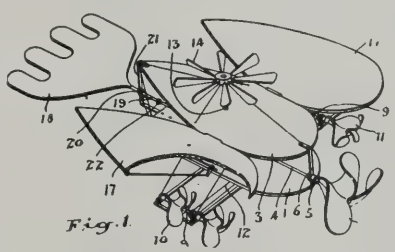
CONTROLLING VALVE MECHANISM, with means for controlling the operation of an element or a plurality of elements, such as one or more elevators, vertically movable doors on furnaces, table rolls in rolling mills and for other such purposes. The device is simple in construction, strong, durable, efficient, and convenient in use and readily set up and comparatively inexpensive to manufacture. For further particulars apply to Messrs. Slaw & Slater, Steubenville, Ohio, U.S.A., who offer patent rights for sale.

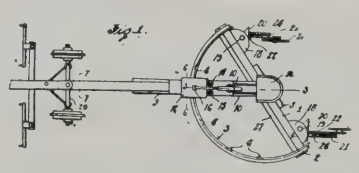


HAY DRIER, designed to provide a device which will insure the proper drying of a large quantity of hay so that when stored there will be no chance of same heating or becoming mouldy. The device is foldable and adjustable and so constructed as to have great strength. Patent rights in the Dominion are for sale by Mr. Fedor Szewczuk, Box 94, Flint, Michigan, U.S.A.



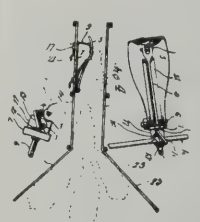
SPARK PLUG, having means for admitting air, gasoline or other fuel to the cylinder through the spark plug, means being provided whereby the air or fuel so admitted will be heated prior to its arrival in the cylinder. Patent rights in the Dominion are for sale by Mr. John O. Brook, Wilmington, North Carolina, U.S.A.

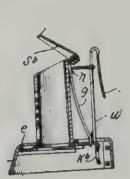




GATE HINGE, which will allow the gate to be automatically adjusted in an upright direction, and so maintain against casual displacement. It is particularly adapted for use where the ground is apt to be frozen or covered with snow, when the gate may be readily raised to swing over such or other obstruction. Patent rights in the Dominion are for sale by the inventor, Mr. Fred Wiederracht, Wapello, Iowa, U.S.A.

FLOOR CLEANER, having a rotary brush by means of which dirt and accumulations are gathered up and delivered into a compartment from which they may be readily removed. It is strong, durable and efficient in use. Mr. Fedor Szewczuk, Box 94, Flint, Michigan, U.S.A., is desirous of getting in touch with a responsible manufacturer with a view to arranging the manufacture or disposal of his interests.

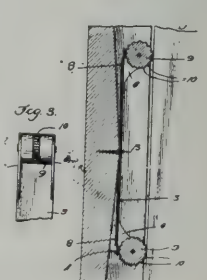




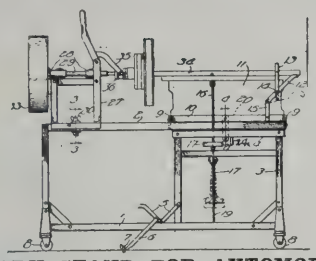
AEROPLANE, above illustration shows the Noland Aeroplane designed for safety, durability and speed, equipped with special ascending apparatus and having dependable stability and wings spread. For further particulars apply to the inventor, Mr. Geo. H. Noland, 21 Finland Street, Copper Cliff, Ontario, Canada, who offers patent rights for sale.

TERRACER, DITCHER AND GRADER.—Will build a terrace to any desired height, cut a ditch to any desired depth and will leave a flat bottom. This device has been thoroughly tested and is considered one of the best on the market. Mr. S. L. Reese, Corsicana, Texas, U.S.A., is open to negotiate for the disposal of his interests or arrange for manufacture of same in the Dominion.

LIVE STOCK COUNTER, for mechanically and automatically registering the count of live stock by the moving animals themselves. The device is simple in construction, strong, durable and guaranteed to be accurate. For further particulars apply to Messrs. Coonan, Moore & Coonan, Post Office Box 146, Poise Barracks, Idaho, U.S.A.

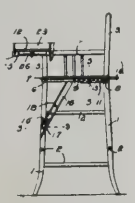


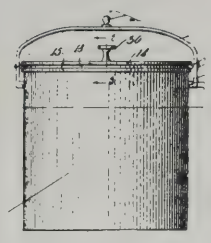
COIN CHANGER, safest, quickest, most durable and efficient coin changer on the market. Mechanically perfect, is equipped with every desirable convenient advantage of superior method for making the change. Patent rights in the Dominion are for sale by Mr. W. L. McClenahan, Lock Box 387, Council Bluffs, Iowa, U.S.A.



FENCE POST, adapted to be driven into the ground and provided at intervals along its length with outstanding ears under which recesses are provided, said recesses being adapted to receiving the line wires and having means for firmly holding the wires in position. Patent rights in the Dominion are for sale by Mr. Alex. Sholund, Route 1, Box 13, Marysville, Washington, U.S.A.

SASH HOLDER, which will firmly hold the sash in any desired position without requiring the use of weights or the like. The device is simple in construction, strong, durable and efficient in use and should prove an attractive proposition in view of the very extensive demands. Patent rights in the Dominion are for sale by Mr. G. J. T. Iwersen, Point Roberts, Washington, U.S.A.

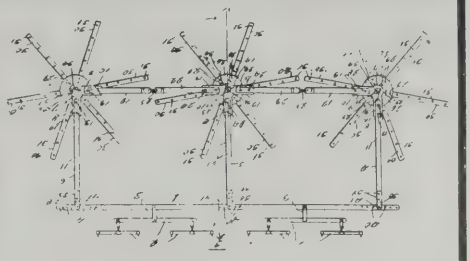




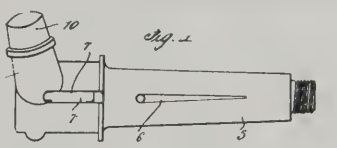
(Continued on page 81)

WORK STAND FOR AUTOMOBILE ENGINES, for repairing and overhauling, re-boring or burning-in, is exceedingly strong and may be transferred from one place to another whereby light, heat or air makes work more comfortable. Is provided with every essential, including tilting motor block bracket which is controlled with a tilting and lock lever. No bolt or nut to fasten. Requires minimum amount of time and attention. Pat. rights in the Dominion are for sale by Mr. H. P. Fries, Brayton, Nebr., U.S.A.

CHILD'S CHAIR, adjustable so as to adapt itself to accommodate children of different sizes and to hold them so that the possibility of accidentally slipping down through or their climbing out of the chair is eliminated. Patent rights in the Dominion are for sale by Mr. Phillip A. Shaver, Box 21, Route 2, Puente, California, U.S.A.



COOKING VESSEL, provided with means for securely fastening cover to the vessel and having means for collecting steam and gases that arise from the material cooked, and conducting the same outwardly at one local point where they may be received in a suitable recepticle. Pat. rights in the Dominion are for sale by Mr. Jan Crawiec, Box 169, Salem, Pa., U.S.A.



PATENTS

Trade Marks, Design Patents, Copyrights

Being near the Canadian Patent Office, we are able to personally interview examiners, thus often getting broader claims and earlier allowance of your Patent. We have access to all Patent Office Records for making searches and report, and solicit the business of Manufacturers, Engineers and others who realize the advisability of having their Patent Business given PERSONAL ATTENTION by experts at Ottawa.

ROTARY HARROW, having means for universally joining a multiple of frames each carrying a rotary harrow. Said harrow will accommodate themselves to the irregularity of the ground. The inventor, Mr. J. G. Williams, Room 17, Merit Hotel, Yakima, Washington, U.S.A., offers pat. rights in the Dominion for sale.

SPRING LUBRICATOR, having means for providing a spindle with lubricant without removing the wheel. The device is simple, durable and inexpensive to manufacture. Patent rights in the Dominion are for sale by Mr. O. H. Stair, Flatonia, Texas, U.S.A.

Manufacturers interested in patents should have their names on our Service Dept. mailing list.

A Premature Report

Ford Motor Co. Not Likely to Build Assembling Plant in Regina for Some time

The report that the Ford Motor Co. of Canada, Limited, was about to erect an assembling plant in Regina, proves to be somewhat premature. Mr. W. R. Campbell, secretary of the company, states that at the present time there are no definite plans for building at Regina. They are, it is true, establishing a branch there, but this is more or less a shift in sales arrangements on account of the fact that they have taken over their dealer's premises. Some property has also been acquired from the city, and the company may build on it at some future time, but certainly not before next year, as the present premises will accommodate them very nicely for some time to come.

One-Fourth More Capacity

Shoe Factory in Quebec of the John Ritchie Co., Limited, Being Extended

A new wing is being added to the factory of the John Ritchie Company, Limited, Quebec, which when completed will enable the company to manufacture 3,000 pairs of men's shoes per day or about 25 per cent. more than the present capacity. The addition is 100 feet by 40 feet, and will give increased floor space on each flat of the present building. This is the company's second addition in the course of seven years and is made necessary by the growing demand for the company's product. In 1915 they produced 8.4 per cent. of all the men's welts manufactured in Canada, whereas in 1918 their production represented 15.3 per cent.

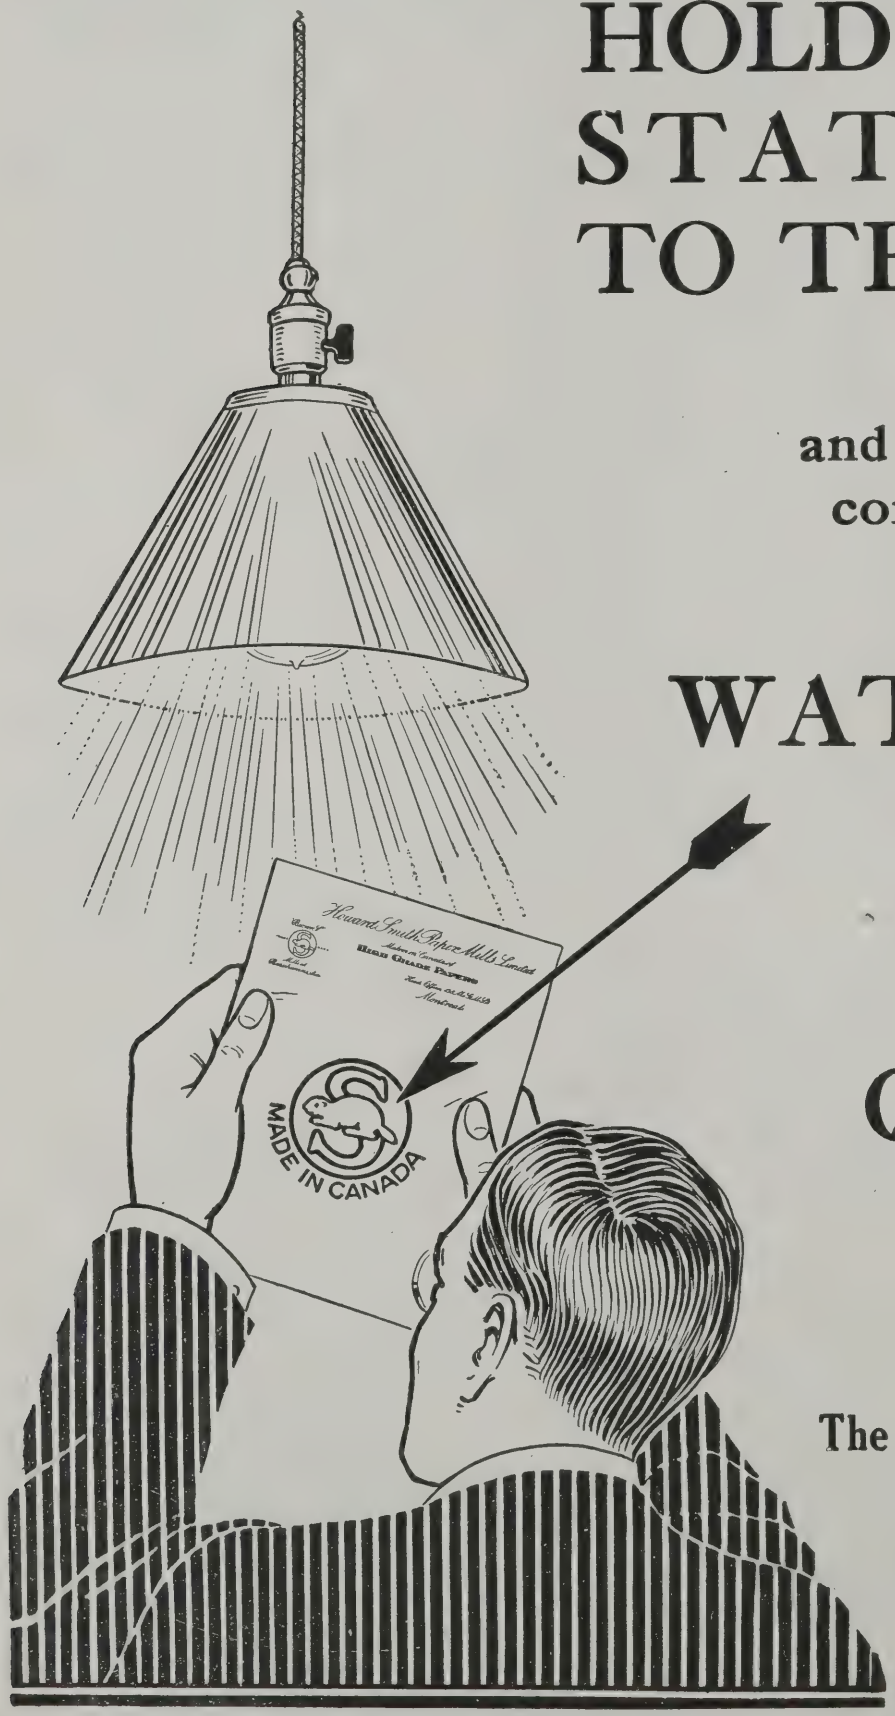
CASH or ROYALTY

Patent No. 191,079. This invention relates to an improved Lamp Chimney and has for its primary object to provide improved means on the neck of chimney for engagement by upstanding resilient members on lamp burner whereby the chimney will be rigidly held in its applied position against accidental displacement.



This is unquestionably one of the best inventions of its kind ever brought before the public possessing all the necessary features to make it commercially successful and being in great demand has no commercial competitor. Manufacturers and capitalists, this is the chance of a lifetime. Investigate the merits of this invention today, tomorrow may be too late.

OFFICE AND FINANCE

Filing Systems, Good, Bad and Indifferent

How to Make Sure of the Profits that May be Lost when Letters Can't be Found

By ARTHUR VAN VLISSINGEN, Jr.

(Reprinted by special arrangement from "System")

THE papers handled in the office of one banking house in New York—its name is on the tip of everyone's tongue—are valued, on the average, at $10,000 each. The transactions are in such large figures that the loss of interest on the money tied up as a result of a paper misplaced for a day or two would often run up into three figures.

But papers are not lost in that office; there has been no instance of the sort since, three years ago, a contract well up in the millions was whisked off the desk of a partner, out the window into Wall Street by a sudden gust of sea breeze. And the blame for that, as the file chief protests with hands upraised, can certainly not be laid at the door of his department!

How Letters are Handled

How, you may ask, can this house guard itself against losses? The answer is simple: It takes as great precautions in handling all its papers as it does in safeguarding $10,000 bills. It can afford to.

When a letter comes to the mailing department, the envelop is stamped with a numbering machine, and it is registered in a book. The envelop is opened by a man of responsibility—the head of the file department. He transfers to the letter the number on the envelop, and reads it. This file department head, mind you, is not a $20 clerk; he's a real executive, who has his part in making the company plans and who knows what is going on just as much as does any member of the firm.

When he reads a letter he knows who is concerned with it. He knows, for instance, that Jameson is handling the deal, and that the letter raises a point which Jameson will have to take up with Marvin, the head of the firm, who won't be in until to-morrow morning. No matter what they decide, the letter will next require the cashier's attention. And when he has made out the cheque, the letter will be safest in the files, in case Jameson needs it again.

File Slips are Attached

So the file chief attaches a slip to the letter; this specifies that Jameson can hold the letter until noon next day, that he is then to return it to the filing department for registry, that the cashier may have it from noon to 4 o'clock, and that at 4 o'clock it is due back in the filing department once more. A copy of these facts is set down in the register, behind that letter's number. And if the letter does not return from Jameson's desk at noon, a messenger is sent to get it. Thus, no important papers are "sunk without a trace." They return to the filing department as an intermediate stop in each of their trips from one executive to another. And the time schedule assures that only a few hours, at most, will elapse between the moment that a paper is mislaid and the moment that the loss is discovered.

That company's filing department, with its complicated registries and schedules, is not for a moment to be advocated as a model for all other filing departments. Probably not more than a dozen concerns in America could use such a plan profitably!

The big fundamental lesson for business in general that that set of files points is, not the method itself, but the individuality of method that has been developed to meet a specific and peculiar need. Whoever originated that method had the mind of a master in filing. He was not afraid of the right plan, because it had never been tried.

The basic principle of all right filing is: Suit the method to the needs of the business. When files are organized accordingly they may very easily save $10,000 a year or more in a business of moderate size. For the average business, fortunately, one of the standard methods will fill the bill better than a specially designed plan.

Filing that saves the executive time and the filing department expense will, in general, avoid needless duplication of filing, of indexing, and of effort in filing and finding papers. Fundamentally the plan that is simplest and yet adequate is the best plan.

An extreme example of this was described recently in *System* by a man who has a "one man business." He found that of the letters he receives every month, not more than a dozen or so does he ever need to see again. And these fall in one or two hard-and-fast classifications. All other letters he throws in the waste basket as soon as he has answered them. And a small box file, renewed every two or three years, is ample for all his filing.

Five General Methods

There are in current use five general methods of filing: (1) alphabetical; (2) numerical; (3) subject; (4) automatic; and (5) geographic. Each of these is especially applicable to specific kinds of work; the manager's difficulty comes in selecting the method which will bring the best results.

"An interesting example of how expensive and unsatisfactory the wrong filing method may be," says an office management expert, "came to me in the very first bit of 'efficiency work' I ever did. That was a good many years ago; I was then a clerk in a Chicago department office of a big express company. My work was tracing down the complaints on service that came to our department. And I had to refer to the files almost continually. The filing clerk, it seemed, could never find anything I needed. I took to hunting up what I wanted, rather than wait. And after I had been doing that for a week or two it dawned on me that the whole filing plan was wrong.

"I put my case up to the department head so forcefully that he told me to change the files in any way that I wanted to. And when I had changed over the files—it took me only a few days to do all the work—we had no more trouble.

"The files had been organized alphabetically—perhaps the simplest method there is for most concerns. But consider our correspondence—practically all of it about delays, losses

HEAD OFFICE . . TORONTO

of shipments, thefts from packages, and the like. Each letter was concerned with the shipper, the consignee, and besides our office at least one other office or department of our company. I might write three letters—one to each of these. And the letters would be filed in three different places.

"The volume of our correspondence was not great. It was easy to divide the entire correspondence into about 25 classes—delays, shortages, losses, and the like. We started, then, 25 divisions in our files—one for each subject. We made no subdivisions, but filed each letter in sequence as it came to its division of the files.

"Since we always had a pretty definite idea about the date of the correspondence we had merely to run through half a dozen letters to find what we wanted. We always knew, of course, what the correspondence was concerned with. And so we got quickly rid, at one move, of practically all our difficulties. The change was simply from alphabetical to subject filing."

A similar result came to a Minneapolis knitting mill which had been burdened by a poor set of files in the shipping department. These files contained stencils with which the shipping clerks addressed cases and boxes for customers. They were arranged in alphabetical order, behind guides. But it generally took the department's errand boy five or six minutes to find a stencil; about 10 per cent. of the stencils called for could not be found, and had to be recut.

This expense—though not inconsiderable—was far from being the biggest waste that the poor filing caused. Similarity in names might result in an order being sent, for instance, to O. B. Johnson of Walla Walla, Washington, when it was intended for Ole D. Johnson in Winona, Minnesota. The round trip freight on such a shipment is worth saving, not to mention Ole D. Johnson's good will.

Divided by States

The difficulty was overcome by a method as simple as that which worked so effectively in the express office. The stencil was divided by states, arranged alphabetically. Behind the guide for each state was placed a set of alphabetical guides.

This new division separated O. B. Johnson in Washington from Ole B. Johnson in Minnesota. And if the stencil of Ole Johnson in Winona is confused with that of Oscar Johnson in Duluth, the extra freight charge is for only a few hundred miles, instead of a few thousand.

One cause of delay in hunting out stencils, too, was the difficulty of reading them. The boy had to lift each one out of the drawer—the waxed paper was smeared with black paint—and hold it up to the light.

White sheets of stiff cardboard—high enough to extend only half-way to the top of the drawer—overcame this trouble. These sheets are scattered through the files in about the proportion of 1 sheet to 2 stencils. The searcher can now read the stencil at once, for its letters stand out clear against the white background.

The files which require the least indexing are the cheapest to operate. The two instances already cited are files of this sort—they require no indexing at all. "It is true 9 times out of 11," declares an expert on office management, "that the concern which is using an index on its files could profitably change its methods to do away with all indexing except the occasional cross reference when a letter from Barnes-Washburn Company may be asked for, or the same letter may be indicated as from George Mallson, its writer.

"A big proportion of the executives who think they need to have each letter indexed in two or three different ways could get along just as comfortably with a straight subject

file, or an alphabetical, or geographic. The occasional delays in finding a letter—there need be very few of them if the right method has been selected—are overbalanced by the saving in filing expense."

"It is remarkable," comments an office manager whose experience lends weight to his statements, "that the man who wants to economize on his filing will almost always select the material expenses—cabinets, for instance—as the place to begin. Yet if he began on the labor of filing, and did away with one file clerk out of 10, the saving in a few months would exceed the total cost of all the materials that this department uses in three or four years.

Central Files Were Lacking

"A striking example of this came to my attention last year in one of our branches. I set out to cut costs in that office. And here is what I found out about the files:

"Five of that branch's department had been keeping up their own files. There were no files that could rightly be called central.

"My first step, after finding out that no reason except tradition caused this, was to move all the outlying files into a room just off the general offices. Seven clerks had been filing in the five departments. We took two girls away from the work at once, leaving five to handle it.

"So far we had merely consolidated the files. Our next job was to reorganize the work. We transfered the files into one set of cases, alphabetically arranged. Then we assigned a section to each girl; we made her responsible for all filing and all look-ups in her section, say A. to J. She at once took a pride in keeping up her section to the best of her ability. The girls did not interfere with one another, because their 'territories' did not overlap; and we were able within 10 days to take two more girls from the department, leaving 3 to do what 7 had done before. The 3 of them are doing it easily and well.

"The next move was to rearrange the files. We placed all 1917 correspondence in cabinets along the south wall, and all 1918 correspondence along the north. The east wall is a window—the room is narrow—and the west wall mostly door.

"By January, 1919, our plan had been working a few months. It was time to transfer; so we merely carted the 1917 cabinets to the basement and put new cabinets in their place. Thus we start new files every year.

"We did not transfer the folders to transfer cases, because transfer cases are hard to work with, and we occasionally have to look up correspondence two years old. It saves time for the clerk if she has only to go through basement files exactly like what she is working wtih every day upstairs. And we saved the work of transferring the folders into cases each time.

Correspondence Kept Three Years

"We keep our correspondence three years. So in January, 1920, we shall buy another set of cabinets and cart the 1918 files to the basement. In January, 1921, though, we shall throw away our 1917 correspondence and use the cabinets to replace the 1920 files. And so from then on we shall buy cabinets only as the growth of our business demands.

"Our original saving in the file department's salary expense by consolidating and reorganizing the work amounts to over $3,000 a year. Isn't that better than saving perhaps $150 by looking first at possible savings of equipment?"

Along the lines of equipment, there seems to be a strong tendency to consider only the late designs as desirable. "Sometimes," says the head of the filing department of a large manufacturing concern, "we find it profitable to use the 'old-fashioned' box file—the file that is made up to

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world. Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

resemble in appearance a large book. Some of our records we need to keep for a good many years; the bulk of our files we can discard after 18 or 20 months.

"Instead of filing everything in our cabinets and then sorting it all over before we transfer, we file these permanent records—contracts and the like—in box files. There are comparatively few of them; they are seldom referred to; but when we are in need of one we need it badly.

"In transferring we are able to handle the whole contents of a cabinet into a transfer case; we save the expenses of sorting and the chance that some of our permanent records will inadvertently find their way into the transfer cases and eventually into the paper baler."

Alphabetical Filing Is General

Perhaps the instances that have been cited here of other methods supplanting alphabetical filing may tend to give the impression that alphabetical filing is generally undesirable. On the contrary, it is the method most widely in use, and on the whole the most desirable. With adequate guides, the method enables the clerk to go straight to the desired correspondence, without recourse to indexes. Its simplicity is the quality that recommends it.

A variation sometimes used consists of giving a number to each section of the alphabet which has a guide. Thus Aa-Af may be number 1; Ag-Am, number 2; and so on. When a paper is filed in subdivision 2 it is marked 2. Then, if by chance it is misplaced in another division, the file clerk is sure to notice its number and replace it where it belongs.

The numerical method involves giving each paper—or folder—a number as it is put in the files. A card index is necessary; the chief advantages of the plan are its accuracy and its flexibility. As many cards as are desired may be used for each letter. The cards may carry the name, subject, and geographical location, and one of them be filed under each heading.

The automatic method is essentially the alphabetical method, with a numerical check. Letters are filed: first by name; and second by initial. Thus R. T. Adams is filed behind the guide Aa-Am, and behind the secondary guide R. A. R. Allen is filed behind the same primary guide, but behind secondary guide A. Each primary and secondary division has a number, shown on guide, on folder, and on a chart. Thus R. T. Adams goes in class 1-27; A. R. Allen, in 1-1.

The geographic plan provides, usually, guides for states, folders perhaps for cities arranged alphabetically within each state, and straight alphabetical arrangement of correspondents' names within each city. It is relatively expensive of operation, but gives remarkably satisfactory results to concerns whose work indicates the need for such files.

Subject filing is also widely used. Each subject has a folder, a guide, or a cabinet, according to its size. It needs indexing, usually. And it can be indexed alphabetically, geographically, or by a number of other methods.

Which plan best suits an individual business can be decided only by someone who is intimately familiar with that business. And the right decision is based on its specific needs, and on common sense.

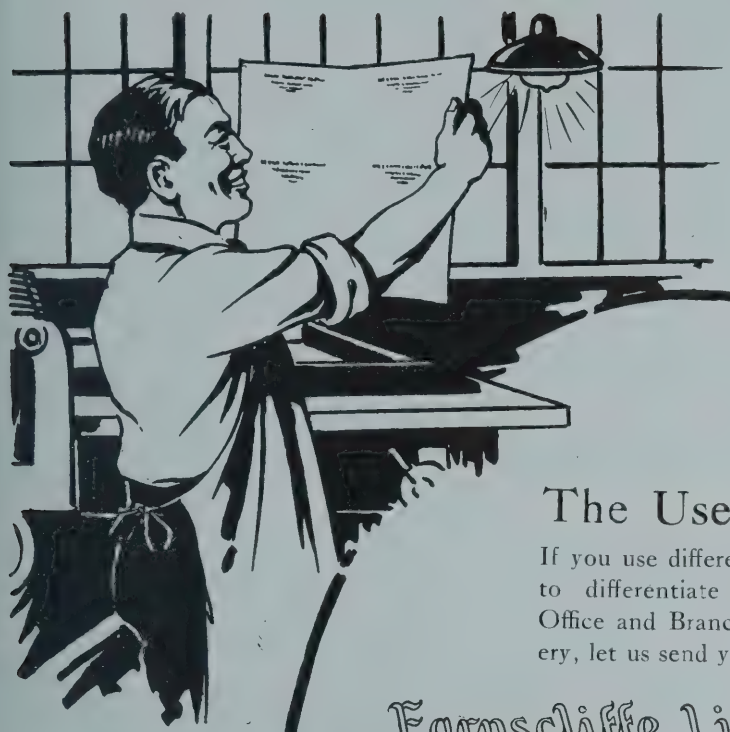
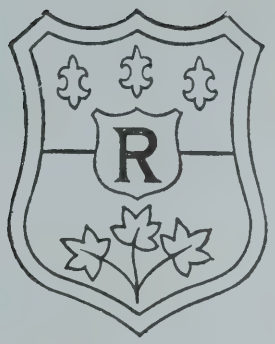
Milling Profits Less

Canadian Flour Milling Companies Earned Slightly Less in the Last Fiscal Year

During the past month several of the big milling companies issued their annual reports. While earnings continue on a large scale, the totals reported fall somewhat behind those of the previous year. Thus the Ogilvie Flour Mills Co., Limited, showed profits from flour milling for the year ended August 31, 1919, of $649,777, compared with $832,910 for 1917-18. From other sources income amounted to $982,738 against $1,122,504 or a total income of $1,632,516 for 1918-19, compared with $1,955,414 in 1917-18. The past year's showing, while not up to the previous year, was yet better than the display of 1914-15, which had been the banner year up to that time.



The Lake of the Woods Milling Company, Limited, for the same period enjoyed profits of $756,616, which represented a decrease of $101,298 over 1917-18. Milling profits amounted to $547,152, a falling-off of $54,368. Here again, while the showing was less favorable, compared with the previous year, it stood well in comparison with earlier years.



The St. Lawrence Flour Mills Co., Limited, reporting for the year ended August 31, 1919, had earnings of $245,594, which compared with $268,737 in 1917-18, but with only $171,071 in 1916-17.

The Western Canada Flour Mills Co. reported net income after making provision for depreciation, etc., of $437,986, which compares with $543,845 a year ago, and $418,022 in 1916-17. The president of this company, Mr. A. Kelly, attributes the decline in profits very largely to the effect of labor troubles, which necessitated the shutting-down of some of the mills.

Presenting the annual statement of the company to the shareholders of the Lake of the Woods Milling Co., Limited, Brig.-Gen. F. S. Meighen, the president, said: "Last year was an excellent one for the company, as both domestic and export business were good. From present indications, the export side will not be as good this year, and we shall have to depend largely upon our domestic trade. This is excellent at present, and we are taking every possible means to develop and extend it. I feel optimistic, however, as I believe that there will be a general increase in activity in the work of reconstruction and production. I expect, therefore, that every month will see a gradual return to more normal conditions of trade. I think there is no reason to fear for the future prospect of your company."

On November 1, officers of the Canadian Pulp & Paper Association were removed to the Drummond Building, corner Peel and St. Catharine Streets, Montreal, within three minutes' walk of the railway station and principal uptown hotels.

From the Angle of your Filing Clerk

You probably look on your filing system as a place where so many letters and papers are stored.

But your filing clerk? She isn't fortunate enough to be able to look at it in such an easy, buoyant manner. With her it's a serious part of routine.

She knows that when you ask for a certain paper you want it quickly, without any waste of time.

With her the *proper system* means the difference between a slow, cumbersome, inaccurate way, fraught with many delays—and a speedy, accurate and efficient method of filing.

"Office Specialty" Systems of Filing and Record Keeping are fundamentally right. A proper principle of organization underlies each one of them. Each system is designed for a specific purpose and it achieves that purpose in a way that extensive study has demonstrated to be the best.

"Office Specialty" System Service, Dominion-Wide in its scope, is offered to any business organization without fee or charge.

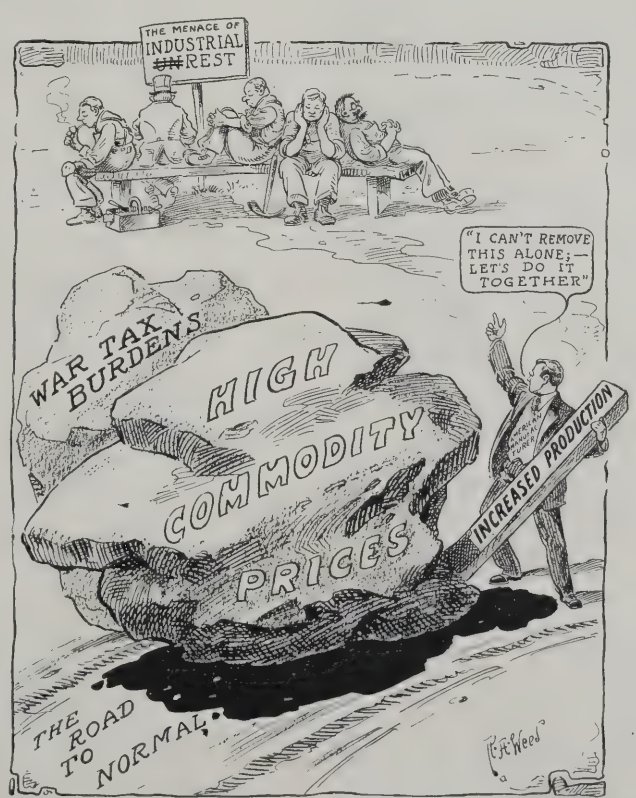
The Factory Visitor's Welcome

There are certain objections to allowing too free access to plants on the part of visitors; but generally speaking the manufacturer who hangs up the "Keep Out" sign and locks the door on the secrets of his manufacturing processes and methods loses in the end more than he gains from so doing

By LEON I. THOMAS
(From "Factory")

"WE were on our way home, the foundry foreman and I, from an inspection trip, during which we had visited a foundry in a neighboring city with a request to be shown through," a Canadian executive recently told me. Then he went on, "The superintendent of the foundry visited had, after reading our letter of introduction, and after some very apparent hesitation, said that they didn't make a practice of that sort of thing, but he 'guessed it would be all right.' He had then started us off as if he were training us for a cross-country walk and we were in at one end of his foundry and out at the other in very short order.

"The foundry foreman was sore and when we had settled ourselves comfortably on the train for the return trip, he proceeded to relieve his mind as follows:



"'Well, we didn't get much out of that fellow did we? He is a good example of the old-time foundryman who, fortunately for the foundry business, are getting scarcer all the time. He was afraid that we would carry something good away with us, wasn't he? No doubt we would have if he had been broad-minded enough to stop and talk things over with us a little bit as we went along. It's a sure thing though, that he could have gotten as much out of the discussion as we did and maybe a little more. Why there were several things which I noticed as we passed them on the fly that I know I am doing in a better and cheaper way than he is, and I would have been only too glad to tell him about them if he had given me half a chance.'"

Inter-factory visits by foremen and department heads have become so frequent in these days, and particularly since the value of co-operative effort taught during the war, that keep-out signs prompted by a keep-out policy are rapidly passing. An industrial engineer of one of the large tire companies outside of the Akron district said to me recently, "We in the rubber business used to have the name of being extremely secretive, and we were too. But now that is all changed. We are in close touch with all the rubber people in the Akron district. We develop a method that saves us say 15 cents on each tire. We soon go down to Akron and tell some of the people there about it. Perhaps we let them use it for a royalty of say five cents and it is more than likely that we come back with some other practical idea under a similar arrangement. We both profit."

As a general rule, the man who hangs up the "Keep Out" sign and locks the doors on the secrets of his manufacturing processes and methods against competitors and all comers generally, loses in the end more than he gains from so doing.

There are, of course, exceptions to the rule and the question is debatable, and there is argument available enough on both sides to draw it out into as long and tedious a discussion as a time-killing political debate. Also there is a distinction which can be made between hanging up a general "Keep Out" sign on the factory, and locking the door against competitors and others who come to inquire about methods and to swap ideas.

There is, for example the excuse for the no-visitors rule that it is a check against the promiscuous and idle invasion of passersby and loafers. The free and indiscriminate coming of visitors and onlookers to any manufacturing institution brings with it both danger and interruption. The idlers standing by may get in the way and get hurt now and then, and through getting in the way and through detracting the attention of machine operators may be responsible for many accidents, and cer-

tainly they divert the attention of the men at work more or less.

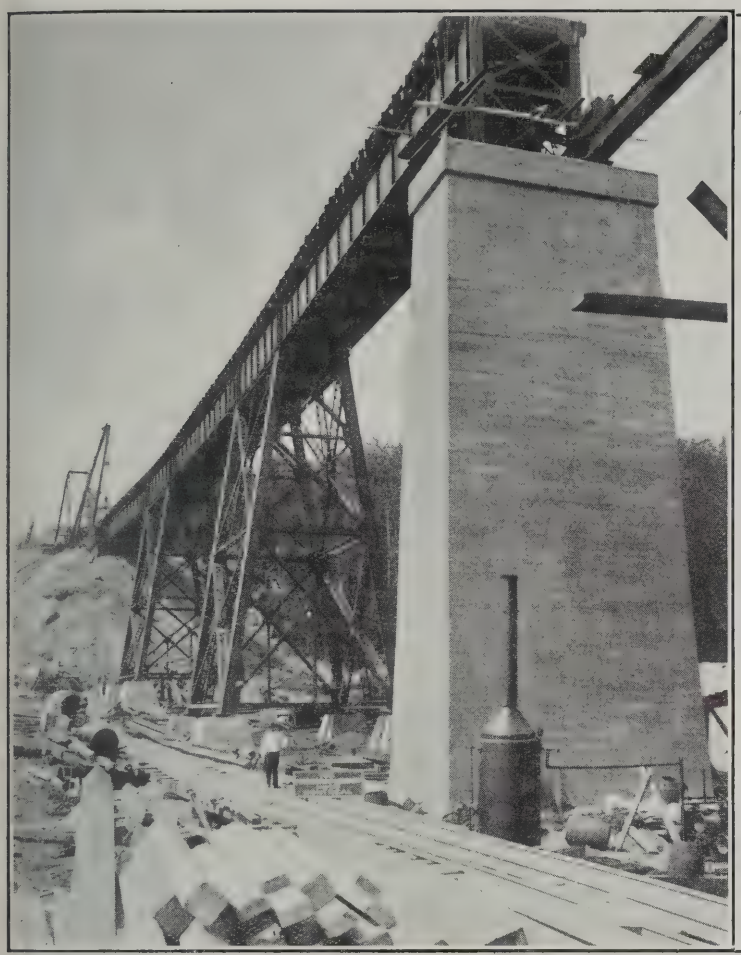
There may be now and then certain manufacturing secrets that it is essential to protect with the locked door, certain things that are not patentable or cannot be protected enough by patents to make the manufacturer of them secure. Yet these are but exceptions that prove the rule, for as a general thing a man gains more than he loses by the open-door policy. This is because he shows his competitor that he invites the confidence of the competitor and through it develops a fair exchange of ideas, which begets much better progress than is ever possible with each man going it alone and thinking out and wrestling with his various problems unaided by this exchange of experience and ideas.

In speaking of the interference of visitors with workmen there should be set down, however, a management advantage. It is entirely possible that the pride in an employee's work is stimulated. In fact, it has been a practice of the National Cash Register Company to put a notice on the shop bulletin boards headed "Visitors Expected To-day" and under this caption the list, which may include prominent outsiders or perhaps branch managers or other executives.

Then of course there's the advertising value of showing visitors about the plant, particularly if the product has a general distribution under a trade-marked name. No one would think of putting up a "No Visitors" sign on the plant of a nationally advertised food product. It would be suicidal. A sign reading "Our plant is not up to sanitary standards" could hardly be worse.

Treat Visitors Like Buyers

Why hasn't this same argument some force, if not to the same degree, in any factory? One leather-belting manufacturer apparently holds something of this view for he advertises: "The leather-belting business is full of secrets and the manufacturers can't give them away, you know. Nobody can get in. He might see a workmen sew up or glue a lap. But —with us it's different. Anybody can see what we do and everybody is cordially invited to go through our works." Then he goes on to suggest that you ask the other fellow how many "presses he has." He then uses phrases, "large plant, big volume," with the implied challenge, "come and see for yourself what's behind our product."



This is not mentioned as a suggestion to advertising copy writers but to emphasize one phase of the value of welcoming visitors to a factory.

Just by coincidence it was a belting manufacturer that expressed the following similar views on courtesy to visitors that builds good will. "There is still among us the business man who says he is too busy to see every Jack and Jill that comes along and that he hasn't time to run a 'rubber-neck' wagon around his plant.

"And really, it is a simple matter to make every visitor feel at home by showing him that his visit is a real compliment.

"Above all, let his first reception be pleasant. And don't keep him waiting—the seat in the ante-room grows hard after much sitting, while temper tugs at the leash. Just send out word when you will see him. If you are too busy, delegate a subordinate to pilot him around.

"In other words treat every visitor as if he were a buyer. He may be if good will counts for aught. And those who have taken pains to cultivate the good will of visitors have ample reason for continuing the practice."

THIS PIER was built through a greater depth of water than any other pier ever sunk in America—with one exception.

It is 102.3 feet below water level.

Such work requires unusual skill, resourcefulness and equipment—all characteristics of

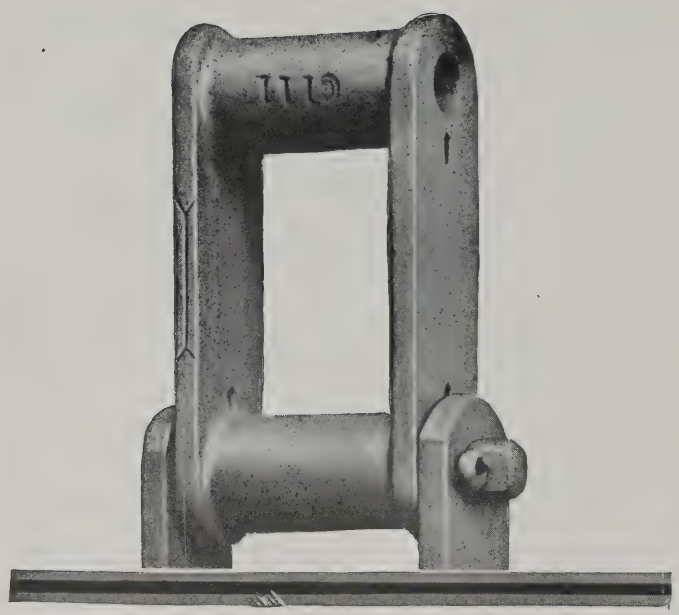
TRADES AND LABOUR BRANCH DEPARTMENT OF PUBLIC WORKS

THE TRADES AND LABOUR BRANCH administers the following:

The Trades and Labour Branch Act
The Bureau of Labour Act
The Stationary and Hoisting Engineers Act
The Building Trades Protection Act
The Factory, Shop and Office Building Act
The Steam Boiler Act
Employment Bureaus
Investigation and Research

Employment offices are in operation in 35 cities and towns of the Province, and are the Ontario units of the recently organized "Employment Service of Canada."

Are you getting your help through the medium of the employment service, which you as a taxpayer are helping to support?



The value of these bureaus will increase in proportion to the extent to which they are used by employers.

NOTICE TO STEAM USERS:

At the last Session of the Legislature, the Act respecting Stationary and Hoisting Engineers was amended, said amendment requires that on and after January the 1st, 1920, all stationary steam plants in the Province of Ontario must be registered with the Board of Stationary and Hoisting Engineers. Application forms for this purpose will be forwarded on request. The boiler horse-power and other information contained in these application forms is to be used for statistical purposes.

A Registration Certificate will be issued to each applicant.

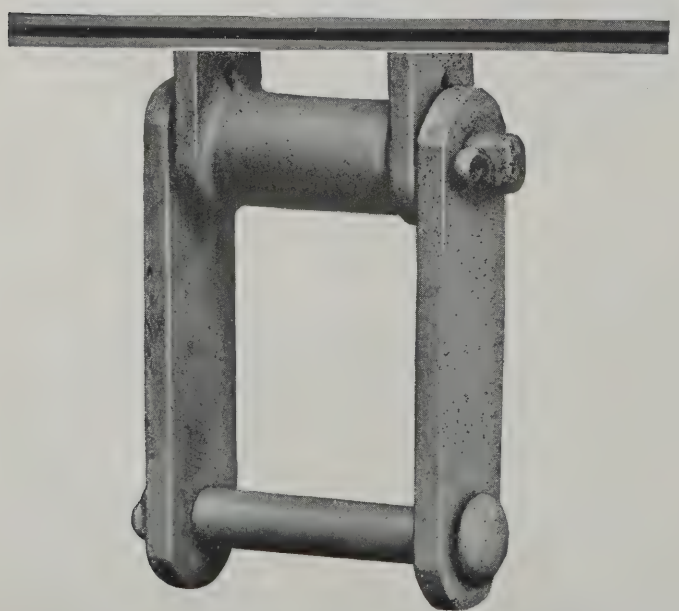
"COMBINATION"

LINK-BELT

FOR ELEVATING AND CONVEYING

STRENGTH and low cost are combined in "C" Class Link-Belt. It is well-established in the fertilizer industry as a durable Link-Belt for elevating and conveying



Length of life in service is increased by preventing motion between the pin and the side bars which hold it. The pins are accurately fitted to the side bars. A flat portion is milled accurately at the end of the pin, fitting into a carefully broached hole in the side bar. Obviously this construction is superior to forged lugs or necks under the head to hold the pin in place

Write for Folder No. 306, which gives particulars regarding "C" Class Link-Belt. Our experienced engineers offer their services in solving your problems in elevating, conveying and power transmission. Write to the nearest office.

BRINGING UP RECOMMENDATIONS

This writer is strongly of the opinion that, when recommendations are introduced at a conference, they should be presented in written form. Such proposals demand more attention than verbal ones and can be studied more carefully by those who will have to reach a decision about them. It also tends to accuracy.

By John R. Mason.
(From "Industrial Management.")

Very often the success of a recommendation depends upon the method the originator uses in presenting his idea and plans to the higher executives of his concern. This is especially true when dealing with personnel problems. Manufacturers as a whole no not think in terms of personnel, and cannot conceive that their employees can be secured by any method similar in its particular field, to the specifications they use for their raw material; nor that they can be handled by scientific laws or procedure, equally as vital as the methods by which raw materials are converted into the manufactured product.

A first step in any effort to better personnel should be a careful study of present conditions. This is absolutely essential, and it is also helpful to secure so much information as possible concerning the problem either by reading or visits to other plants. Except when it is necessary, in gathering information concerning a problem in mind, no mention should be made of it, nor of any plans or recommendations until the entire proposal is worked out. After condensing the proposal and arguments so far as possible, have them written out and a carbon copy given to each of the men with whom it is to be discussed at a conference. This is where the employment manager should remember to study the men with whom he is to deal, at the same time that he is working out his recommendations.

Cite as Many Examples as Possible

Following are the points to be included in a report of this nature: First, as analysis of present conditions and their resultant faults; second, a statement of what would be an ideal system; third, the proposed system with a statement of its weak as well as its good points. Believing that a start in the right direction is better than no improvement at all, the proposed system is not always the ideal one, but very often it may be the only possible solution, considering plant facilities and organization. In this report cite as many examples as possible of what other concerns are doing, especially those in the same line of business, to meet and remedy the problem that is to be discussed.

A written recommendation has the following advantages. It demands more attention than a verbal one and as each man receives a copy of it, there is less likelihood that it can be forgotten or side tracked by any one man. It also forces the person making the recommendations to be absolutely sure of his statements and less liable to exaggerate. It is not human nature for a person to be so optimistic in "black and white" as verbally. Because of a written recommendation a person is better able to command at the conference, on having thoroughly studied the problem, it is easy to anticipate many of the objections as well as questions that will be asked and draw up conclusive rebuttals in advance.

In the conference itself, merely give a short verbal statement of the conditions and recommendations, as every one present should have read his copy of the recommendations. Then let the others take the lead in the discussion. Get the work and arguments into the written paper. Except for answering questions or correcting wrong impressions, do not attempt to take part in any discussions but merely direct them on to ground where one is perfectly familiar.

WHEN 3 PER CENT. IS IN CONTROL

There should be some channel, through the development of industrial democracy, by means of which employers can bring about a better understanding with the great mass of their employees. It is said that just three per cent. of the employees of any concern are in a position to impose their will on the majority.

By George E. Holmes.
(From "Industrial Management.")

Estimates of the actual number of dissatisfied employees wishing to strike during any labor disturbance have been inside of the figure of three per cent., showing conclusively that this small minority has always been able to impose its will upon the greater majority.

This being the case, we ask ourselves why it is that the worker can rarely explain just why he is "out" except that he "followed the rest." Are these men like sheep that they follow the first leader that presents himself? And, are they so completely devoid of individual reasoning powers that they are incapable of thinking for themselves? or are they so cowardly they dare not oppose?

This would be a most pessimistic view of our laboring class and one unworthy of them. They have fought and died for a principle many times—a principle involving the good of the whole rather than one of personal interests. Is it not possible that in this very thought, of a principle, exists the solution of the entire "labor problem?"

Primarily, our first consideration should be with the laborers' viewpoint—just what does he think? We know that he believes his employer is his enemy, that he is selfish and entirely inconsiderate of others, that he looks upon his help as so many lifeless machines created for his especial benefit. He has this preached at him from every angle.

Few attempts have been made by his employer to refute this—he being devoid of any channel through which he could unbiasedly present his side of the question without it being taken as subterfuge, and the idea of "slipping something over on the workingman."

The three per cent. have dominated because they had something definite to offer the workers. Whether this was based on facts or not mattered little, it was a *something* and always help promise of betterment. They appealed to the emotional side of the worker and gave him to understand they were fighting for the principle of right and equality.

We have always believed that right will prevail. Is it not possible for the employer to make use of the lesson the three per cent. has taught him, and by creating a channel for complete understanding appeal to the great majority—the 97 per cent. showing them conclusively that their best interests are not embodied in a spirit of antagonistic competition but in closer coöperation?

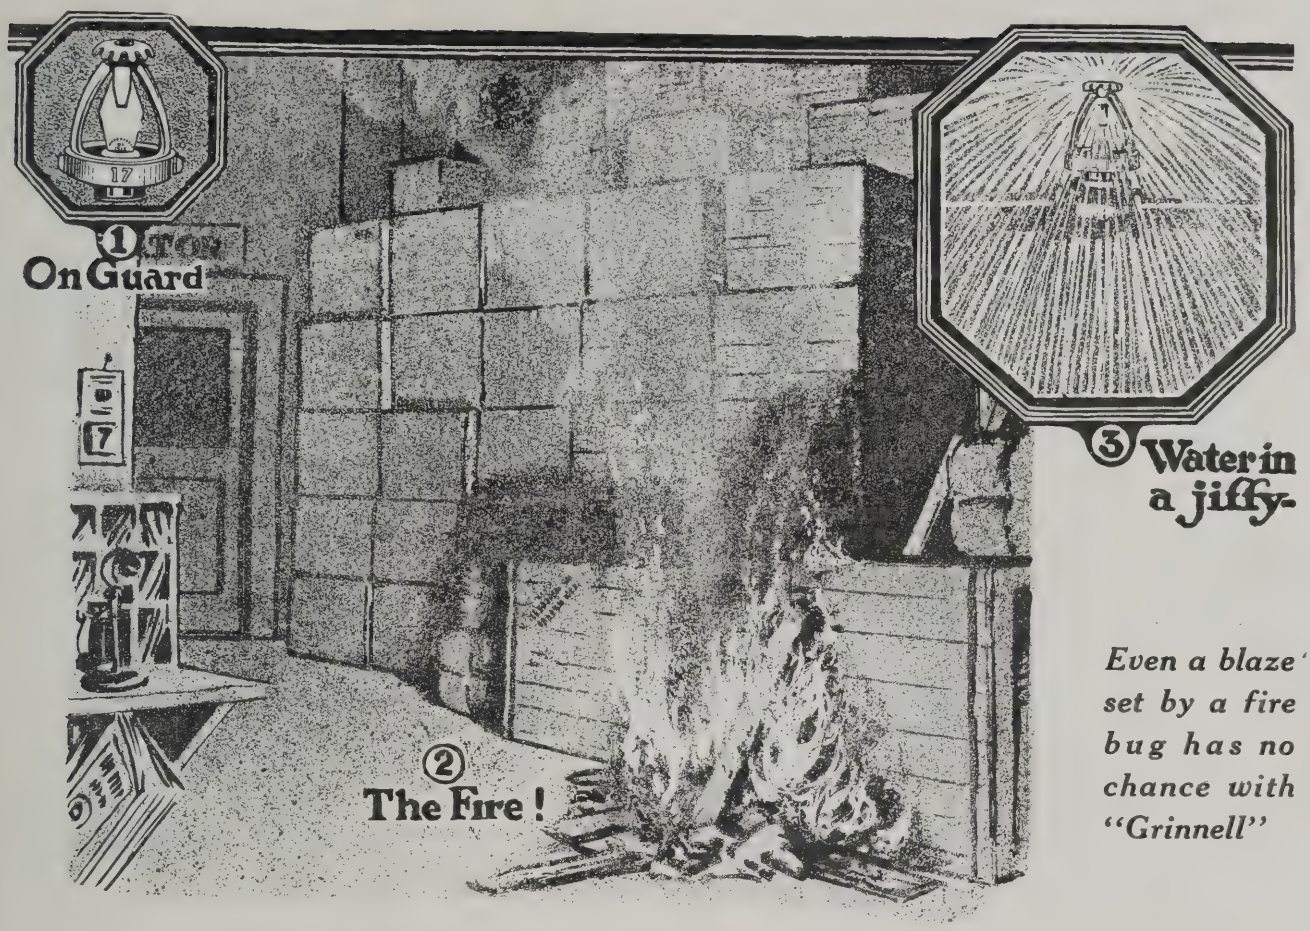
If properly handled, industrial democracy puts into the hands of the 97 per cent. the truth of the entire situation, first. It educates them to an understanding of why they are not entitled to examine the books of the company. It shows them that the company has taken the risks, has supplied the capital, has created the organization and made possible the sale of the product. They understand and believe that the profits of the concern belong to the fellow who earned them. They come to realize that their additional earnings, beyond that established as a mean basis, must come from their own individual interest in assisting the management to reduce overhead costs, labor turnover, production costs, departmental losses, and in bringing forward ideas for general betterment; that any recommendation they wish to make will be accepted in the true spirit of a constructive suggestion and not in the light of a demand.

The Canadian Appraisal Company
Limited

DURING the past fourteen years we have appraised some four thousand properties, scattered all over the Dominion of Canada.

These include the leading and most representative plants of every manufacturing industry of the Dominion.

The valuations which we make comprise land, buildings, plant, machinery and equipment, tools, water powers, etc.; in fact, all the permanent working plant of any manufacturing or other industry.



Our certificate, therefore, of values, in conjunction with the certificate of profits and liquid assets prepared by the accountant, furnishes a complete verification of a company's assets.

Even a blaze set by a fire bug has no chance with "Grinnell"

Make a Date with the Fire!

IF you knew that a fire was soon to come that would disrupt and destroy your prospering business, you would make an ***appointment*** with that fire if you could.

You would ask to know the particular spot and the exact minute. You would be there on the dot.

You'd even have a dozen buckets of water handy to give your guest a cold reception.

You wouldn't be five or ten minutes late.

A Grinnell Automatic Sprinkler System, figuratively speaking, has an appointment with ***your fire.*** It is there at the exact spot, at the particular minute. It greets that fire with many buckets of water and, try as it will, the fire cannot disrupt or destroy your business.

Before the fire could be detected by the most careful watchman, "Click!"---the sprinkler head deluges the space below it with a resistless rain that smothers every trace of fire.

Your insurance man will tell you that the installation of a Grinnell system means that in a few years the saving in insurance premiums pays its entire cost and thereafter continues to pay big dividends as long as you are in business.

Important

Heretofore the underwriters have often required a tank supply for automatic sprinklers in addition to the city mains. Now, however, Grinnell Sprinkler equipments can often be installed without a tank.

WHY COAL SITUATION IS SERIOUS

Shipments from the Alberta coal fields are away below normal. In Eastern Canada, the supply from the American coal fields is being seriously affected by strikes and shortage of labor. Canada's Railway War Board declares it is the duty of every coal importer to release cars promptly.

(From War Board Bulletin No. 10.)

The popular idea that a "coal scare" was being worked up in the United States and in this country, in order to justify profiteering by the coal mines, made it necessary for this Board to hesitate before taking steps to urge Canadian shippers to lay in their coal stocks earlier than usual. Careful inquiry, however, along lines already taken by the American Congress, confirmed the view that the prospective shortage was real, and that Canadian consumers of coal should govern themselves accordingly.

Canada's main sources of coal supply are, roughly, four in number. The Pacific Coast is supplied from Nanaimo, Washington, and, to some extent, Alberta; the Prairie Provinces receive their logical supply from the Alberta and British Columbia mines; sections of Eastern Canada are taken care of by Nova Scotia fields; but the chief supply, and almost the entire amount of anthracite coal, comes from the various mining regions of the United States. As it is in Eastern Canada that the density of population and industrial development is highest, a coal shortage in the United States has very serious aspects for a great proportion of Canadians, and for a heavy percentage of their industries.

The coal supply situation on the Pacific Coast and in the Maritime Provinces may be dismissed as being reasonably satisfactory. On the Prairies a serious shortage exists. The fuel year in the Alberta coal-fields commences on April first. Last year, which was by no means a record year for coal-producing efficiency in the West, there had been shipped between April first and the second week in September 1,313,421 tons of "commercial" coal—as distinguished from coal for railway service. In the same period of the present year only 529,522 tons of "commercial" coal had been shipped. The volume of railway coal shipped was equally low by comparison.

This shortage on the Prairies was, and is, extremely serious. In pre-war years a certain amount of anthracite found its way to the Canadian West, via Ontario, from the American fields. This movement was cut off by war conditions last year, and this year will be very far short of the amount necessary to make up the shortage in Western coal production. The moral for the Western coal consumer is, therefore, to lay in whatever supplies he can obtain just as quickly as he can.

Eastern Canada, almost wholly dependent upon American coal, and particularly anthracite, is intimately involved with the present coal mining situation in the American fields. Strikes cut down the actual working time in important mines. Recently came the exodus of the foreigners, chiefly employed in these mines, overseas. Visits to their native lands, impossible during war time, became so popular as to leave many mines without enough men to do more than guard the property. That situation has slightly improved, but all the mines are running on low production.

One factor is to some extent in the hands of Canadians. Coal-cars are scarce. There are at this date (Oct. 1st.) 12,890 American coal-cars in Canada. Reports to this office show cars held in Canada very much longer than the necessary time for unloading. This sort of thing is grossly unfair to other coal consumers in Canada. Every Canadian importer should endeavor to release coal-cars with the minimum of delay.

EDUCATING FOR CO-OPERATION

Educational work is a necessary part of any plan adopted to promote co-operation between employer and employee. Wrong opinions must be counteracted and employers must see that the attitude of employees is such as to enable them to co-operate successfully in the general plans of the business.

By E. O. Davis.
(From the "Textile World Journal.")

Whatever plan you may adopt as a means of promoting co-operation, you will have more or less educational work to do. Some of your employees may be in a mental rut, unable to understand the need of working with you. They may not at first construe the real meaning of any effort you may make along co-operative lines.

The nature of the educational work you must do depends upon the trend of thought of your employees, and right here is where your work must begin. Believe what you may, and practise what you believe if you will, but your progress will be slow unless you deal individually and collectively with the minds of those composing your organization. It is their attitude toward you and your business that you must handle if you would have your employees co-operate with you in making the business a real success.

Your old employees should have a fairly good estimation of you and your business. If they have not, it must be largely your fault. But the new ones will need special attention until they become established in your organization. When a person enters your employment, he either has the right opinion of you and your business, the wrong one, or no opinion at all, but he undoubtedly has some kind of an opinion bearing on the relation of labor and capital. Whatever this opinion is, you and your business are likely to be judged accordingly. If the opinion is an equitable one and the worker has the right sort of ambition, he should easily become a co-worker. If he has no opinion at all, then he should be so instructed in business principles, that when there has been an opinion formed, it will be a just one. But if he has a wrong opinion, it must be destroyed through a right understanding and the practice of business democracy.

In teaching the principles that promote co-operation, nothing is more essential than patience on your part. You must remember that the human mind is usually slow to turn loose the old and grasp the new, and it certainly must have something new to grasp before it can be expected to turn loose the old. A man in this respect is very much like being up in an airplane; he cannot very well get out until he has something besides the air to support him. Neither can a man turn loose of an old idea until he has a new one to catch on to.

We must be sure that our new ideas are more practical and elevating than the old before we offer them to others, and then they may be refused by some. People do not always want to advance. In studying the lives of some people, one is reminded of a body of water, whose only incentive for action seems to be to reach a lower level. This is why there is so much room at the top.

Get your employees interested in something worth while and keep them interested in it. Interest promotes effort. Better start with yourself. Get interested in your employees. Study their desires and needs and meet them so far as is possible and necessary. If you are not already in business, don't start unless you have enough capital to finance some kind of real welfare work. Don't become discouraged if you find an indifferent attitude among the few. Whatever position one may take in anything, it will be the result of conclusions reached by reasoning according to his understanding in the matter. If workers are reasoning along selfish and erroneous lines, and we all do, educate them out of it.

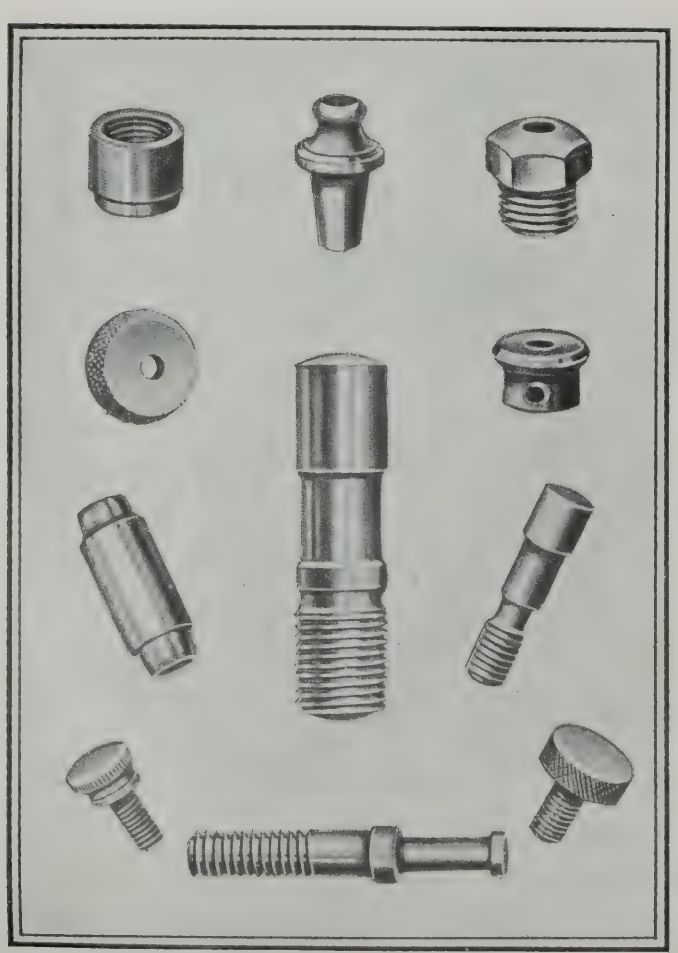
WEST MAY GET A NEW INDUSTRY

Experiments are being carried to a successful conclusion which will prove that straw from flax grown for linseed purposes can be utilized in the manufacture of binder twine. This discovery contains large possibilities for the development of an important industry in Western Canada.

(Public Service Monthly of Saskatchewan.)

Mr. R. J. Hutchinson, the flax specialist at the Central Dominion Experimental Farm at Ottawa, has been making some rigid tests of a new process of making binder twine from flax straw grown for linseed purposes. He has contributed the following report on the matter, from which it is very pleasing to note that in his opinion "binder twine and coarse cordages can be manufactured from the fibre of flax grown for linseed purposes only, and can be placed upon the market with profit to both the consumer and manufacturer." The utilization of this process will mean the saving of a vast sum of money annually, which is now going out of the province, by Saskatchewan farmers who use close to twenty million pounds of twine every harvest.



The six divisions of Mr. Hutchinson's conclusions should be carefully read, and it is well to note that a machine has now been successfully devised which removes the main difficulty in the manufacture of flax twine, namely the threshing of the flax without injuring the stalk.

In *The Public Service Monthly* for the month of February, 1918, there was an article upon the above subject which gave the results of an experiment conducted under the auspices of the Saskatchewan Provincial Government with fibre that had been extracted from flax grown in Saskatchewan for linseed purposes only and treated by special process, the property of the Flax Fibre Development Association of Regina. The manufactured articles resulting were binder twines and commercial cordages in large ranges of good quality and appearance and of normal strength. These results were somewhat remarkable, for it had always been considered that western flax was useless when looked at from a fibre standpoint. The mechanical extraction of the fibre and the chemical treatment were carried out in Saskatchewan, while the preparing and spinning was undertaken by a large and well-equipped factory in the United States.

Since the publication of this article the whole matter has been the subject of much attention by both the Saskatchewan Grain Growers' Association and the Federal Government of Canada, and the results as published seem to contain large possibilities for the development of an important industry in the West and the utilization of one of Canada's natural products.

During 1918 the S.G.G.A. undertook to have carried out under their direct supervision a series of experiments with the process to prove the *bona fides* of the claims put forth, and to ascertain what further problems remained to be solved before the utilization of this western fibre could be considered as a possibly successful commercial undertaking.

The quantity of fibre treated and spun under the control of the S.G.G.A. was larger than that treated and spun in the first instance. The results obtained were highly satisfactory and were practically on a par with those already described in the article above referred to. After treatment the fibre passed through the preparing, spinning and twisting machines with a facility equal to linen jute or hemp tow, and with even greater facility than some of the stock that the machines were then working. All original figures were borne out except that there was a slightly heavier loss in working and the yarn spun was 4½ lea instead of 5 lea. This is to

McClary's

London, Toronto, Montreal, Winnipeg, Vancouver, St. John, N.B., Hamilton, Calgary, Saskatoon, Edmonton

be attributed rather to the equipment at disposal than to the quality of fibre. The spinning end of the experiment was carried out by the only cordage works there is in the Dominion and the equipment is not to be compared with that of the factory which undertook the original experiment.

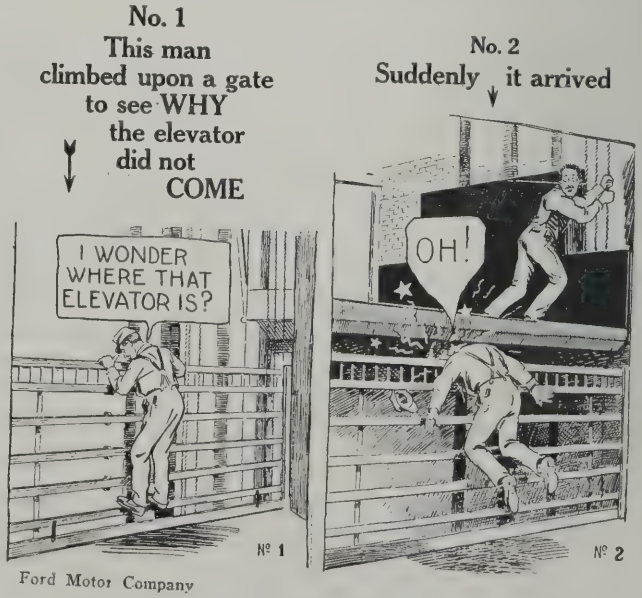
On the other hand it was proven that the fibre taken from flax that had been threshed with a toothed cylinder would not give the required results. Thus a serious problem arose, as there was no machine extant capable of threshing seed flax without injury to the straw.

On the recommendation of Messrs. Maharg and Musselman, the Federal Government undertook to carry out through the Department of Agriculture experiments which would embrace every phase of the process from the growing flax to the finished twines and that upon a large scale, as this would eliminate the possibility of any special manipulation of small quantities, and confine every step of procedure to being carried out by machinery in productive quantities. It would further test the capacity of every machine brought into operation.

This experiment, while it might not prove the actual cost of production, for specialized buildings, equipment and machinery have not been available, it would nevertheless form a sound basis upon which calculation and estimate could be made.

The experiment is now reaching its final stages and already permits of a general forecast being made.

1. Threshing can be done without in any way injuring the stalk of the flax. A machine was produced and flax was efficiently threshed in the factory. This machine has now been adapted for outdoor threshing, and will be tested in the fields.



2. Decortication or separating the fibre in its crude state from the flax by mechanical means gives the calculated amount of fibre per ton of straw.

3. The chemical treatment in quantities has been done more rapidly and economically than was estimated to be possible.

4. The preparing and spinning give the results already known, and at the price estimated.

5. The manufactured products are equal in quality and appearance to those produced on previous occasions.

6. Binder twine made last year has been tested this year for tensile strength with the same results as obtained last year, thus proving that no disintegration has set in, and that the keeping properties of the fibre were maintained.

DOUBTFUL ABOUT PROFIT SHARING

President of the Link-Belt Company in a recent address before the Illinois Manufacturers' Association says profits of average business are rarely sufficient to make a worth-while distribution. He is also rather dubious about feasibility of taking labor into partnership. Here follow some extracts from his speech.

By Charles Piez.

One suggestion to improve the employment relationship has been profit sharing, and new experiments are being tried at every hand. I am highly interested in the results, but as a means of allaying unrest and satisfying the worker, I am afraid most of these experiments are foredoomed to failure. The schemes that succeed will succeed because of the personality of the man behind them, and not because of the merit of the schemes. Profit sharing as it is usually applied, involves payment to the deserving and the undeserving; to the ambitious, energetic, useful employee, and to the laggard who succeeds in just getting by. It is apt to result, therefore, in general dissatisfaction, and a lowering of the standard of efficiency. Many plans have been tried, but a small fraction survive. The profits of the average industry are rarely sufficient to make the amount distributed to the individual large enough to stimulate and retain his interest, and only exceptional industries like that of Mr. Ford can continue to make really effective distribution. I like Mr. Ford's plan, for it consists in paying high wages and insisting that the employees earn them. My own conviction is that the best system for profit sharing consists in the opportunity for earning liberal wages for a standard amount of work performed, and that extra effort and output or extra quality, ought to entitle the man to earn wages in considerable excess of the prevailing rates. This gives the man an immediate additional return on work that is within his own control, and does not force him to wait until the end of the year for an indefinite share in an uncertain profit.

The idea of taking labor into partnership is offered as another remedy. It sounds alluring, but, like profit sharing, is another one of those schemes it is difficult to make workable and permanently effective. In the first place, the average industry, with an investment of, say, $2,000 per employee, rarely earns in normal times as much as $1.00 per employee per day. When the return for capital invested is set aside and provision is made for necessary additions and extensions, there is little or no cash to divide, and there is general disappointment among the partners. If any division is made, it must be made in stock, or its equivalent—it can't be made in cash.

And yet I am strongly convinced that a real pecuniary interest by the employees in an industry is a good thing, provided that interest is paid for. Partnership must carry with it a sense of responsibility in the pecuniary success of the venture, and cannot be helpful or effective if it represents an association in which one partner is purely interested in securing all he can for himself, without thought of the continued strength and success of the venture. I am in favor of opening up the opportunity for acquiring a stock interest in an industry, to every workman whose length and character of service justifies it, and who has the nerve to assume the responsibility to pay for that interest in cash. And when the stock acquired by workman and employees reached a proper volume, I would gladly welcome a representative of their choosing, as a member of the Board of Directors. Representation on the Board, except on the basis of stock interest, would not and could not bring about the purpose which the proponents of this suggestion have in mind.

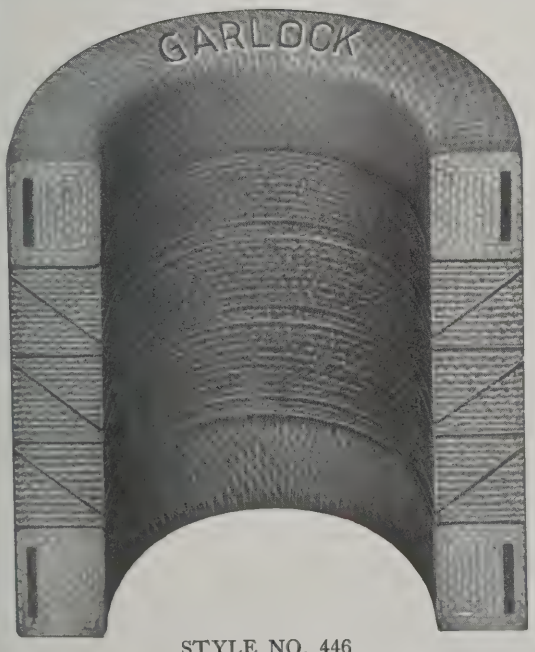
Manufacturers, PREVENT Big Fires by "nipping them in the bud," with

"IMPERIAL" FIRE EXTINGUISHERS

(Every "IMPERIAL" bears the Underwriters' label)

If your factory burns, how will you fill orders during the long period of rebuilding? How will you hold your customers? How will you hold your employees? Your *Insurance* won't do all this!

Every Insurance Company makes an allowance on the premium rate for the installation of APPROVED Extinguishers.



Your Insurance Agent can tell the exact amount an "IMPERIAL" will save you.

WELFARE WORK IS NOT CHARITY

Employers work on an entirely wrong basis when they regard welfare work as a species of charity. Nor should they take it up as a sort of hobby. There is nothing substantial in such methods and they will not stand the test. They are never lasting and their failure brings discouragement.

By E. O. Davis.
(From "Textile World Journal.")

There is a need of a certain kind of welfare work among the employees of all business establishments. But not in the form of charity. To provide such necessaries as comfortable working and housing conditions, also recreation facilities, is not charity. These are essentials, just as food and clothing are, and all of them are practical means of building up a spirit of co-operation. In fact, to provide them is co-operation on the part of the employer. Sharing profits, when practical, in the form of a dividend is a splendid plan, but every man or woman should receive according to his or her earning capacity.

I do not advocate any scheme that would take from the employer his personal rights in the operation of his own business. Nor do I believe in the distribution of industrial earnings except in the form of a fair compensation as a reward for honest effort and a legitimate profit on financial investment.

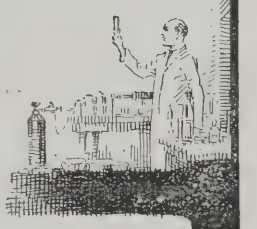
I never did believe in a mere fad or some sort of pet hobby as a means of building up a spirit of co-operation. There is nothing substantial in such methods. They are not lasting because one is likely to become tired of and disinterested in them, and the channel through which you had intended to teach your employees has vanished and you are worse off because of your experience, unless it has helped you to think along more practical lines. This, however, is not always the case, because a failure in the first attempt too often discourages the employer, also the employee, and leaves a feeling that, after all, the only thing worth while is the object of making money for one's self. But this most certainly is a mistake, because the hope of financial gain as the principle incentive for action can never develop the higher ideals in man, and the salvation of any business, or of the world in fact, is dependent upon the human race understanding and putting into practice these higher ideals.

There are some who still hold that all compensation should be included in wages, in which instance a man can invest his earnings according to his individual needs. The main objections to this plan are that it prohibits civic improvement and fathers selfishness. It puts industry back to the sweat-shop basis and continues to crown the dollar as lord of all. Proper environment is just as essential for an individual business as for a community, and money spent for such purposes should be regarded the same as taxes paid into the treasury of a commonwealth, a large per cent. of which is usually used for civic betterment.

Money taken from the employees' wages (if you wish to term it as such) and used for industrial civic improvement is a financial investment in the business for the employee. It gives him a personal interest in the business that will inspire individual effort and promote a general good feeling for the welfare of the business, the result of which will be better efficiency, and better efficiency means larger earnings and still higher wages, so that in the end you have your desirable surroundings, co-operation, contented employees, good wages and larger profits for the stockholders. Isn't this what we really want and need?

Appoint Us to Your Staff!

Make us a member of your organization to investigate the processes, the methods, the practices of your manufactory.



Your persistent efforts toward more economical and efficient operation will be most effective if coupled with investigation and experiment in our laboratories.

When you employ us you put on your payroll, at a most reasonable cost, an organization of practical and technical men welded together by years of experience in many fields of industrial work.

They are competent to advise your plant men with a view to promoting efficiency and increasing production, bringing to bear on your problems the concentrated experience of our staff.

Many concerns consider our services along these lines indispensable

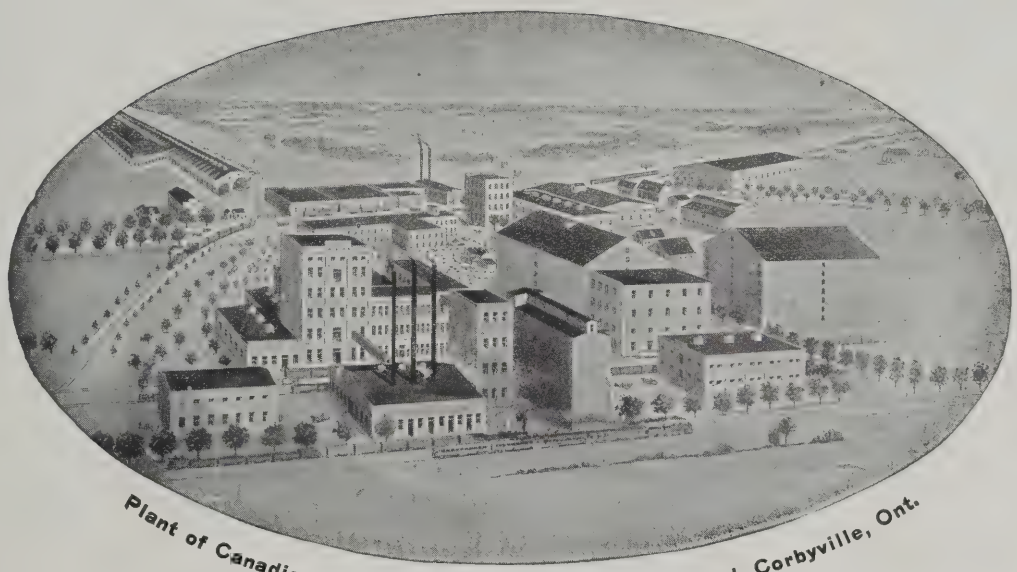
THE RIGHT ATTITUDE TO LABOR

Co-operation between employer and employee is declared by this writer, who is secretary of an American hosiery company, to be one of the most essential elements in any industry. Anything that will tend to build up this co-operation should be regarded as necessary to the success of business.

By E. O. Davis.

(From "Textile World Journal.")

Everyone is familiar with the Bible story of the young man who inquired what he must do to be saved, and, when told, went away sorrowing because he was required to adopt a new plan of salvation. From the description of this fellow, one would infer that he was a modern manufacturer or business man.



If our present business methods were entirely practical we would not need a change. Judging from the present state of affairs in some localities, it would seem that we are not using the right principles and that our entire system is wrong. This, however, is not altogether true, and besides, the customary usage of present methods makes it unsafe to adopt any radical changes. But this does not prohibit a man from doing things differently, provided he does not go beyond the reasoning faculties of his co-workers, or undertake some project which he has not the time nor the funds to carry out.

There are many factors in the make-up of any business; some are more important than others, while some few are indispensable. Of the more important, co-operation between employer and employee is one of the most essential elements in any industry. It is also one that has possibly been neglected more than any other, not so much from our lack of having seen the need of it, as on account of our inability to formulate some practical means of making it a reality. All seem willing to admit the need of a better understanding between labor and capital, but how many are willing to take the time and trouble to work out some practical, unselfish plan that will be most suitable for his individual business? Individual your business is, and individual your organization must be, but the purpose and aims of those composing an organization should never be individualized at the expense of the business as a whole.

Anything that will help to build up and maintain a lasting spirit of co-operation between employer and employee must be regarded as necessary to the success of any business, and a business cannot be a complete success unless employer and employee work for each other's interests. The maximum success may be derived from any co-operative plan by intelligently choosing between the things we would like to do and the things most practical for that individual business.

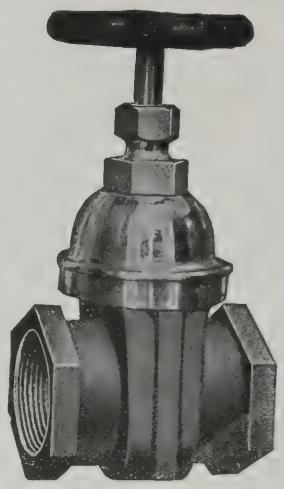
Men have told me that they had used their utmost efforts to get their employees to co-operate with them. But did they use the same effort to co-operate with their employees? Was it co-operation they were really after? Was it their earnest desire to pool their assets with those of their employees in a common investment for the purpose of making the business a success for all? And were they willing to share the profits of that business with their employees in proportion to the investment of each, be that investment either money or labor? If not, then why call it co-operation at all, when their only purpose was to increase their own earnings? Give your employees credit for being able to distinguish between selfish and unselfish plans which you would have them adopt. If you are practising selfishness yourself, you are teaching it to your employees. You are training them to work against you and your interests as well as their own.

ALCOHOL

Plant of Canadian Industrial Alcohol Company Limited, Corbyville, Ont.

With a capacity of 450,000 (proof) gallons per month we are the largest producers of Alcohol in Canada.

Manufacturers of vinegar, perfumes, essences, pharmaceutical preparations, etc., are invited to write us for prices of Alcohol suitable for their particular line of business.



We make a special feature of contracting for the requirements of manufacturers for the year or season, thus providing not only a uniform cost but also a steady supply as needed.

Those who are using Duty Paid Alcohol in their manufacturing processes would do well to consult us with a view to using it "In Bond," thus avoiding the use of two-year-old Alcohol. Under the rules and regulations of the Department of Inland Revenue, newly made Alcohol may be used "In Bond." This Alcohol is much cheaper than two-year-old.

METHYLATED SPIRITS or Denatured Alcohol is sold only by the Department of Inland Revenue, Ottawa, Ont., but any other kind of Alcohol may be secured from us.

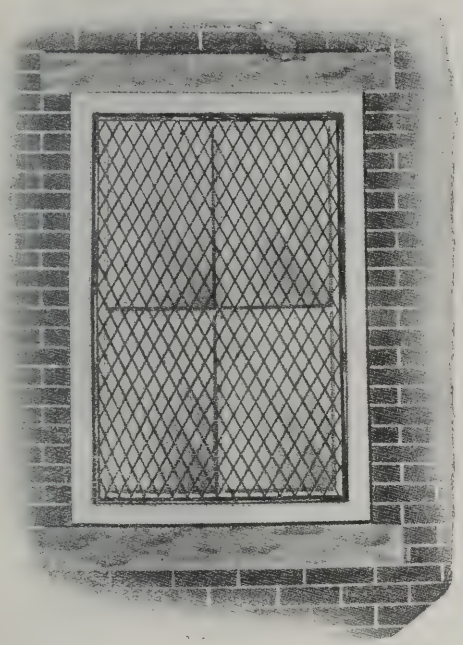
AERIAL FORESTRY COMES TO STAY

Flights made this summer in the St. Maurice Valley demonstrate efficiency of the seaplane in determining location of forest fires and providing prompt means for extinguishing them. The moral effect of having a plane suddenly appearing over a fire just started will be of value as a deterrent.



(From the Laurentide "Digester.")

The aerial service inaugurated by the St. Maurice Forest Protective Association in co-operation with the Department of Lands and Forests of Quebec and the Dominion Department of Naval Affairs has now been carried far enough to give some indication of its probable value. Owing to difficulties in making an agreement between the Government and the Association, it was the middle of June before the seaplanes were released at Halifax, and by the time they were overhauled and ready to fly, July was at hand. The two successful flights made by Lt. Graham from Halifax, demonstrated their value for long distance work and reliability. Immediately on arrival at the base on Lac a la Tortue, near Grand-Mere, flying commenced and trips were made to all parts of the St. Maurice Valley. Some fires were seen and their location and size accurately determined by flying over them. It was found feasible to transport a Johnson fire pump and hose to any crew needing it. A fire anywhere in the 16,000 square miles could be reported inside of two hours, and in another two hours a pump could be on the lake nearest the fire. The moral effect of having a plane suddenly appear over a fire just started and the possibility of detecting the person who set it will certainly be of value as a deterrent.

For transporting persons who have business at different points in the woods the planes are invaluable. The Manager of the Association could be taken within two hours, or two and a half at the most, to any part of his district. The Superintendent of Logging Operations could go to any part of his operations, have time for inspection and return the same day. Men who were injured in camp or taken ill could be brought out, in the utmost comfort, and taken to a hospital. Unfortunately the men who can benefit by the use of the planes have not taken advantage of them, although it is hoped they will do so before the season is over.

For exploration work they are invaluable. Five hundred square miles were covered and notes made of the location of burns, lakes, timber, etc., and some photos taken in two hours, and the writer came back with a far better idea of the country than if he had travelled over it for two months. Types of timber are easily distinguished. Areas of burns can be located; one can tell whether the burns are beginning to restock or not. Anyone wanting to buy a piece of timber land could tell in an afternoon's flying whether it would be worth purchase or not. The manager or any other official of a timber holding concern could, in a few days' flying, learn more about the location and value of his timber than he could get in volumes of reports.

In flying over forested land the different kinds of trees are quite distinct, especially as the leaves turn. Lakes are very dark in color, almost black, and shoals and rocks can be plainly seen. Sandbars under water in the rivers are yellowish and plainly visible. There is not much sensation of speed unless you watch some point directly below you or which you are approaching. All the details of the terrain are plainly visible. Burnt areas show plainly, pure stands of spruce and balsam show up so that the individual trees can be counted.

EFFECT OF PAMPERING WORKMEN

Dealing editorially with the National Industrial Conference, the Farmers' Advocates points out that prices are high because raw materials are scarce and raw materials are scarce because conditions have been made more agreeable for workmen in the factories than on the farms. This is an interesting commentary from the agricultural standpoint.

(From the "Farmers' Advocate.")

We have no intention at this time of discussing all the features of the conference. It immediately arrived at a harmonious decision that labor legislation should be uniform throughout the different provinces. Then immediately there were differences of opinion as to collective bargaining and hours of labor. The labor delegation stood out strongly for an eight-hour day and a 44-hour week. At this point, Hon. Chas. Dunning, Minister of Agriculture for Saskatchewan, and a member of the third group, drew attention to the fact that an eight-hour day on the farm was impossible. In fact any set hours of work on a farm are impossible. If a legal eight hour day was set it would vitally affect agriculture in an adverse way was the substance of Mr. Dunning's statement to the conference.

It is about time that those who may be included in organized labor and those who may be included in organized capital and industry came to a realization that to-day's problems cannot be settled by them getting their feet together under a table. The majority of people in Canada come entirely outside of both these classes combined. It might come within the possible that these two classes could settle their differences as to hours of work per day, working conditions, wages or share of profits, and have legislation passed that would include all this. What is more, the two parties might live up to these conditions and yet it might prove a national calamity, for outside these two classes comes agriculture, the first industry of the nation, which popularly is not even considered an industry, and there are a hundred other professions and industries also not considered that, with agriculture, make up the greater part of Canada's population. Our so-called industries and our organized workers are in some ways taking themselves too seriously. Food prices and clothing prices are not alone high because of profiteering. They are high because there is a shortage of the raw commodities that make up our foods and clothing, and there is a shortage because conditions have been made more agreeable for our workmen in the factory than it can be made on the farm. Not only has labor on farms left for the city, but farmers themselves have left to join the ranks of labor in the city. Even improved agricultural machinery that reduces labor is failing to keep up the needs of food. The fact that the prices of raw food and raw materials for clothing have gone up has taken few men to our farms, because the cost of producing these materials has increased proportionately.

We wish to state merely that no permanent solution of the disputes between capital and labor can be arrived at without placing the matter before every class in the Dominion. The Parliament of Canada is the proper place to carry on a discussion of the matter rather than a conference of picked delegates. However, the present Parliament is largely made up of professional politicians. We hope that our next Parliament will be more truly representative of the people. We are satisfied at least that agriculture will be much better represented and that policies affecting industry will more nearly meet its needs.

QUEBEC CORNERED THIS MARKET

While that extremely useful mineral, asbestos, is widely distributed, the deposits as a rule have little value except in the province of Quebec. Here a fine variety is found and mining asbestos has become an important industry, the province being to-day the world's chief source of supply.

By W. F. Sutherland.
(From "Scientific American.")

At the present time the Province of Quebec is the world's chief source of asbestos, the production in other countries being comparatively small. Russia is the chief producer outside Canada, the asbestos being mined in the Ural district. Before the present trouble in Russia most of the Russian asbestos was either used locally or exported to Germany, a little reaching the United States.

Geographically asbestos is a widely distributed mineral, although many of the deposits are of little value commercially. The United States has many deposits, Newfoundland has large deposits of good quality and Italy was formerly a large producer. China, Siberia, Australia, New Zealand and South Africa have also deposits which may be of use in the future. The South African fibre is of very good quality and the mines are being rapidly developed.

Two varieties of asbestos are met, amphibole and chrysotile. The amphibole or hornblende asbestos is much inferior to the chrysotile, having none of the fineness of fibre, the tensile strength, the elasticity nor the flexibility of the chrysotile. It also differs in chemical composition from the chrysotile in having lime associated with its magnesia, while the chrysotile is a hydrated silicate of magnesia. The Canadian deposits of asbestos are of the variety known as chrysotile and it occurs only in a serpentine rock to which it is essentially similar in chemical composition. Serpentine in itself is very similar to peridote, a rock in which it is usually found, differing only in being hydrated.

Open-pit mining or glory-hole work is used throughout the Quebec district, the mines running sometimes to a depth of 300 feet. Underground work is carried on at some of the mines during the winter months, and searchlights have been employed to render night working possible. Some of the mines separate the barren rock from the asbestos-bearing portion in the pit, and each is loaded into separate boxes. In most, however, the hand separation commences after the rock reaches the surface by means of the aerial cableways, or by other means.

After the hand separation the barren rock goes to the rock pile and the rock which will afford crude asbestos is taken to the cobbing sheds where it is separated by hand and the asbestos bagged. The remainder, usually 35 per cent. to 70 per cent. of all rock handled and which contains asbestos requiring mechanical separation, goes to ore bins or in some cases directly to the mill for concentration. For the first fifteen years after the opening up of the asbestos mines, cobbing was the only means of recovering asbestos, but in 1893 the process of mechanical concentration now used, with but slight modifications, was devised.

Practically all the mills use the same system for the separation of the asbestos, and considerable ingenuity is displayed in its carrying out. The milling practice consists essentially of coarse crushing, drying and alternate fibre crushing and screening. At each screening the asbestos then liberated is drawn off through overhead pipes by suction bands and collected in settling tanks. When thoroughly screened from dust and classified according to length of fibre by rotary screens the different grades pass to their respective storage bins or are bagged for the market.

GOING BACK ON THE STOP-WATCH

An industrial expert, who has always advocated the use of the stop-watch in studying operations, changes his opinion and declares that good results can be secured from industrial management without employing a stop-watch at all; the greater part of the inefficiency being attributable to the shortcomings of management.

By C. E. Knoeppel.

(Reproduced from "Scientific American.")

In writings and addresses in the past, I have advocated the use of the stop-watch. I have used it in my professional work. I have instructed others in its use, and have had others use it for me. Some four years ago, however, I began to see evidences of its unpopularity in industry, and began to study the entire situation with the view to getting along without it. Since that time the organization of which I am head has made no use of the stop-watch in its regular work of eliminating industrial inefficiency. We see no use for it in the future, in so far as we are concerned, for excellent results have been and can be secured without its use.

The inefficiency almost universally met with in industry, which is the one factor responsible for the high prices we are now fighting, is not all due to the inefficiency of the worker by any means. As a matter of fact the *greatest part of the inefficiency found is due to the shortcomings of management.* Unless a plant is properly organized; unless there are reliable records on which to base conclusions; unless production is properly controlled; unless working conditions and facilities are what they should be, workmen cannot work efficiently, whether they want to or not.

Idleness in equipment; waste in floor space; inadequate manufacturing facilities; too much material tied up in stock; over-equipment; break-downs and repairs in equipment during working hours; failure to provide work or material or tools on time; these are certainly factors not within the control of the workers in a plant. This does not mean that there is no inefficiency on the part of the workers, but it does mean that the greatest inefficiency is that of management and that you cannot get a high degree of labor efficiency with a low management efficiency.

Our experience proves further that through efficient organization, proper records, control of production and improved facilities, manufacturing efficiency can be materially increased, and in accomplishing these things we have found that no stop-watch is at all necessary.

This brings us up to the matter of the worker's part in industry. There are seven essentials necessary in industry:

(1) Supplying the funds; (2) providing the plant; (3) furnishing equipment; (4) providing an organization; (5) placing orders for work; (6) supplying material; (7) doing the work. In the first of these capital is concerned; the next five fall within the province of the management; labor is concerned with only one of them—doing the work. In this the element of time enters, and the thought behind the use of the stop-watch has been to study this use of time by labor.

It is of course true that labor has felt that the less hours it worked the *more* work there will be for *more* people. In some cases labor has even gone so far as explicitly to take the attitude that it ought to reduce the amount produced per hour in order to "make jobs' for more men. So in our experience we have been observing a three-fold tendency:

(*a*) Less hours work per man; (*b*) less production per hour per man; (*c*) greater wages per hour per man; which is the basis of the vicious cycle of increasing prices.

Every Member of Our Organization is an Active Worker, co-operating to produce Results

GIVING EMPLOYEES INFORMATION

Under the plan of employee representation through works councils in the International Harvester Company's plants, the men are shown figures which it had been the custom of the company to keep secret. Thousands of men, when given this information, have been able to use it intelligently and act wisely upon it.

By Cyrus McCormick, Jr.
(From the "Manufacturers' News.")

Those men who object to employee representation argue that employees are more interested in high wages; that they will elect undesirable or incapable representatives; that they will break down the discipline of the shop, and that it is merely an invitation looking toward the ultimate establishing of a closed shop. In reply to those objections, I believe that while it may be argued that the point of view I have followed is a matter of opinion, no one has suggested a more constructive arrangement for settling the differences between employers and employees. Secondly, our experience indicates that as often as not the men ask for shorter hours rather than higher wages. They are interested in living happily, and they feel that employee representation is giving them a better chance of livelihood.

To others who claim that a group of American employees will not elect men capable of upholding the confidence reposed in them, I quote figures to indicate the stable characteristics of men chosen by the employees of the International Harvester Company as their representatives. The average of these representatives throughout our company is about 37 years. Three-fourths of them are married. Their average employment with the company is over seven years, and a large number own their own homes or stock in the company. They are required by the plan to be American citizens, but that has not prevented the election of a large number of good Americans born in foreign countries, some of whom have proven themselves in common council far above the average ability. I do not pretend to say that we do not have any radicals among the number, but their presence has only served to make the discussion keener and to prove to us that our plan was really democratic in basis. The men, of their own free will, have chosen responsible representatives whose opinions are valuable for what they are.

The workings of the plan have called upon the representatives of the men and management alike to put forward their keenest intelligence. In the beginning it was quite natural that the first demands were all for large increases in wages. The plan passed successfully a very severe test when it had to be explained to the men, through their representatives, that the financial condition of the company and of the business were not such as to justify a flat increase of wages. Later, when the cost of living rose again, as it did last summer, the question was again brought up, and this time the management representatives accepted the point of view of the employee representatives just as sincerely and fairly as in the beginning the latter had accepted the view of the former. The International Harvester Company, since the inception of its plan of employee representation, has never held back any information from the men. Business policies have been discussed and figures shown which it was our former custom to keep secret. We share their pride in the fact that thousands of men, when given this information, have been able to judge it intelligently and act accordingly.

The company has also been able to discover many inequalities in the wage scale which it did not dream existed.

Buyers' Guide to Canadian Manufactures

List of Articles which will Enable the Purchaser to Know the Manufacturers of Made-in-Canada Goods. For Rates of Insertion in this Department write to the Advertising Manager of INDUSTRIAL CANADA, C.M.A., Toronto, Ont.

ABATTOIR MACHINERY AND SUPPLIES
*The John Whitfield Company, Toronto, Ont.
ABRASIVES
*Coralox, Limited, Hamilton, Ont.
*Canadian Hart Wheels, Limited, Hamilton, Ont.
*Dominion Abrasive Wheel Co., New Toronto, Ont.
ACCOUNT BOOKS
*The Brown Bros., Ltd., Toronto.
ACCUMULATORS, hydraulic
*The Hydraulic Machinery Co., Limited, Montreal.
ACETYLENE GAS
*The Prest-O-Lite Company of Canada, Ltd., Toronto, Ont.
ACETYLENE GAS BURNERS
Economic Acetylene Burner Co., Toronto, Ont.
*The Prest-O-Lite Company of Canada, Ltd., Toronto, Ont.
ACID PROOF COATINGS
*Beveridge Paper Co., Ltd., Montreal and St. John, N.B., Supply Department.
ACIDS

Will Not Rebuild

Canada Furniture Manufacturers Do Not Intend to Restore Burned Factory at Wiarton

It is not the intention of the Canada Furniture Manufacturers, Limited, to rebuild the chair factory at Wiarton, Ont., which was destroyed by fire on the night of October 1, with an approximate loss of $75,000. Taking into consideration the labor situation at the present time and the high cost of building, the management do not regard it as a wise thing to do to restore the industry. Instead, many of the lines which were formerly made at Wiarton will be manufactured in the Woodstock plant. Facilities at the latter plant are such as to make it possible for the company to turn out a much larger output, if only the labor can be procured, and no effort will be spared to procure this labor.

Belgian Sample Fair

Belgians Anxious to See Closer Trade Relations Between their Country and Canada

A letter has been received by the Commercial Intelligence Branch, Department of Trade and Commerce, Ottawa, from the Agent-General of the Province of Quebec in Brussels, Belgium, announcing that the Brussels Sample Fair will be held from April 4 to 21, 1920. He adds: "Belgians expect the Canadian manufacturers and exporters will attend this Fair with their samples. They are anxious to see closer trade relations between the two countries. Entries can be made up to January 15. Here are the prices of the stands; covered stands 4 x 3 yards, frs. 600; open stands, frs. 25 per square yard. Each firm will have to pay a fee of frs. 5 for its registration in the official catalogue."

CANADA'S INDUSTRIAL EXPANSION

Continued from page 72

Will Make Steel Tires

Company Formed in Montreal to Engage in Important Industry in Field of Railway Equipment

In anticipation of an increasing demand by Canadian railway corporations for steel tires for locomotive and passenger equipment, a company known as the Canadian Steel Tire & Wheel Co. has been formed, with a view to establishing a plant for their manufacture in this country. The company have acquired a plant on Marien Avenue, Montreal East, formerly used in the manufacture of munitions, and are rearranging it to suit their requirements. They expect to have the machinery installed and to be ready to start operations about the middle of January and at first will employ from fifty to sixty hands.

Mr. F. J. Buller

Vice-president and Manager of the newly-formed Canadian Steel Tire and Wheel Company, Limited

It is understood that American capital is behind this enterprise, though the management is in Canadian hands. The vice-president and managing director is Mr. F. J. Buller, formerly treasurer of the Canadian National Railways at Toronto, who has resigned from the latter position to take up this new line of work. On the directorate is also Mr. K. W. Blackwell, of Montreal, director of the Canadian Car & Foundry Co. The superintendent is Mr. Stephen H. Williams, an experienced producer.

Mr. Buller is a well-known figure in Canadian railway circles. He has been in the service of the Canadian Northern and Canadian National Railways for nearly twenty years and through this connection has acquired an intimate knowledge of railway management, especially in the financial end, which will prove of value to him in his new position.

Tire Factory Increases Capacity

Additions to Goodyear Plant at New Toronto Will Jump Tire Capacity from 2,500 to 3,500 per Day

Three extensions and two smaller buildings are at present in course of erection at the New Toronto plant of the Goodyear Tire & Rubber Co. of Canada, Limited. The present main building is 100 feet wide by 460 feet long, four storeys and basement. One of the extensions makes a 100-foot addition to the main building. The other two extensions, measuring 100 x 120 feet, four storeys and basement, are connected to and run south of the main building. There is also under construction a building 80 x 50 feet to be used for the manufacture of chemicals and another 50 x 75 feet. These various additions, which should be ready for use by the end of the year, will give an increased capacity of 1,000 pneumatic automobile tires per day, bringing the output up to 3,500 tires. In addition to automobile tires the plant is thoroughly equipped for the production of motorcycle and bicycle tires, automobile, motorcycle and bicycle accessories. At present the factory is operating to full capacity on a 24-hour day. The company have not been able to fill all their tire orders for a period of about two years.

New Box Factory

Peterboro Industry Acquires Land from City on which to Make Needed Plant Extension

The City of Peterboro is selling the Alfred McDonald Lumber Co., Limited, a piece of land adjoining their present plant, on which they will erect a box factory and storage shed, the main building being 50 x 50 feet. The company have been in the box-making business for some years, but find their present quarters too cramped. The building at present used as box-factory also houses planing mill, sash and door factory. By removing the box-factory, space will be available for the development of other departments.

Cotton Mill Extension

Milltown Plant of Canadian Cottons, Limited, Being Enlarged at a Cost of $750,000

To take care of their steadily increasing business in fine dress ginghams, Canadian Cottons, Limited, are erecting a large weave shed in connection with their mill at Milltown, N.B. The new building will be approximately 410 feet long by 186 feet wide, consisting of a basement and one floor. All the foundation walls are of concrete and the columns, beams and girders throughout are of B. C. fir. The flooring is also of B. C. fir with hardwood top. When completed, which will hardly be before the first of next September, it will be one

of the finest plants of its kind in America, costing about $750,000.

Referring to the new addition, Mr. A. O. Dawson, vice-president and managing director of Canadian Cottons, Limited, says,—"The only thing that is at all worrying me is as to whether we will be able to get the necessary help to run the plant when it is ready. We are hopeful, however, that we will be able to secure the necessary help, as we can draw from the American side of the River, as well as from the Canadian. In fact, nearly half our employees at that mill are American citizens, having their homes in Calais, Maine, and coming c[illegible] to Milltown each day to earn their living."

New Whitewear Industry

Two Owen Sound Men Arrange to Start Manufacturing Industry in their Home Town

As reported by the Owen Sound *Sun-Times*, Messrs. Robert McKnight and J. J. Kelley are arranging to open a factory for the manufacture of whitewear in that town. They have leased a flat known as Lemon's Hall and expect to start manufacturing in November with about 20 girl operators. Mr. McKnight is a returned officer, who was formerly engaged in the whitewear industry in Montreal. Mr. Kelley until recently was a member of the dry goods firm of Brookes & Kelley. Local capital is interested.

New Electric Conduit Plant

Canadian Allis-Chambers, Limited, Are Erecting a New Building at Their Toronto Works

A plant for the purpose of electro galvanizing and enameling electric conduit is at present being erected by Canadian Allis-Chalmers, Limited, in connection with their Toronto works, and will be ready for occupation about the first of February next. This new department will, when in operation, employ about forty men and will have a capcity of about 12,000,000 feet per annum of the highest quality conduit, in sizes from ½ in. to 4 in. in diameter. The building will be 650 ft. x 150 ft., one story high, of fireproof construction, and will contain the most up-to-date equipment used in the process of zinc plating. Steel trusses span the entire width, with 20 ft. of head room above floors, and electric mono-rail cranes will operate over the pickling and plating tanks. There will be three complete dynamos, each of 5,000 amperes capacity, while in addition to the equipment used in the process of zinc plating the plant will be equipped with baking furnaces and other appliances required in the process of black enameling conduit.

New Paper Products

Howard Smith Paper Mills, Limited, Will Develop a Number of New Lines at Cornwall

In connection with the recently announced purchase of the Toronto Paper Company's Mill at Cornwall by the Howard Smith Paper Mills, Limited, an interesting announcement is made by Mr. C. Howard Smith, president of the latter company. Mr. Smith states that the plant at Cornwall is well adapted to make certain grades of paper that have not hitherto been manufactured in Canada.

"The programme that we have laid out," says Mr. Smith, "is to put this plant in first-class shape to develop lines of business that are not made in Canada to any extent. I might mention blotting paper, which is almost altogether imported from the United States; bristol and index boards, of which there are very small quantities made in Canada, and high-grade cover papers. Doubtless there will be other lines that we will make when the market opens up for them. As you

MADE IN BR·EN·CO CANADA

are doubtless aware, the imports of paper into Canada for the last fiscal year amounted to something over $8.000,000. Believing, as I do, in the necessity of Canada making every possible article it can for its own use and exporting the surplus, in this item of $8,000,000, there is a great opportunity for our plant."

The plant taken over is situated on the Cornwall Canal, and has good water power and an excellent quality of water. The mill is well and substantially built of brick and covers an extensive area of ground. It has railway facilities with the G.T.R., C.P.R., and O. & N.Y., as well as boat transportation to Montreal and Toronto. In this respect it occupies a unique position in Canada. The plant is well organized, having good men at the head of the different departments, Mr. W. J. Wallace, Treasurer of the Company, being one of the prominent figures in the Canadian paper industry. Besides the paper mill, which contains four machines, there is a sulphite plant, with a capacity of about 20 tons of bleached sulphite a day.

With the acquisition of this mill at Cornwall, Howard Smith Paper Mills, Limited, will have three divisions, which will enable them to carry out their policy of specialization to still better advantage. It will be their policy to make as few grades of paper as possible in each mill, which will result in the production of better paper on a more economic basis.

Will Make Small Motors

Branch Plant of Robbins & Myers Co., Springfield, Ohio, Being Erected in Brantford

One of the latest United States companies to decide upon manufacturing its product in Canada is the Robbins & Myers Co. of Springfield, Ohio, makers of small motors, who have selected Brantford as the home of their Canadian enterprise. A factory building, 150 x 380 feet, is being erected in the Holmedale Section, and this will be equipped with the latest type of machinery. Mr. Roy Booth, the manager, states that they expect to start production on January 1, employing approximately 500 people at the outset. The plant will have a capacity of 125,000 motors per year work and represents an aggregate investment of $500,000. Asked as to the connection between the Canadian industry and the parent concern, Mr. Booth stated that the arrangements had not yet been shaped up in concrete form.

Cut-to-Fit Houses

New British Columbia Plant Expected to Start Operations by End of January

A deal has recently been completed whereby The Cut-to-Fit Building Company, Ltd., with head office in Vancouver, have acquired 60 acres of land on the north arm of the Fraser River, on which there is now being erected a factory and mill for the manufacture of cut-to-fit houses. It is expected that by the end of January, 1920, the new plant will be in a position to handle 125,000 feet, equivalent to 5 houses per day.

Recently, through efforts put forth in the interests of British Columbia in London, the cut-to-fit house is gaining favor. The enormous demand for house accommodation in the United Kingdom, and the increase in the price of labor, has made it imperative that some cheaper means of housing the great populace be found. For months the Government of Great Britain refused to even consider the cut-to-fit house idea, but recently advice has been received from the British Columbia Agent-General in London, that the British Government is now ready to give mill-cut houses a trial.

The new plant of the Cut-to-Fit Building Company, Ltd., will be modern in all respects. All lumber will be brought

from the saw-mills in dimension form, and cut and dressed to size. The new mill will have excellent shipping facilities, both by boat and rail, and present indications point to a large export business, in addition to the present steady demand from the North-West for houses, farm buildings, garages, etc., which this company will be in a position to manufacture.

New Packing Plant

Davis & Jones Launch Out in a Modest Way in City of Moncton, N.B.

A new packing plant for the Maritime Provinces is being established by the firm of Davis & Jones in Moncton, N.B. A two-story wooden factory building is being erected and it is hoped to start operations this month. For the present the firm will not do any slaughtering but will buy dressed hogs from the surrounding country. They will put on the market pork products of all kinds, as well as bologna, and at the outset will not employ more than five or six hands, as they plan to go very carefully until well established.

More Automobile Bodies

Capacity of Walkerville Plant of Fisher Body Co. of Canada Considerably Enlarged

Certain additions are at present being made to the plant at Walkerville, Ont., of the Fisher Body Co. of Canada, Limited, which will greatly increase its capacity. The company estimate that, when the additions are completed, the factory will have a capacity of approximately 300 open and 25 closed automobile bodies per day. It was recently reported that the company proposed to build a new five-story factory in Windsor, but Mr. V. A. Clemen, the manager, states that action on the building of this plant has been deferred until spring.

Coke Plant Operating

Granby Consolidated Mining, Smelting & Power Co. Start Work at New Anyox Plant

In July the Granby Consolidated Mining, Smelting & Power Co. began to produce coke and by-products in their coke ovens at Anyox, British Columbia. The big plant, which is the only one of its kind on the Pacific coast, has been two years in preparation and is now in full operation. Coal for the 32 ovens is supplied from the Granby's properties at Cassidy, Vancouver Island, from which steady shipments have been made to the northern smelter town for several weeks past. The coke produced is said to be of excellent quality, and continued operation is expected. The by-products of the coke plant include, toluol, benzol, sulphate of ammonia, and coal tar, for all of which there is a consuming market. The coal tar will be shipped to Vancouver to be fractioned into pitch and creosote, and will provide British Columbia points with a dependable product.

Stratford Factory Extending

Sixty Thousand Feet More of Floor Space Being Added to the Plant of Kindel Bed Co.

An "L" extension, 185 x 75 feet, three storeys and basement, is being added to the main building of the Kindel Bed Co., Stratford, giving that company about 60,000 feet more floor space. The work was started last summer, but is progressing more slowly than expected and will not be finished until February. A shipping shed for convenience in loading and unloading will also be added to the plant. The Kindel Bed Co. moved to Stratford from Toronto in 1916, and the business since that time has been growing fast.

Will Give More Employment

Enlargement of Brantford Plant Will Require Hiring of Hundred Additional Hands

Two additions to the plant at Brantford of the Slingsby Manufacturing Co., Limited, manufacturers of bed and horse blankets, mackinaws, kerseys, linings, sheetings and yarns, are at present under construction at an approximate cost of $200,000. The main mill is being enlarged by the erection of an extension, 140 x 100 feet, four storeys high. This building will be utilized for manufacturing and the company are installing additional cards, mules and looms. The second erection consists of a dyehouse, 80 x 84 feet, three storeys high, which is being equipped with the most up-to-date dyeing machinery. The additions will require the employment of a hundred new hands.

Larger Output for 1920

Re-organized Industry in Stratford Will Make Improvements to Increase Capacity

While no definite announcement will be made for a while yet, the McLagan Furniture Co., Limited, Stratford, under new management, will undoubtedly be extended to provide for a larger output in 1920. The company has recently been reorganized, the McLagan Estate having disposed of its interests in the George McLagan Furniture Co., Limited, and the Stratford Chair Co., Limited, to Toronto and Montreal financiers. It is now known as the McLagan Furniture Co., Limited, and controls not only the two Stratford industries, but the Meaford Manufacturing Co. as well. D. M. Wright is president and managing director; W. K. Trower, Montreal, vice-president; H. S. Robertson, secretary-treasurer, and R. S. Robertson and L. M. Green, Toronto, directors. Both Stratford plants are at present operating to the fullest capacity, the production of phonographs being steadily on the increase. The McLagan plant is one of the largest and best equipped plants of its kind in Canada. The Stratford Chair Co.'s plant is a four-story concrete building, containing 60,000 sq. feet of floor space.

More Storage Room

Addition to Plant of Dominion Sheet Metal Corporation Gives Much Needed Room

At their works in Hamilton, the Dominion Sheet Metal Corporation, Limited, have nearly completed a brick and stone addition, 50 x 140 feet and two storeys high. The ground floor will be used entirely as warehouse space to enable the company to carry a much larger stock of Premier galvanized sheets, while the second floor will be used for light storage and other purposes. Everything is prepared to add at some future appropriate time two additional storeys, the steel work being especially heavy on that account. The building is being equipped with elevator and mono-rail electric hoist of three ton capacity.

New Industry for N.B.

Manufacture of Hardwood Last Blocks to be Commenced on Large Scale by English Interests

A new and promising industry, that of the manufacture of hardwood last blocks, will soon be added to the industrial enterprises of New Brunswick. Mr. H. Mobbs of Kettering, England, has decided to locate a plant for this purpose at Mullin's Brook, near McGivney Junction, on the line of the

Canadian National Railways. A mill, formerly in operation at Napadoggan, is being moved to Mullin's Brook and when erected will give employment to from one to two hundred men. An arrangement has been entered into with the Nashwaack Pulp & Paper Company, for the necessary supply of hardwood and it is expected that from three to four million feet of maple timber from the old Gibson limits will be manufactured yearly into last blocks. Mr. R. T. Baird is slated as manager of the new enterprise.

A Wire Rope Plant

Company Formed in British Columbia to Establish Industry on Granville Island, Vancouver

The Britannia Wire Rope Co., Ltd., with an authorized capital of $100,000, propose to establish a factory on Granville Island, Vancouver, for the manufacture of wire rope. Up to the present the large demand for wire rope in British Columbia has been supplied principally by rope imported from England and the United States. Exact information as to the requirements of logging and other industries in British Columbia depending on regular supplies so impressed a large British corporation which controls its own resources of raw materials, that the Britannia Wire Rope Company has been formed. The proposed site for this plant is eminently suitable for such an industry, having access both to rail and deep-water, which will greatly facilitate the handling of the output.

A New B.C. Industry

Manufacture of Soil Pipe to be Commenced in Former Plant of Robertson, Godson Co.

Colonel J. S. Tait, late Commander of the 29th (Vancouver) Battalion, is reported to have purchased the plant of the Vancouver Pipe & Foundry Co., Ltd. This plant was formerly operated by the Robertson Godson Co., but has not been working for the past six years. The foundry is now being equipped with all the necessary machinery and moulds to operate a ten-ton capacity cupola. Cast iron pipes and fittings as well as castings will be made in the new foundry. The manufacture of cast iron soil pipe is a new industry in British Columbia, there being no other similar industry in that province.

Doubling its Capacity

Dominion Forge and Stamping Co., Limited, are Making Important Plant Extension

The Dominion Forge & Stamping Co., Limited, Walkerville, are at present doubling the capacity of their board hammer shop and are installing a new 8,000-lb. steam hammer and a new 5-inch forging machine. The recent sale to the Ford Motor Co. of Canada of their frame and fender plants does not in any way affect the forge plant. The only difference will be that the company will devote their entire attention to the forging business and be in a better position to give efficient service.

Branch Plant for Peterboro

Nashua Gummed & Coated Paper Co. Preparing to Locate Canadian Plant in Peterboro

The Nashua Gummed & Coated Paper Company of Nashua, N.H., a well-known American firm of paper converters, have plans well advanced for the establishment of a branch factory at Peterborough, Ontario. This enterprise will occupy the plant recently owned by Stickney Motors, Limited, which has been purchased by the City of Peterborough and leased to the Nashua Company. The buildings are single storey brick

The Steel in

FAMOUS FIVE FILES

is made according to an exclusive formula.

They are accurately ground and cut for the special kind of work they are intended for, consequently they stay sharp and give good service.

That means better work and contented workmen, because there is no waste of time or energy.

When a Famous Five File becomes dull it may be thrown away knowing that it has given maximum service.

Specify them when ordering.

They are:

mill construction, and have seventy thousand square feet of floor space. About thirty people will be employed initially. It is expected that operations will start during the coming January. The plant will be thoroughly equipped for the production of non-curling sheet gummed papers, cloth-lined papers, box stay, sealing tape, gummed cloth, and plain and printed waxed papers of all grades.

Confectionery Plant Extended

Bean & Westlake, Limited, Have Been Very Much Crowded for Room of Late

Owing to the pressure of expanding business, Bean & Westlake, Limited, are adding an extension, 21 x 70 feet, three storeys high, to their plant in Woodstock. It will not be completed until after the first of the year, but is being used to a certain extent. The new addition will increase floor space by about one-fourth and output by one-third, but will only give temporary relief. It is the intention of the company to erect another building in the near future.

Quebec Brewery Enlargement

La Brasserie Champlain, Limitee, Plan Extensions Increasing Their Capacity Largely

A programme of extension has been inaugurated by La Brasserie Champlain, Limitée, Que., which will increase capacity from 125 to 375 barrels per brew. At present a new cold storage building 172 x 46 feet, 4 storeys high, and with capacity of 60 vats of 5,000 gallons each, is under erection and will be completed by March 1. Next year a new bottling department, new power house and second brew house with capacity of 250 barrels per brew will be erected. The Company are manufacturing India Pale Ale, Pale Ale, Biere Blonde, Tip Top Beer, Biere Temperance and Porter.

Will Make Wire Cloth

Niagara Falls, Ont., the Site of a New Industry in Which American Capital is Interested

A plant is at present under construction at Niagara Falls, Ont., for the Niagara Wire Weaving Co., Limited, a new company in which Mr. Hamilton Lindsay, President of the Lindsay Wire Weaving Co., Cleveland, Ohio, is principally interested. The company are spending about $220,000 in plant and equipment, and will employ about 150 hands in the manufacture of wire cloth and wire-weaving machinery. The market for these products will be largely in Ontario and Quebec, they being used in pulp and paper mills and other industries.

Rubber Industry for Guelph

Northern Rubber Co., Limited, Expect to Get Going Early in the New Year

It is anticipated that the plant being erected in Guelph by the Northern Rubber Co., Limited, will be ready for operation early in 1920. It is a building, 80 x 200 feet, four storeys and basement, of reinforced concrete, and when equipped will have a capacity of 5,000 pairs of rubbers per day, and a payroll of about 500 hands. The company are capitalized at $500,000, half common and half preferred, and the present investment is about $250,000. F. E. Partridge, chief executive of the F. E. Partridge Rubber Co. is president; F. W. Kramer, formerly superintendent of the Dominion Rubber Co. factory at St. Jerome, is vice-president and superintendent, and A. F. Dwyer, formerly manager of the Maple Leaf Rubber Co., Port Dalhousie, is secretary-treasurer.

St. Thomas Developments

Several New Industries Getting Started, Particularly in Musical Instrument Line

A new company, known as St. Thomas Cabinets, Limited, and capitalized at $100,000, has recently been formed in St. Thomas for the purpose of undertaking the manufacture of gramaphone cabinets and panels. They will occupy about 23,000 square feet of floor space in the Lawson E. Jones plant, formerly known as the Thomas Bros. plant, and expect to be producing about January 1. B. F. Honsinger is president; Jos. Bone, vice-president and manager; J. B. Woodhouse, secretary-treasurer; H. Woodhouse, A. A. Ingram and P. A. Honsinger, directors.

Provincial Machine & Supply Co., which was formed earlier in the year for the manufacture of gramaphone motors, tone-arms, cranks and metal parts, are now ready for production.

Hitch Bros. of Canada, Limited, have organized with Mr. A. J. Hitch as president and general manager, to manufacture a patent wall-paper hanger which bids fair to revolutionize the trade. They are capitalized at $50,000 and expect to start manufacturing in December.

A New Chemical Industry

Plant at Kitchener, Ont., Will Refine Medicinal Salts Secured from a Lake in Saskatchewan

Operations will begin very shortly on a fairly large scale at the plant of the Salts & Potash Co. of Canada, Limited, Kitchener, Ont. This company, formed last April, was the outcome of an investigation of the potentialities of chemical materials found in Maskaki or Houghton Lake, Saskatchewan. This lake contains about eight square miles of a substance known as astraknit, which in its crude form has no commercial value. Several years ago a few Canadians conceived the idea of having the raw material of the Lake analyzed and experiments were conducted from time to time by chemists in the United States and Canada. After the expenditure of considerable money, the project was declared to be commercially feasible and a lease was secured from the Dominion Government.

An evaporating plant has been installed at the Lake, this being of a modern and up-to-date design. A spur line has been run in from the Prince Albert branch of the G.T.P. and the evaporated salts will be shipped to Kitchener, where a refining plant has been established. The company have purchased a building suitable for the purpose from the Canadian Pyrofugout Flooring Co., and have applied the refining process to the building. For the first six months they will handle from 100 to 150 tons of crude salt from the lake per week. The product to be manufactured consists of epsom salts, glauber salts, magnesia carbonate, potassium chloride, potassium nitrates, potassium sulphate and medicinal salts, and the company expect to commercialize their product to the Canadian trade in a very short time. They have absolute faith in the success of their enterprise because through experiments and research they have demonstrated that the product soon to be offered will be superior in quality to anything heretofore marketed in Canada.

The directors are, A. J. Gough, Sellers-Gough Fur Co., Limited, Toronto; Richard Gough of the same firm; John

Mr. Gough is president; Mr. Sloan, vice-president; Mr. Klotz, secretary-treasurer; Mr. James E. Day, Toronto, assistant secretary and solicitor; Mr. Weichel, managing director and Mr. C. Ide, production manager. Mr. C. W. Hancock, formerly connected with British Acetones, Limited, Toronto, is chemist.

The Dominion Glass Co., Limited, are at present carrying out their pre-war programme of doubling the capacity of their plant at Redcliff, Alta.

The Canadian Chicle Co., Limited, have sold their building in Peterborough to the Western Clock Co. and have taken over the property of the Lundy Shovel & Tool Co. One of the building is being remodelled to suit their purposes, and the balance, consisting of 20,000 ft. of floor space and an acre of land, will be sold or leased.

Eclipse Rubber Co., Limited, Montreal, have rented a building in Victoriaville, P.Q., and commenced the manufacture of waterproof clothing there, employing about 100 hands. Operations commenced about October 15, and so far results have proved satisfactory. If success continues the industry will be enlarged.

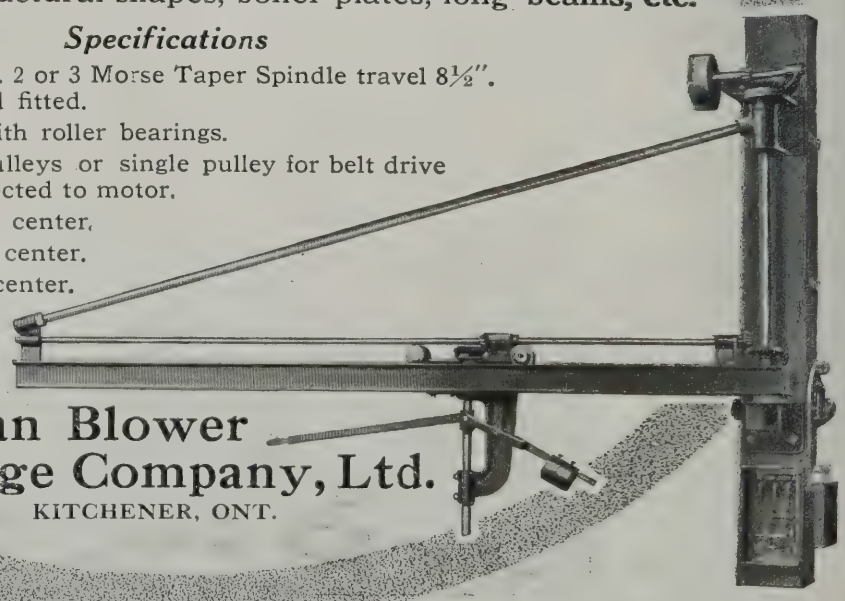
A new industry for Brantford is that of J. & J. Cash Inc: of Coventry, England, and South Norwalk, Conn., manufacturers of cotton labels, etc., who have secured space in the *Expositor* Building and will start operation about the beginning of the year with 25 hands. The business will be run in connection with the South Norwalk branch.

The General Phonograph Corporation, of New York, have bought out the plant of the Pollock Mfg. Co., Limited, Kitchener, and will continue the manufacture of phonograph motors, tonearms and reproducers.

About $300,000 is being expended by the Steel Company of Canada, Limited, on enlargements to their Montreal works. They are building crane runway, forge shop and new finishing and storage buildings in connection with their bolt and nut department, which will add materially to their capacity for production in these lines.

The Vancouver Sheet Metal Co. have recently moved into their new plant on Granville Island, Vancouver. This plant takes the place of that destroyed by fire some months ago in another part of Vancouver City, and the new factory is equipped with the latest machinery for turning out cornices, skylights, windows, kalanin doors, corrugated iron roofing, etc.

It has been found necessary to hold over until December a good deal of additional material about recent industrial developments. As already pointed out there is much activity at the present time and space is not available to refer to it all. The December number will contain supplementary information.



Built for Service

The Canadian Radial Drill is designed particularly for work in structural shops. For reaming and countersinking large surfaces such as structural shapes, boiler plates, long beams, etc.

Specifications

Spindle 2-3-16″ diameter No. 2 or 3 Morse Taper Spindle travel 8½″.
All gears accurately cut and fitted.
Carriage wheels equipped with roller bearings.
14″ x 14″ tight and loose pulleys or single pulley for belt drive to motor, or direct connected to motor.
15 ft. beam will drill to 13′ 6″ center.
12 ft. beam will drill to 10′ 6″ center.
7 ft. beam will drill to 5′ 6″ center.

Vancouver Island's Resources

As Disclosed by the Exhibits at the Home Products Fair Recently Held at Victoria

By T. J. GOODLAKE
Secretary, Victoria and Vancouver Island Section, C.M.A.

THE exhibits shown at the Home Products Fair, which was held recently in the Hudson's Bay Building, Victoria, B.C., on the initiative of the Victoria and Island Development Association, were a revelation of the progress which has been made in the industrial and agricultural development of Vancouver Island. And no very active imagination is needed to envisage by their aid the vast commercial future which is opening up for this unique and richly endowed corner of the Dominion.

As in the minds of many, to whom the Pacific Coast is still *terra incognita*, there is some vagueness as to the geography of that region, it should be explained that Vancouver Island forms part of the Province of British Columbia, and the City of Victoria, which occupies the extreme southern tip of the Island, is the Capital of the Province. The Island is 278 miles long by 60 miles broad, and has an area of some eight and a half million acres. It is separated from the provincial mainland by a series of narrow channels widening into the Gulf of Georgia, and from the State of Washington by the Straits of Juan de Fuca.

While it consists partly of rocky and forested mountains, at least one million acres can be classified as arable land. Its shores are washed by the Japanese current (the Gulf Stream of the Pacific), so that the mildness and equability of the climate are favorable to fruit-raising, and this is extensively carried on, especially in the neighborhood of Victoria. The strawberry crop has become particularly in demand in the Prairie Provinces and co-operative marketing has enabled large and regular shipments to be made at profitable prices.

The coal deposits of the Island are estimated at over one billion tons. They are worked by a number of long-established collieries, whose product is second only in steam-raising qualities to Welsh coal. Other mining possibilities of the Island, particularly in iron and copper, are practically unlimited and await only capital and enterprise for their development.

The surrounding waters abound with many sorts of fish, including salmon, halibut, cod, herring, oolichan, salmon-trout, bass and others. The total salmon pack of the Island canneries approximates 200,000 cases, the greater part of which is exported to European markets. A clam cannery has been established for many years at Sidney.

The whaling industry, carried on by the Consolidated Whaling Corporation, has its headquarters at Victoria, and two of its four stations are situated on the Island. Some hundreds of the largest whales are caught annually. The products include oil, fertilizer, bone meal, and canned whale meat.

The forests of Vancouver Island are capable of producing annually over one billion feet of merchantable timber, of which about a quarter is the present estimated cut. The

What's in a name?

Well, it depends on the name. In business a name—and the reputation a name stands for—means pretty nearly everything. For instance, the name

"Butterfield"

signifies absolutely reliable quality when it is found imprinted on shanks of

TAPS, DIES
TWIST DRILLS
Milling Cutters
REAMERS

and other Cutting Tools. It means flawless materials, perfect workmanship, and a rigid factory inspection that rejects everything below the highest standard.—Buy tools by NAME—and choose the name "BUTTERFIELD."

principal varieties are spruce, hemlock, Douglas fir, cedar and balsam. The chief markets are the Middle West of Canada, Europe, Australia, and South Africa.

Turning from the basic industries to the manufactures of finished product it was evident from an inspection of the Fair that successful concerns were already well established in many lines. These included notably paint, soap, mineral waters, biscuits, confectionery, condensed milk, pickles, preserves, coffee, extracts, vinegar, rice, oat and wheat products, macaroni, lace. There was also shown the output of a score of other industries in various stages of development.

A prominent stand was that of Yarrows, Ltd., of Esquimalt, whose exhibit included a model of a type of Indian shallow draft, stern-wheel steamers, of which several have been exported by the firm, and also a standard make of aeroplane which had been completely overhauled and rebuilt at the same plant.

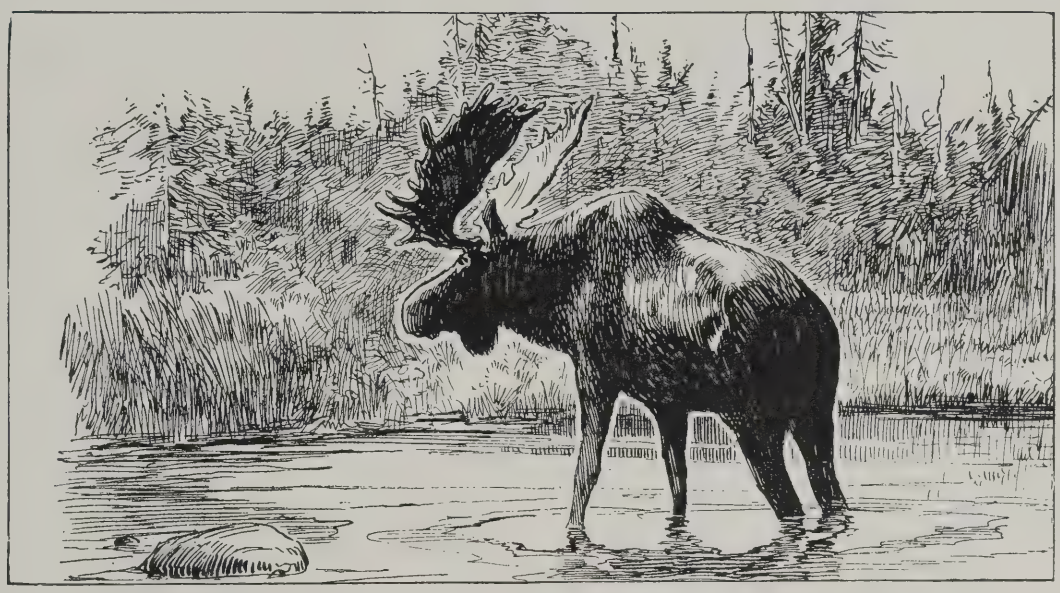
Much credit is due to the officials of the Victoria and Island Development Association for the admirable organization of the Fair, and especially to the manager, Mr. George I. Warren. His energy was instrumental in attracting the dense crowds that thronged the building during the whole of the week that the Fair was open. The exhibition was honored by a visit from H.R.H. the Prince of Wales, who made a detailed and interested inspection of the stands.

Places for Disabled Men

An Appeal Being Made to Manufacturers to do Their Best to Supply Jobs for These Men

Information & Service Branch, Department of Soldiers' Civil Re-Establishment, has created a Special Department for placing disabled and maimed soldiers in employment and has opened offices at all the leading centres of Canada to give special attention to cases of this category. The first office has been opened at 287 Queen Street West, Toronto, phone Adel. 6530, and employers are earnestly requested to co-operate with the officials of the Department, as the placing of permanently disabled men and amputation cases has become a serious problem and must be faced. There are positions which these men can fill in your factory, store or office with 100 per cent. efficiency, such as watchmen, caretakers, janitors, clerks, chauffeurs, elevator men, etc. The Department can place a fit man who can do a full day's work, but the pressing problem at present is the placing of the man who cannot do a full day's work alongside a fit man and who becomes discouraged and quits. There is a place for such a man, and employers are asked to look over their lists for vacancies and communicate with this Department when needing men.

It is a duty to the Empire and will prove to be a strong factor in keeping down any unrest if these maimed men are provided for. If manufacturers do their utmost along these lines, the large number of unemployed disabled men will soon be taken care of. It is estimated there are between 400 and 500 such men in Toronto alone.



Offices have been opened by the Department at 186 Windsor Street, Montreal; 287 Queen Street West, Toronto; 115 Royal Bank Building, London; 610 Notre Dame Investment Building, Winnipeg; Board of Trade Building, Vancouver; 349 Barrington Street, Halifax.

M. B. ROBINSON . . . . . Asst. Secretary

Statement of Principles by U.S. Employers

(Continued from page 60)

out, a sharp distinction should be drawn between the employment relations in the field (*a*) of the private industry, (*b*) of the public utility service, and (*c*) of Government employment, Federal, State, or Municipal. In all three there are common rights and obligations, but in so far as the right to strike or lockout is concerned, the nature of the Government service and public utility operations requires that they should be considered from a somewhat different point of view than private industry.

In private industry the strike or the lockout is to be deplored; but the right to strike or lockout should not be denied as an ultimate resort after all possible means of adjustment have been exhausted. Both employers and employees should recognize the seriousness of such action and should be held to a high responsibility for the same.

The statement that the right to strike or lockout should not be denied does not cover the matter of the sympathetic strike or lockout, where for mere purposes of coercion there is a combination deliberately inflicting injury upon parties against whom the assailants have no grievance, for the purpose of accomplishing an ulterior result. The sympathetic strike is indefensible, anti-social, and immoral. The same may be said of the blacklist, the boycott, and also of the sympathetic lockout.

In public utility service the public interest and welfare must be the paramount and controlling consideration. Modern social life demands the uninterrupted and unimpaired operation of such service, upon which individuals and communities are as dependent as is human life on the uninterrupted circulation of the blood. The state should, therefore, impose such regulations as will assure continuous operation, at the same time providing adequate means for the prompt hearing and adjustment of complaints and disputes.

In Government employment the orderly and continuous administration of Governmental activities is imperative. A strike of Government employees is an attempt to prevent the operation of Government until the demands of such employees are granted, and cannot be tolerated. No public servant can obey two masters; he cannot divide his allegiance between the Government which he serves and a private organization which, under any circumstances, might obligate him to suspend his duties, or agree to assist him morally or financially if he does. Social self-defence demands that no combination to prevent the operation of Government be permitted. The right of Government employees to be heard and to secure just redress should be amply safeguarded.

12. *Training.*—Practical plans should be inaugurated in industry and outside of it for the training and up grading of industrial workers, their proper placement in industry, the adoption and adaptation of apprenticeship systems, the extension of vocational education, and such other adjustments of our educational system to the needs of industry as will prepare the worker for more effective and profitable service to society and to himself.

The foregoing is limited to a statement of principles. Only casual reference has been made to methods by which such principles may be carried into effect. The problems are so serious and difficult that such methods must be worked out by the individual establishments in conjunction with their employees and by industry as a whole.

Why Not Ship "Canadian National"?

Lines of the C.N.R. extend from Atlantic to Pacific through All Canadian Territory. They serve practically all of the important points in each of the nine provinces. They reach direct the important seaports.

Recent Trade Enquiries

A List of Enquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

DOMESTIC TRADE ENQUIRIES.

171. Toronto.—A newly established Canadian firm of manufacturers' agents, with sales offices at Halifax, Montreal, Ottawa, Toronto, Winnipeg and Vancouver, wish to secure agencies for Canadian products. The members of this firm have considerable overseas service and some of them know the English market and export and import trade thoroughly. They are in an excellent position to place Canadian products in foreign countries.
172. Quebec.—A Canadian agent, who has been in the hardware business for the last fifteen years and has a good connection amongst all the hardware trade in Quebec, wishes to secure an agency for a line of electrical specialties in that Province.
173. Vancouver.—A reliable firm of selling and purchasing agents in Vancouver asks to be put in touch with Toronto manufacturers looking for representation in British Columbia.
174. Copra Crushing Machinery.—A Canadian firm wishes to get into communication with a manufacturer who can supply photographs, sketches, designs and requirements of copra crushing machinery (used for crushing dry cocoanut meat).
175. Toys.—A Toronto firm of good standing is desirous of getting in touch with local toy manufacturers with the idea of representing them. Being in the toy business themselves, they intend to continue manufacturing and at the same time represent and market other manufacturers' lines.

FOREIGN TRADE ENQUIRIES.

176. Export to Norway.—A gentleman who is a member of a well recommended Norwegian firm is looking for agencies of Canadian goods suitable for export to Norway. He will be in Canada until the end of November, and will arrange to call on seriously interested manufacturers.
177. Merchant Bar Iron.—A London firm wish to get in touch with Canadian manufacturers of merchant bar iron.
178. Cottons and other Goods.—A London firm interested in the import of all classes of goods from Canada, but particularly cottons, wish to get in touch with Canadian shippers.
179. Paper.—A Glasgow firm who are buyers for one of the largest paper distributors of India, in addition to having an extensive home trade, ask for quotations on all classes of paper, specially news printings and cream laids, quantities 50 tons at a time.
180. Weaving Wire.—A Glasgow firm ask to be placed in touch with exporters of mild steel galvanized and iron weaving wire suitable for making wire gauze.
181. Electric Welding Wire.—A Glasgow firm ask to be placed in touch with exporters of the above.
182. Hairpin Wire.—A Glasgow firm is in the market for the above.
183. Weaving Wire.—A Glasgow firm makes inquiry for the above.
184. Tinned Mattress Wire.—A Glasgow firm asks to be placed in touch with exporters of the above.
185. Wire Rods.—A Glasgow firm is in the market for the above.
186. Woollen Goods, Furs, Etc.—A London firm of manufacturers' agents, importers and exporters, are desirous of securing the agencies for Canadian manufacturers of woollen goods, furs, jewellery, watches, optical goods, and leather goods.
187. Automobile Accessories.—A Glasgow firm ask to be placed in communication with exporters of automobile lamps, tires, plugs, mechanical and electrical horns, etc.
188. Wire Nails.—A Glasgow firm who have branches in India and Australia ask for sources of supply of the above, with a view to arranging export to these countries.
189. Sheet Steel, Etc.—A Glasgow firm, who have branches in India and Australia, ask for sources of supply of the above, with a view to arranging export to these countries.
190. Confectionery.—A Glasgow firm who have already placed large orders for assorted chocolates with Canada would like to hear from exporters of white peppermint creams, penny or twopenny confectioners' novelties, cream caramels, marshmallows, etc.
191 Asbestos Woven Cloth.—A Stirling firm makes enquiry as to the possibility of securing supplies of the above from Canada.
192. Weaving Wire.—A Glasgow firm are in the market for soft mild steel weaving wires in white annealed tinned and galvanized qualities, in sizes from 20 W.G. to 40 S.W.G., .0048 diameter.
193. China.—We have an enquiry from a gentleman who states that he has lived in China for five years and who desires to return as the direct representative of some Canadian manufacturer. He has served as Chinese interpreter with the British Army in France. His references are good.
194. Rotterdam.—An agent in Rotterdam desires to be put in touch with Canadian suppliers of copper, chemicals, leather, lime, marble, mica, oils and pulp.
195. Automobiles and Accessories.—A gentleman well known in the motor trade in England wishes to secure agencies for Canadian automobiles and accessories.
196. Belgium, Bohemia and Central Europe.—An agent, well connected on the continent, wishes agencies and quotations for Belgium, Bohemia and Central Europe from Canadian firms who can supply the following: Bicycle saddles and chains, agricultural machinery, raw material of all kinds, tinned meat and fish.
197. Hardware.—A gentleman in London, with good connection and references, asked to be placed in communication with Canadian hardware manufacturers with a view to securing agencies for London.
198. Hardware and Manufactured Goods.—A reliable London firm asks to be put in touch with leading Canadian firms to whom they could submit detailed requirements and obtain catalogues and samples of their productions.
199. Italy.—An Italian firm who are agents for an old established and well-known London firm asks to be put in touch with Canadian firms who can export the following articles: Agricultural machines of all qualities, lime phosphates, and fish, dry and salted.
200. Bermuda and the West Indies.—A Canadian, manufacturers' agent, well recommended, is leaving at the beginning of November for Bermuda, the British West Indies and South America, and desires to get in touch with any Canadian manufacturers who would be disposed to take advantage of this opportunity to promote the sale of their products. France, Spain, and Central and South America.
201. A Canadian, 31 years of age, who knows English, Spanish, French and Portuguese well, and who now holds an important secretarial post with the Leopoldina Railway, the largest British owned railway in Brazil, is desirous of getting in touch with manufacturers who are considering representation in France, Spain or Central and South America. This gentleman has been for several years in Porto Rico and the Spanish West Indies and is highly recommended.
202. Geneva, Italy.—A firm in Geneva, Italy, desires to secure the names and addresses of Canadian firms who are in a position to export the following articles: Chemicals, minerals, fabrics, lumber, iron and steel.
203. South Africa.—A South African firm is interested in the following articles: Wheel material, i.e., elm naves sizes, from 6 x 8 to 9 x 10; hickory spokes from 1½ inches to 2 inches; hickory rims from 1½ inches x 1½ inches x 2 ft. 6 inches to 2¼ inches x 2¼ inches x 4 ft. 6 inches, including all intermediate widths, depths and heights. Trimming hides for upholstering carts and motor cars; leather cloth similar to rexine, pegamoid or moroccoline, cheap to good quality in 54-inch and 60-inch widths. Hood material 72-inch widths waterproof and also similar kind of material for cushion covers; household enamelware and lumber, including pine shelving, carpenters clear in half inch and 1 inch x 12 inch to 16 inches x 12 inches and up.
204. Oil Stoves.—A Liverpool firm is prepared to place large orders for the above, for which a strong demand exists.
205. Pianos.—A Liverpool firm asks to be placed in touch with exporters of the above.
206. White Powdered Arsenic.—A Liverpool firm asks to be placed in touch with exporters of the above.
207. Ochres.—A Liverpool firm asks to be placed in touch with exporters of ochres.
208. Mattress Wire.—A Liverpool firm are open to purchase the above 23-gauge mainly.
209. Maple Flooring.—A Liverpool firm asks for offers of 100,000 feet of the above, 1 inch x 4½ inch, finishing 13-16 inches x 4 inches face, planed, tongued and grooved.
210. Antwerp.—A firm in Antwerp desires to be put in touch with Canadian manufacturers of the following: Chocolate, sugar, condensed milk, and flour. They are in a position to place large quantities, having regular requests on the subject.
211. Swansea.—A British Company, which does a trade with the wholesale and retail confectioners, grocers and chemists, is specially interested in securing the representation of some Canadian factory which can supply chocolates, gums, lozenge and compressed lozenge tablets, in bulk or packed.
212. Alsace-Lorraine.—A correspondent, highly recommended, is anxious to obtain the representation for the Alsatian Provinces of lines of Canadian food products. He states that food products are not represented to any extent in Alsace, and the fact of starting an export trade in these lines would surely lead to enquiries for other Canadian products. He is willing to put himself entirely at the disposition of these firms under whatever mode of payment they have in mind, and would be pleased to receive samples and prices plus rate of exchange f.o.b. of the following: Meats, smoked ham and shoulders, smoked sausages, etc.
213. Spain.—A correspondent who expects to sail for Spain shortly and to remain there for six weeks or more desires to be intrusted with some commission in that country. He is experienced in commercial matters, and is able to prepare trade reports and statistics.
214. Belgium.—A commission agent in Belgium who has had twenty years' experience in exporting to Africa, wishes to get in touch with Canadian firms who can supply the following: Enamelled products; cotton tissues and mixed cloth, including ready-made clothes, shirts, vests and cotton jackets intended for negro workmen. These goods were formerly supplied to the Congo by Germany.
215.—Belgium.—A correspondent in Brussels asks to be put in touch with leading Canadian firms manufacturing bookbinding machines, machines for the manufacture of office furniture, pencils, penholders and fountain pens.
216.—Foodstuffs, Linseed Meal.—A firm in Christiania asks to be put in touch with Canadian exporters of the above.
217. Electrical Machinery.—A firm in Milan, Italy, wishes to get in communication with Canadian exporters of the following: Motor engines, dynamos, transformers, voltameters, ampermeters and insulators.

Barrett Specification Roofs

20 Years of Service Guaranteed---

IN the old days buying a roof very often proved to be something of a gamble. Maybe you got just what you specified, and maybe not.

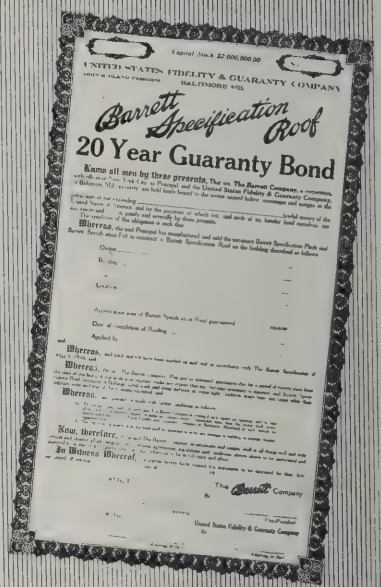
The cost per square foot was too often taken as the only standard of value — frequently to the owner's subsequent sorrow.

Today all this is changed.

It was The Barrett Specification which first made it possible for building owners everywhere to obtain, through their local contractors, a *standardized roof,* worked out by roofing engineers and based on scientific principles of modern roof construction.

Today we offer to *guarantee* Barrett Specification Roofs *for a period of 20 years!*

This guaranty is obtainable on any roof of 50 squares or more, in any town of 25,000 population or over, and in smaller places where our Inspection Service is available.



It is a Surety Bond, issued by a well-known Fidelity and Guaranty Company.

To obtain this Surety Bond you have only to insert in your building specifications the following:

> "The roof shall be laid according to The Barrett Specification dated May 1, 1916, and the roofing contractor shall secure for me (or us) the 20-Year Guaranty Bond therein mentioned."

The guaranty costs you nothing. We merely require that the roofing contractor be approved by us and that we be given an opportunity to inspect the construction.

We shall be glad to send you a copy of *The Barrett Specification,* with diagrams, ready for insertion in your building plans.

Editorial Comment

Wild Theories at the International Labor Conference

ONE of the Italian delegates at the International Labor Conference at Washington suggested that all raw material in the world should be pooled and placed under the jurisdiction of some international body, who would distribute it to the various countries according to their needs. As Italy is notoriously short of raw materials, there was considerable wisdom in his proposal from his country's point of view, but the nations which are plentifully supplied with raw material did not receive it with enthusiasm.

An English delegate claimed that the institution of private property was the primary cause of unemployment, and that, therefore, all private property should be abolished. This proposal was rejected by the other labor delegates, who, apparently, had some private property of their own.

Unemployment at the Labor Conference

THE Labor delegates at the International Labor Conference seemed determined to force the acceptance of some international arrangement by which the unemployed would be placed on the pay-roll of their respective countries indefinitely. Unemployment pay brought disastrous results in Great Britain, and it is significant that it is being dropped. In most cases unemployment pay is an invitation to stop working. The introduction of any system of unemployment pay or insurance would be particularly unfortunate in Canada. Here our problem is not to provide for unemployment, but to secure enough people to do the work which is waiting to be done. Before the war we were securing at great expense immigration at the rate of about half a million a year. In normal times there is always a shortage of labor in Canada. As a general rule, anyone who wants work, and will accept the kind of work available rather than remain idle, need not be idle. At intervals of seven to ten years in our history there have been periods of depression when there was unemployment for a few months, but in these cases special measures were taken which were as satisfactory as any that could be devised under the circumstances. Even in periods of depression in Canada it was found that a great proportion of the unemployed were people who should never have left the farms, and were attracted to the city by the hope of getting easier work at higher pay and enjoying the excitement of city life. The rapidity with which Canadian industry and agriculture absorbed the Canadian army is sufficient proof that Canada has nothing to fear from the spectre of unemployment.

The surest way to create unemployment is to bonus it.

Asking for Something Every Year

IN addressing the International Labor Conference at Washington, the Right Honorable George N. Barnes, representative of the British Government, made the following observations:—

> "My labor folks—and I regard myself, too, as being a labor man, although I happen by the accident of time to be a Government representative—my labor colleagues and comrades will think I have been somewhat moderate and modest in my proposals. If so, I would say to them that this conference is not the last conference. It is the first one. I would say to them that what we cannot do this year, we may do next year, or the year after."

Mr. Barnes states very concisely the attitude of labor towards these annual international labor conferences. They propose to come to them year after year always asking for more. It is necessary that employers should understand that the labor sections of the Peace Treaty were incorporated in the Peace Treaty by the direct action of those Governments which have partially surrendered themselves to labor. The International Labor Conference will tend to become a gigantic machine for propagating theories, which will injure both employees and employers. In any case it will furnish the means by which a constant agitation will be maintained; and the primary objects of this agitation will be to shorten the hours of work unduly, to increase wages beyond economic limits, to advocate the extension of various kinds of compensation and insurance

schemes, and in general to continue increasing the cost of living. As a general rule, employers want to treat those who are working for them fairly. They know that men and women work better when their hours are not too long, when they are well paid, and when they secure recognition for individual capacity. But employers are in a constant state of uncertainty because they do not know where the demands of their employees are leading. If they ask a forty-four hour week to-day, what will they ask next year and the year after? The coal miners of the United States struck for a thirty-hour week, and the whole North American continent is suffering as a result. If employees would make reasonable requests, abide by them for say a period of ten years, and undertake financial responsibility for breaking agreements, they would find employers ready to meet them more than half way.

Mr. Parsons on the Eight-hour Day

AS a delegate representing all the employers of Canada at the International Labor Conference at Washington, Mr. S. R. Parsons, of Toronto, has been guided by the resolution regarding the eight-hour day passed by the employer delegates at the National Industrial Conference in Ottawa last September.

In voting against the draft international agreement at the Washington Conference Mr. Parsons made the following statement:—

"I beg to make a short statement on behalf of myself and those whom I represent, the Canadian employers, in connection with this report which is now before the conference, and I may say I will hand a copy of this to the translator afterwards so that he can read it in full. In speaking for Canadian employers, many of whom have been consulted since this conference was in session, I beg to state as follows:

"1. While in many industries the eight-hour day is already in operation, especially in the building trades and in manufacturing, where the work is laborious, yet the general application of the shorter working day would, according to actual experience, greatly lessen total production.

"2. At the present time when the Government of the country is calling upon manufacturers to increase their output and exports in order to meet heavy national obligations, nothing should be done which would tend to hinder them in their efforts.

"3. Only by increased production can the cost of living be reduced to all classes. To ignore this fundamental truth is to blind our eyes to actual facts.

"4. While having regard to world-wide interests, it must be remembered that Canada is a young and undeveloped country. To attempt to put her upon the same footing as old world countries with entirely different conditions is like placing a young and vigorous giant on the same footing as a man advanced in life. We should have the opportunity of living our own life and managing our own affairs to suit our circumstances. If we can achieve more than others as a nation it is surely not only our privilege but our duty to do so. Why should our national life and development be dwarfed? An ancient philosopher has well said, 'That which is not good for the beehive can not be good for the bee.' Compulsory reduction of hours militates against establishment of new and small industries, and if the workman is to be hampered in his effort to rise a serious blow is struck at the national life of a young and rapidly developing country.

"5. An attempt was made in the eight-hour day committee of this conference to include in the draft convention all purely commercial undertakings, such as wholesale and retail stores, banks, etc. This proposition did not carry a majority in favor of it but will be considered again at a later conference. It has also been announced that agriculture has already been included in the programme of some countries proposing to come under this legislation. Evidently what is aimed at ultimately is an attempt to drive all the workers of the world like a flock of sheep into the eight-hour pen, regardless of the world's requirements. It is not suggested for a moment that the general acceptance of the eight-hour day will settle now or permanently our social and industrial problems, including hours of work.

"6. Under the proposed legislation Governments will be called upon to deal with economic questions to a much greater extent than ever before. It is quite conceivable that influences are likely to be brought to bear upon politicians from one direction or another in connection with such legislation and the administration thereof which would not make for national soundness or prosperity. There is much truth in the statement 'that Government is best which governs least.'

"7. Employers of Canada, representing all employing classes, at a national industrial conference in the city of Ottawa in September last, considered this question and agreed unanimously in a resolution calling upon the Government to appoint a commission on which employers and employees should be represented, to study the possible application of the eight-hour day to all branches of industry. If it can be demonstrated after such study, that the eight-hour day is sound economically as applied to Canada, and in the interest of all classes, including the workers, I feel safe in saying that the manufacturers—and I believe also the employers generally—will be glad to co-operate in bringing it into being. Meantime I have no option but to oppose the legislation as per draft convention before this conference.

"8. It is generally recognized that unless the United States accepts similar legislation, it would be placing an unfair burden upon Canadian employers, and the country at large, to be bound by the terms of the proposed convention."

Mr. Parsons stood firmly in support of the necessity of increasing production, in the face of the present international shortage of almost all products.

"What labor wants," said Hon. Mr. Barnes, a labor minister in the British Cabinet, during the Conference, "is more leisure."

Mr. Parsons thought that the world needs goods of every kind more than labor needs leisure.

Greater production means more food, clothing, houses, fuel, and other necessities for every one. Consequently, we should be advocating longer instead of shorter hours of work for every one till the crisis is past.

"A Canadian Tariff."

FOR two hundred years the fiscal policies of civilized countries have been divided into three classes, each class being founded on the theory of a school of political economy.

There are the "Protectionists," who believe that the industry of a country should be "protected" against undue foreign competition by means of a tariff, which should be regulated on various articles so as to allow home industries to develop.

Second, there is the "tariff for revenue" school, which advocates that a fairly uniform tariff should be levied on imports for the purpose of raising national revenues, and without special concern for the protection of any industry.

Third, there are the "Free Traders," who say that there should be no tariff on any imports, that all national industry should be fully exposed to foreign competition, and that national revenues should be raised by other forms of taxation.

Economic and political conflicts have raged about these three schools of fiscal thought for two centuries, and nations have either taken one of the above policies or compromised with features of two or even three of them.

In the coming revision of the Canadian tariff, the old controversies as to the respective merits of the above fiscal policies will doubtless be revived, unless a new course is followed.

What is our national fiscal problem? Is it not threefold: to raise revenue, to develop the country, and to supply the needs of its inhabitants?

Can we unite our energies in the task of framing "A Canadian Tariff"—that is, a tariff which will assist in the task of developing Canada as a great country within the British Empire?

Canada's Depreciated Dollar.

IN itself a decline in the exchange value of a country's currency need not be regarded as an evil. Depreciation in its unit of circulation in the markets of another country, by working as a deterrent to foreign buying and by encouraging home production and export trade, may be considered as actually a benefit. On the other hand, a depreciated currency is a symptom of a state of affairs that no self-respecting nation should view with equanimity.

So far as Canada is concerned, the depreciation of our dollar in New York, through the money markets of which practically all our financial transactions with the rest of the world are carried on, has come about largely through the creation of an adverse trade balance with the United States. This adverse balance for the last fiscal year amounted to something like $272,504,220, coupled with which was the necessity of transferring large cash balances to meet the interest charges on Canadian securities held by United States citizens.

Obviously the discount on our dollar can only be eliminated in one way and that is by wiping out the unfavorable trade balance. By buying less from and selling more to the United States this desirable result can undoubtedly be achieved. It should become the duty of all producers, and particularly Canadian manufacturers, to increase their output to such an extent that not only will domestic requirements be more completely met but the surplus for export be largely augmented. With the tremendous burden of the war and post-war debt on the nation's shoulders, there should be every incentive to convert an adverse into a favorable trade balance and thereby bring it about that the foreign buyer will become a contributor to the liquidation of our obligation.

Through the medium of house organs and bulletins, manufacturers might very well bring this situation to the attention of their workpeople. The Ford Motor Co. of Canada have done so very effectively in their *Ford News*, a "Trade in Canada" edition of which was recently issued. Not only did the company show how they were doing their part in buying every possible piece of material in Canada but they urged editorially the necessity for greater production.

"During the coming fiscal year," they stated, "the interest payable on Canada's Federal debt will be at least $115,000,000 and, in addition, for many years to come, an annual charge of $30,000,000 to $40,000,000 will have to be provided for her soldiers and the dependents of those who have fallen. To meet these extra charges and at the same time provide for carrying on the ordinary administration of public affairs demands the whole energy of the people of the Dominion. An adverse balance of trade is a condition which it is imperative to guard against. Instead of importing, Canada must export. Her factories must run full time every week in the year; the farmer must continue to speed up his production; he is the backbone of Canada and must not fail her. The vast mineral resources of the Dominion must be exploited to the utmost and the unprofitable conflict between Capital and Labor must give way to a broad spirit of understanding and co-operation. The responsibility for the commercial success of the country rests with the individual man, woman and child. No matter how small or menial the task, its conscientious execution by the worker adds just that much to the total effort which must be made by the people to place the country on a sound and prosperous footing.

"Everyone must do his bit, and do it well. To sit back and rely upon the other fellow to do the work is to invite disaster. Each must bend his or her energy to the task in hand. Your success depends upon the prosperity of the country and vice versa the prosperity of the country depends upon your success. There is, and can be, no time or place for the slacker in the strenuous years that lie ahead. Set the good example yourself, individually. In the new era that is opening up men are getting to realize that they are indeed their brother's keeper and that the time has now come when each one is in duty bound to shoulder his due share of responsibility for the success of the community."

The Necessity for Greater Production.

PRODUCTION in Canada is falling off. It has been falling off for some time. There is no way of arriving at accurate statistics which would cover the situation all over the country. But it is a fact that the aggregate output of all the factories of Canada is considerably below normal. What are the reasons? They are difficult to define accurately, but it is certain that one fallacy at least is being disproved. That fallacy is the belief that factories as a general rule can produce as much in a forty-four hour week as they can in a fifty-four or sixty-hour week.

As a result of the eight-hour day law, passed in France early last spring, the national factory output of France has fallen in almost direct proportion to the percentage of reduction in working hours. During the past year there has been a considerable reduction in the gross working hours of Canadian factories, and now we know that there has been a corresponding reduction in output.

More serious still, the production per hour even of the actual existing working hours, is below normal. As a

result we are losing orders every day because we cannot deliver the goods.

There is also another very important point to be considered in regard to output. It is difficult to keep the quality of materials up to the old standard. Workers do not seem to be showing the same interest in trying to put their best efforts into their work as they showed some years ago. The result is that if production is falling and the quality of the output tends to deteriorate, and if these two conditions continue and increase, a serious economic situation will be created.

We are told also that agricultural production has fallen off. We have not the best facilities for investigating the truth of these rumors, and prefer to leave their verification either to the Government or to the associations which represent agriculturists. Government statistics usually appear a year or so after their collection. Consequently, they are not much use when conditions of the moment require to be analysed.

Since the Armistice, Canada has had the greatest trade opportunity in her history. It is doubtful if such another opportunity will occur. The situation has been unique. Highly industrialized Europe before the war produced practically all the manufactured goods it needed and exported in great quantities. Europe also supplies the greater part of its own agricultural needs. The war has changed all this. Europe wants all kinds of manufactured goods in great quantities. Europe also wants vast quantities of agricultural products. We can sell nearly everything we can send to Europe. What an opportunity! If we can supply this demand we shall lay the foundation for Canada's financial greatness. Money will come into the country in vast amounts and will be circulated here through all classes of the community. Is there any problem in Canada at the present time greater than the necessity of producing everything which the country can produce in the greatest possible quantities and of the very best quality for sale abroad?

Water Powers of B.C.

IN these days when the utilization of water-power in industry is becoming of steadily increasing importance and when knowledge of the resources of the Dominion in this particular must be regarded as of the utmost value, the work of the Conservation Commission in making a comprehensive survey of the whole situation merits the warmest commendation. This is apropos of the recent publication by the Commission of "Water Powers of British Columbia," a volume characterized by minute attention to detail and thoroughgoing study of the entire field. It is the work of Mr. Arthur V. White, consulting engineer for the Commission, assisted by Mr. Charles J. Vick, and extends to 644 pages of explanatory and statistical material, calculated to give any one interested in the subject the maximum of available information.

The undertaking of Mr. White and his associate is so broad in scope and intimate in detail that it would be impossible to give even a faint idea of the contents of the volume. Suffice it to say that there is no phase of the subject that has not received attention. To the manufacturer or promoter the value of the work will be found to lie in the very clearly arranged tables describing the water-powers of the province, giving their location, their head and their estimated horse-power. This, in addition to information regarding legislation passed by the province on the subject of water-power, will be of the utmost value to anyone desirous of investigating power possibilities in the coast province.

Newspapers and Democracy

THERE are many newspapers in Canada which are advocating what they call "democracy in industry."

A newspaper is a manufacturing plant organized in the same way as a factory is organized. We do not know of a single instance in which any newspaper has attempted to show in practice what it means by democracy in industry. We would like to see some of the great newspapers make the attempt, but up to the present time they prefer to give the advice and to let other manufacturers than themselves make the experiments.

Certain newspapers have also given very wide publicity to charges of alleged profiteering on the part of manufacturers. Yet we understand that certain newspapers in Canada have made good profits during the past five years, have paid very handsome dividends, and are, in fact, extremely successful manufacturing enterprises. The public would like to see some of these newspaper manufacturers demonstrate in their own plants the theories which they are advocating.

The United States Rejects the Peace Treaty

THE Senate of the United States, on November 19th, 1919, rejected the Peace Treaty of Versailles and the League of Nations Covenant. By this action the United States not only refused to accept the political principles involved, but they also rejected the labor clauses of the Peace Treaty.

It is difficult to see how the International Labor Conference, now sitting at its first session in Washington, can make international regulations in regard to labor if the United States is not to be included therein. If, for example, the countries which decide to remain in the League of Nations agree that a forty-eight hour week should be made international, the United States, which does not limit the hours of work in this manner, would immediately have an enormous advantage in international trade over the other countries who had voluntarily restricted their hours of labor, or, in other words, their production. Canada is particularly interested, as it would be difficult for us to compete with the United States under such conditions.

The First International Labor Conference

History of the Steps Leading Up to the Holding of the Conference—Draft Convention on the Eight-Hour Day—Position of the Canadian Employers on the Inportant Question Presented by Mr. S. R. Parsons

By J. T. STIRRETT

General Secretary, Canadian Manufacturers' Association

AT the Plenary Sitting of the Peace Conference of the 11th April, 1919, the following Resolution was adopted:

> "That the Conference approves the Draft Convention creating a permanent organization for the promotion of the international regulation of labor conditions which has been submitted by the Labor Commission, with the amendments proposed by the British Delegation; instructs the Secretariat to request the Governments concerned to nominate forthwith their representatives on the Organizing Committee for the October Conference, and authorizes that Committee to proceed at once with its work."

It was decided to hold the first International Labor Conference in Washington, D.C., on October 29th, 1919. Each country was invited to send four delegates, two representing the Government, one representing employers and one representing labor.

The Organizing Committee, assembled under authority of the foregoing resolution in accordance with the provisions of Part XIII of the Peace Treaty, issued a circular and series of questionnaires dealing with the items of the agenda specified in the Treaty. The information contained in the replies to the questionnaire from the different Governments was analyzed and summarized by the Organizing Committee and presented in the form of reports to the International Labor Conference.

Owing to the fact that the United States had not ratified the Peace Treaty, no official delegates represented the United States at the Conference. The delegates from Canada were as follows:

(*a*) Government:
Hon. Gideon D. Robertson, Minister of Labor.
Hon. Newton W. Rowell, President of the Council.

(*b*) Employers:
Mr. S. R. Parsons, British American Oil Co., Ltd., Toronto.

(*c*) Labor:
Mr. P. M. Draper, Secretary of the Dominion Trades and Labor Congress, Ottawa.

When the Conference opened in Washington on October 29th, delegates were present from the following countries: Argentina, Belgium, Canada, Chile, China, Cuba, Czecho-Slovakia, Ecuador, France, Great Britain, Greece, Holland, India, Italy, Japan, Guatemala, Nicaragua, Norway, Paraguay, Peru, Portugal, Poland, Roumania, San Domingo, Siam, Spain, South Africa, Sweden, Switzerland, Uruguay and Venezuela.

The subjects on the agenda of the Conference were as follows:

1. Application of the principle of the eight hours' day or 48 hours' week.
2. The question of preventing or providing against unemployment.
3. Women's employment.
4. Employment of children.
5. Extension and application of the International Convention adopted at Berne in 1906 for the prohibition of the use of white phosphorus in the manufacture of matches.

Canada was principally concerned in the first two items of the above agenda.

The eight-hour day was one of the subjects discussed at the National Industrial Conference, Ottawa, September 15th-20th, 1919, and the following resolutions were passed and recorded by the three groups of delegates present:

Resolution submitted by the Employers' Group:

"Resolved that appropriate Government Commission, composed of an equal representation of employers and employees of the various industrial, producing and distributing industries, should be appointed to undertake investigations as to the adaptability of the hours of labor principles of the Peace Treaty to the different industries of the country, and to report as early as possible."

Resolution submitted by the Employees' Group:

"That we agree with the recommendations and findings of the Royal Commission on Industrial Relations, and urge the adoption of an eight-hour day by law throughout the Dominion, with due regard and recognition of the Saturday half-holiday, where same prevails and its possible extension.

"In industries subjected to seasonal and climatic conditions, such as farming, fishing and logging, if it can be established by investigation that the operation of such law is impracticable, then exemption shall be granted such industries from the operation of such law."

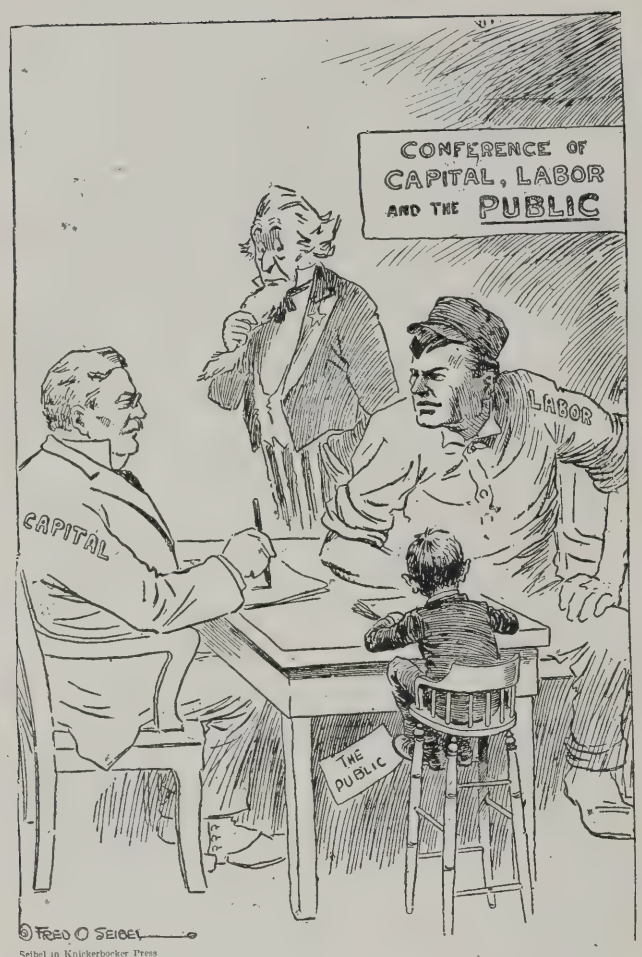
Resolution submitted by the Third Group (representing the public):

"We approve of the principle regarding employment and hours of labor set forth in the Treaty of Peace and in paragraphs 50 to 53 inclusive, of the Report of the Royal Commission, and would recommend that the Governments of Canada enact legislation providing for such in all industries where it is now established by agreement, at the earliest opportunity, and after due investigation by a Commission, composed of representatives of Employers and Employees representing the various industries, legislation be enacted by the Governments of Canada providing for the same to be extended in all industries where it can be applied, having due regard to the curtailment of production and distribution."

Mr. Parsons, the delegate representing the employers of Canada, announced early in the sessions of the Conference, that he would be guided by the resolution adopted by the employer delegates at the National Industrial Conference.

Draft Convention

The Organizing Committee of the International Labor Conference prepared a Draft Convention (agreement) to limit the hours of work in industrial undertakings to 48 hours in the week. The Committee suggested that this agreement should be brought into operation generally on July 1st, 1921. This draft agreement was submitted to the Conference, and after the views of Government, employers and Labor delegates had been stated, it was referred with various amending suggestions to a committee of fifteen. The Draft Agreement follows:



Draft of a Convention to Limit the Hours of Work in Industrial Undertakings to Forty-eight in the Week.

1. The present Convention applies to all industrial undertakings, other than undertakings in which only the members of the family are employed.

Industrial undertakings shall be deemed to include the following:—

(*a*) Mines and quarries.

(*b*) Industries in which articles are manufactured, altered, repaired, ornamented, finished or adapted for sale, or materials

Seibel in Knickerbocker Press

The Tertium Quid

How the cartoonist of the "Knickerbocker Press" pictures the situation at the recent labor conference at Washington

are transformed (including the generation and transformation of electricity, shipbuilding, laundry work).

(*c*) Construction, reconstruction, maintenance, repair, alteration or demolition of any building, railway, tramway, harbor, dock, pier, canal, inland navigation, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, water work or other work of construction, and the preparation for and laying the foundations of any such work or building.

(*d*) The transport of passengers or goods by road or rail, including the handling of goods at docks, quays, wharves, and at warehouses, but excluding transport by hand.

The national law shall define the line of division which separates industry on the one side and commerce and agriculture on the other.

2. The working hours of employed persons shall not exceed 48 in the week, with the exceptions hereinafter provided; but the provisions of this Convention shall not apply to persons holding positions of supervision or management or employed in a confidential capacity who are not usually employed in manual labor. Where persons are employed in shifts, it shall be permissible to employ persons in excess of 48 hours in any week if the average number of working hours over a period of one month or less does not exceed 48.

3. The limit of 48 hours may be exceeded in case of accident, breakdown of machinery or plant, or other emergency, but so far only as may be necessary to avoid serious interference with the ordinary working of the undertaking.

4. The limit of 48 hours may be exceeded in those industries or processes which are required by reason of the nature of the industry or process to be carried on continuously by a succession of shifts, subject to the condition that the working hours shall not exceed 56 in the week on the average. The limitation of the hours of work shall not affect any holidays which may be secured to the workers in such industries by the national law in compensation for the weekly rest day.

The industries included in Schedule A shall be regarded as industries to which this Article applies.

5. The limit of 48 hours may be extended to 60 in the case of any of the classes of workers included in Schedule B.

6 (*a*). In industries in which the conditions specified in Schedule C exist, overtime for not more than 150 hours in the year may be worked, subject to the condition that a worker when employed overtime shall receive a rate of pay which shall be higher by at least 25 per cent. than his normal rate of pay.

(*b*) In other industries overtime for not more than 150 hours in the year during the next five years and afterwards for not more than 100 hours may be worked subject to the same conditions as in (*a*).

7. If any of the contracting States claims that any industry other than those specified in Schedules A, B or C carried on in its territory comes within any of the foregoing Articles, it shall notify the same to the Governing Body of the International Labor Office.

8. In order to facilitate the enforcement of the provisions of this Convention, every employer shall be required:—

(*a*) To notify by means of a notice posted in the works or other suitable place, or by such other method as may be approved by the Government, the times at which the employment of his workers commences and ends, or where work is carried on by shifts, the times at which the employment of each shift commences and ends. The times shall be so fixed as not to exceed the limits provided for under this Convention, and when notified shall not be changed except with such notice and in such manner as may be approved by the Government.

(*b*) To notify in the same way such rest times observed during the period of work as are not reckoned as part of the working hours.

(*c*) To keep a record in the form prescribed by the national law or order of the Executive Government of all additional hours worked in pursuance of Articles 3 and 6 of this Convention.

It shall be made an offence against the law to employ any person outside the times fixed in pursuance of paragraph (*a*) or during the times fixed in pursuance of paragraph (*b*).

9.* In those countries in which climatic conditions, the imperfect development of industrial organization or other special circumstances render the industrial efficiency of the workers substantially different, the following modifications of the provisions of this Convention may take effect:—

.....

10. The provisions of this Convention may be suspended in any country by order of the Government, in the event of war or other emergency endangering the national safety.

11. The provisions of this Convention shall be brought into force not later than the 1st July, 1921.

Schedule A.

1. (*a*) Industries in which work is necessarily carried on by all or the great majority of the workers night and day for seven days a week:—

(i) The extraction of metal from the ore, or the recovering of metal by blast furnaces or other processes, including blast furnaces, reverberatory furnaces, retorts, electric furnaces, electrolytic process and the preliminary process of calcining ores.

(ii) The manufacture of coke and recovery of coal by-products from coal.

* NOTE.—It will be necessary in accordance with Article 405 of the Treaty to consider the modifications necessary in the case of special countries, but as the replies of Japan, China, India and other countries had not been received when this report was drafted, the Committee have not yet been able to make any recommendations in regard to them. [Cf. p. 134].

(iii) The production and refining of mineral oil, including mineral oil from shale.

(iv) Public Utility services (gas, electricity, water).

(*b*) Branches of industry in which work is necessarily carried on night and day for seven days a week, but which constitute a portion only, and generally a small portion, of the work of the establishments in which they are carried on:—

(i) Continuous processes in the manufacture of chemicals, including synthetic dyes.

(ii) Sugar refining (char-house).

(iii) Manufacture of condensed milk (receiving department and vacuum pan, pasteurizing and cooling departments).

(iv) Cement manufacture (Schneider kiln and rotary kiln processes).

(v) Steel manufacture (smelting department).

(vi) Works of construction (tunnelling by compressed air, work of pump and engine attendants).

(vii) Salt works (work of lump men and wallers).

(viii) Glass manufacture (founders, teasers, casters, drawers, Lehr kiln-men and cave-men in sheet and plate works).

(ix) Mines (minding of pumps, fans, furnaces, winding).

(x) .....

(xi) .....

II. Industries in which work, though not carried on day and night, is necessarily carried on seven days a week, e.g., manufacture of milk products, other than condensed milk.

Schedule B.

Classes of work common to most industries which require to be exempted from the limit of 48 hours because of the special conditions of the employment:—

(i) Persons who have to come in before the normal hour for beginning work, or to remain after the day's work is over, e.g., boiler attendants, engine-men, electricians, oilers and greasers, cleaners, time-keepers and checkers.

(ii) Persons who have to come in early to prepare material, e.g., sponge makers in baking trade, moulders' laborers in foundries.

(iii) Works maintenance staff, whose duty is to carry out repairs.

(iv) Laboratory chemists and persons engaged in research work and testing work.

(v) Furnace men (including glass tank men and teasers), retort men, men employed on works gas plants.

(vi) Annealers engaged on continuous work (i.e., on work where the annealing takes several days to perform), and kiln-men, oven-men and stove-men.

(vii) Day and night watchmen, caretakers, pointsmen on works railways.

(viii) .....

(ix) .....

Schedule C.

(i) Industries liable to press of work at certain recurring seasons of the year, e.g., aerated water making, beer-bottling, printing and bookbinding, preparation of food, malting, manufacture of ice, seed cleaning and grading, making and repairing of

agricultural implements or machinery, manufacture of artificial manure.

(ii) Industries liable to sudden press of orders arising from unforeseen events, e.g., making-up of wearing apparel, job-dyeing and dry cleaning, biscuit making, warehouses in which goods are made up for shipping orders, packing-ca e making for shipping orders, farriers, ship-repairing, dock laboring.

(iii) Industries in which the article manufactured or material used is of a perishable nature, e g., fish-curing, preserving of fruit, preserving of meat, manufacture of condensed milk, extraction of whale oil, manufacture of glue and gelatine.

(iv) Industries in which the time for the completion of the work or process cannot by reason of the nature thereof be accurately prescribed, e.g., bleaching and dyeing, tetxile printing, metal rolling mills and foundries, lead pipe making, copper refining, wire drawing, paper-mills, baking of bread or biscuits, tanneries, starch or cornflour works, vulcanizing of rubber, sheathing or covering of electric cables.

(v) Factories driven by water power only which are liable to be stopped by drought or flood.

Mr. Parsons' Address

On the subject of the 48-hour week and the proposed draft agreement submitted, Mr. Parsons, Delegate of Canadian Employers, made the following address to the Conference:

MR. PARSONS (Canada). Mr. President, being a member of the employers' delegation who could not see his way clear to subscribe to the declaration and the proposition brought into this house by Mr. Marjoribanks, representing the employers in general, I would like to have the opportunity of stating my reasons for not joining in that proposition and to make some general observations upon the question under discussion.

In the first place, it appears to me that those who were responsible for bringing forward the draft convention—which we have been giving consideration to—have brought forward something which they have tried to fit to all the nations of the earth represented, but hardly with success. It is as though they handed out a suit of readymade clothes to the different countries, irrespective of their size or of their conditions, and had tried to make the same fit. In our country, in the ready-made clothing industry, they have, in connection with each large concern, what they call, I understand, a butcher, whose business it is to try and make fit any ready-made garments that are put upon the customer. Now, it appears to me that in connection with this labor programme, of the eight-hour day in particular, that we need a butcher for each country in order to make the programme fit as submitted to us.

I submit, that the first consideration before us in this matter is the welfare of the workmen. And in that proposition I am sure I will carry the judgment of every delegate and of every adviser in this house. I have a firm belief in co-operative methods, and committees, and commissions—what you call perhaps in the old land, shop committees. I also believe in the weekly day of rest. I also believe in profit sharing. I believe in everything that can be done in every individual industry in order to further the interests of the worker. I believe that the day has come when we can all say with Charles Dickens, "When men and women seem by one consent to open their shut-up hearts freely and to think of people around them as if they really were fellow passengers to the grave and not another race of creatures bound on other journeys."

An International Question

I do not, therefore, object to this eight-hour day, per se. My objection comes from the fact that in the present world-wide conditions that we are not prepared for it and that we can not fit it to our individual country's economic system. The question of hours is particularly a national and international economic question. And let me say, Mr. Chairman, that looking at it in this regard, the governments of the countries concerned, the employers' delegates representing the different countries and the employees are all equally concerned in a proper, a just, and a satisfactory solution of this great question.

Let me repeat again that this question should not be considered by any one class of people in any one country or in all the countries of the world. It must be considered as a national—a great national question, to which each one of us must give his very best consideration. What is the condition of the world to-day? You will agree with me in saying that there has been physical and material devastation in all the war-worn countries of Europe; that there is a great shortage of man power in all the countries; that there is a lack of foodstuffs; that we have huge national obligations which must be considered and met. In a word, the countries of the world have mortgaged their futures, and to-day we ought to give consideration to the question as to how the mortgage will be paid, for it assuredly meets us on every hand. The world is not suffering to-day on account of long hours, my friends. The world is suffering to-day for lack of food and clothing.

If my information is correct, and I believe it to be, there are 100,000,000 people on the verge of starvation in the Old World to-day. Not one-third of all the industries of the Old World are producing at full efficiency. What situation does this reveal to us? Is it a time when we ought to be considering shorter hours, which, to my mind, necessarily mean lack of production?

What did we hear from our French delegate of the employers? That since the eight-hour day had been introduced in France there had been a corresponding falling off in production; that from 10 hours to 8 hours a day meant 20 per cent. of a reduction in production.

Will shorter hours make up this lack? What have we before us as a proposition in connection with the hours? The draft convention calling for a week of 48 hours; my friends of labor from Canada, and, I think, perhaps, some other countries, calling for a week of 44 hours; the miners of this country calling for a week of 30 hours.

Have you ever thought that if we are to have a maximum of hours of work that it might be also wise to have a minimum in consideration of the world's great need?

The country which I have the honor of representing as an employers' delegate at this convention, Canada, is one of the great food-producing countries of the world, like its great sister on the south. This North American Continent is the bread basket of the world. I noticed that in the speech of the Right Hon. Mr. Barnes the other day, in speaking of this draft convention, he specially emphasized the fact that agriculture was excluded. Now, my friends, what does it mean when we exclude agriculture in a country like Canada, and I should think—although I have no right to speak for this country—in a country like the United States?

It means this in Canada: We have to-day a shortage of man power on our farms; everywhere our farmers in our great agricultural stretches are crying out for more help, and they can't get it. And what is the consequence? A great loss of production and higher prices.

Cause of Profiteering

We talk about profiteering. Profiteering is only a symptom. There would be no profiteering if we had plenty of production the world over; but it is the shortage of production that is responsible for profiteering. And what do you do for the farmers when you try to bring in a short working-day in industry? You may say that you do not interfere with agriculture. Let us look at it a moment. You simply draw, as if by a magnet, the workers from the farms into our towns and cities because of the shorter hours, the high wages, and the lights and shades of city life.

Who will suffer on account of the shortage of foodstuffs provided by the farms because of the shorter hours drawing the workers into the towns and cities? In the first place, the workers themselves will be the first to suffer because of this shortage and the consequent higher prices. In the next place the farmers will suffer. How? Because their children—the boys and the girls—and the men and the women will be drawn to city life, meaning thus a smaller production and less profit. Then, again, the farmers are bound to suffer in another way: The shorter hours in city life, towns, in our industries, will

Sykes in Philadelphia Public Ledger

Samson

make dearer agricultural implements, dearer food and clothing that the farmer uses, and he is hit in both ways; in the first place, because he has not men enough to work his farm to produce what is necessary; and, in the second place, because all that he uses in manufactured articles is increased greatly in price. Not only that—I am speaking for my own country, and yet I believe it applies, as I have said, equally to this country and to other grain-growing countries of the world—if there is a shortage of foodstuffs in our agricultural districts in this North American Continent, the workers all over the world are bound to suffer. They are bound to suffer because of the shortage. They are bound to suffer because of the consequent higher prices. I ask you, therefore, if you consider that it would be sound economically, in the present situation and circumstances of the world, to create such a shortage as will surely be created by shortening working hours.

Objects to so Many Exceptions

Again, Mr. President and gentlemen, I object to this draft convention which has been presented to us on account of the fact that it contains so many exceptions of one kind and another, and as referring to one country and another, that it will cause great discontent among those who are thus excepted from its operation. Take again our own country of Canada, we have great seasonal occupations. For instance, the lumbering industry, which is one of our great industries from east to west, it is well known that you can only carry on the lumbering industry when you have the water to run the logs. In part of our country, as in some other countries who perhaps have not the lumbering industry as we have, we are frozen up for a number of months of the year, and therefore we must make hay while the sun shines. Also there is a great difference in climate in our wide stretching country—on the far west, British Columbia has a climate somewhat like Great Britain. On the east it is frozen up for four or five months of the year. You will see at once that the exceptions applying on account of our great differences of climate, and other factors, will mean that there will be so many industries and workers excepted, that those workers who are excepted will become utterly dissatisfied.

Those who have to work a larger number of hours than the proposed eight-hour day, if that should come into effect, will soon say, "We are not going to work longer than our friends who have the shorter period," and thus again you decrease production and cause dissatisfaction among the workers.

Unlike Great Britain, according to the statement of the Right Hon. Mr. Barnes, we did not promise our workers, either before the war or during the war, that their conditions of labor would be altered, that they would have shorter hours, or anything of that nature. Our workers in Canada put their backs into their work in the first place because they were loyal to the cause, and in the next place because they received higher wages than ever they secured before. In all honesty I am bound to say that some of them, especially working on piecework in the munitions, worked harder than they should have done because of these higher wages.

I know it may be said that at the present time there is no particular standard of hours, and therefore there are many exceptions to what may be called even a sort of a general rule as to working hours. But, at the present time it is recognized by all the workers that there are different hours which apply to different industries, and it is so understood. If we try to bring in what is called the universal eight-hour day, then we are faced almost at once by the necessity of extending that day and those hours of work to seasonal and other occupations, and that, to my mind, will be the cause of great dissatisfaction.

There is, however, another very serious objection, perhaps one of the most serious objections that can be brought forward against the legislation which is proposed in this draft convention. It is the attempt to deal by legislation with business matters. This is an economic problem, and I fear that if we try to settle it in our legislative halls in a political way, it will receive a political and not an economic answer. The more business interests of any country get into the hands of the government and politicians the more difficult it is to keep out influences which should never come between one class and another in any country.

Nine Different Solutions

In the case of Canada we have nine different Provinces dealing with the labor question. I understand the same is the case in the United States, where forty-eight legislatures deal with the labor question. You can therefore see how difficult it is to arrive at any agreement, when you consider the different interests of these different Provinces or States.

In my opinion an attempt to limit the hours of work will mean the deathblow to small industries and would prevent starting new ones. Let me explain what I mean. The great majority of employers, on this continent at all events, have come up from the ranks or have had next to nothing to start with. How have they succeeded in coming to their present positions in the industrial world? It has been by working long hours, or rather with no regard to hours; also by thrift, the practice of economy, ambition, and by accumulating savings. A man starts in a very modest way. Perhaps he would gather about him three or four or a dozen workers who are possibly interested with him in some way in the venture. He works long hours because he knows that he is up against large industries with great capital and ability to do what he could not possibly do. The only way that he can get a start is to work longer and to secure men who will work with him. In that way he gradually gets ahead and assumes a place in industrial life of which he may well be proud. That is the history, I venture to say, of nine-tenths of the employers on this continent. If it is true of individual employers, I submit that it is likewise true of the small and newer nations. It will be the larger nations, if we go into this universal eight-hour day, that will have the great benefit. They will have the benefit of raw materials. They will have the benefit of capital. They will have the benefit of transportation, and, therefore, they, like the great industrial corporations, will cut the melon. That is the way business tends, either individually or nationally, these days.

There is another reason why, as representing the employers of Canada, I can not agree to become one of the signers of this draft convention. It is that, along with our friends of the United States, we inhabit the North American Continent. These two countries have interests in common. Our industrial life is much the same. Our wages are about the same. Our social conditions are almost identical. We have similar aims and similar industrial aspirations.

The United States has not yet signed the treaty of peace. I do not know, and I suppose none of us knows, whether the United States will sign the treaty of peace, or if they do, whether the reservations which they may see fit to make will be of such a character that they will reserve to themselves certain matters regarding labor conditions, as well as other considerations. In other words, the uncertainty that there is in connection with this matter in the United States would make it suicidal for us, their small neighbor, in point of population, in the north, to agree to what they had not adhered to. We have eight or nine millions of a population. Our industries are young. They lack capital. We are struggling. We are alongside a magnificent country of one hundred and ten millions in population, with great industries and great wealth. It is quite easy to understand, therefore, that until the United States has spoken that Canada must keep silent.

In closing, I would say that in Canada in the month of September we held a great national conference at the seat of government, Ottawa. There was represented in that conference an equal number of representatives of employers, of employed, and of the Government and the public. The employers' delegates could not agree with the employees in connection with this proposition of the eight-hour day. We, therefore, as employers, sent forward our own resolution to the Government of Canada, asking that a commission be appointed who would give thorough study to this important subject, and that upon this commission there would be represented an equal number of employers and of employed. That question, therefore, so far as our country is concerned, we hope will be studied in the light of all the facts, so that there will be no hasty conclusion reached, otherwise we might arrive at a decision which might interfere with our country's development and well-being.

Hopes for Reduced Hours

Let me say that I know I am speaking for the employers of Canada, and I feel sure that I am speaking for all the employers represented in this conference, when I say that we hope that the day will come when by the introduction of machinery to a greater extent than at present, as well as labor-saving devices, that the hours of work may be greatly reduced from what they now are. Personally I will hail that day on behalf, let me say, of my fellow-workers—for I have worked all my life—and I would be glad, like others, of a little bit of respite from the long hours and toil of a lifetime. I don't believe that that time has arrived yet. My principal objection, therefore, is that, in view of the world's needs, we certainly should not consider shortening the hours of toil, and, therefore, to my mind, decreasing the production.

Social welfare for any or all classes of the people will never be attained by uneconomic regulations. It is utterly impossible. If any one class in a community obtains an unfair advantage the other classes must suffer, and we can not bring forward in any country of the world to-day any regulations which are not based on a proper economic footing and attain what we call social justice. The thing can not be done. The two things do not work together.

Let me just state that if we attempt this it is the surest way of wrecking our civilization, and we have the best civilization to-day that the world has ever brought forward. Let us take care of it and mend it here and there, but not attempt to destroy it.

I would like to read two or three words by Mr. W. A. Appleton, president International Federation of Trades Unions. Mr. Appleton points out that "Phrases and catch words are everywhere taking the place of production. Unless the world produces it can not live."

He says, "The State is often described as a ship. To-day the ship is on a lee shore and all hands must work at maximum speed if she is to be saved from utter wreck."

Gentlemen, let us face present conditions as honest men, whether representing our Governments, employers or employees, and work out this question in accordance with economic standards. (Applause).

Unemployment

It was evident that the Labour Delegates wanted to get an international arrangement by which some scheme of employment insurance would be put into force. Mr. Parsons, as the Delegate of the Employers of Canada, strongly opposed any such suggestion, on the ground that in a country such as Canada there was no legitimate reason for unemployment, except under very abnormal conditions which could be taken care of as they arose.

At the time of writing the International Labour Conference is still in session and final action has not been taken on any subject on the agenda.

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Executive Council Meeting

The November meeting of the Executive Council was held on the afternoon of Thursday, November 27th, at the Prince George Hotel, Toronto, with the president of the Association, Mr. T. P. Howard, in the chair. There was a very full attendance of members, the following signing the roll:—Messrs. C. Howard Smith, W. H. Shapley, E. J. Davis, J. S. McKinnon, H. A. Telfer, S. J. Williams, E. Y. Chown, W. M. Gartshore, W. A. Richardson, E. G. Henderson, P. W. Ellis, T. A. Hollinrake, Jas. A. Riordan, J. S. A. Whealy, R. W. Leonard, E. H. Gurney, R. Thomson, J. F. M. Stewart, F. B. Stewart, Thos. Roden, H. M. Snyder, W. C. Coulter, C. A. Waterous, G. H. Douglas, Carl Riordon, G. C. Coppley. The meeting was one of unusual interest, several matters of vital importance to Canadian manufacturers being under consideration.

Annual Meeting, 1920

The President and General Manager, who were appointed a special committee to select the place and date of the next Annual Meeting of the Association, have reported to the Executive Committee that they have arranged to hold the meeting in Vancouver, B.C., on June 8 and 9, with the annual dinner at Victoria, B.C., on June 10. The detailed arrangements will be completed as soon as possible and in the meantime all members will be notified of the date and place so that they may make the necessary arrangements to attend.

December and January Meetings

The by-laws do not provide that a meeting of the Executive Council should be held in December and the question of holding another meeting before the end of the year came up for consideration at the November meeting of Council. It was decided that a meeting should be held sometime between the middle of the month and Christmas in Toronto. The January meeting will be held in Montreal on the regular date.

Membership Campaign

Reporting just prior to the membership campaign, which took place during the week, December 1 to 6, the Executive Committee stated that much preliminary work had been done. Some time ago lists of non-members had been supplied to the divisional secretaries. A personal letter from the President containing an appeal for each present member to get one new member during the coming year was mailed to the entire membership. A special letter enclosing pamphlets was mailed to all non-members on the list, announcing the membership campaign and setting forth reasons why they should join the Association. 9,000 reprints of the article on the Association's activities which appeared in the November number of INDUSTRIAL CANADA were struck off, and have either been distributed or are available for distribution. In addition to this, a small pamphlet setting forth the services of the Association, was printed to the extent of 9,000 copies. It is proposed to follow up the membership campaign with a steady campaign by personal solicitation, where possible, and by correspondence.

Tariff Board Urged

A strong deputation of members of the Executive Council waited on the Government at Ottawa on Tuesday, November 25, to urge the appointment of a permanent board of experts to advise the Government on questions of tariff. The deputation, which was headed by Mr. T. P. Howard, the president, was received by Sir George E. Foster, Hon. C. C. Ballantyne, Hon. J. A. Calder and Sir Henry Drayton. The manufacturers made it quite clear that the board should be simply advisory in character. They had no desire that it should usurp any of the functions of the Ministers or of Parliament. At the same time they felt that the Minister of Finance should have to assist him, a board of experts who would make a study of trade conditions and the best scientific means of adjusting or revising the tariff to meet any general or special conditions arising from time to time. The deputation further questioned the desirability of a sub-committee of the cabinet going through the country and conducting a tariff inquiry, on the ground that it might result in political agitation of a disturbing nature. It was made clear, however, by the Ministers present that the Government was committed to this policy. Altogether it was felt that a favorable impression had been created on the minds of the Ministers as a result of the argument advanced on the necessity for a permanent tariff board.

Commercial Intelligence Committee

A meeting of this Committee was held on Thursday, November 20. The following gentlemen, suggested by their respective divisions, were added to the Committee:—

L. W. Simms, T. S. Simms & Co., Limited, St. John, N.B.
R. B. Stewart, Maritime Bridge Co., Ltd., New Glasgow, N.S.
A. H. Brittain, Maritime Fish Corporation, Montreal, Que.
Jos. Daoust, Daoust, Lalonde & Co., Ltd., Montreal, Que.
Hugh Scully, Willys-Overland, Ltd., Toronto, Ont.

In reporting on their work to the Executive Council, the committee gives an outline of the recent services rendered. In addition to the usual volume of correspondence and numerous interviews given to satisfy inquiries, supervision was given to the circulation of the report of the Canadian Economic Commission to Siberia; the Government was provided with a complete set of the proofs of the new *Trade Index* and a separate list of all the

Assistance for Canadian Manufacturers Transacting Business in the United States

Canadian manufacturers who encounter difficulties when transacting business in the United States will find that the Canadian War Mission in Washington can in many instances render valuable assistance.

Offices of the Mission are located in the Munsey Building, Washington, D.C., and Mr. M. M. Mahoney, the Secretary, is constantly in touch with the various Departments of the United States Government, thus enabling him to intercede successfully in the interests of Canadian business houses.

Members desiring to take advantage of this service should communicate direct with Mr. Mahoney, outlining fully all facts in the case; or, if they desire, the Association will be glad to take the matter up on their behalf.

articles made in Canada for the first time within the last three years; the Censor and Statistics Bureau was supplied with list of manufacturers in Canada and through the facilities at its disposal for *Trade Index* work the committee were able to supply the Membership Committee with a complete non-members' list.

Appreciation of services of the Committee in getting foreign commercial reports has been exemplified by their increasing use. An opportunity has been presented to strengthen its work in this connection at small cost, and the Committee is strongly of the opinion that it should be taken advantage of. To this end it has recommended to the Executive Committee the expenditure of the nominal sum required.

The Committee has in the past gathered information as to the quantities and values of specific goods annually consumed in Canada for manufacturers who are seriously proposing to manufacture goods not previously made in Canada or not in sufficient quantity to supply the bulk of the domestic demand. The Committee was impressed with the importance of this beneficial work and recommended that it be continued to the limit of the facilities at their disposal.

Committee on Smoke By-Law

The effect of the present shortage of coal has acted adversely on many factories and industries. The Toronto Branch Executive has, accordingly, found it expedient to appoint a sub-committee consisting of Messrs. Ed. J. Freyseng and T. F. Monypenny, to co-operate with the Commissioner of Property of the City of Toronto in relation to alleged offences against the Smoke By-law. It was complained by the city authorities that, while a great many factories and industries are at present complying with the by-law, there are others that are making little or no attempt to live up to the regulations.

The sub-committee promptly arranged for a conference with Commissioner Chisholm and representatives of nine Toronto corporations, against which complaints had been made, with the result that all the cases have been postponed, *sine die*. The manufacturers intend, meantime, to adopt such remedies as may be practicable. It transpired that from thirty to forty prosecutions a year are instituted to compel the prevention of smoke, and fines imposed, but without perceptible improvement.

The Committee is giving consideration to the desirability of approaching the city authorities with a view to the rescission or modification of harassing invidious restrictions calculated to discourage industries from locating in this district.

New Branches in Ontario

As the result of intensive organization following upon the divisional organization, definite steps are now being taken to form new district branches in Kitchener, Peterboro, Galt and Windsor, and the Secretary is preparing an itinerary for the Head Office officials to visit these centres.

Bulk Sales Act

At the Conference of Commissioners on Uniformity of Legislation in Canada, held in Winnipeg, August 26th-29th, 1919, the draft of a model Bulk Sales Act was considered by a Committee which recommended that the principle of the draft be approved, and that the draft be recommitted to the Committee having the matter in charge for further consideration. The draft will be again presented for consideration at the next Annual Meeting of the Conference, and meantime, the Committee was authorized to submit the draft to all interested parties. Our Legislation Committee will give careful consideration to the draft and report to the Council.

Canadian Industries Exhibition

The Association is co-operating with the managers of the Canadian Industries Exhibition, Royal Agricultural Hall, London, England, on the recommendation of Mr. Lloyd Harris, Chairman of the Canadian Mission in London. A circular has been issued to all our members asking them to direct inquiries and applications for space to Mr. O. C. Pease, 41 Victoria St., Toronto, who is the representative for the exhibition authorities in Canada. Fuller particulars regarding the Exhibition appear elsewhere in this number.

Visit of British Empire Delegates

On the suggestion of the Association, the Canadian Government issued an invitation to the delegates from all the countries of the British Empire who are now attending the first International Labour Conference in Washington, to visit Canada at the conclusion of the Conference. The invitation was accepted and tentative arrangements were being made, but owing to the outbreak of the smallpox epidemic in Ontario, these arrangemetns were cancelled as the delegates decided not to come.

Canadian Association of Advertisers

Closer co-operation with the Canadian Manufacturers' Association is desired by the Association of Canadian Advertisers, who, at their annual meeting in Toronto, on November 20 and 21, appointed a special committee to work with the C.M.A. in all matters pertaining to advertising and marketing. Good service has already been rendered to this Association by the A.C.A., in giving expert advice on various advertising propositions which have come up from time to time, and it is the desire to extend this service. At the annual dinner of the A.C.A., held at the King Edward Hotel, Toronto, on the evening of November

20, the principal speaker was Mr. Lloyd Harris, who dealt with the work of the Canadian Mission in London. He was followed by Mr. H. Macdonald, secretary of the Ontario Division, C.M.A., who gave the company present a comprehensive account of what this Association is doing, through INDUSTRIAL CANADA, the *Canadian Trade Index* and other channels, to promote the interests of Canadian industry.

Certificates of Membership

The Executive Committee have decided that the large framed certificates of membership in this Association should be issued in the name of a firm only, and not in the name of the individual, and that these certificates should be signed by the President and the General Manager. They have arranged further that small pocket certificates should be printed and issued to individual members, and that these should be signed by the General Manager and General Secretary. They have also instructed that before a resignation is accepted all certificates of membership must be returned to the Head Office of the Association to be cancelled.

The Use of Canadian Goods

It has been brought to the attention of the Executive Committee that the employment of United States engineers and architects on construction work in this country is resulting in the increased use of articles manufactured in the United States in preference to articles manufactured in this country. The Committee have instructed that a circular be sent to all members of the Association, asking them to insist that Canadian goods be used in all construction work within their control, and also that the chief engineering firms, architects and others be communicated with and asked to specify Canadian material so far as possible.

British Excess Profits Tax

Certain Canadian manufacturers who are carrying on export trade with Great Britain and who have already been taxed under the Canadian Business Profits War Tax Act, have been called upon to pay taxes in Great Britain under the Excess Profits Duty in that country on business they have done there. The Executive Committee in its report to the Executive Council recommended that a strong deputation of those interested should interview the Dominion Government immediately and lay the case of these Canadian exporters before the Minister of Finance. This action was agreed upon by the Council.

Our Opportunities in China

Reporting to the head office from Vancouver, Hugh Dalton, Secretary of the Pacific Division, says:—"Trade Commissioners and others arriving in Vancouver from the Orient continue to emphasize the immense possibilities of the business to be done by Canadian manufacturers in Japan and China, but they invariably point out that Canadian manufacturers will only obtain their proper share of this business by following the example of the American manufacturers and sending their own representatives to the Orient. The Chinese Consul here, who has recently returned from spending five months in China, tells me that there is a vast number of representatives of American manufacturers now in China. He says that the Chinese, from long and satisfactory experience with British manufacturers, would prefer to do business with the latter, but on account of the present inability of British manufacturers to supply the wants of the Chinese market, they would like to do business with Canada in preference to the United States. If our manufacturers, however, do not go after the business, it will almost certainly go to the Americans. The Chinese Consul tells me that the Chinese boycott of Japanese goods and ships is growing rather than diminishing, which is an additional reason why our manufacturers should make greater efforts to get into the Chinese market, as that market is much larger and more satisfactory to deal with (as I think Captain Robert Dollar has already told you) than the Japanese market."

Cheap Power for Maritime Provinces

During the meeting of the Executive Council of the Association in St. John, N.B., on October 1st, and the subsequent trip of various members of the Association and Officials through the Maritime Provinces, one of the chief questions discussed was the problem of securing an adequate supply of cheap power for these Provinces. The interest of our Maritime Provinces' members was quickened by the descriptions furnished by Ontario members of the beneficient results to industry which had been obtained by the introduction and development of cheap power in Ontario.

At the meeting of the Maritime Division of the Association, held in Halifax on May 28th, 1919, the Governments of the Maritime Provinces were memorialized by resolution with the request that every effort should be made to investigate the possibilities of developing cheap power in the Maritime Provinces, and to offer every facility and encouragement to assist in such development. It was

The Magic Key

How the cartoonist of the London "World" pictures the labor situation

PETERBORO WON FIRST HONORS

The first city to report a One Hundred Per Cent. total in the big membership drive of December 1 to 6 was Peterboro, and the total was gained on the very first day of the campaign. With six new memberships secured, every one of the 32 manufacturing establishments of the city is now a member of the C.M.A. This fine achievement reflects great credit on the spirit of the Peterboro manufacturers, while special thanks are due to Messrs. W. R. Breyfoyle of the De Laval Co., and Edgar Worth of Canadian Woollens, Limited, for their leadership in the good work.

finally decided, on the request of Mr. R. H. MacKay of New Glasgow, one of our members, who is also a member of the Nova Scotia Power Commission, to ask the Executive Council of the Association to endorse the resolution which had been submitted by the Maritime Division to the Governments of Nova Scotia and New Brunswick on the subject of power. This was done at the October meeting of Council, and a copy of the resolution was forwarded to the Premiers of New Brunswick and Nova Scotia. A reply has been received from the Premier of New Brunswick stating that the subject is being considered and that legislation will probably be introduced during the coming Session bearing on the matter. A letter has also been received from Mr. MacKay on behalf of the Nova Scotia Power Commission, thanking the Association for its assistance.

Educational Industrial Films

A considerable quantity of information has been gathered by the Commercial Intelligence Department relating to the use of industrial films for educational purposes through moving picture houses in Canada and elsewhere. The Commercial Intelligence Committee at its last meeting discussed the subject of motion films and was of the opinion that a purely advertising film concerned only individual manufacturers, while the educational film from which all direct advertising has been deleted might be of interest to the sections or groups of the Association. Its recommendation is, therefore, that the Secretary convey the information at his disposal in a report to the groups and sections for their consideration.

The Exchange Situation

The attention of the Commercial Intelligence Committee has been called recently to the practice of some export houses and others insisting on payments from abroad being made in New York funds. It was pointed out that from both a business and patriotic point of view, there was much to be deplored in this practice. The Committee has accordingly advised the issuance of a circular to the membership pointing out the value of making quotations on the basis of Canadian exchange and accepting payment for goods in Canadian funds.

Conditional Sales Act

A Committee of the Conference on the Uniformity of Legislation in Canada, held in Winnipeg, on 26th-29th August last, reported that having considered section by section the draft of a model Conditional Sales Act, they recommend that the draft should be referred to the New Brunswick Commissioners with instructions to redraft the statute, and submit it to the Commissioners from the other provinces, and subsequently to report thereon to the Conference. One Legislation Committee will report on the subject.

Technical School Scholarships

One of the most valuable services rendered by members of the Toronto Branch C.M.A., is the giving of scholarships to pupils of the Central Technical School. Referring to these scholarships at the Annual Commencement of the school held on November 21, Dr. A. C. McKay, the principal, said that the special day courses have been well attended and that, as far as possible, the classes are divided to give definite practical instruction in the closely related industries. From both regular and special day classes, there is a constant stream of young people entering industrial life, with an ever-increasing equipment of mental culture and practical efficiency, the scholarships given by the manufacturers being a strong factor in helping the school to hold young people until they have secured an adequate preparation for life.

The evening classes have continued for some years to grow in numbers and indications point to an immediate demand on the school space and equipment, far in excess of what is at present available. The total enrolment in the Central Technical School, including 930 returned soldiers, now is 8.895. The following are the scholarships donated by members of the Toronto Branch C.M.A., to the Central Technical School in 1919:

Name of Donor.	Scholarships.	Amount.
Anthes Foundry, Ltd.	1	$25 00
Banfield, W. H. Sons. Ltd.	1	25 00
Beardmore Belting Co., Ltd.	1	25 00
Boeckh Co., Ltd.	1	25 00
Booth Coulter Copper & Brass Co., Ltd.	1	25 00
British American Oil Co., Ltd.	2	50 00
Brown Bros., Ltd.	1	25 00
Canadian, W. A. Rogers Co.	1	25 00
Christie Brown & Co., Ltd.	1	25 00
Clarke, A. R., & Co., Ltd.	1	25 00
Consumers Gas Co. of Toronto	1	25 00
Davies, Wm., Co., Ltd.	1	25 00
Dodge Mfg. Co., Ltd.	1	25 00
Dunlop Tire & Rubber Co., Ltd.	1	25 00
Eaton, T., Co., Ltd.	2	50 00
Ellis, John F.	1	25 00
Firstbrook Bros., Ltd.	1	25 00
Freyseng, Ed. J.	1	25 00
Goodyear Tire & Rubber Co., Ltd.	1	25 00
Gourlay, R. S.	1	25 00
Graves Bigwood Co.	1	25 00
Gurney Foundry Co., Ltd.	1	25 00
Gutta Percha & Rubber Ltd.	1	25 00
Hamilton Gear & Machine Co.	1	25 00
Hunter Rose Co.	1	25 00
Harris Abattoir Co., Ltd.	2	50 00
Imperial Oil Co., Ltd.	1	25 00
Imperial Varnish & Color Co., Ltd.	1	25 00
Inglis, John, Co., Ltd.	1	25 00
International Business Machines Co., Ltd.	1	25 00
Lever Bros., Ltd.	1	25 00
Laidlaw, R., Lumber Co., Ltd.	1	25 00
Lowndes Co., Ltd.	1	25 00
Massey-Harris Co., Ltd.	2	50 00
McGregor & McIntyre, Ltd.	1	25 00
Roden Bros., Ltd.	1	25 00
Rolph Clark Stone, Ltd.	1	25 00
Rous & Mann, Ltd.	1	25 00
Southam Press, Ltd.	1	25 00
Scythes & Co., Ltd.	1	25 00
Stauntons, Ltd.	1	25 00
Steel Co. of Canada, Ltd.	1	25 00
Toronto Carpet Mfg. Co., Ltd.	1	25 00
Toronto Hardware Mfg. Co.	1	25 00
Toronto Plate Glass Mfg. Co., Ltd.	1	25 00
Toronto Salt Works, Ltd.	1	25 00
Turnbull Elevator Mfg. Co., Ltd.	1	25 00
Warwick Bros. & Rutter, Ltd.	1	25 00
	52	$1,300 00

In addition a sum approximately $200 was distributed as prizes for students in the evening schools by the Toronto Branch C.M.A.

The Toronto Branch was represented at the Annual Commencement by George Brigden, Chairman Educational

Committee; J. S. McKinnon, First Vice-President; T. F. Monypenny; Ed. J. Freyseng and H. Macdonald, Secretary. The scholarships to the day classes were presented by Mr. Moneypenny and the prizes to the evening classes by James Richards, Chairman Advisory Industrial Committee, and George Brigden. Additional interest was lent to the occasion by the presence of Hon. R. H. Grant, the new Minister of Education of Ontario, who gave assurance of his sympathy and interest in everything that advanced the educational interests of the Province.

Australasian Markets

The Association has been recently in receipt of a communication from the New Zealand Loan and Mercantile Agency Co., Limited, with head office in London, England, relative to the establishment of trade relations between Canada and Australia and New Zealand. The company are prepared to discuss with Canadian manufacturers exclusive agency arrangements for any of the following commodities: Agricultural implements, binder twine, brushes, butter boxes, cement, confectionery, engines, fencing, roofing, household ranges, leather substitutes, pianos, pumps, tires and rubber goods, tools and waggons. The company was incorporated in 1894; they have a paid-up capital of ten million pounds, and operate twenty depots in Australia and ten in New Zealand, where they buy from and sell to the farmers.

Membership Campaign in Ontario

The Executive Committee of the Ontario Division at its last meeting appointed Mr. W. C. Coulter and the Secretary Mr. H. Macdonald, a Committee, to divide the province into districts or zones and arranged that a representative manufacturer in each such district should be requested to convene a meeting of all manufacturers who are members within each territory so that a local committee for the campaign might be organized with a district chairman and secretary.

It was also arranged that a circular should be mailed from the Head Office in sufficient time to reach all members, prior to December 1st, featuring the President's appeal at the Annual Meeting for each present member to secure one new member this year. Literature was also prepared and forwarded to all non-members to prepare them for the canvass.

Addresses Ontario Division

A most gratifying number of members of the Ontario Division turned out to hear Mr. Lloyd Harris, Chairman of the Canadian Mission in London, at a special luncheon held at the Prince George Hotel, Toronto, on Thursday, November 27, at 12.30 noon. The large banquet hall of the hotel was completely filled, over 250 being present, and in the gathering were a large number of out-of-town members. Mr. T. P. Howard presided and with him at the head table were the guest of honor, Mr. Lloyd Harris, and Messrs. J. S. McKinnon, George H. Douglas, C. Howard Smith, F. W. Stewart, Carl Riordon, Colonel R. W. Leonard, S. J. Williams, W. C. Coulter and J. E. Walsh. Mr. Harris spoke for upwards of an hour and held the close attention of the members throughout, as he gave a clear and comprehensive outline of Canada's foreign trade opportunities and the obligations resting on the country.

Activities of the Quebec Division in November

By. W P. HUGHES
Secretary, Quebec Division

DURING the month of November the Montreal office continued to be the rallying centre for a large number of Trade Section meetings. Several of the more active of these local bodies are meeting more or less regularly at definite intervals, and the tendency to establish this practice seems general in this locality. At least one of these groups meets in the office every week. It is a hopeful sign that manufacturers are learning to secure for themselves the benefits of such frequent conferences, and every encouragement is being given to this movement by the local organization.

The November meeting of the Executive Committee was held on Thursday, the 20th. At this meeting eight applications for membership were submitted, and plans concluded for the big membership drive during the first week of December. The eight applications thus recommended to the Central Executive for final approval, were as follows:

La Gerbe d'Or, Ltd., Terrebonne, Que.
The Victoriaville Furniture Co., Victoriaville, Que.
Victoria Hide & Skin Co., Victoriaville, Que.
Canada Broom Co., Montreal.
Casavant Freres (C. J. Laframboise, 2nd), St. Hyacinthe.
Phœnix Bridge & Iron Works (Wm. D'Oyley Hutchins, 2nd), Montreal.
Parker, Irwin, Ltd., Montreal.
Trudeau Carriage, Ltd., Montreal.

For the membership campaign in December the province has been organized and canvassers appointed. The three branch organizations within the province are made responsible for the territory within their jurisdiction. Prominent members have been written to in the various centres outside of the branch districts, and the ready response from these members to undertake the work of canvassing prospective members in their vicinity has been most gratifying.

In Montreal the city has been divided into five sections, and each of these will be canvassed by a team under the leadership of one of the members of the local Reception and Membership Committee. Reports will be collected in the local office each night and wired to the head office.

Arrangements have been made so that the campaign will receive widespread publicity throughout the province through the medium of the press.

Meetings have also been arranged at different points where a number of prospective members could be gathered together. Local members are enthusiastic for a hundred per cent. membership within the province, and the energy with which the campaign will be carried on will undoubtedly lead to most satisfactory results.

It was also decided at the meeting of the Executive to hold a general meeting of the Montreal Branch with an informal dinner on the evening of December 11th. The Reception Committee has been fortunate enough to secure Mr. E. W. Beatty, K.C., President of the Canadian Pacific Railway, to address the meeting, and one of the most profitable evenings which the members have ever enjoyed is looked forward to.

The Branch Executive gave its support, and appointed the Chairman, Lt.-Col. W. J. Sadler, as the branch representative

in connection with a movement to establish daylight saving for Montreal as a permanent factor each year. This movement has been started by the Canadian Club of Montreal, who have called for representatives to be appointed by the larger public bodies in this city, and it is expected that in the near future this joint committee will meet and formulate its plans for action.

Messrs. J. R. K. Bristol and S. B. Brown, the heads of the Tariff and Transportation Departments, respectively, visited the office on Wednesday, November 12th, and were able to bring the services of these departments to the direct problems of a considerable number of our branch members.

Messrs. S. B. Brown and G. P. Ruickbie of the Transportation Department, were again in Montreal on Thursday and Friday, the 27th and 28th instant, in connection with the meeting of the pulp and paper manufacturers, to study the question of freight rates on newsprint. Valuable information was collected on this subject which, it is understood, will be presented to the authorities in Ottawa in the near future.

On Tuesday, the 25th instant, a delegation, consisting of Mr. T. P. Howard, President of the Association; F. W. Stewart, Vice-Chairman of the Branch; Messrs. T. O'Reilly (Gillette Safety Razor Co. of Canada, Ltd.), B. W. Coghlin (B. J. Coghlin & Co.), K. W. Blackwell (Canadian Car & Foundry Co., Ltd.), Walter Ramsay (A. Ramsay & Son Co.), J. L. Waldie (Canadian Tube & Iron Co.), went to Ottawa, where they were joined by the members from Ontario in an interview with the Government, when the appointment of a Permanent Tariff Board was strongly urged. It is earnestly hoped by local members that their efforts were successful in persuading the Government to make this appointment, for it is felt that it is only in this way that the burning question of the tariff can be scientifically and satisfactorily settled.

Some fifteen members of the Executive Committee entertained at an informal luncheon in the Windsor Hotel on October 30th last Mr. Harrison Watson, Canadian Government Trade Commissioner in London, Eng. Mr. Watson has been in a position to secure much valuable information on the question of trade with the Mother Country, and the discussion which followed the luncheon was greatly appreciated by the local members.

The Work of Canada's Trade Commissioners

By J. M. McINTOSH
Manager, Trade Sections Department, C.M.A.

IT was a wise step on the part of the Department of Trade and Commerce to recall the Trade Commissioners from abroad as soon as practicable following the cessation of hostilities, so that they might take stock of new developments in Canadian industry and that our manufacturers might profit from the exchange of information in respect to the markets in which the services represent.

The Commissioners who have been in Canada this year are: J. W. Ross, China; B. S. Webb, Argentine Republic; D. H. Ross, Australia; W. J. Egan, South Africa; W. A. Beddoe, New Zealand; G. B. Johnson, Brazil; Harrison Watson, United Kingdom; J. E. Ray, Manchester, Eng.; Phillippe Roy, France; and Hon. Raymond Hubbard, Siberia.

In order that we may link these Commissioners with the development in trade between Canada and the countries in which they are located, the exports of Canadian produce in the fiscal years ending March 31st 1914 and 1919 are produced below:

	Exports.	
	1914	1919
United Kingdom	$222,300,000	$532,900,000
Australia	4,700,000	14,000,000
New Zealand	1,900,000	6,200,000
South Africa	3,800,000	12,000,000
Argentine Republic	2,100,000	4,600,000
Brazil	800,000	4,000,000
China	500,000	2,900,000
Russia	1,400,000	6,200,000
France	3,800,000	96,100,000
	$241,300,000	$678,900,000

It will be observed that there are enormous increases and in respect to this development the Commissioners have played a very important part. While in some cases these increases are in part due, undoubtedly, to war business, in the case of the United Kingdom, New Zealand, Argentine Republic and Russia, figures for the six months subsequent to March 31st indicate a still further improvement. This signifies that the impetus which our trade has gained through war business is likely to continue. Australia, South Africa, Brazil, China, and France, show a slight falling off.

The Association's facilities at all Branches have been placed unreservedly at the disposal of and have been taken advantage by practically all these Commissioners. With the exception of the Commissioners from Brazil, Manchester, France, and Siberia, they have toured the country from coast to coast. Meetings in some cases have been arranged and explanatory addresses given, but the most fruitful results have been attained from personal interviews. Our members within convenient reach have been notified, interviews arranged, and plants visited. It may be said, due to the nature of the export business, that probably the greatest interest on the part of our members was evinced in the South American, Australian, New Zealand, and South African fields. Messrs. Webb, Egan, and D. H. Ross spent about one month each in Toronto and Montreal, the other Commissioners being able to cover the ground in less time. They made proportionately shorter visits in Amherst, Hamilton, Winnipeg, and Vancouver, where our Secretaries were instrumental in placing them in touch with members. In addition to this they visited many of the smaller cities.

Visits have been Opportune

Having regard to the importance of developing trade abroad, the visits of these Commissioners have been particularly opportune. The publicity gained and interest aroused have fitted in most admirably with the growing desire upon the part of members for foreign outlets and from these visits it is quite safe to say that a very large amount of new business will be developed.

The Commissioners are a unit in stating that direct representation is absolutely essential. It is quite impracticable to expect to develop business by correspondence when so much time is lost in the transmission of the mails and too many misunderstandings are likely to arise. Such a method serves rather to prejudice business than to develop it.

Emphasis was laid upon the necessity for consistent support of all agencies appointed. Export trade should not be

considered as a stop-gap to take care of periods of depression in the home market. Failure to keep up a continuity of supply embarrasses the agent and discredits the exporter. All the Commissioners were agreed that the inauguration of preferential treatment by the United Kingdom would reflect itself in the development of Empire trade. South African markets, in which Japan has hitherto enjoyed a large trade, are now showing a prejudice against Japanese goods and agents of Japanese firms are trying to unload, and are taking on British connections instead.

Object to American Connections

The Commissioners from the Southern Dominions are most emphatic in their objection to Canadian factories attempting to deal through American connections. While the United States enjoys large trade in these markets there are many buyers who prefer to deal with Canadian houses. The imperial sentiment thus manifested is not encouraged, while inquiries addressed to Canadian houses are answered through head offices in the United States or by United States exporting agencies.

With particular reference to South Africa, Australia, and New Zealand, it should be borne in mind that, as Commissioners are the only official Canadian representatives there, their offices become to some extent somewhat diplomatic and in consequence much depends upon the relationships which they may develop with the members of the Governments and other public officials. These relationships may have important results in respect to the further extension of preferential treatment and the improvement of transportation conditions.

The Commissioners are in a particularly good position to procure confidential information in respect to the business integrity and financial capacity of agents and importers in their territories and Canadian exporters are well advised in consulting them and keeping in constant touch with them.

The Commissioners have all expressed themselves as particularly well pleased with the facilities placed at their disposal by our Secretaries and the attention paid to them.

Mr. Dalton, the Secretary of the Pacific Division, whose report upon the Commissioners' visits is most complete, brings up a matter of immediate and pressing interest to the shippers at the coast; i.e., the establishment of a better steamship service between Vancouver and South Africa on the one hand and Australia and New Zealand on the other. These matters have been the subject of discussion between Mr. Dalton and Messrs. Egan, Rose and Beddoe, so that with the work they may do upon return to their own territories the object sought may be more rapidly advanced. Mr. Dalton's report upon this phase is of such importance that it is reproduced herewith.

In conclusion the opinion is expressed in respect to those of the staff who have come in contact with the Commissioners of a wholesome regard for their business ability and the importance of the service they are in a position to render has been firmly established. In respect to those of our members who have met them, much information of value has been exchanged and in many cases arrangements for representation effected. In respect to the Commissioners themselves they have seen the development in the capacity of our plants during the years since they were last here and are able to go back to their posts and advance our interests with a confidence that is borne of a close and intimate personal touch.

Extract from the Report of Mr. Dalton

In regard to trade with South Africa, there is a vast field in that country for the manufacturers of this Province, but very little can be accomplished in that direction until we have a direct steamer service from this coast to South African ports. The general run of manufactured articles which could be exported to South Africa must now be shipped by rail to the Atlantic seaboard, and thence by steamer, and no commodities, such as knitted goods or boots and shoes, which we make here and for which there is a demand in South Africa, can stand a rail charge of $4 or $5 per 100-lbs. and hope to compete with Eastern Canadian or American manufactures.

Large quantities of box shooks are now being shipped from this Province to South Africa via Southern American Atlantic ports, but a much larger business could be done were there a direct line of steamers from here. British Columbia lumber has been sold for a great many years in South Africa, but only in cargo lots, but a much greater volume of lumber will move from here to that country when we have direct steamship service, and manufacturers are consequently able to ship in less-than-cargo quantities.

Two of the officials of the Canadian Mercantile Marine are now on this coast, and from interviews with them it is reasonable to expect that we will before many months have the desired steamship service. The principal obstacle to the establishment of this service is the lack of return cargo from South Africa to this coast, but this is a matter which Mr. Egan has in hand, and he is going thoroughly into the same immediately on his return to Cape Town, and I am optimistic that this difficulty will be overcome.

Preference for Australia

In regard to trade with Australia and New Zealand, there is already, as you know, a very large volume of business being done between Canadian ports and those countries, particularly with New Zealand. Canada enjoys a trade preference in both South Africa and New Zealand, and negotiations are now under way for the establishment of a similar preference in Australia. Such a preference would be of direct benefit to Canadian manufacturers in meeting American competition in Australia.

The Canadian Mercantile Marine officials referred to above have announced definitely their intention of placing four 8,100 ton steamers on the route between here and Australia and New Zealand, which will give us a monthly service, commencing in January. Up to the present, there has been but one line of steamers from British Columbia ports to Australasia, viz, that operated by the Union Steamship Company of New Zealand, and these steamers are heavily subsidized by the New Zealand Government, on the understanding that preference would be given to New Zealand shipments, both inwards and outwards. This arrangement means that it is not always easy for those interested in making shipments to or from Australia to secure space. There is every reason to believe that the establishment of the Canadian Mercantile Marine steamers on this route will alter this condition.

Messrs. Beddoe and Ross have taken the keenest interest in the establishment of this Canadian line of steamers as the additional tonnage this will give to their territories will naturally greatly facilitate their efforts to establish Canadian products in Australia and New Zealand.

A cleaning house, 50 x 50 feet, with a capacity of 2,000 bushels of flaxseed per hour, is being erected by the Dominion Linseed Oil Co., St. Boniface, Man. In connection with the cleaning house there is a warehouse and track shed. The cleaning house is being erected to separate wheat and oats from the flaxseed. The whole mill has a capacity of 50 barrels per day of linseed oil, besides oil cake.

Advertising Canada in Motion Pictures

The Story of How the Exhibits and Publicity Bureau of the Department of Trade and Commerce, Ottawa, is Spreading Broadcast Throughout the World by Means of Motion Picture Films, the Gospel of Canada

By RAYMOND S. PECK

Editor of Films, Department of Trade and Commerce, Ottawa

FEW people in Canada realize to what extent motion pictures are being used by the Federal Government to advertise the Dominion, and spread Canadian publicity broadcast throughout the entire world. Therefore a resumé of what the Exhibits and Publicity Bureau of the Department of Trade and Commerce, Ottawa, has done, and is doing, will, perhaps, come as a pleasant surprise to many prominent Canadian manufacturers and business-men.

This bureau was established in January, 1917, and since that time has grown with amazing rapidity. The bureau now occupies the entire Arnold Building at Kent and Wellington Streets, Ottawa. Here will be found commercial exhibits, purchased by the various trade commissioners, covering products which are imported into the countries in sufficient quantities to warrant the investigation of the trade by Canadian manufacturers.

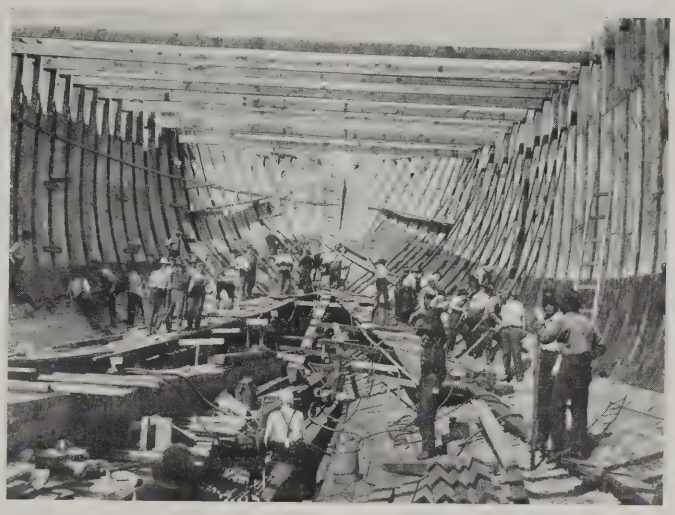
A Finely Equipped Laboratory

However, the greatest and most amazing growth of this new Government Bureau has taken place in that section of the work given over to the production of motion pictures. Here will be found the finest equipped motion picture laboratory in Canada. The most modern equipment and methods are used in the manufacturing of film, with the result that a new standard has been set by this bureau for motion picture production in Canada. When moving picture scenics, industrials and educationals, were being made of such high excellence, it was not long before they attracted the attention of prominent American and Canadian film executives, anxious to secure these series of pictures and exploit them in the moving picture theatres of America on a percentage basis. Ont by one various contracts for the distribution of this series were made, until to-day these Canadian Government films enjoy a world-wide circulation.

In Canada these Government films are shown from coast to coast through the film exchange system operated by the Canadian Universal Film Co., Limited. Invariably they secure "first run" in the best theatres in the leading Canadian cities. In the United States they are shown throughout the length and breadth of the great Republic through the Goldwyn Picture Corporation, and the First National Exhibitors' Circuit, two of the dominating film exchange systems of that country. A contract has also been recently closed by the Government, with Sir William Jury, one of Britain's leading theatrical magnates, whereby he secures the British and European exhibiting rights for these Canadian scenics, industrials, and educationals. Arrangements have also been effected whereby the pictures will be shown regularly in the representative theatres of Australia, New Zealand, South Africa, and other foreign countries where Canada has trade commissioner representation.

A snappy scene from the film, "Wooden Shipbuilding in Canada," showing logs striking the water at the foot of a chute

Circulation Girdles the Globe



It can be readily understood from these facts concerning distribution of these films, that the circulation is world-wide and girdles the globe! And this tremendous circulation is not spasmodic. Every other week the Exhibits and Publicity Bureau sets into circulation one complete reel. Thus, by means of this bi-monthly release schedule, there is a steady and ever-increasing flow of Canadian propaganda being sown broadcast throughout the globe. The motion picture speaks a universal language. Truly Babel crumbles before the motion picture screen! The motion picture has rightly been termed the World's University, and one prominent British statesman has called the screen "the blackboard of the future."

Some conception of the tremendous growth of the motion picture interests can be grasped, when it is stated—and truthfully so—that it is now America's Fifth Industry! Lloyd George has said of the film industry: "I desire to express to the film industry of Britain my sincere appreciation of their effort to help the Government during the war. Your theatres are not only recognized places for the amusement of the people, but the film is a powerful force for the education of the people to a rational, happy and peaceful mode of living and working." Recently the Exhibits and Publicity Bureau produced a reel of film which was titled "Peace Hath Her Victories," and dealt with Victory Year at the World's Greatest Annual Fair—the Canadian National Exhibition. The subject was treated as a national achievement that Canadians could well be proud of. This film is now being shown throughout Canada, and a copy has already been sent overseas to Sir William Jury's film company for British and European distribution, while the United States will soon have its copy! Thus the message of Canadianism is carried throughout the entire world.

Probably the outstanding feature of this series of "Seeing Canada" reels, from a film executive's viewpoint, is the high grade of workmanship and artistry achieved and maintained. Competent film critics have

stated that these films can be classed with the finest of similar film products being produced anywhere. An American who occupies a responsible executive position in the Canadian film area pronounced the "Algonquin Park" picture—a recent mid-summer release, the finest scenic he had ever seen, and was anxious to play it again in his theatre in Toronto—which is a precedent for a one-reel scenic film!

It is largely through the high standard of production that the bureau has been able to get such tremendous circulation, because film men have had no difficulty in merchandising the product to the exhibitors or owners of theatres, both here and abroad, at a good rental figure.

Another scene from the film "Wooden Shipbuilding in Canada," showing small army of workmen in hull of a ship

Another phase of the work of the bureau is the showing of these pictures from time to time, before gatherings in schools, churches, community centres, rotary and kindred organizations and boards of trade and other civic bodies. A lecturer is constantly employed by the bureau in this work, with Canada as his "stamping ground." A prominent Canadian business man, who is the executive head of a large organization said: "I was a Four-Minute Man during the bond campaigns, and in that experience I discovered the wonderful power that films have for visual instruction—something which I had always under-estimated!"

The purely amusement end of the film business had reached powerful proportions. I firmly believe the next great development in this Fifth Industry will be along commercial and educational lines. Already the movement in that direction has set in, in a manner that is most pronounced. The certain demand for films for non-theatrical purposes is growing larger every day, and the market is very barren of good material to meet that demand. The demand comes from churches, schools, associations, institutions, and industrial organizations, not alone in Canada, but throughout the world. The Dominion of Canada has most certainly taken a prominent lead in this work, through its Exhibits and Publicity Bureau of the Department of Trade and Commerce. In days gone by tons of immigration literature and propaganda in all forms have been scattered over the Seven Seas—but now the narrow strip of celluloid film, barely more than an inch wide, is winding itself round and round this old globe of ours, and tightening its hold more than ever on the great masses of the world's inhabitants. Canada is taking a prominent part in getting a strangle-hold on the world's attention by means of motion pictures!

Progress Towards Uniformity of Legislation

By H. MACDONALD

Secretary, Legal Department, Canadian Manufacturers' Association

IT has long been generally recognized that the independent action of the various provincial legislatures has resulted in a diversity of legislation which, especially with regard to commercial law, raises a serious obstacle to commercial intercourse between the different parts of the Dominion, and is a source of embarrassment to British and foreign merchants doing business in Canada. In the United States, where a similar, but perhaps more complicated situation exists, work of great value has been done by the "National Conference of Commissioners on Uniform State Laws." For the past twenty-eight years, these commissioners have met annually and have drafted various uniform statutes and the subsequent adoption by many of the state legislatures of these statutes has secured a substantial measure of uniformity on various subjects.

The obvious benefits resulting from the meetings of the state commissioners in the United States suggested the advisability of similar action being taken in Canada, and on the recommendation of the Council of the Canadian Bar Association, several of the provinces passed statutes providing for the appointment of commissioners to attend a conference of commissioners from the different provinces, for the purpose of promoting uniformity of legislation in the provinces. The Canadian Manufacturers Association has long evinced a deep interest in the subject of uniformity of provincial laws and has kept in close touch with the work of the commissioners, with a view, as far as possible, to submit practical suggestions from time to time, which would not only be of assistance to the commissioners but of special benefit to Canadian manufacturers.

The first meeting of the commissioners appointed under these statutes and of representatives from those provinces in which no provision has been made for the formal appointment of commissioners, took place in Montreal on the 2nd day of September, 1918, and at this meeting the "Conference of Commissioners on Uniformity of Legislation in Canada" was organized. Although the work of the commissioners at their first meeting was necessarily of a tentative and preliminary character, provision was made for the consideration of various subjects by committees during the ensuing year.

The second annual meeting of the conference took place in Winnipeg on the 26-29th August, 1919. Several sessions were devoted to the consideration of drafts of model statutes, relating, *inter alia*, to the following subjects: Bulk sales, conditional sales, fire insurance policies. The conference also considered and adopted the report of its committees on the following subjects: Legislative drafting, sales of goods, and partnership.

The English Sale of Goods Act, 1893, has been adopted in New Brunswick and Prince Edward Island as a result of the first meeting of the conference. This statute is now in

force in all the provinces of Canada except Ontario and Quebec. The English Factors Act, 1889, has also been adopted in New Brunswick, and is now in force in six provinces.

It should be remarked that the appointment of commissioners, who receive no remuneration for their services, does not bind any province to accept any conclusions arrived at by the conference, and that such uniformity of legislation as may be secured by the conference will depend upon the subsequent voluntary acceptance by the provincial legislatures of the recommendations of the conference. It will be obvious, therefore, that the Legislation Committee of the Canadian Manufacturers Association has a very important function to discharge in carefully studying such legislation and submitting to the various provinces relevant considerations for its adoption, where such may appear to be of special benefit to the manufacturers.

Canada's Pressing Fuel Problem and a Way Out

By LOUIS SIMPSON
Member C.M.I. and A.E.S., Industrial Engineer

FEW manufacturers, at any rate amongst those operating in Eastern Canada, appear to have realized the serious position at present existing, as regards the present and future supply of fuel.

Writers, in discussing this question, have not made sufficiently clear the fact, well known to those who have made a study of Canada's fuel supply, that whilst Canada may possess an unusually large proportion of the world's still stored wealth of coal, such coal is often so located, and much of it is of such a quality, that it is of no practical use at this time.

Canada's supplies of useable coal are found in the far east or in the far west of the Dominion. The cost of transportation limits the distribution of this coal. None of it is carried into the Province of Ontario, only a small quantity is brought into the manufacturing sections of the Province of Quebec.

Of the coal, known to exist in the east, 70 per cent. is under the waters of the Atlantic, and, therefore, can only be mined at a greatly enhanced cost. One company owns a large portion of this coal field and uses a very considerable portion of its output for its own use in metallurgical operations.

The coal of the middle west provinces of Canada is largely lignite, and, because of its peculiar characteristics, can only be used as fuel under certain conditions, which conditions are not present in the provinces of Ontario and of Quebec. The manufacturers of the Province of Ontario are entirely dependent, and the manufacturers of the Province of Quebec are very largely dependent upon supplies of coal imported into Canada from the United States.

These supplies, owing to labor troubles in the States, are now cut off. When once more available, they will only be available at a price much higher than has hitherto been paid, a price immensely higher than that paid before the war.

Not only does the cost of fuel directly affect the cost of production, but also indirectly, because it increases the cost of living, and so far has compelled, and will continue to compel, the work people to demand high wages.

These are the bald facts, plainly stated.

The possible and probable stoppage of industries through lack of fuel and the distress caused by an inadequate supply of fuel during the cold winter months, are matters of unusually serious moment.

The future high cost of fuel will, of necessity, increase the cost of transportation, and the Canadian manufacturer seems likely to have to face a handicap the like of which he has never before experienced. It is estimated that the Canadian railways burn one half of the soft coal used in Canada; also that the bunker requirements (that is coal used by steamships, etc.), is 2,000,000 tons per year.

The consumption of coal by the railways, might, with advantage, be appreciably reduced by the electrification of certain of Canada's main lines of railways, but such electrification would take considerable time to effect, and then could only be done with a very large expenditure of capital.

It has been advanced that, by exploitation of the peat bogs of Canada, the fuel shortage might be ameliorated. Let not the fuel question, as a whole, be thus camouflaged. The influence of any peat fuel that may from time to time be marketed will, at the best, be slight and local, and will affect the consumption of hard coal, rather than that of soft coal. Further, it has not yet been proven, although lots of money has been expended in trying to prove it, whether the recovery of peat under Canadian climatic and labor conditions can, to any extent, be economically undertaken. The writer is fearful that the labor conditions in Canada will prevent (apart from other troubles, such as cost of transportation) the marketing of any considerable quantity.

The Dominion Government and certain Provincial Governments have been spending large sums of money in the endeavor to produce from the lignites of central west Canada, a commercial fuel. The results up to date are by no means conclusive, though it is probable that a way will eventually be formed to reach the desired end, but such results can only indirectly aid the manufacturers of Ontario and Quebec.

It is evident, therefore, that a most serious condition of affairs exists, and that the endeavors of the Governments to ameliorate those conditions have, up to date, been more or less failures. It is probably too much to expect politicians to keep themselves posted and up to date in the continued progress made by science, but such an excuse cannot be fairly advanced by the Honorary Advisory Council of Scientific and Industrial Research, in whose hands the Dominion Government placed the direction of the work undertaken upon the lignites. The position of Canada's fuel supply being as indicated, it has seemed surprising that the above-mentioned Council has not called the attention of the public and of the Government to the known and admitted advantages of liquid (oil) fuel. Such fuel can be obtained by retorting the oil-yielding shales, which are to be found amongst the undeveloped natural resources of all the provinces of Canada, and their development and education would have provided a speedy and certain solution of the present and future difficulties.

This article is written for the purpose of discussing the question of fuel supply, but it is only right to state that the Government and also the Advisory Council have had their attention called to the possibilities of this proven supply of liquid fuel, and that on several occasions the Senate passed unanimously a resolution calling upon the Government to take immediate action, with a view of securing the prompt development of these undeveloped national resources, and that neither Government nor Council have done anything.

It is seldom realized that the cost of fuel does not consist, alone, of the money paid for the fuel delivered, but that the cost is the total of several charges of which the cost

delivered is only a part, and though in some cases it may be the major part, yet in others the money paid for labor (which the use of liquid fuel materially reduces), and for storage (the cost of which is also reduced), may be important factors.

Again, when comparing the respective values of different fuel, it is too often overlooked that, whilst a laboratory test may or may not give a true record of the number of British Thermal Units (a measure of heat contained in the sample tested) present in one pound of fuel, with coal, it does not follow that the total B. T. U. in one ton is the product of the B. T. U. multiplied by the pounds contained in one ton. With liquid fuel (oil) such a calculation would be correct, but with coal incorrect, because coal nearly always contains an unknown, but certain, quantity of incombustible rock, the quantity of useless material being more, now, than before the war.

Again, ignoring the certain presence of this rock, the B. T. U. ascertained to be in the coal when compared with the B. T. U. ascertained to be found in the liquid fuel (oil) does not correctly establish their respective values. Under certain known conditions, that too often are found to exist when burning coal, only 20 per cent. of the contained heat units are utilized, whereas, with liquid fuel, 75 per cent. have given useful results. It is evident, therefore, that even were the cost of the heat units contained in the liquid fuel to be greater than that of those contained in the coal, yet because of the increased efficiency obtainable, the liquid fuel would be the more economical fuel. That the many advantages possessed by liquid fuel are at last beginning to be recognized is evident from the action of the U.S.A. Government, who, when building their new merchant marine, adopted liquid fuel. Sir George Hunter of the British Shipbuilding firm of Swan & Hunter, has also lately stated that in his opinion, within two years, all the Trans-Atlantic steamers would be using liquid fuel. It will, doubtless, be asked, why has not liquid fuel been more largely used in Canada than has been the case, up to date. The answer is understandable and to the point and is: Because the benefits that the use of liquid fuel assures have not been understood by the users of fuel, and, also because liquid fuel of the desired quality has not, up to date, been obtainable in Canada, in sufficient and in assured quantities.

Such liquid fuel as has been available, in eastern Canada, has been a by or waste product of oil refineries. It was the refuse from certain operations. It varied in character, according to the quality of the crude oil being fractionated and refined, and according to the process of refining used. Too often it contained a great excess of sulphur, and also of water. It was a *most undesirable product*, and must not be taken as a sample of an up-to-date fuel oil, such as would be accepted by the British Admiralty.

It will naturally be asked why was not the desired quality of fuel oil obtainable? The answer is also understandable: Because, through the persistent refusal of the Dominion Government to permit those, who possessed the necessary capital, and who were prepared to invest in this new industry, to import into Canada the required machinery and material, without having to pay duty and war tax, totalling generally 42½ per cent. upon the cost, capitalists have refused to find the money required.

As the cost of recovering the oil from oil-yielding shales consists largely of interest and depreciation (after payment of wages and taxes), chargeable upon the cost of the works, that will have to be erected, it is evident that the imposition of import duty and war tax, as above stated, is an insurmountable deterrent. During the war the investment of no less than $5,000,000 was lost to Canada, because the U.S.A. capitalists refused to invest under such conditions. They pointed out that for the privilege of establishing a new industry in Canada, the Government were demanding from them a payment exceeding $1,250,000 and that before their capital was given the opportunity of earning one cent.

It is greatly to the interest of all Canada that not only should the shale deposits, rich in oil, be worked, but also those comparatively lean in oil. The cost of the plant is the one governing factor. It is only by keeping the cost of the several plants within certain limits that beds of shale lean in oil can be profitably worked. It is evident that this possible new industry has been unduly and improperly and very unwisely discriminated against. Canadian manufacturers must have fuel, else they will have to close down their works. It should be made possible for Canadian manufacturers to purchase the fuel they require, and that fuel should be of a good quality and should be obtainable at a reasonable cost, otherwise how can they compete? If ever an industry, at its inception, deserved encouragement, it is this proposed oil shale industry, yet the history of the past eight years gives evidence of a persistent system of discouragement.

It may or may not be news to the readers of INDUSTRIAL CANADA, but it is well to place on record the fact, that through recent inventions, it is now possible to use fuel oil, if of the right quality, in the place of hard coal for domestic purposes, and that such substitution would effect a considerable economy. All that is now required is the supply of oil. If this oil is not now in supply, the fault lies with the Government.

The following statement may be of interest:

1. Fuel oil contains about double the heat values contained in soft coal.
2. It can be delivered, stored and used at a less cost for labor.
3. Its efficiency, upon combustion, is very much higher than that of coal.
4. The capacity of boilers and heaters using fuel oil is greatly increased.
5. When used, there are no cinders or dust to remove.
6. When used, the repairs to boilers and furnaces are less.
7. Whilst, in some cases, it will entirely eliminate the need of hired labor, in all cases, the labor will be greatly reduced and should cost less.
8. When used the steam pressure can be kept constant.
9. Tall chimneys will no longer be needed.
10. Smoke nuisance, with its accompanying cost to the public, would cease.

At present Canada is importing, and has to pay for, nearly $100,000,000 of fuel (coal) and oil. Now that the strike in the United States seems likely to be ended at the cost of an increase in the price of coal exceeding $1.00 per ton, the total mentioned may be exceeded. Would it not be greatly to the advantage of Canada, and certainly to the advantage of every manufacturer in Canada, were this enormous sum kept in Canada, and circulated therein? Then business would boom. Manufacturers, what are you going to do about it?

Nova Scotia Conference

Important Gathering of Business Interests of the Province to Discuss Development Policies

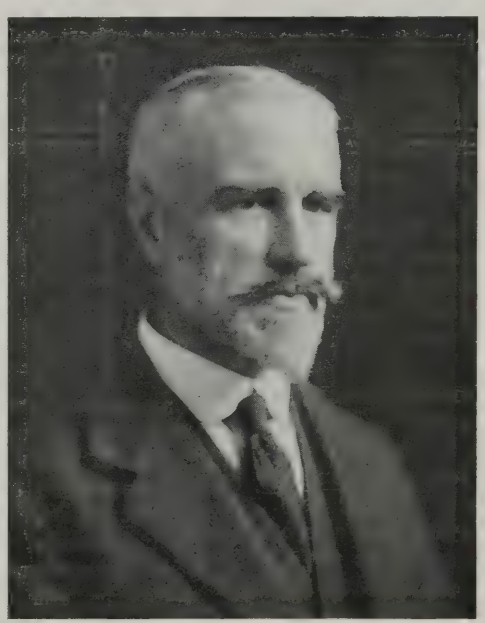
The Head Office is advised by H. R. Thompson, secretary of the Maritime Division, that a big Provincial Conference for Nova Scotia was held in Halifax on December 3 and 4 to discuss proposals for the promotion of provincial interests. On the agenda were such important matters as the organization of a world's fair for Nova Scotia; the practicability of a world's industrial conference as a means of advertising the province's resources; the improvement of transportation facilities; the importance of better highways and the development of water powers. A report of the conference will be published in the January issue.

Value of the Canadian Industries Exhibition

First Time an Exhibition Confined to the Products of One of the Overseas Dominions Has Ever Been Held in England—Canada's Future in World Markets Depends Upon the Energy and Enterprise of Her Manufacturers

By J. M. McINTOSH
Manager, Trade Sections Department, C.M.A.

LLOYD HARRIS says that the greatest thing he did in London was to discover the British Empire and, when he said that, he was not talking in geographical terms but in terms of trade. Everybody knows that the red patches on the world's map are the measure of the Empire's extent, but we are only commencing to learn what they buy and sell.



Canada's place in the Empire trade will depend upon the enterprise and boldness of its traders. Opportunity is knocking at our doors. Everything we have offered for sale abroad has been snapped up and answered with demands for more. Canadians seem to be suffering from an overdose of being surprised at themselves. The fighting ability of Canadians has been proven, but nobody would have believed that we could raise, equip, transport, and maintain an army of half a million until we did it. Nobody would have thought we could manufacture war supplies in tremendous volume until we did it. When the Finance Minister asked us for a loan which we thought would tax us fairly heavily, we came through with twice the amount. Having done these few odd things, what is now left for us to do is to get busy and complete the job by producing in proportion to the markets of the world, which are open to us.

Mr. Harris has told us plainly that millions of dollars worth of business might have accrued to Canada had we been on the spot with our salesmanship and samples. The only way to get business is to go out after it, and if we do not go after it there are others who will.

Mr. Harris has covered his missionary work with a boldness and enterprise which should be characteristic of every Canadian manufacturer. If we indicate that same spirit, results will follow which will make us still further surprised at ourselves.

Were this not coupled up with something practical it might be considered as so much hot air, but the practical part of what we are getting at is to impress upon our manufacturers the value of the Canadian Industries Exhibition in London, England, next June, as a medium for meeting British buyers and distributors to all parts of the Empire.

The Royal Agricultural Hall is one of the largest exhibition buildings in London, and is situated in the heart of the city. It is principally used for exhibition purposes, and the path to it is well worn by buyers of all classes of goods. Mr. Greville Montgomery, whom Mr. Harris has introduced to the Association, is well known as a former member of the British House of Commons, and as the promoter of the biggest exhibitions now controlled by any public company. The Building Trades Exhibition, held biennially, is the largest trades exhibition in the world, and is visited by interested persons from all parts of the British Isles. He is also responsible for the Mining Exhibition, Textile Machinery Exhibition, and Rubber Trades Exhibition. The business which these shows develop would make you dizzy.

Mr. H. G. Montgomery
Promoter of the Canadian Industries Exhibition, London

The Exhibition will be advertised throughout the United Kingdom in trade and daily papers, the use of posters on hoardings and in railway stations. The fact that this will be the first time that an exhibition confined to the products of one of the overseas Dominions has ever been held in England will insure a large attendance.

If Canadian manufacturers will invest a few hundred dollars and go there with their samples, set them up attractively place them in charge of their nicest salesmen, and follow up everything that looks like business, we won't be worrying very long about adverse trade balances.

Great Britain, the clearing house of the Empire, if not at present of the world, has at last committed herself to Imperial Preference. Canada has had the latch string hanging out for years, but it took the rude jolt of war and post-war conditions to bring the Mother Country into line. It will, however, avail nothing if we do not go to her and show that we can supply her wants. Having just borne the brunt of the European mix-up, she may at present be a little short of cash, but her promises to pay are gilt-edged.

Large scale production is the most potent competitive factor which Canadian manufacturers have to meet. If the cultivation of our home market does not provide an outlet sufficiently large to enable us to produce on a scale which will put us on an even keel with our competitors, it is obvious that we must cultivate other markets that will, else we may lose out in our home market the most valuable of all. There is nothing to be gained from watching the movements of competitors and following in the swim. Trade may follow natural channels, but when you come to analyze the channels you will invariably find that a good deal of digging deflected the course in the direction of those countries where traders were bold, enterprising, and far-sighted. Our industrial history has never yet presented such splendid opportunities. Our future in the world's markets places upon our manufacturers of to-day demands which cannot be met by limiting our capacity and vision to home market needs.

Canada's Industrial Expansion

A Record of Progress

NOVEMBER'S story of industrial growth proceeding in all parts of the Dominion is duplicated and made all the more emphatic by the record for December. Again there is the same account of new industries being established, existing industries being extended and new products being produced. The movement is quite general and apparently is not confined to any special lines of industry. It bespeaks a confidence in the industrial outlook, which will go a long way towards stabilizing business conditions.

Established Branch Plant

The Eclipse Rubber Co., Limited, Are Now Manufacturing Waterproofs in Victoriaville, P.Q.

A branch plant of the Eclipse Rubber Co., Limited, Montreal, has recently been located in Victoriaville, P.Q. They have rented a building for the purpose and now have about 65 employees, manufacturing waterproofs. The industry is progressing satisfactorily and the management are well satisfied with conditions as they are to date. They propose later to enlarge the plant.

Furriers Erect Building

Seven-Storey Structure Going Up in Montreal for Holt Renfrew & Co., Limited

A seven-storey building is being erected on McGill College Avenue, Montreal, by Holt, Renfrew & Co., Limited, the main purpose of which is to provide the most efficient fur storage. The building throughout will be a model of modern fur handling and is designed to improve the company's service in Montreal. It will be connected by bridge with the present retail store on St. Catherine Street and will contain all packing and shipping rooms, offices, cold storage room, factory and skin rooms, employees' dining rooms, etc.

Double Output of Tires

Oak Tire & Rubber Co., Limited, Have in Prospect Doubling Capacity of their Plant

The programme of the Oak Tire & Rubber Co., Limited, Oakville, manufacturers of "Royal Oak" tires, calls for the enlargement of their factory next spring by the addition of another storey, size 200 x 60 feet, which will enable them to double their present output. At the present time additional machinery is being installed to take care of the increasing demand for their product. About 90 hands are now on the payroll, and since April last the plant has been running 23 hours a day. An effort is being made to secure a portion of the export business in tires.

Enlarging Brewing Plant

British American Brewing Co., Limited, Are Building New Bottling Shop at Windsor

The British American Brewing Co., Limited, Windsor, who manufacture "Cincinnati Cream" beer, are at present carrying out a programme of enlargement which will increase their capacity considerably. They are erecting a new bottling shop, 140 x 70 feet, which will be equipped with the latest machinery at an approximate cost of about $75,000. They are also enlarging their present stock house and increasing its capacity by 5,000 barrels, equipping it entirely with glass-lined steel tanks. A new office is also being laid out in the second floor of the bottling shop. They state that business is very good and the addition will about double their capacity.

Lumber Co. Change

American Interests Take Over Mills and Limits of the Finger Lumber Co.

What is characterized as the biggest deal in the history of the lumber industry in Manitoba was the recent sale for approximately $1,500,000 of the lumber mills and timber limits of the Finger Lumber Co. of the Pas to C. J. and D. N. Winton, of Minneapolis. The Finger Lumber Co. was established in 1912 and has been in active operation since with an average production of 190,000 feet per day. The limits consist of 324 square miles. Mr. H. Finger, who established the company, has been a resident of the Pas since 1904 and for several years was mayor of the town.

Move Factory to Woodstock

Manufacturers of Sunkist Orange Marmalade Take Over Factory at Woodstock

The California Fruit Growers Exchange have removed their manufacturing plant from Toronto to Woodstock, where they have taken over the Tobin Arms building and are operating it under the name of the Exchange Orange Products Co. The plant is of sufficient size and is admirably suited for the manufacture of a food product. They have at present about twenty-five hands at work and will be the exclusive manufacturers of Sunkist orange marmalade for Canada. The Toronto factory was located at 105 King Street East.

Doubling Machine Shop

B. J. Coghlin Co., Limited, Montreal, Make Considerable Enlargement to Their Plant

By adding another floor to their machine shop, B. J. Coghlin Company, Limited, Montreal, manufacturers of springs, axles, track tools and railway supplies, will more than double the output of that department. The company moved to the present site in 1912, were obliged to put up

Plant of the Hoover Suction Sweeper Co. of Canada, Limited

This is one of the latest United States branch industries to locate in Canada, the plant being erected in Hamilton

machine shop in 1915. The new floor will be 75 x 125 feet, additional buildings within two years, and built their present of brick and steel construction with metal sash. Besides this addition they are putting in a large installation for fuel oil to give them more room in their forge shop by doing away with coal, which necessarily takes considerable floor space. They will probably extend this building next summer.

Extending Plant at Guelph

Gilson Manufacturing Co., Limited, are Enlarging Both their Foundry and Machine Shop

To take care of their constantly expanding business in their "Goes like Sixty" line of gasoline, gas and oil engines and other lines of manufacture, the Gilson Manufacturing Co., Limited, of Guelph, are making plant extension at the present time. To their foundry they are adding a building 70 x 90 feet, and to their machine shop, a structure 140 x 80 feet, two storey high. The two extensions will enable them to increase their output materially.

Envelope Manufacturers Build

Barber-Ellis, Limited, are Making Considerable Extension to their Factory in Brantford

Barber-Ellis, Limited, envelope manufacturers, whose factory is located in Brantford, Ont., are making a substantial addition to their plant. The present building is 300 feet long by 100 feet wide. The extension will be uniform with their building, 100 feet long by 100 feet wide and two storeys in height, making the factory 400 feet long. A portion of the addition will be devoted to an enlargement of manufacturing facilities while the balance will be used for additional stock warehouse room. The construction is of reinforced concrete with brick facing, and the work will cost about $75,000.

The Great Plant at Anyox

Immense Industry Now Being Operated by the Granby Consolidated M. & S. Company

Started during the war in order to provide a sure supply of coke for their smelter at Anyox, B.C., the huge by-product coking plant of the Granby Consolidated Mining & Smelting Co., has only recently been completed and now stands as a monument to the faith of this company in the mineral possibilities of British Columbia. In a description of the plant appearing in the November issue of *Iron and Steel of Canada*, it is explained that the entire installation is practically an all-British achievement There are 30 ovens in all, stretching over 200 feet and standing 20 feet high. Gases driven off are conveyed to the by-product house where many by-products are secured. The plant has a capacity of 500 tons of coke daily, while out of each ton of raw coal carbonized there results 65% of the total weight in coke, 11,500 cubic feet in gas, 10 gallons of tar, 21 pounds of sulphate of ammonia, 3 gallons of light oil, 1.55 gallons of benzol, .40 gallons pure toluol, 30 gallons solvent napthalene, and 4 pounds crude napthalene. From the tar there is made creosote, pitch and many other useful by-products. The plant is the most efficient of its kind in the world, the loss in conversion being reduced to a minimum. The total investment at Anyox approximates eight million dollars.

New Factory Completed

Plant at Hamilton of Hoover Suction Sweeper Co. of Canada, Limited, Now in Operation

There has just been completed at Hamilton the fine new factory erected by the Hoover Suction Sweeper Co. of Canada, Limited, the recently-organized Canadian subsidiary of the Hoover Suction Sweeper Co. of North Canton, Ohio. The plant has an original capacity of 125 sweepers per day. The building is two stories high, of the most modern type of factory construction, and the foundation and walls are so built as to permit the addition of the third and fourth stories when the time for expansion has arrived.

Hoover Electric Suction Sweepers will be manufactured complete in this factory, with the temporary exception of the electric motors, which will be made to Hoover specifications in Canada by Canadian manufacturers. The building contains 30,000 square feet of floor space and is equipped with the wide variety of machines, tools and equipment required in producing Hoovers.

Chief among the manufacturing operations in the construction of the Hoover is the casting of the aluminum housing in which the sweeper is encased. This requires a foundry of large proportions. And the foundry at the new plant is most complete and up-to-date. A metallurgist also is employed to make tests and to supply formulas for the exact alloys to be used to insure the best and strongest type of aluminum castings. Machine shops of sufficient capacity to finish these castings, together with equipment for making the motor-driven beating-sweeping brush, which is an essential and exclusive part of the Hoover, are in keeping with the original manufacturing demands. These shops can be expanded later, with the growth of the factory. There is a small forest of automatic screw machines, lathes, drill presses, punching and stamping machines, reamers, grinders

Enlarged Factory at Hamilton of Zimmerman-Reliance, Limited

During the past season the Company have added 30,000 square feet of space to the plant by addition of a third storey

and polishers in the machine shops to perform a variety of operations that require accuracy and high-grade work.

Other important departments are the bag-making department, the big assembly rooms and the testing and inspection departments that exist throughout the plant. All parts of the Hoover are thoroughly inspected and tested both before and after assembly, so that there can be no question as to the high quality of manufacture.

Thomas F. Kelly is sales manager of the company, and is now building up a competent force of sales representatives in every large city and in most of the smaller cities and larger villages in the Dominion. The general offices are located at Hamilton in the new building.

Another Floor Added

Zimmerman-Reliance, Limited, Gain 30,000 Square Feet of Additional Space at Hamilton Plant

Through the recent addition of a third floor to their plant in Hamilton, Zimmerman-Reliance, Limited, have secured 30,000 square feet of additional floor space. With the exception of a room 80 x 80 feet at the front of the building, the entire floor will be devoted to the manufacture of hosiery, a new line for this plant. The front room is being fitted up in an up-to-date manner as a recreation and lunch room for employees and will no doubt be appreciated by the help.

Zimmerman-Reliance, Limited, represents an amalgamation of the Zimmerman Manufacturing Co. of Hamilton and the Reliance Knitting Co. of Toronto. The former was organized by Mr. A. F. Zimmerman in 1905 and specialized in balbriggans. The latter was organized by Mr. F. R. Sweeney in 1903, to make sweaters. The plants of the combined companies now contain over 160,000 square feet of floor space and employ 700 hands. Capacity is 1,000 dozen underwear, 1,000 dozen hosiery and 150 dozen sweaters daily. Mr. F. R. Sweeney is president; Mr. A. F. Zimmerman, vice-president and general manager, and Mr. A. B. Couch, sole selling agent of Zimmerman-Reliance products.

More Manufacturing Space

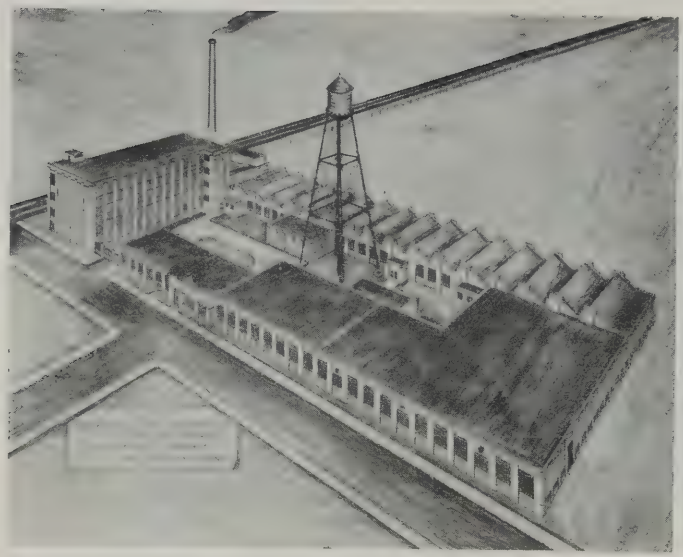
Knitted Goods Factory in Stratford is Being Very Considerably Enlarged this Year

Before the end of the year R. M. Ballantyne, Limited, manufacturers of knitted goods, Stratford, hope to have the addition to their factory, recently under construction, completely equipped and ready for operation. The addition is a building 125 x 89 feet, two storeys and basement, of mill construction, and will add 50 per cent. to total floor space and 100 per cent. to manufacturing floor space. It has been erected for the purpose of relieving congestion in the present factory, bettering working conditions and enabling the company to instal additional plant to take care of increasing business. The staff has been increased 50 per cent. during the past two years and a considerable number more employees will have to be taken on during the next year to provide for the greater output demanded.

Coating Mill Enlarged

Pressure on Finishing Room at Georgetown Coating Mills Has Necessitated Some Relief

The Provincial Paper Mills Co. are at present building two additions to their coated paper mill at Georgetown, Ont., in order to relieve the pressure on the finishing department. An extension is being made to the finishing room, 80 x 90, two storeys high, and a new color room, 40 x 80, two storeys high, is also being erected. Both are of concrete block construction, similar to the main building, and were to be ready for occupancy by about December 1. The company report heavy orders which have been causing serious congestion in the finishing end. At other mills no changes are at present contemplated, but plans are being prepared for the erection of the first paper mill unit at Port Arthur.



Grinding Wheels

The Norton Company of Worcester, Mass., are Establishing a New Industry in Hamilton

A plant for the manufacture of grinding wheels for the Canadian and British trade is at present under erection in Hamilton by the Norton Company of Worcester, Mass., a Massachusetts corporation with a capital of $9,000,000. The site of the plant is a tract of four acres at the corner of Lottridge St. and Beach Road, which the company have purchased from the Hamilton Bridge Works Co., Limited.

Only a few units of the projected plant will be erected at present, and these will be completed about February 1, whereupon the production of vitrified and silicate grinding wheels will be commenced. These will be made of alundum abrasive and crystolon abrasive, the former an aluminous abrasive made by the company from bauxite at electric furnaces at Niagara Falls, N.Y., and Chippawa, Ont., the latter an artificial abrasive chemically known as carbide of silicon, manufactured in electric furnaces at Chippawa, Ont.

The Hamilton industry will be operated by the Norton Company of Canada, Limited, a subsidiary corporation with a capital stock of $500,000, and the original units with their equipment will give employment to 60 men. The local or-

Nearly Ready for Operation

A bird's eye view of the fine new plant at Hamilton of Porritts & Spencer, Canada, Limited

ganization at Hamilton has not yet been decided upon, but the officers of the Canadian corporation will be to a great extent identical with those of the parent company. The Norton Company are the largest manufacturers of grinding wheels in the world, and their decision to make their product in Canada is an important development. The company also manufacture refractories and non-slip tile.

British Branch Industry

Plant of Porritts & Spencer, Canada, Limited, at Hamilton, is Now Nearing Completion

About three-fourths of the work on the plant being erected in Hamilton by Porritts & Spencer, Canada, Limited, is now complete and early operation is anticipated. This interesting development, which involves the location by Messrs. Porritts & Spencer, of Bury, England, of a branch factory in Canada, has many points of interest. The plant was designed in Hamilton by P. M. Smith, Vice-President of the W. J. Westaway Co., Limited, textile mill engineers, and was built by Hamilton contractors with local labor and building supplies. The first unit, as illustrated, forms a hollow square, which if straightened out would be over 1,000 feet in length. The structures are largely one-story, except the storehouse, which rises to four stories. About 90,000 square feet of floor space is provided. Construction is standard slow-burning mill construction and reinforced concrete. The largest unit, the spinning and weaving building, is 60 x 360 feet, one-story, with saw-tooth roof. It will be heated by a novel system of forced hot-water circulation and will be equipped with automatic sprinklers throughout. Ample provision has been made for expansion both in laying out the plant and in the choice of building site, as the present structures only cover about one-third of the eight acres of land owned by the Company. The product will at first be paper-makers' felts, but this line will doubtless be extended to other lines of woollen goods from time to time.

Mercury Mills Extend

Showing the 117 foot addition recently made to the plant of Mercury Mills, Limited, at Hamilton

A Record in Construction

Addition to Espanola Mill of Spanish River Pulp & Paper Mills Made in Record Time

It is believed that in the building and equipping of a plant to house two new paper machines, the Spanish River Pulp & Paper Mills have established a record at their Espanola Mill. The actual work of construction was commenced on June 4th, when the first sod was turned. One hundred and thirty-eight days later, No. 5, the first of the new machines, was making paper. The Espanola Mill was previously a four-machine mill. The decision to make it a six-machine mill was arrived at in 1916. At that time an order was placed with the Pusey & Jones Co., Wilmington, for two machines. However, the entry of the United States in the war led to the postponement of the undertaking and the matter was left in abeyance until May of this year, when it was decided to go ahead.

The work involved was the building of a two-machine mill from the ground up and the installation of machinery and equipment in these buildings. The first action taken was the complete study and preparation of a plan under which the work was to be done. The study of all the facts, with the plans and drawings available, led to the conclusion that it was perfectly possible to complete the construction by November 1st, providing the programme adopted could be carried out and providing the machinery and equipment contractors lived up to their estimated dates.

Have Extended Main Building

Large Addition Made to Factory of Mercury Mills, Limited, to Increase Production

Mercury Mills, Limited, Hamilton, manufacturers of hosiery and underwear, have just completed the erection of a substantial addition to their Hamilton factory, which will considerably increase the production of their regular lines. The main factory building, as erected in 1916-17, had a frontage of 371 feet, and consisted of two parts, the mill proper, 176 x 92 feet, and the dye house 176 x 51 feet. The extension now completed has been made to the mill and consists of a structure 117 x 92 feet, three storeys and basement. The company will take on quite a number of additional hands in order to make up a complete staff.

Increase Output 50 per Cent.

A New and Much Larger Plant Being Erected in Ottawa by Bishopric Wall Board Co., Limited

Replacing their plant destroyed by fire last August, the Bishopric Wall Board Co., Limited, Ottawa, are erecting and equipping buildings to give 50 per cent. more output and greatly improve working conditions. The old plant was largely of frame construction; the new plant is being built of brick, cement blocks and Bishopric stucco board. It includes main factory with boiler house, 105 x 60 feet, with 16-foot walls; dry kiln, 50 x 50 feet, with 9-foot walls, divided into three chambers, each chamber holding approximately

100,000 pieces of laths on truck; and planing mill, 48 x 50 feet, with 12-foot walls. They will also have a store shed, 50 x 90 feet, of frame construction, for storing manufactured board and roofing, and an open shed, 120 x 120 feet, for storing kiln-dried lath. Although capacity will be greater, they do not anticipate employing more labor, because laths will now be carried to the factory by carrying chains instead of trucks as before.

Furnace Fire Brick Industry

Gates Refractories, Limited, of Montreal, Acquire and Operate Plant Seven Miles from City

The plant formerly occupied by the Art Furniture Co., and located about seven miles from the centre of Montreal, has recently been taken over by Gates Refractories, Limited, who are now manufacturing furnace fire brick at the rate of about 300 tons per months. Hitherto, J. W. Gates, patentee of the bricks now being made, obtained his supply from other fire brick firms, but the demand increased so much that a sufficient supply could not be obtained from these sources. Accordingly the original company was reorganized and the present industry established. The buildings acquired are of two-storey brick construction with about 12,000 feet of floor space. Two kilns of 50 and 60 tons capacity respectively are in operation, and two other 60-ton kilns will be completed by the end of the year. The company will specialize in power plant brick work.

Increasing Newsprint Output

The Laurentide Company Will Add Two Immense Paper Machines to Their Equipment

Through the addition of two 166-inch newsprint machines, the Laurentide Company of Grand-Mere, Que., will increase the capacity of their paper mills to 360 tons per day. In announcing the decision of the management to make this increase in equipment, the *Digester*, the company's house organ, says:—

The new machines are to be placed in a new building to the west of the present Number 3 machine room. This building will be 320 feet long by 90 feet wide and two storeys in height. It will be of non-combustible construction throughout and its architectural design will be similar to the present machine rooms, except that it will have a flat concrete roof on steel trusses. The interior of this new machine room will be one of the "show" places of the plant. The walls will have enamelled tile wainscoting and the floors are to be of special composition similar to those in the power house.

"Both of the new machines are to be designed to run up to one thousand feet of paper per minute. They will not start off at this pace when they are first run, however. They will be started at about 650 feet per minute, and as they become "tuned up" their speed will be increased until they reach the maximum of one thousand feet every minute that they run. The length of the wire will be about 112 feet, and it will be pitched about four feet. There will be four presses and forty dryers, each six feet in diameter. The details of the driving arrangement have not yet been fully worked out, but it is expected that a very great improvement will be made over anything that has been installed up to date. The machines will also have a number of new features, details of which are not yet available. Over each of the machines will be an electric travelling crane of about twenty-five tons capacity.

"In addition to the extension to the Paper Mill, other new equipment is to go into the Laurentide Plant in the near future. Three new grinder units are to be placed in an extension to the present grinder-room. Outside of these, the new machines will require additional machinery in the groundwood screen room, and new equipment in the boiler-house, where an additional battery of boilers will be installed. No changes will be necessary in the sulphite mill, as it already has much more than sufficient capacity to supply the additional requirements of sulphite pulp. The present sulphite slush system will be extended to take care of the new machines.

More Production by Abitibi Co.

Big Newsprint Paper Mill at Iroquois Falls Will Have Additional Capacity Next Year

The foundation of a large extension to the mills of the Abitibi Power & Paper Co., Limited, at Iroquois Falls, Ont., is now in and construction of the new building will be proceeded with next spring. It is being erected to house three new machines, which will add very considerably to the capacity of the mills. Two of the new machines are for the manufacture of newsprint paper, being 232 inches wide, with a capacity of 85 tons each. The third is a board machine, 132 inches wide, with capacity of 60 tons. The company hope to have one of the newsprint machines and the board machine in operation in the fall of 1920 and the other newsprint machine in operation a year later. In the meantime the mills are running to capacity.

Building Foundry

Auto Specialties Manufacturing Co. of Canada Will Erect Malleable Iron Foundry

One of the notable developments of the day at Windsor is the announcement that the Auto Specialties Manufacturing Co. of Canada have purchased a site of 10½ acres on which they will erect a modern malleable iron foundry and other buildings later on. The company are already located in

Crabtree Division, Howard Smith Paper Mills, Limited

Which will be further extended to provide additional capacity for the manufacture of sulphite bonds

A Recent Plant Extension in Hamilton

An Addition, 208 feet long by 75 feet wide for warehousing purposes, now under erection by the Canadian Steel and Wire Co., Limited

Windsor where they manufacture Bair Bow separating top holders, automobile jacks and malleable iron motor car parts, and their purpose in erecting a foundry is to supply themselves with malleable iron. The first unit of the foundry will cover approximately 45,000 square feet and will cost about $200,000. Its erection will be followed by that of a machine shop, 200 x 80 feet. The buildings will be the latest word in building construction, ample thought having been given to light, ventilation, etc., and they will be absolutely fire proof. The company expect to have the plant ready for operation by April and will employ about 200 hands. Apart from their own requirements, they will be able to take on some custom work.

Cotton Mill Enlargements

Canadian Cottons, Limited, Have Been Carrying Out Large Programme at Hamilton

By raising the roof on their No. 4 and No. 5 buildings at Hamilton and adding a third storey, Canadian Cottons, Limited, have secured approximately 24,000 square feet additional floor space. This has enabled them to instal more carding and spinning machinery, sufficient to increase their spinning product by about 25 per cent. They have also added another storey to their old engine room building, giving 2,000 square feet more space which will be used for employees' dining room and first aid room. At present they are adding two storeys to their cotton warehouse, which will increase cotton storage capacity by 11,500 square feet. They expect to have all enlargements completed and in operation by the first of the year.

New Pulp and Paper Co.

Great Lakes Paper Co. Will Proceed With Their Proposed Industry at Port Arthur

Wiring from Chicago on November 7 to D. M. Hogarth, M.P.P., Port Arthur, Lewis L. Alsted, president of the Combined Locks Paper Co., of Combined Locks, Wisconsin, stated that it was the intention of the Great Lakes Paper Co., to proceed at once with their proposed pulp and paper industry at Port Arthur. The plant will be located on the Carrick property, consisting of 100 acres and lying north-east of Port Arthur. It will consist of ground wood, sulphite and paper mills of 30,000; 7,500 and from 33,000 to 35,000 tons per annum capacity, respectively. The power will be supplied from the Nipigon development of the Ontario Hydro-Electric Power Commission, for which a contract has already been signed. The first unit will be in operation by December, 1920, and the paper mill by June, 1921. The cost of construction will be from $5,000,000 to $6,000,000. Interested in the company, in addition to Mr. Alsted, are George Seaman, president of the Seaman Paper Co., Chicago, and James Whalen, president of the Port Arthur Shipbuilding Co., and a director of the Whalen Pulp & Paper Co.

Three Hundred Motors a Week

New Company Secure Plant at Stratford for Manufacture of Phonograph Motors

With a ready market at their door in the McLagan phonograph industry, Canadian Phono Motors, Limited, which has recently been organized at Stratford, will commence the manufacture of phonograph motors shortly after the first of the year. The company have secured an existing building, 40 x 80 feet, three storeys and basement, and are putting it in shape for their purpose. They expect to produce 300 motors a week at first and hope to give employment to about fifty hands. While not financially connected with the Phono-Motor Mfg. Co., of Brooklyn, N.Y., the Canadian company will manufacture from the same patents. The manager is Mr. E. H. Wilkinson, whose father is Mr. E. E. Wilkinson, manager of the Phono-Motor Co.

Knitting Factory for Owen Sound

Clinton Knitting Co. of Clinton, Ont., Establish Branch Industry and Start Operations

Operations started on November 10th at the branch plant located by the Clinton Knitting Co. of Clinton, Ont., at Owen Sound. The company have leased about 4,000 square feet of floor space in a building on 9th Street East, occupied by the Owen Sound Garage, Limited, and are starting in a small way, though they plan eventually to employ from 50 to 100 girls. In fact the size of the plant will only be limited by the amount of help they can secure. Knitting only will be done at first, and goods will be forwarded to Clinton where they will be dyed and finished. Later a dyeing plant will be installed. The company manufacture hosiery only. The industry was started in Clinton 14 years ago and now employs 63 hands, with a branch employing 35 hands at Wingham. The

Extending the Big Plant of the Goodyear Tire and Rubber Co. of Canada

This photograph shows progress on new wing, 120 x 160 feet, at east end, and the start of construction on west wing of similar size. These additions will increase the plant's capacity from 2,500 to 3,500 tires per day

largest shareholders are the Owen family, formerly of Clinton, but now of New York. Charles F. Libby is secretary and general manager, and his son, Frank J. Libby, will take charge of the Owen Sound plant.

May Enlarge Soon

Canadian Plant of the Shredded Wheat Company Will Soon Require Enlargement

Referring to the report that the Shredded Wheat Company, Niagara Falls, contemplated making additions to their plants on both sides of the Niagara River, Mr. R. W. Ogden, Secretary, states that: "We do not propose at present to make any alterations or additions to our plant on the Canadian side, although, with the present growth of our business, some enlargement or change in that plant will have to be taken care of in the near future. At the present time our plans consist of a duplication of our present plant located on Erie Avenue, Niagara Falls, N.Y., together with the addition of several units to our wheat storage elevator.

New Milling Company

Judge, Jones Milling Co., Limited, Have Established Milling Industry at Belleville

There has just been completed at Belleville a mill with capacity of 250 barrels of flour, 250 barrels of corn flour, 100 barrels of rolled oats, 300 barrels of corn meal, and 1,000 sacks of feed per day, in addition to an elevator to handle oats and grain for cleaning and bagging in transit. The industry belongs to the Judge, Jones Milling Co., Limited, a new company affiliated with the Judge Grain Co., of Montreal, and in which Grahams Limited, of Belleville, hold a half interest. Mr. George B. Jones, a miller of several years' experience, is manager, and the plant was to have been ready for operation about December 1.

Another Branch Plant

Eclipse Machine Co. of Elmira, N.Y., are Locating an Industry in Walkerville

The Eclipse Machine Co. of Elmira, N.Y., manufacturers of brakes, clutches, etc., have recently purchased the empty factory of the Cott-a-lap Co. of Walkerville, Ont., and will probably begin operations before the end of the year, employing about one hundred hands at the outset. The plant

Corner View of New Wing

Taken from the south-east corner of the Goodyear building, and showing the main building in the background to the left

consists of two good large buildings, one of two storeys and the other one storey. The Cott-a-lap Company manufactured jute for paneling the walls of rooms, but owing to the war and the consequent shortage of material, they suspended operations and have now disposed of their plant. The price paid is stated to be $40,000.

New Whitewear Industry

Sound Whitewear, Limited, Started Operations During November in Owen Sound

Reference was made in the November issue to the establishment in Owen Sound of a new whitewear industry by Messrs. McKnight and Kelley. It is now possible to state that the company will operate under the name of Sound Whitewear, Limited, with R. C. McKnight, President; J. J. Kelley, Secretary-Treasurer; and R. G. McKay, Elias Lemon and John Parker, Directors. The company have leased Lemon's Hall, which has 7,500 square feet of floor space, and will manufacture ladies' and children's whitewear, giving employment to 25 girls at the outset. The company's product will be disposed of through the jobber and retailer.

Freight Claims and Their Collection

This is the First of a Series of Articles Setting Forth the Proper Methods of Preparing and Presenting Freight Claims to the Carriers to Ensure Prompt Settlement—The Problem is One of Special Interest to Every Shipper and Receiver of Freight, Especially Those Without the Aid of a Traffic Manager

By F. R. ALLWARD

Transportation Department, Canadian Manufacturers Association

"HOW to collect freight claims?"—that is the problem confronting every shipper and receiver of freight, where the volume of business does not warrant the services of a competent traffic manager. There is probably no point of contact between the railways and their clients that causes more friction, and it is perhaps equally true to say that there should be none easier of adjustment.

Railway managers now realize that the manner in which claims are handled has a direct and important bearing on the attitude of the shipping public toward the carrier and thus very directly on the success or failure of the struggle of the various lines and systems to retain old and acquire new business.

The broad principles of this new policy are being gradually instilled into the minds of railway claims agents, as well as of all employees whose duties require them to negotiate with claimants. However, the carrier must comply with the law, as embodied in the Canada Railway Act, and it is ignorance of this law (or failure to observe it) on the part of many shippers that is responsible for nine-tenths of the trouble.

Claims Accepted in Good Faith

In the ordinary channels of trade, such as the sale and distribution of manufactured goods, a high standard of ethics has grown up in recent years, as a result of which a claim made by a customer for goods not up to standard, damaged, or short received, is almost invariably accepted in good faith. In fact, many of the most progressive houses have adopted the motto: "The customer is always right," and every claim is adjusted on that basis.

It is perhaps natural, therefore, for the small shipper not fully conversant with the law of carriers, to file a claim in a more or less informal manner and to expect the railway company to arrange a prompt adjustment in accordance with the usual trade custom.

Right there is the crux of the trouble—the cause of most of the friction between the railways and their clients.

A railway company, in undertaking for hire to carry goods for the general public, subjects itself to the law of carriers under Common Law, as well as the Canadian Railway Act. Sections 427, 428 and 429 of the Act have a direct bearing on the settlement of freight claims and govern largely the policies and methods of investigation followed by the Claims Department of a railway. Section 427 expressly provides that:

"Any officer or agent of any railway company who knowingly or wilfully permits any person or persons to obtain transportation for property at less than the legal rate established, by means of false billing, false classification, false report of weight, *or by any other device or means*, shall for each offence be liable to a penalty not exceeding $1,000 and not less than $100.00."

It is also provided in Section 428 that:

"Any person or persons who shall knowingly or wilfully, with or without the connivance of the carrier, obtain transportation for goods at less than the published rates by false billing, false classification, false representation of the contents of the package, *or by any other device or means*, shall for each offence be liable to a penalty not exceeding $1,000 and not less than $100.00."

A claims agent of a carrier, who fails to properly investigate or verify a claim, is deemed guilty on the charge of having permitted the claimant to obtain transportation of his property at less than the legal rate. The consignor or consignee who files a fictitious claim is also deemed guilty of having violated the law and is subject to a fine or imprisonment.

It will be readily perceived therefore that a claims agent must of necessity thoroughly investigate and verify a claim by documentary proof, before authorizing payment, and in doing so he is protecting the interests of the claimant as well as of the carrier. A shipper's word may be as good as his bond, in the ordinary channels of trade, but if he expects a railway company to give his claims favorable consideration he must follow the rules of evidence as practised in the courts of law. In other words: he must furnish the carrier with the documents and proof usually required in support of a claim and keep his records of the entire transaction in such shape that they are readily accessible as evidence.

The claims department of a railway is an informal court, and the official in charge a judge; and, if the facts submitted in support of a claim are not conclusive evidence of his company's liability, he is justified in refusing to authorize payment.

Easily Adjusted if Properly Submitted

It has been stated above that of the various questions arising between the shipper and the carrier, none should be easier of adjustment than a claim by the shipper against the carrier for loss, damage or overcharge in freight, for the reason that when the carrier accepts a shipment for transportation, it thereby undertakes to transport that shipment from the point of origin to the point of destination, within a reasonable time, and to deliver it in good condition (or at least in the same condition as received). This is done under a clear and explicit contract, which, taken with the duties and obligations placed upon it by law, governs and controls where there is a breach by either party. Consequently, should the goods suffer damage or be lost in transit, or if the contract is broken in any other way, it simply rests with the shipper or the consignee to present a claim to the carrier, and if properly verified the latter has no recourse but to honor the same.

Legal questions will, of course, arise in determining whether or not there has been a breach of contract for which the carrier is liable to the shipper; but it may safely be stated that in the majority of claims the carrier's liability is so very apparent that the carrier does not attempt to waive responsibility.

A claim may be presented to the local freight agent of the carrier, who is responsible for the breach of contract. but many experienced shippers prefer to negotiate direct with the claims agent. However, either method of serving claim

is in order, provided same is supported by the proper documents and a full statement of the facts relating thereto.

The following list contains a brief description of the documents required:

LOSS AND DAMAGE.

(1) Statement of claim containing description of shipment; name and address of shipper; consignee; point of origin; destination; number and description of articles; nature and extent of loss or damage; invoice price of articles; amount of claim, etc.

(2) Original bill of lading—if not previously surrendered to carrier.

(3) Original paid freight (expense) bill.

(4) Original invoice, or certified copy.

(5) Other particulars obtainable, in proof of loss or damage claimed.

CLAIMS FOR OVERCHARGE.

(1) Statement of claim, showing charges and rate assessed; rate claimed, and tariff authority.

(2) Original paid freight bill.

(3) Original bill of lading—if not previously surrendered to carrier.

Additional Articles to Follow

In the succeeding articles which will be published each month in INDUSTRIAL CANADA, an attempt will be made to set out the steps that should be followed by a shipper or consignee in keeping a record of each transaction where there is a breach of contract by the carrier, in order that proof may be readily available.

Service to Australasia

S.S. Orari to Sail from West St. John on December 15 for Auckland, etc.

The New Zealand Shipping Company will have the steamer *Orari* on the berth at West St. John to sail about December 15th for Auckland, Wellington, Lyttleton, Timaru, Melbourne and Sydney. All requests as to space and rates should be addressed to the New Zealand Shipping Company, Limited, 213 Board of Trade Building, Montreal.

Handling Perishable Traffic

How Shippers by Express May Help in Effort to Conserve Food Supply

A bulletin has been issued to the shipping public by the Express Traffic Association of Canada, dealing with the handling of perishable traffic by express during cold weather. Its contents, which are as follows, are brought to the special attention of manufacturers:

"In view of the susceptibility to damage by frost during certain months of the year—approximately from the 1st of November to the 31st of March—the express companies desire to direct attention to the necessity of better protective packing for such articles as green or fresh fruits and vegetables, flowers, liquids, etc. The Government is, quite properly, putting forth extraordinary efforts to conserve the food supply. It is also your duty and ours to prevent destruction.

"Express goods are carried on passenger trains, which are heated by steam or otherwise. Shippers may be under the impression, therefore, that perishable articles forwarded by express are always quite safe from frost, but it must be remembered that these goods are hauled by wagons in the cities, and are of necessity moved on station platform trucks between trains and depots, where heated protection cannot always be provided.

"The express companies are not liable for any loss or damage to shipments caused by weather conditions which are beyond their control.

"In the mutual interests of shippers and express companies, and of the public welfare, you are respectfully asked to assist in the matter of better protective packing, and also to refrain from tendering to the express companies for shipment perishable articles which are not sufficiently packed to protect the contents from damage by frost. The express companies prefer that their patrons should take suitable steps in this matter, thus avoiding the necessity of their declining to accept and receipt for shipments not properly protected."

Marking Express Shipments

Pamphlet Issued by Express Traffic Association for Education of Shippers by Express

A pamphlet was issued last month by the Express Traffic Association of Canada, containing the classification requirements and suggestions to the public relative to the proper marking of express matter. As the subject is one of much importance in expediting the handling of the express these marking requirements are reproduced herewith:—

(*a*) Each package, bundle or loose piece in a shipment must be plainly, legibly and durably marked, showing the name of only one consignee, and of only one station, town or city and province to which destined. Old marks must be removed or effaced by the shipper.

(*b*) Shipments wrapped in paper, or packed in boxes, crates, barrels, corrugated strawboard, pulpboard or fibreboard containers must be marked with pen, brush, stencil, waterproof crayon, or by label securely attached with glue or equally good adhesive. Such shipments must not be accepted when marked only with tag, except as provided below:

Shipments of iced goods, such as fish, oysters, etc., must be marked with brush, stencil or waterproof crayon, or with two tags securely tacked, one of which must be sunk in a groove in the box or case, or otherwise protected in such manner as to prevent becoming detached or defaced by contact with other articles or surfaces.

Containers which are customarily used several times for transportation of goods by express, such as bread boxes or dog kennels, which cannot be satisfactorily marked with brush, stencil, waterproof crayon or label, may be accepted when bearing two address tags securely attached to the package.

(*c*) *Castings, Machine Parts, Shafting, Pipe, Rods, Bars, and Other Metal Articles*:

1. When boxed, barreled, crated or trussed, must be marked in compliance with paragraph "(*b*)."

2. When not boxed, barreled, crated or trussed, and there is sufficient smooth surface for the purpose, the address must be plainly marked on the article with durable paint. Such shipments must not be accepted unless marks are thoroughly dry.

3. When not boxed, barreled, crated or trussed, or when not possible to mark as provided in preceding paragraph, shipments must be marked with not less than two wooden, leather, metal, cloth, rope stock or sulphite fibre-tag-board tags. Rope stock or sulphite fibre-tag-board tags may be either wholly of sulphite or rope stock or a combination of both, must test not less than 14 point, have reinforced metal eyelets, and must be attached by wire not less than 23 gauge, or strong cord. Tags must be attached wherever possible to unexposed parts of the article in order that they may not become detached in handling.

4. When tags are used for marking Rods, Shafting, Bars, Pipe, Iron Bed Sides, Automobile Springs and other articles of like character, shipped singly or in bundles without packing, there must be two tags, conforming to specifications of paragraph "3," both tags securely attached to the article by wire not less than 23 gauge, or strong cord; one tag to be concealed by being bound to the article with a burlap covering, the latter securely fastened at each end.

5. When metal articles are shipped in sacks, the address must be shown on tag conforming to the specifications in paragraph "3," attached either by wire or strong cord, and an additional tag bearing the same address must be enclosed in the sack.

(*d*) *Trunks, Suit Cases or Valises.*—Must be marked with one strong tag and have an address label pasted on the bottom in addition thereto before forwarding. Shippers should place a duplicate address inside of these articles for the purpose of identification.

(*e*) *Automobile Tires.*—When not boxed or crated, must have two marks, both to be attached to the inner surface of the package, bale or tire, and to consist (1) of a strong tag securely attached, and (2) another tag bearing the same

address, securely bound by burlap or cloth, or an address label pasted on the inner surface.

(*f*) *Bedding, Carpets and Rugs.*—When not boxed or crated, must be sewed up in burlap or some other substantial cloth covering, and marked with stencil or brush; such shipments must not be accepted when marked only with tag. Shippers should place duplicate address inside of the bale for the purpose of identification.

(*g*) *Nursery Stock and Trees* in bundles or bales must be marked with not less than two tags, securely attached, and when in bales, shippers should place a duplicate address tag inside the bale for the purpose of identification.

(*h*) *Household Goods and Furniture* which, under individual items may be accepted when not boxed or crated, must be marked by not less than two tags securely attached to each piece.

(*i*) *Lot Shipments.*—Except when in carloads, each package or article in a lot shipment must be marked in compliance with these requirements.

(*j*) *Shipments not marked in accordance with the foregoing requirements, or as noted under individual items of the Classification, must be refused.*

Steamship Services

Steamship Companies Are Now Transferring Their Sailings to St. John and Halifax

Navigation from the port of Montreal closes about November 26th. Commencing about December 1st, the Canadian Government Merchant Marine, Canadian Pacific Ocean Services, Furness Lines, Manchester Liners, Canadian-Transatlantique Line, Head Line, Marine Navigation Limited, Houston Line, Elder Dempster Line, and New Zealand S.S. Company, will begin the winter season from West St. John, St. John and Halifax.

The C.P.O.S., in their sailing list No. 1, for the winter season, dated November 21st, 1919, show the following sailings from West St. John, St. John and Halifax:—

West St. John to Liverpool.

Mategama	C.P.O.S. Lines	Ab't Dec.	4
*Canadian Rancher	Can. Govt. Mer. Marine, Ltd.	Ab't Dec.	6
*Canadian Ranger	Can. Govt. Mer. Marine, Ltd.	Ab't Dec.	10
Corsican	C.P.O.S. Lines	Ab't Dec	13
Empress of France	C.P.O.S. Lines	Ab't Dec.	19

* Sails from St. John.

West St. John to London.

Grampian	C.P.O.S. Furness Lines (C.P.O.S.)	Ab't Dec.	7
Montcalm	C.P.O.S. Furness Lines (C.P.O.S.)	Ab't Dec.	9
Mattawa	C.P.O.S. Furness Lines (C.P.O.S.)	Ab't Dec.	10
Cornish Point	C.P.O.S. Furness Lines (Furness)	Ab't Dec.	20

West St. John to Antwerp.

Messina	C.P.O.S. Furness Lines (Furness)	Ab't Dec.	5
Castellano	C.P.O.S. Furness Lines (Furness)	Ab't Dec.	20
War Beryl	C.P.O.S. Furness Lines (C.P.O.S.)	Ab't Dec.	26
Tunisian	C.P.O.S. Furness Lines (C.P.O.S.)	Ab't Dec.	28
Holbrook	C.P.O.S. Furness Lines (C.P.O.S.)	Ab't Dec.	29

West St. John to Glasgow.

Pretorian	C.P.O.S. Lines	Ab't Dec.	10
Sicilian	C.P.O.S. Lines	Ab't Dec.	18

West St. John to Avonmouth Dock (Bristol).

Sardinian	C.P.O.S. Lines	Ab't Dec.	26

West St. John to Manchester.

Manchester Hero	Manchester Liners	Ab't Dec.	14

West St. John to Havre (France).

Bilbster	Can. Trans. Atlantic Line	Ab't Dec.	6
Hudson	Can. Trans. Atlantic Line	Ab't Dec.	13

West St. John to Belfast.

Ramore Head	Head Line	Ab't Dec.	15

West St. John to Dublin.

Fanad Head	Head Line	Ab't Dec.	12

West St. John to St. Nazaire (France).

Cape Corso	Marine Navigation Ltd.	Ab't Dec.	15

West St. John to Buenos Ayres and Montevideo.

Hyanthes	Houston Line	Ab't Dec.	15

West St. John to South African Ports—Cape Town, Port Elizabeth, East London, Durban, Delegoa Bay.

A Steamer	Elder-Dempster Line	Ab't Dec.	20

West St. John to Australasian Ports—Melbourne, Sydney, Auckland, Wellington, Timaru.

Orari	New Zealand S.S. Company	Ab't Dec.	15

St. John to Barbados, Trinidad, Demerara and B.W.I.

Chaudiere	Royal Mail Steam Packet Co.	Ab't Dec.	9

St. John to Kingston, Jamaica, and Havana, Cuba.

Canadian Warrior	Can. Govt. Mer. Marine, Ltd.	Ab't Dec.	30

Halifax to Liverpool.

Canadian Seigneur	Can. Govt. Mer. Marine, Ltd.	Ab't Dec.	15

Halifax to Glasgow.

Canadian Trapper	Can. Govt. Mer. Marine, Ltd.	Ab't Dec.	5

Halifax to Rio Janeiro, Santos (Brazil), Buenos Ayres (Argentine).

Canadian Spinner	Can. Govt. Mer. Marine, Ltd.	Ab't Dec.	20

Halifax to Havana, Cuba.

Canadian Trader	Can. Govt. Mer. Marine, Ltd.	Ab't Dec.	3

Halifax to Barbados, Trinidad and Demerara.

Caraquet	Royal Mail Steam Packet Co.	Dec.	1
Canadian Signaller	Can. Govt. Mer. Marine, Ltd.	Ab't Dec.	27

Halifax to Santiago (Cuba) and Kingston (Jamaica).

An Experimental Brick Plant

Enterprise of Nova Scotia Steel & Coal Co., Limited, in Making Their Own Fire Brick

An interesting description of the brick plant now being operated by the Nova Scotia Steel & Coal Co., Limited, at Sydney Mines is given in the November issue of *Iron and Steel of Canada*. Prior to 1916 all the refractories for the company's blast furnaces and steel mills at Sydney Mines were obtained from the United States, but, even when times were normal, deliveries were uncertain. This was aggravated by the war and the company were faced with a serious problem. In order to improve conditions it was decided to build a brick plant. This was done in 1916 and, as originally designed, the machinery building was 30 x 60 feet. The dry shed was soon found to be too small and an extension was built bringing the size up to 80 x 72 feet. A second kiln was also built, bringing the capacity of the plant up to about 5,000 bricks per day. The completed installation cost $27,000. Concluding his description, the writer, Mr. A. Dawes, superintendent of power, says:

"To sum up, this plant, which was started on an experimental basis, has proved itself a success and demonstrated that good refractories can be made from material obtained from the Nova Scotia Company's own collieries and from other sources in the province. The cost of bricks made in this plant was generally lower than those obtained elsewhere, but the factor which appeals most strongly to those in charge of operations at the steel plant at Sydney Mines is that they have on hand a brick-making plant which is a standby against any delays in delivery or hold-ups due to any cause of the firebrick necessary for their extensive steel industry."

Canadian Exporters' Exhibition in London, Eng.

Endorsed by

Canadian Mission in London
The Department of Trade and Commerce, Ottawa
Canadian Trade Commission, Ottawa
The Canadian Manufacturers Association

The first entirely Canadian Industrial Exhibition, to be held outside of our Dominon, is scheduled to take place in the Royal Agricultural Hall, London, England, from June 3rd to June 17th, 1920, inclusive. Held under the auspices mentioned above, this exhibition will undoubtedly be of the greatest possible value to the Canadian Manufacturers.

London is the mart of the world. It is the giant clearing-house for world trade, wherein importers buy, not only for British account, but to a very large extent for foreign buyers as well. Representatives from these importing houses, and from others throughout the United Kingdom, will visit the Canadian Industries Exhibition by special invitation.

Personal salesmanship and actual demonstration are universally acknowledged to be the fundamental elements in selling goods. If your Company is already represented overseas, the British buyers will look for your booth at the Exhibition. If your Company is seeking such representation, the Exhibit offers you the easiest, quickest, and most economical way to attain your object.

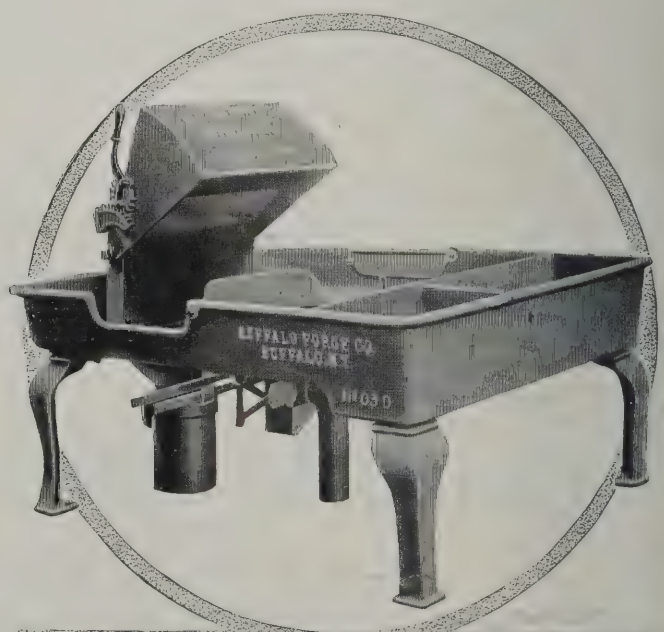
LACHINE CANAL
MONTREAL, QUEBEC

WE HAVE received instructions to sell the property belonging to CANAL LANDS LIMITED situated on the South side of the Lachine Canal, practically within the CITY LIMITS. The property is the first one outside the LIMITS.



Owing to its close proximity to THE TOWN OF COTE ST. PAUL, which now forms part of the CITY OF MONTREAL, LABOR CONDITIONS ARE EXCEPTIONALLY GOOD.

The very best shipping facilities both by rail and by water.

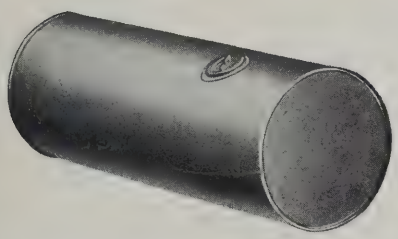
It has a frontage on the LACHINE CANAL of 959 feet, and an average depth of about 2,488 feet, and a superficial area of 2,500,375 square feet. Would sell en bloc or in smaller parcels to suit purchasers.

For further particulars apply to

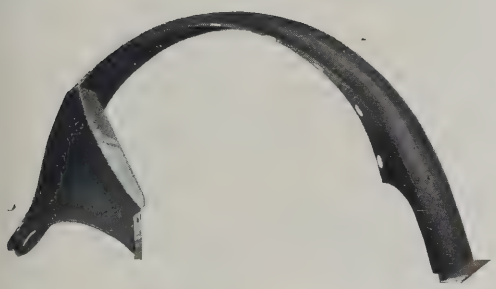
REAL ESTATE DEPARTMENT,
MONTREAL TRUST COMPANY,
11 Place D'Armes, Montreal, Que.

HEAVY DUTY FORGES

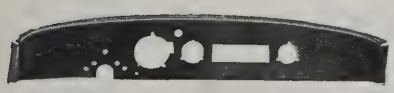
Canadian Forges are designed for the particular work they are required to do

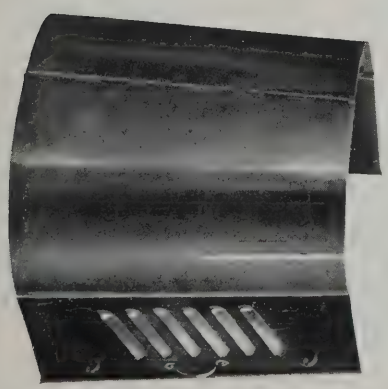


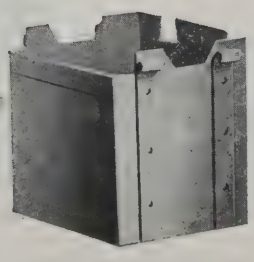
Our Catalogs 100 and 108-14 describe our full line. Write for a copy.

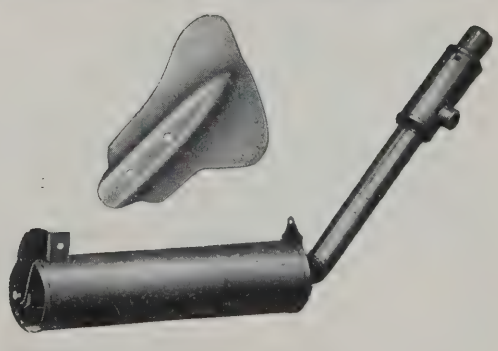


CANADIAN BLOWER & FORGE CO., LTD.
KITCHENER, ONT.









—and here's the proof—

of our exceptional skill in the production of all kinds of

STEEL STAMPINGS

OUR regular business for many years has been based on metal stamping. Consequently, we have developed a metal stamping department with batteries of heavy presses, hammers and other up-to-date equipment that make for the very highest efficiency.

We are doing a vast amount of automobile body stampings—work that is of the most difficult character. Our success in this line clearly indicates our ability to serve you.

If you are in the market for steel stampings of any size write us for quotations. Our prices, the quality of our work, and the reliability of our service will give you complete satisfaction.

All Time Recorders are not Fully Automatic

and unless they are, they cannot give the complete Time Recording service you need

This description of the exclusive International Automatic features is worth every Time Recorder buyer's attention

THE demand for International Time Recorders has increased to such an extent that we feel it will be of assistance to the buyer if we make clear just what is meant by a "Fully Automatic Time Recorder."

Let us see what this means in the card type of recorder. A fully automatic time recorder is one that entirely eliminates the human element as to its operation in any shape or form. It has what is known as three specific automatic devices.

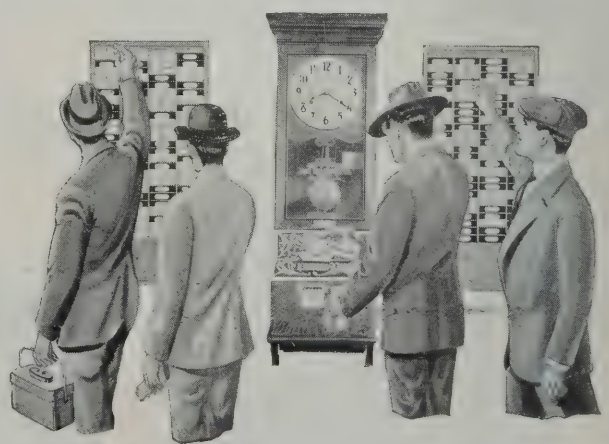
First, is the two color device or the red record, which is printed automatically by the recorder when any employee registers one minute late, or leaves one minute earlier than schedule time. The great value of this device is recognized not only for its moral effect on employees, but as well the saving of time in making up the payroll.

Second. The second automatic device is known as the automatic "Day to Day," and is a device on our recorders that shifts the position of the card holder at each midnight, so that it will register in the proper column for the subsequent day. It is a very important device, for should this be left to be done by hand, it may easily be forgotten, then the record would be printed on top of the previous day's record, which would destroy them, and it further leaves the opportunity for a malicious person to set this so it will print in the wrong column. The "Day to Day" automatic shift is purchased by a vast majority of employers of labor.

Third. The third automatic feature is known as the automatic "In and Out Shift," which is a device embodied in the mechanism of the time recorder that shifts the time card holder so that the printing mechanism will record in the IN column or the OUT column, for instance, the IN column from 7 a.m. to 9 a.m., the OUT column from 12 to 12.30 at noon, the IN column from 12.30 to 2 p.m., again the OUT column from say 4 p.m. to 6.30 p.m., adjusted of course according to requirements.

This is an extremely important device to the employer of labor, as otherwise the shifting of columns has to be done by hand by the employee as he comes in or goes out. It not only means lost time making the shift, but the employer is also depending on the human element that the records be positively correct, which one cannot be assured of except it is done by the mechanism of the recorder for reasons that must be obvious.

Without this device, any and all employees have access to the placing of the time card so that it will print in either the IN or OUT column as the employee wishes, which is not a sound proposition, for the reason that amongst a number of employees, anywhere in the world, would be found one who might be termed mischievous or even malicious, and be anxious to have time records destroyed.



Each purchaser of a time recorder that lacks any of the three automatic features as described above has not a fully automatic time recorder of the card type; the lack of any one of these automatic features may be the cause of it costing the employer many times over what the automatic feature would have cost in the initial purchase.

We manufacture card recorders from $140 up, some of which have no automatic features whatever, and to the price of the basic machine, namely the non-automatic recorder, is added the cost of each automatic feature as desired.

AN INTERNATIONAL FULLY AUTOMATIC CARD TIME RECORDER

The Automatic Dial Time Recorder

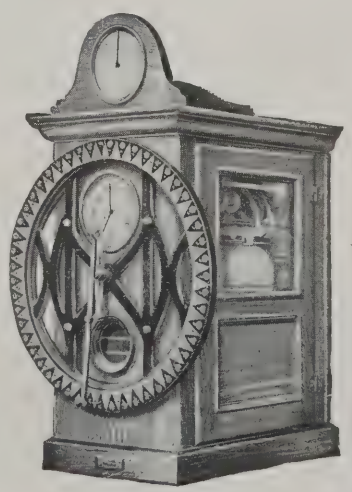
built by The International Business Machines Co. has exclusive Automatic features which put it in a class by itself

THE DIAL RECORDER. The dial recorder is a very much favored type of time clock, and has by far the largest percentage of sale, owing to its speed in operation, and its limit of number of employees that can use it, its cleanliness, and also the fact that no employee has access to the printed records. The fully automatic dial recorder has three distinct automatic features, which are indispensable to a complete time recording service

First, it has the automatic red color ribbon device, which will print all late records, or early leaving records in red, and which record is invaluable on account of the moral effect on the employee and the saving of time in computing the payroll.

Second. It also has an automatic feature known as the automatic column shift, which device moves the printing mechanism at the time designated so that it will print in the proper column, which is provided for each day's record of the week; for instance, when Monday's records have all been made, this device will shift the printing mechanism so it will record for Tuesday in another column, and so on.

This device is of great importance to the employer, owing to the fact that he knows he is not depending on any person or persons to see that this printing mechanism has been properly shifted, according to the set schedule.



Third. The time recorder has also another automatic feature known as the "In and Out Column Shift," which device automatically shifts the printing mechanism so that the record will be printed for the IN records in their proper places, and the OUT records in their proper places, again eliminating the human element as to whether these records are properly placed or not.

Fourth. For every place of business having employees who are coming and going quite frequently, aside from the set schedule of starting and stopping work, we have what we term the "New International Dial," which is the last word in time recorders and one of the finest pieces of mechanism ever presented to the public. This machine has, as a fourth automatic feature, a device that makes it impossible for an employee to register on top of his previous record, and coupled with this device is also the fact that irrespective of automatic column features, and no matter when an employee registers, the record will be found in its right relative position. It is the only recorder in the world that will automatically place the records in their relative positions irrespective of when or how they are made.

The average number of employees operated on a time recorder to-day in manufacturing plants on this continent is 130, where a few years ago it would have averaged 175 to 200. This change has been brought about by the employer of labor recognizing the false economy of allowing too many employees to register on one recorder, as it causes congestion, it is mentally resented by the employees, and further it affects production, owing to the employees hastening away from their work so that they will be amongst the first to register out, so as to avoid that congestion.

The dial recorder is made in three sizes, for 50—for 100—for 150 employees, each employee being designated by a number on the dial of the recorder. The average size dial recorder purchased is of the 100 size, which again indicates the employer is recognizing that to have a recorder for each 100 employees is profitable indeed, and fair to the employees. We can clearly see the day coming when the average number of employees on a recorder will be 100, as it clearly tends to improve efficiency in a time recording equipment.

The Dial Recorder is manufactured in two types, namely, for a daily record and for a weekly record, and the one is selected which will fit in best with the method of bookkeeping or cost recording used by the firm installing same.

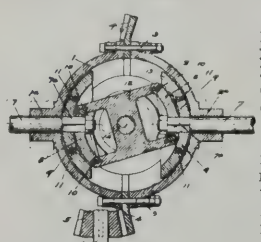
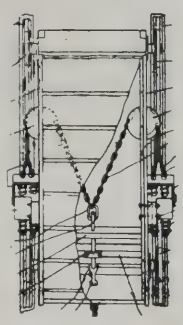
PATENTS FOR SALE



SAWING APPARATUS, a simple and easily operated mechanism, portable for convenience of felling trees or cutting logs. Is so constructed that the saw is reciprocating to make a cut and is constantly lowered so that the maximum cut at each movement is obtained. Patent for sale by Mr. A. Nelson, 246 E. Indianna Ave., Philadelphia, Pa.

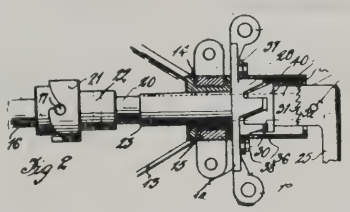


REAMER AND TAPER GAUGE, the very thing for which the mechanical world has been looking. This device is not only an adjustable, variable, taper reamer, but is also an **ACCURATE TAPER GAUGE.** This tool has been thoroughly tested and is beyond any question of experiment. The pat. holder, Mr. B. Hurd, 25 Ladd St., Portsmouth, N.H., is desirous of communicating with a reliable manufacturer with a view to negotiation for the manufacture of this invention in the Dominion.

SLOW-FEED MANGER, having a storage compartment and means operated by the animal to insure a proper feed to the bowl from the storage compartment, simple in construction, efficient in use, but strong and durable and well adapted to stand the rough usage to which articles of this kind are ordinarily subjected to. Pat. for sale by J. I. Brown, 62 Jefferson St., Westfield, Mass.

DIFFERENTIAL MECHANISM, by means of which power may be transmitted to one or more revolvable elements, driving them together in the same direction at the same speed or in opposite directions. This device is considered by experts to be one of the best that has yet been brought to their attention. It is strong, durable and absolutely efficient in use. Pat. for sale by Mr. F. W. Seeck, care Lebanon National Bank, Lebanon, Ore.

SAFETY GRIPPING MECHANISM FOR ELEVATORS, strong, durable, simple in construction, safe and convenient in use, readily set up and comparatively inexpensive to manufacture, adapted to mine cars travelling upon an inclined track and controlled by a pulling cable, and will, in case of accident, grip the rails to retard the movement of the car. Pat. for sale by C. Fak, Box 161, Bush, Ill.



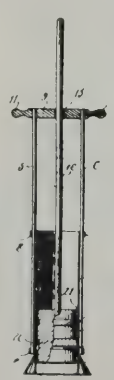


Fig 2

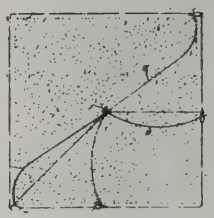
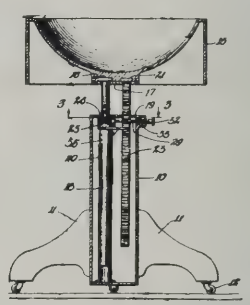
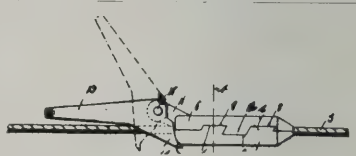


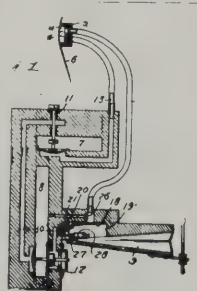
SAFETY CRANKING DEVICE FOR EXPLOSIVE ENGINES, a strong, durable and efficient cranking means, which will automatically free itself upon a retrograde movement of the engine shaft or backfiring of the engine, thus eliminating all danger. The device is simple in construction and absolutely efficient in operation. Patent for sale by J. J. Bush, 612 N. 11th St., Tacoma, Wash.



SLED, specially equipped with durable and efficient steering means and so constructed that the opposite sides may be shifted to varying positions with respect to the body, at the same time being maintained in parallelism with each other, and being securely placed. Patent for sale by S. S. Griffin, 1402 S. Durango St., Tacoma, Wash.



CLOTHES WASHING APPARATUS, simple and effective in use, easily operated, and may be constructed at a minimum cost. It operates both by pumping action and pounding action, thus insuring the best possible results. The inventor, Mr. W. Wilbur, Lynden, Wash., is open to negotiations in the disposal of his interests in this device.

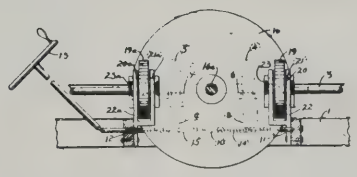


PROCESS FOR TREATING STANDING GRAIN, especially adapted for the prevention of rust on the plant after rains when conditions are such as to cause this blight. The process consists of means whereby the moisture may be shaken from the grain as illustrated above. For further particulars apply to J. Hanson, 109 N. 7th St., Montevideo, Minn., who offers patent for sale.

ADJUSTABLE STAND, convenient, simple, and attractive device, having means whereby the surface may be raised or lowered for the convenience of persons of different stature. Patent for sale by M. Tymczyna, Russel, Man.

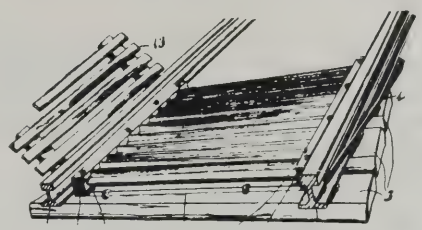
CABLE CLAMP, a simple and convenient device, absolutely reliable, strong, durable and efficient in use, may be cheaply manufactured and placed on the market at a minimum cost with a very reasonable profit. Patent for sale by D. B. Steele, 21 E. 60th St., Seattle, Wash.

AUTOMATIC EXPRESSION CONTROL FOR PLAYER PIANO, which gives an absolutely perfect reproduction of hand playing, gets away from mechanical effect of the present devices now on the market. Patent for sale by Mr. M. S. Howard, Waukon, Ia.



CREAM COOLER, a simple and efficient device, so constructed that it may be readily dismantled and cleaned, and that broken and damaged parts may be quickly and cheaply supplied. This device is one which should prove an attractive proposition, as it is the most practical device that has yet been given to the public. Patent for sale by T. E. Hooker, Dos Palos, Cal.

PATENTS FOR SALE



CALF WEANER, most efficient and humane device on the market. Note special features—adjustable lock nut, corrugations rendering durable, 2 in 1 spike and blab weaner, easy to remove, nose member is of hard rubber, does not in any way injure the animal, cannot get under it. Patent for sale by K. Lurz, Wall, S.D.

FRICTIONAL TRANSMISSION MECHANISM, particularly for use with tractors, quickly and easily adjusted to any desired speed for easy manipulation of tractor in any desired direction. May be manufactured and installed at a minimum cost. Patent for sale by A. J. Trigwell, 228 the Alameda, San Jose, Cal.

PATENTS
Trade Marks, Design Patents, Copyrights

CATTLE GUARD, for keeping animals from straying on a railroad or thoroughfare. This device is simple in construction, efficient in use and one which does not require any attention. The device is so constructed that should an animal try to pass it will become engaged with the device, which is sufficient to warn the animal to retire which will be allowed. Patent for sale by D. McMartin, Agardsley, Man.

RETURNED CANADIAN OFFICER

Captain Indian Army Reserve — four years' service in France, India, Egypt and Palestine. Can speak Hindustani and has good knowledge of Indian customs and business cities; would like to communicate with either exporters or importers dealing in the Indian market. Also slight knowledge of Arabic, and invites similar correspondence concerning Egypt. Box 4800 INDUSTRIAL CANADA.

A CANADIAN

University Science Graduate (married) wishes to change position for personal reasons. Has had valuable experience in selling, buying, construction, engineering and factory management. At present is manager of a manufacturing business, which has shown decided improvement under his direction. Confidential correspondence solicited. Box No. 4900, INDUSTRIAL CANADA.

WANTED

Agency of Specialties for Quebec City and District. Best connections and references. Reply to G. A. Vandry, 28 St. Joseph St., Quebec.

EUROPEAN REPRESENTATIVE

Two returned soldiers with several years' business experience desire to get in touch with Canadian manufacturers of staple products for introduction to, or development of, European market. We have initiative and are willing to invest sufficient capital to cover initial cost of establishment in United Kingdom. Box 5000, INDUSTRIAL CANADA.

Valuable Report on Siberia

The report of the Canadian Economic Commission, Siberia, has just been issued from the Government Printing Bureau. This report covers 79 pages, including an index of subjects and geographical districts and contains a very comprehensive statement of agricultural, marketing, financial and transportation conditions. Considerable statistical information is furnished outlining the productive capacities of Siberian agricultural, fishing and timber industries, and lists of manufactured articles required in Siberia are provided. There is also a full outline of the operations of co-operative agricultural societies and their methods of financing shipments. The report is completed by a map showing the number of towns and railway connections. A copy may be had on application to the Commercial Intelligence Branch, Department of Trade and Commerce, Ottawa.

Visitor from New Zealand

A recent visitor at the offices of the Association was Mr. W. D. Munn, of Munn & Anstiss, Limited, manufacturers agents, Auckland, New Zealand, who has been arranging for new lines in both the United States and Canada. Mr. Munn states that the people of New Zealand are most favorably disposed towards Canadian goods and would gladly give them a preference, whenever possible, in making their purchases. He declares that conditions in New Zealand are good, the people being uniformly prosperous. Manufacturing is making some progress, though only in a limited number of lines and there are abundant opportunities for the sale of many kinds of manufactured products.

How to Charge Off Special Equipment

If You are Asking Yourself that Question or Have Any Doubts About it, You are Almost Sure to be Interested in This Article by the Superintendent of a Well-Known Plant

Reproduced from "Factory"

ONE of the big problems which will confront many managers in the next few years is that of the proper charge for carrying the new buildings which were erected during the war to increase the production of munitions and other Government supplies. That numbers of large eastern concerns have structures which they do not expect to utilize fully in the immediate future is quite well known.

Can the regular volume of present business and of business in prospect be expected to carry the extra burden of interest, taxes, and so on, on these vacant buildings and on their more or less complete equipment? If this burden is saddled on the price of new product, how will the product fare when it faces the competition of similar lines which are wholly free from such inflated costs? It will take a lot of courage to accept the situation as it really is and to decide it as it should be decided. The truth is that the buildings were erected, in part at least, as a speculative proposition.

How Charge Up Maintenance

Loyalty to country, patriotism, and desire to serve, all entered into the determination to build, but men with the energy necessary to accomplish such large results foresaw that perhaps they might not write off the entire cost of the buildings from the profits of the war business. They also foresaw the present situation. Now what must be done? Even if the buildings are paid for, there are maintenance charges to meet. From what fund will they be paid?

A recognized authority on the subject of factory management and operation, whose observations receive the attention of a large audience, wrote as follows a few years ago: "The product of a factory should bear only the expense used to produce it. It cannot bear the expense of idle machinery which did not contribute to its production. Although the owner may feel that he is entitled to interest on money invested even if not producing, it is coming to be recognized that idle capital is no more entitled to wages than idle labor." Doubtless the specialist would mention idle buildings or buildings partly idle were he to rewrite the paragraph to-day.

Many analogies have been drawn to illustrate this condition, but it seems that we may get a clear idea of the relation of partly or wholly unused facilities to those fully utilized by comparing them with something tangible and movable, like ships. We will assume that a man is in the ocean transportation business and that he has three vessels. When each of the three is regularly carrying full cargoes there is no question about charges.

But let us suppose that times change so that he is unable to secure business for one ship and that he takes her out of commission. What will happen if he adds her storage charges with interest and other expense to the price charged to the shippers who employ the two other vessels? Will they not patronize some other line?

Suppose that trade continues to fall off and, furthermore, that his second vessel is compelled to take harbor in a distant land, disabled, and in need of expensive repairs, and that it will take months to restore her to service. Will the owner attempt to increase the charges on his remaining vessel so that she will earn enough to cover the loss both on the ship which is out of commission and also the one which awaits repairs as a result of the storm?

Probably it would matter little what he attempted, for the shippers would soon indicate the only possible course for him. This would be to charge for the third ship just what he had always charged, with a little margin more if he could get it. But for the present the loss is on his capital account and no amount of juggling will alter the fact.

If he wants his books to show the real condition, his surplus will show the loss or his capital account will be reduced. The shipping man's patrons will not allow him to deceive himself for a single day. But there are no such prompt monitors for the manufacturer who hesitates to acknowledge the truth.

The manager of a large manufacturing plant, known to the writer, once stoutly declared that "The expense is there and it has to be paid." So, notwithstanding the best efforts of clearer thinkers, he persistently added increasing percentages of overhead as business fell off, until his soaring estimates on contracts drove away nearly all of his company's trade. He was so determined in his unwise course that he permitted subordinates arbitrarily to apportion unabsorbed charges to the estimates of the factory production department, while he in turn added a profit percentage to those already topheavy figures. The breaking out of the war in 1914 and the sudden termination of foreign competition was all that saved the concern from collapse.

The Element of Fair Play

It is difficult to understand why these men will delude themselves into travelling in such a vicious circle, but the practice continues despite the obvious fallacy of their reasoning. The element of fair play also enters somewhat into this situation.

Why should those who continue to patronize the concern in dull times be penalized by higher charges than they pay ordinarily? Have they not a strong incentive to make their purchases just as small as possible, or to look for another source of supply?

But not all calculations are made in that way, although many well-meaning accountants fail to recognize all the factors which enter into falling business conditions in so far as they affect the production department.

In well-managed plants the depreciation of machines falls to practically zero when they are not in use. The belts are thrown off and the machines are slushed down. Power consumption, oil, waste, and other charges are reduced. In extreme cases the assistant foremen are required to work on

HEAD OFFICE - TORONTO

direct production and the shop clerical forces are reduced in proportion.

It is not a safe generalization to assume that the overhead continues practically the same in dull times as it is in busy times. A revision of figures may show a material reduction in a department where the value of the equipment is low and the operating costs are high, although there may be an actual increase in other departments.

It is a question whether the irregularities due to lack of exact information concerning these matters do not really cost more and entail greater loss eventually than the moderate expense of correct calculation. Boosting the overhead in dull times certainly does not smooth the path of the salesmen as they try to fill up the empty places in the production department. Again it may be much better to keep going, in order to keep an organization together, even without earning a profit for a time, than to permit accumulated charges to increase until they become alarming.

Cases are not unknown where managers have arbitrarily grouped unassociated departments together for no better reason than their desire to equalize the overhead. The automatic lathe department is sometimes joined with the hand turret lathe department so as to charge a part of the always high automatic department overhead to the much lower overhead of the hand-machine group. That sort of accounting would be ridiculous if it were not so serious. How it affects the costs charged against work done on the hand machines, which cannot be done on automatics, is too apparent to require mention.

Then we often find that the same overhead is charged against the vice hand in a department that is charged against the operator of an expensive machine. Asked why this is so, the accountant will declare that he is too busy to keep track of so many different rates and he has to "strike an average." Now any careful thinker knows that this so-called average may not be an approximation of the real costs.

Every Element is Considered

Is it possible for any method to be reasonably correct which does not recognize the actual facts as they exist in any single case? Many accountants now believe that the machine class rating will give results far more reliable than the other methods. Under this system every element is considered. Power, light, floor space, machine value, and supplies, all enter into the reckoning. The bench man also is charged with his better light, his floor space, his equipment, and his perishable tools.

But someone may object that a special machine which is seldom used may be put into a class by itself, and that a machine class overhead, if logically computed, would place such a burden on that machine's time that its use would be prohibitive. This might be true if the machine is used only one day out of six, but the principle of no pay for idle capital enters at this point. When it is known that the machine will be busy only one day out of six, its power and light consumption and its supplies of oil, belts, and so on, and the cleaner's and sweeper's time, should all be figured on that basis and not as if it were running full time.

Its depreciation also will be much slower than if it were running full time. To figure in some other way by attempting to balance the machine's unearned floor rental against an excessive depreciation, and then hope that the errors will not make enough difference to cause trouble, is taking liberties with chance.

A practical way of improving the situation would seem to be to secure more work which may be done on the machine. If it were procured through someone's mistaken judgment and, though it will never fully pay for itself it seems unadvisable to discard or sell it, a wise course would

be to write off a large part of the first cost, charging it to profit and loss or expense, and then proceed on a rational basis of charge for the time the machine is used. A subordinate naturally hesitates to suggest such measures to the critical manager, especially if the man who should make the suggestion is responsible for the mistake. But sound business principles do not take account of individual preferences.

The writer knows of a prominent plant where the overhead in the automatic department was figured extremely high. It was decided to install twelve hand turret lathes to increase the output by taking light finishing cuts on the work and thus permit the automatics to run without frequent stops for small readjustments of the cutting tools.

The small machines were under the supervision of the automatic department foreman and they were actually a part of that department. But in order to avoid the excessive overhead which would have been placed on them by the accounting practice prevailing there, had they been assigned to the automatic department, the fiction of a separate department with a much lower overhead was established. Thus the correct result was secured by an unbusinesslike subterfuge.

Many a time the writer has seen a profitable contract go to a competitor whose figures were only a small percentage lower than his, even after the padding had been innocently administered by the manager. His protests have sometimes been heeded and sometimes they have not, but the average purchasing agent who makes contracts involving large sums has a way of squeezing out the inflation and of getting right down to hardpan.

These purchasing men know that selling expenses are large, so they aim to do their business in such a way that the cost of making a sale to them is just as low as possible. They are not interested in the size of the sales department of the firm they patronize or in the cost of running it. They understand that the cost of making a large number of small sales is high and that that cost must be met; but they also know that the cost of selling them a large order is very often less than that of selling a smaller buyer a much smaller bill. So they will not allow the same percentage of selling expense to go against their houses. Of course this refers to special contracts, not to negotiations for one-price articles.

Good Judgment Needed

Good judgment is so clearly demanded in estimating that the arbitrary methods of the past must be discarded if business is to be done on equal terms with competitors. It matters much to-day how the special equipment necessary to perform a contract is charged when the estimate is made.

For instance, if some apparatus is required which it is reasonable to suppose will be used on other work, it is most unwise to write its whole cost into a single estimate. For if it is to be made by the contractor, the charge will usually include the full direct cost of labor and material, plus the department overhead, plus the general selling expense, plus administrative expense, plus a profit based on a certain percentage of the sum of these several charges. All of this the prospective purchaser is asked to pay.

Would it not be far better judgment to charge such equipment to either expense or capital, as the case warrants, and then to place only a small part of the cost, without all the extras, on the purchaser?

But someone says that is speculating on the future. Is not all business speculation in part? Good sense is required in such matters, for if a plant is not fairly equipped to fill a contract, that contract will certainly go to one that is.

The purchaser is not interested in plants which cannot meet his needs. He wants to do business with those which can. And he is seldom willing to pay a very large part of

TRAVELLERS' CHEQUES

Convenience, security and economy are secured by the use of Travellers' Cheques issued by this Bank. They enable the bearer to identify himself and are readily converted into the current coin of any foreign country.

AN ALLIANCE FOR LIFE

Many of the large Corporations and Business houses who bank exclusively with this institution have done so since their beginning. Their banking connection is for life—yet the only bonds that bind them to this bank are the ties of service, progressiveness, promptness and sound advice.

364 Branches in Canada Extending from the Atlantic to the Pacific

MERCHANTS BANK CONTINUES TO GAIN

Statement for Half-Year Gives Total Assets of $198,506,572
A NEW RECORD

Deposits Gain $30,117,802

The Balance Sheet of the Merchants Bank of Canada as at the end of the half-year period, 31st October last, received from the Bank's headquarters here on Saturday, shows continued gains and growth on the part of this well-known financial institution.

The Total Assets have now reached the commanding figure of $198,506,572, an increase of $32,582,136 over the corresponding date last year. The readily available portion of the Assets amounts to $84,014,965, an increase of $11,566,688, by which is shown that the liquid position of the Bank has been well maintained.

That the Bank has continued to do its full share, both to the Government and the Commercial Community is shown by an increase of $4,682,244 in securities held of the Dominion and Provincial Governments, while Current Loans and Discounts in Canada have increased by $19,435,478 during the 12 months' period.

Note Circulation at $15,827,373 is $647,130 higher than a year ago with the issue in excess of Paid-Up Capital more than covered by a Deposit of $8,000,000 in the Central Gold Reserve.

The Deposits amount to $166,006,015, against $135,888,213 on October 31st, 1918, being an increase for the period of $30,117,802, of which gain $19,368,746 was in Savings or Time Deposits and $10,749,056 in Deposits payable on Demand—a basis of progress which cannot but be considered satisfactory.

The statement altogether makes very good reading for those who realize the important part that our Chartered Banks play in the well-being of the whole country, industrial as well as agricultural, and the figures are especially interesting, as the period covered, with the exception of 11 days, has been after the date of the Armistice and clearly demonstrates that our large and well-managed financial institutions are continuing their progress and growth on a solid basis with the war a thing of the past.

The main features of the figures of October 31st, 1919, and October 31st, 1918, compare as follows:

BALANCE SHEET
As At 31st October

the cost of fitting them out. It is better not to bid on a contract at all than to send in a bid so high that it tells a story of inadequacy in the bidder's plant.

Branch in Paris

Park-Union Foreign Banking Corporation Has Placed a Branch in French Capital

Announcement is made by the Park-Union Foreign Banking Corporation, the international bank with which the Union Bank of Canada is associated, that a branch was opened on November 10 in Paris, France, under the management of Mr. George Alfred Carrere. The branch is located at the corner of the Rue Taitbout and the Boulevard des Italiens. This constitutes the fifth branch of the corporation, the others being in Seattle, San Francisco, Shanghai and Yokohama, with head office at 56 Wall Street, New York.

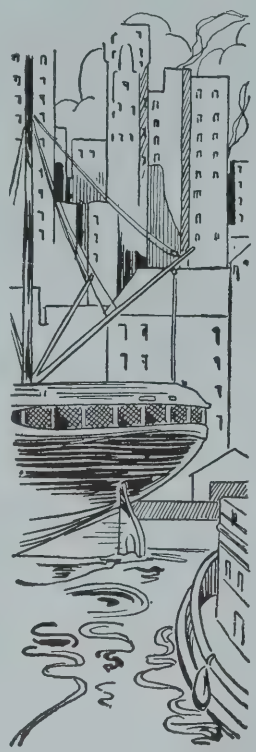
Progress of Merchants Bank

Substantial Gains Are Recorded at the End of the Half-Year on October 31

It has now become customary for the banks to present half-yearly balance sheets, a practice which enables customers and the public generally to keep more closely informed on the progress of these institutions. The half-year of the Merchants Bank of Canada ended on October 31 last, and the statement since issued gives convincing proof of the stability and growth of this particular institution.

It is extremely gratifying to note the splendid expansion in assets, which between October 31, 1918, and October 31, 1919, grew by $32,582,136 to $198,506,572. Of this total, $84,014,965 represents readily available assets, these being $11,566,688 greater than a year ago. During the same period, deposits increased from $135,888,213 to $166,006,015, of which gain $19,368,746 was in savings or time deposits and $10,749,056 in demand deposits.

Both the items, call loans and loans and discounts, show good increases, witnessing to the part played by the Merchants Bank in furthering the business interests of the country. Call loans in Canada were up from $4,916,574, to $6,843,017 and call loans abroad from $2,899,198 to $3,418,846. Loans and discounts expanded from $86,818,802 to $106,254,280. Altogether the statement is one of which the bank should have every reason to be proud and should be a source of confidence to all who have dealings with it.



Car Earnings Drop

Very Considerable Reduction in Profits for Fiscal Year Ended September 30

As might have been expected, earnings of the Canadian Car & Foundry Co., Limited, during the transition period from October 1, 1918, to September 30, 1919, were less than those during the last year of war. In figures they show a reduction from $3,252,608 to $1,887,634, both amounts being subject to Government taxes. Out of the latter sum, dividends of 8¾ per cent. were paid on the preference stock, while adding in the previous year's surplus, the amount carried forward was $7,061,556.

The directors, in their report to the shareholders, regard the results as satisfactory. Aggregate sales were $33,000,000 with business practically all in the regular lines of the com-

San Francisco

THE GOLDEN GATE TO THE EAST

FROM San Francisco Bay, the largest harbour on the Pacific coast of the United States, sail the ships that carry the exports of Canada and the United States to Hawaii, Australia, China, Japan, the Philippines, Mexico and Central America.

San Francisco is the Golden Gate to the East; a city of pluck and romance. Almost destroyed, it arose from its ashes and in three years re-built the modern, progressive and important city of to-day.

To exporters and importers, San Francisco should be kept in mind.

Through our direct connection with the Park-Union Foreign Banking Corporation, having branches in San Francisco and Seattle on the Pacific coast; in Shanghai in China; Yokohama in Japan; in Paris, France; our own New York agency at 49 Wall St., and our two branches in London, Eng., we are able to offer every banking facility for the transaction and extension of foreign business throughout the world.

Our officers will be glad to advise Canadian business men regarding their foreign trade activities.

pany's products. In the previous year the aggregate was $45,000,000, of which one-fourth was munition work. Reporting on the outlook, it is stated that the car company has orders on hand which will carry it into next year, but after that the future is uncertain. Serious thought is being given to diversifying the output from the various plants. New lines are being considered. It is improbable that further shipbuilding orders will be taken. The condition of plants is generally satisfactory, and the financial position is also satisfactory, with no indebtedness to any bank.

A Gratifying Statement

Bank of Montreal's Annual Report Shows Readjustment to Post-War Conditions

Special interest attaches to this year's annual statement of the Bank of Montreal, because it shows how satisfactorily this great financial institution is meeting peace conditions. The Bank's year ended on October 31st, which means that nearly the whole period has been spent under the new conditions. During the war the Bank assumed heavy commitments to assist the financing of the Dominion and Imperial Governments. Since the Armistice was signed, trade and manufacture have received special attention through the medium of current loans.

As might have been expected, there has been a decrease in total assets, though this was experienced during the first six months of the year. Since then assets have shown a substantial growth. At October 31st total assets stood at $545,304,809, as compared with $558,413,546 a year ago and $489,271,197 at April 30th.

While the various readjustments were being effected, a strong liquid position has been consistently maintained, and as a result liquid assets amount to $337,980,858, being 67.99 per cent. of the liabilities to the public. The expansion that has occurred in trade and commerce is reflected by an increase in current loans of approximately $18,000,000 and these now amount to $164,182,591, as compared with $146,028,861 a year ago.

The various campaigns for thrift, which were inaugurated during the war period, are also apparently having a good effect. As a result, deposits bearing interest have gained to $312,655,964, as compared with $268,167,111, at the end of the first six months. Deposits not bearing interest also show a gain and now stand at $129,946,641, up from $124,736,111, at the end of April last.

Since the close of its last fiscal year the Bank has also completed, without inconvenience to the public, the absorption of the Bank of British North America, both capital stock and rest account being increased to $20,000,000 respectively, as compared with $16,000,000.

The Profit and Loss Account, in turn, reflects the larger business handled, and the total profits for the year amount to $3,314,227, or 16.57 per cent. on capital.

Branch in Buenos Aires

Royal Bank of Canada has Announced Opening of a Branch in Argentine Republic

C. E. Neill, General Manager of the Royal Bank of Canada, announced on November 10 the opening of a branch in Buenos Aires, Argentine. It will be under the management of Mr. T. F. Diver, late manager of the branch in Barcelona, Spain, and formerly supervisor of Cuban branches. The Royal Bank now has 68 branches in the West Indies, Central and South America.

From the Angle of your Filing Clerk

You probably look on your filing system as a place where so many letters and papers are stored.

But your filing clerk? She isn't fortunate enough to be able to look at it in such an easy, buoyant manner. With her it's a serious part of routine.

She knows that when you ask for a certain paper you want it quickly, without any waste of time.

With her the *proper system* means the difference between a slow, cumbersome, inaccurate way, fraught with many delays—and a speedy, accurate and efficient method of filing.

"Office Specialty" Systems of Filing and Record Keeping are fundamentally right. A proper principle of organization underlies each one of them. Each system is designed for a specific purpose and it achieves that purpose in a way that extensive study has demonstrated to be the best.

"Office Specialty" System Service, Dominion-Wide in its scope, is offered to any business organization without fee or charge.

Another Paper Mill

Price Brothers & Co., Limited, Decide Upon Erection of Another Mill in Saguenay District

An announcement has been made by Sir William Price, president of Price Bros. & Co., Limited, Quebec, that the directors of his company have decided upon the erection of another paper mill. This will be erected at a point three or four miles east of Chicoutimi, where a new town called Saguenay will be laid out. There the mill will be on tide water. Sir William Price's statement was as follows:

"My board has definitely decided to start without delay on a large newsprint mill in the Saguenay district, with a capacity of between four and five hundred tons. Work has already been started on the necessary waterpower, and by May of next year construction of the mill will be under way.

"A further machine is now being erected in our Kenogami mill. This machine would have been working now had it not been for the strikes in England. This brings our present output up to 270 tons, or, including Jonquiere, 325 ton, per day of paper and board, in addition to sulphite pulp. When our new plant is operating, our total output of paper and board will be in the neighborhood of 800 tons per day."

It has also been announced that the same company will erect another big sawmill at Matane.

From Munitions to Motors

Willys-Overland, Limited, Have Made Rapid Progress in Changing Over Plant

The progress made by Willys-Overland, Limited, West Toronto, in transforming their factory from a munitions plant to its present stage of peace production affords another instance of the way in which Canadian manufacturers are meeting changed conditions. During the war, the entire plant was devoted to the construction of airplane motors and munitions, and with the cessation of this work immediate steps were taken to manufacture automobiles. The decision was made to concentrate, at least at first, upon the new light model Overland 4, which had undergone exhaustive tests and was calculated to revolutionize the motor car industry through the introduction of the "three-point suspension springs," which it had been proved would give the most surprising riding qualities.

Mr. J. G. Perrin
Assistant General Manager, Willys-Overland, Limited

Putting on the Finishing Touches
Scene in the Willys-Overland plant as the new light model Overland 4 comes down the runway

Mr. T. A. Russell, who became president and general manager this year, surrounded himself with able executives and technical experts, whose total factory and office staff last May numbered only 229. Gradually, yet with rapidity, machinery was installed and sources of steady supply of raw material established, so that each month the company was able to use additional men. Within a few months, actual motor car production was reached, and within the past few weeks it has attained a quantity that ensures it as a permanent and growing industry. At the middle of November, the number of employees had increased to nearly 1,300, all their efforts being directed to the production of the Overland 4. The new car has had a favorable reception from one end of Canada to the other, and as contracts already made are sufficient to keep the factories busy for a year or more, Willys-Overland, Limited, promises to take its place permanently among Canada's leading industries.

Increase Payroll 50 per Cent.

Guelph Carpet & Worsted Spinning Mills, Limited, Make Important Plant Additions

Considerable enterprise is being shown at the present time by the Guelph Carpet & Worsted Spinning Mills, Limited, one of the largest textile industries in Canada. Since the amalgamation early this year of the Guelph Carpet Mills Co., Limited, and the Guelph Worsted Spinning Co., Limited, under the new name and management, the Company have made rapid progress and many improvements are noticeable. Recently new offices and showrooms were built on an elaborate scale, and now the work is just being completed on a large extension to the worsted spinning department. The cost of the new plant and machinery is over $300,000, and will be in operation in the spring.

The present plant in full operation employs 400, whilst this new development will increase the payroll about 50 per

Steel Building For Sale

Tenders will be received up to 15th December next, by the subscribers, subject to previous sale, for the purchase of the Steel Building 300 ft. long, 100 ft. wide and 32'6" in height from floor to eaves, 38'9" at peak, and containing approximately 640,000 lbs. Structural Steel, now standing on the property formerly owned and operated by the Nova Scotia Car Works, Ltd., in the City of Halifax, and used by them as a Steel Erecting Shop.

The Building Measures 300 ft. by 100 ft.

——Consisting of 20 panels, 15 ft. centres making a total length of 300 ft. and width of 100 ft.

Each panel consists of two outside columns, 10 x 10 H. Steel Bars, 49 lbs., also centre columns H. Steel 12 x 12, 71.6 lbs.

Purlines consist of 18 6" I. Beams, 12.25 lbs.

Side Channels 12 5" I. Beams, 6.5 lbs.

The Roof Truss is made up of angles, approximately, 2½ x 2" x 5/16".

There is a double set of Crane Girders down the length of the building as follows:

2 24" I. Beams, 80 lbs. with 18" Channels, 15 lbs., these I. Beams are fastened to the Columns with Steel Brackets.

The Building to be taken down and removed from its present site before 1st March, 1920. Any further particulars desired will be furnished on application. The lowest or any tender not necessarily accepted.

Canada Corporations, Ltd.

Cor. Hollis and Prince Streets, Halifax, N.S.

cent., enabling this institution to claim the premiership in the country of its kind. Besides manufacturing woollen and worsted yarns of all grades and qualities on a large scale, used for all purposes in knitted garments by the numerous knitting mills in the Dominion, they are extensive manufacturers of floor coverings in tapestry, velvet, Axminster, Brussels and Wilton designs.

Knitting Mills Being Enlarged

Two Mills of Penmans, Limited, in Quebec Are Being Extended to Meet Trade Requirements

Due to increased demand for the company's goods both for home and foreign consumption, Penmans, Limited, manufacturers of knit underwear and hosiery, are at present making additions to their mills at Coaticook and St. Hyacinthe, Quebec. The former extension consists of a three-storey erection, 60 by 100 feet approximately. The latter is 25 by 40 feet, two storeys high. Both are of brick, standard mill construction and sprinklered throughout.

Mr. I. Bonner, general manager, reports that with the exception of one or two lines, the demand for the company's product is good. Export business developed to date is such as to keep the mills fairly well occupied all the time; in fact, some of them are booked for a number of months ahead. In certain underwear and hosiery lines, production is entirely limited to the quantity of help available, which in Ontario is a very serious matter at the present time.

More Space Needed

In Anticipation of Increase in Export Business, Bicycle Manufacturers Tack Addition to Plant

An extension, which will add approximately 16,000 square feet of floor space to their plant at Weston, Ont., is being erected at the present time by the Canada Cycle & Motor Company, Limited. The company's plant is of the modern, one-storey, saw-tooth-roof style of construction and the addition will harmonize with the original building. It is expected that the work of erection will be completed before the end of the year.

Expanding export business is the reason back of the enlargement. The company have always done more or less foreign business and indications now are that this department will grow to such an extent in the next few years that greater manufacturing facilities will be needed. On completion the addition will be utilzed for storage purposes, though it will be gradually absorbed in the manufacturing end as the need for space arises.

Clothing Manufacturers Build

Capacity of Plant of W. E. Sanford Mfg. Co. at Hamilton to be Increased by New Erection

With the object of improving working conditions and increasing production, the W. E. Sanford Manufacturing Co., Limited, Hamilton, are erecting a new building in the vicinity of their plant at King and John streets. The new structure is 40 x 140 feet, three storeys high and of reinforced concrete construction. It is being built entirely for manufacturing purposes and will be ready for occupancy about January 1. While erected primarily for the better housing of employees

REES' RoTURBo
PUMPING MACHINERY

Is used the world over in Modern Industrial Plants, Power Stations, Waterworks, Mines, Pulp and Paper Mills, Salt and Chemical Plants, where highest efficiency, reliability and high-class engineering are demanded.

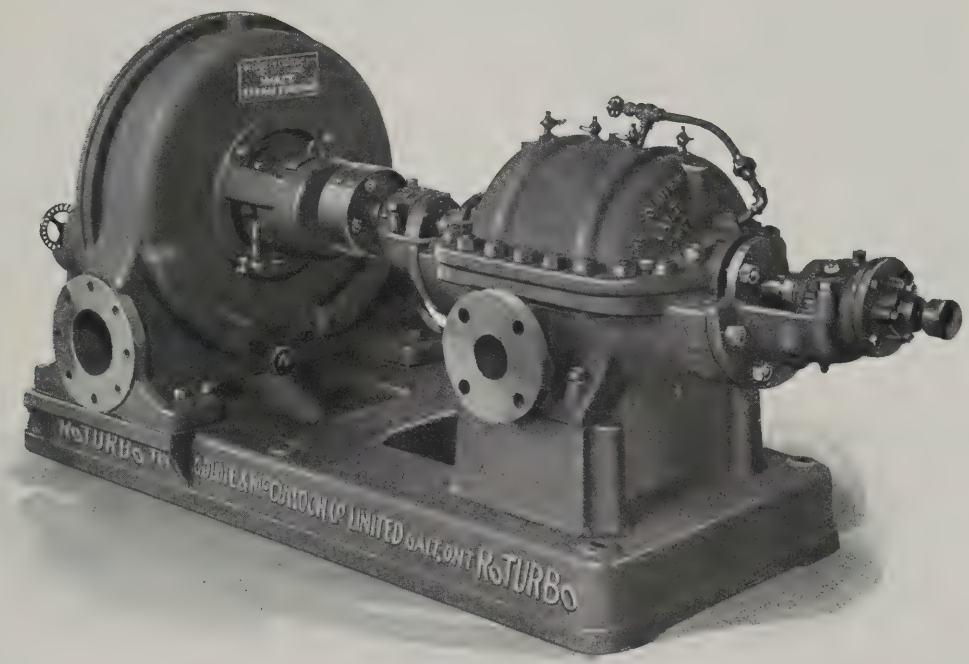

Illustration shows a REES' RoTURBo Multi-stage Pump direct connected to Goldie & McCulloch "WAIT" Steam Turbine, recently built for the Salts & Potash Co. of Canada, Limited, for pumping brine.

REES' RoTURBo Pumps provide a very high and sustained efficiency over a wide range of duties which means a saving in power costs. The self-regulating feature of RoTURBo design is responsible for this saving, and this same feature protects your prime mover from overloads on a decreased pressure head, eliminating expensive delays and costly repairs.

Catalogues and complete details mailed to those interested on request.

and so that manufacturing might be carried on under improved conditions, the building will naturally give greater capacity for production and the company expect an increase in output of about 10 per cent. At present they have all the business they can attend to. Great difficulties are reported in securing materials and, owing to the shortage of skilled labor, manufacturing is retarded. Both conditions militate against their being able to engage in export trade to anything more than a limited extent.

Partridge Rubber Expands

Expect Shortly to Increase Number of Hands in Guelph Factory from 350 to 500

When an extension now under way is completed, the F. E. Partridge Rubber Co., Limited, of Guelph, will augment the number of its employees from 350 to 500. The addition to the building is 100 x 60 feet, four storeys high. This company have had a very rapid growth. Organized in Montreal in 1915, the plant was transferred to Guelph in 1916. It at first occupied a small building but additions have been made almost continuously until the company now occupy a modern five-storey structure. Besides making the Partridge line of tires and rubber tubes, the company manufacture a complete line of rubber sundries, including hot water bottles, tobacco pouches, etc., the daily output being 475 tires, 600 tubes, 500 hot water bottles, and 1,000 tobacco pouches. With the increased facilities for manufacturing, the company soon hope to increase their daily output to 800 tires with a proportional increase along other lines.

Toric Lenses Now Made in Canada

Imperial Optical Co., Toronto, Now Manufacturing These Lenses on Factory Basis

The Imperial Optical Co., Toronto, have built and installed 40 automatic multiple Toric lens grinders, and polishers, and are now manufacturing these lenses on a factory basis production, using the same methods as those employed by the largest lens grinding manufacturers in the United States. They are figuring on putting an addition to their present building to accommodate additional machinery for lens grinding.

Adding to Plant

Otto Homuth of Preston, Ont., is Erecting Building for Storing and Grading Rags

Additions to the plant of Otto Homuth, manufacturer of woolen shoddies and grades of woolen rags, Preston, Ont., are being made at present. These consist of a building, 100 x 45 feet, two storeys high, mill construction, to be used for the storing and grading of rags and a boiler house 37 x 37 feet with 65-foot cement chimney. Mr. Homuth intends to instal a 75 h.p. boiler for heating both the new building and the present plant, and he expects to have the enlargement completed before the end of the year.

Progress at Ojibway

Canadian Steel Corporation Have Made Good Start this Year on Their Big Plant

Considerable work of a preliminary nature has been accomplished at the site of the Canadian Steel Corporation's projected plant at Ojibway, Ont., this year. A number of underground sewers and drains have been laid; a considerable amount of permanent and temporary railroad tracks has been constructed and a vessel slip and docks built. The slip is 2,400 feet long, 202 feet wide, with 23 feet depth of water. The dock is all massive concrete work, upon 75 and

80-foot piles driven to rock; it will be completed, with the exception of dredging, this fall. Excavations have been made for four blast furnaces and the foundations are practically completed for two. All foundations are supported upon piles driven to rock. The contract has been let for the steel work for two blast furnaces and is now in the shops for fabrication. The steel work for the permanent machine shop and field fence shop is also being fabricated. It is the hope of the Corporation that conditions next year may be such that work can be pushed with greater vigor.

50 per Cent. More Capacity

Another Storey being Added to the Plant of the National Acme Co., Montreal

By adding another storey to their main building, which is approximately 430 x 55 feet in size, the National Acme Co., Montreal, manufacturers of milled screws, nuts, bolts and special parts, expect to be able to increase their output by 50 per cent. The addition to the plant has been rendered necessary by the increased volume of business being booked, particularly from automobile manufacturers. The work of enlargement will probably be completed by January 1. When under operation, the extended plant will require the services of from 75 to 100 additional hands.

Will Make Tungsten Lamps

Canadian Westinghouse Co., Limited, are Establishing New Industry at their Hamilton Works

Contracts have recently been let by the Canadian Westinghouse Co., Limited, for the remodelling of their west end plant, which was used continuously throughout the war period by the Militia Department. This plant will be used for the manufacture of tungsten lamps. The management expect that production will be commenced within the next four or five months. It is impossible to say how many additional employees will be needed, but the number at the outset will be quite limited.

Building Power Plant

Bathurst Lumber Co., Limited, Spending Million Dollars on New Power Development

About a million dollars is being expended by the Bathurst Lumber Co., Limited, Bathurst, N.B., on an important power development at Grand Falls on the Nepisiquit River, twenty miles from Bathurst. The Falls have a natural drop of 84 feet. The company are building a reinforced concrete dam, which will raise the head from 100 to 110 feet. Two turbine generators, each developing 4,500 h.p., will be installed and provision is being made for another unit of the same capacity to be installed later on as required. The power will be transmitted over steel poles to the pulp and saw mills at Bathurst and the whole operation will be complete and in service by the end of 1920.

Greater Brick Capacity

Citadel Brick & Paving Block Co., Limited, Quebec, Will About Double Its Output

By February 1st, the Citadel Brick & Paving Block Co., Limited, Quebec, expect to have completed a plant enlargement which will increase their annual output of bricks from eighteen to thirty-five million. They are adding to their present battery of three kilns, four round down-draft brick kilns of a capacity of 100,000 bricks each, these being all connected together according to the Minter System and equipped with electric motors and fans for artificial draft. To their system of dryers, they are adding twelve 110-foot

The Canadian Appraisal Company

Limited

DURING the past fourteen years we have appraised some four thousand properties, scattered all over the Dominion of Canada.

These include the leading and most representative plants of every manufacturing industry of the Dominion.

The valuations which we make comprise land, buildings, plant, machinery and equipment, tools, water powers, etc.; in fact, all the permanent working plant of any manufacturing or other industry.

Our certificate, therefore, of values, in conjunction with the certificate of profits and liquid assets prepared by the accountant, furnishes a complete verification of a company's assets.

The Same Fittings That We Use Ourselves

WE are one of the largest users of pipe fittings in Canada, and we offer you the identical fittings we use in all our work—steam and hot water installations, power piping and automatic sprinkler systems. Try them on one job and you will never go back to other makes.

G.F.E. Quality Pipe Fittings give ***permanent*** satisfaction because every piece is a masterpiece.

First: the ***Choice of Material.*** We use nothing but the finest selected materials, and our mixtures are carefully analyzed by our own chemists.

Second: in ***Machining.*** All G.F.E. Fittings are threaded on our own machines by our own men who know that no small part of the profits of our own contracting business depends on their being threaded right. Try them once and you'll use them always.

Third: in ***Inspection.*** No fitting is allowed to leave our plant that does not reach our rigid standards,—standards built up by the rigorous requirements of sprinkler installation work which is on a higher plane than any other contract work.

These are some of the reasons why the use of G.F.E. Fittings on a job means not only labor saved, but freedom from leaks and absence of future troubles.

The "best there is" is none too good for your work. "Good enough" won't do. G.F.E. Fittings are the "best there is."

waste heat dryer tunnels, with capacity of drying 40,000 bricks per 24 hours. These dryers are equipped with electric motors, fans, etc., and will be the most up-to-date dryers in the country. The company are also putting in additional machinery to take care of increased production, such as heavy duty dry pans for pulverizing shale, single roll crusher for crushing shale, new Freese cone-clutch wire-cut brick machine, new pug-mills, etc. When all improvements are carried out, the plant will be producing 10,000,000 high-grade rustic face bricks, 25,000,000 builders' shale bricks, and 1,000,000 square feet of hollow ware a year. The cost of the enlargement will be about $100,000.

Preparing for Mill Erection

Nashwaak Pulp & Paper Company Construct Dam and Power House on Nashwaak River

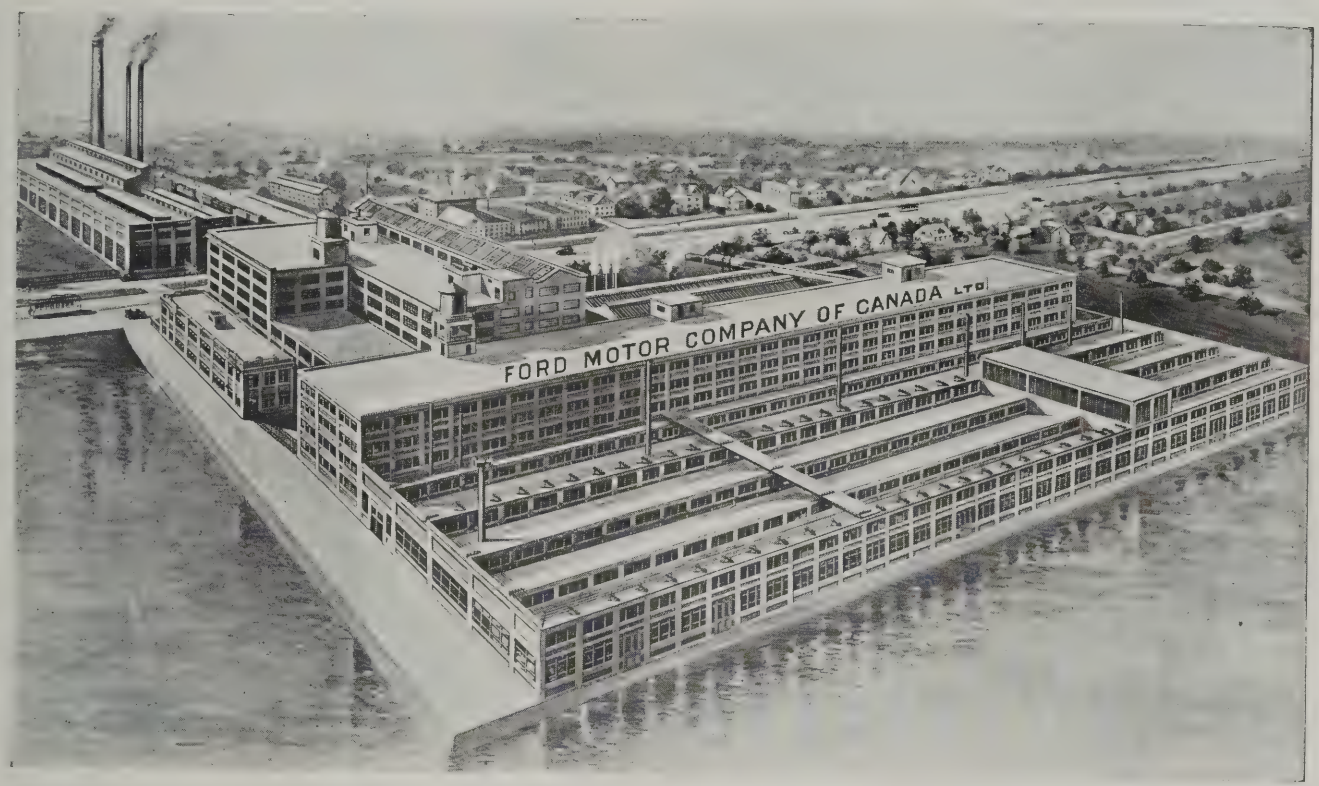
As a preliminary to their proposed development on the Nashwaak River in New Brunswick, the Nashwaak Pulp & Paper Co., Limited, of St. John, N.B., and New York, are at present completing the construction of a dam and power-house about 3½ miles from the confluence of the Nashwaak and St. John Rivers. It is expected that the dam, which will develop about 1,000 h.p., will be completed this fall. The company have not yet decided as to when they will begin the construction of their pulp mill and, according to Hon. N. M. Jones, the manager, no definite action will be taken until labor conditions are more settled. In the meantime the company are continuing to operate their mill at St. John, formerly the mill of the Partington Pulp & Paper Co.

Open Branch Plant

Hall, Dent Canada, Limited, Forced by Labor Shortage to Branch Out

Owing to the difficulty of securing sufficient labor in London, where they are operating two plants, Hall, Dent Canada, Limited, started a new branch plant last month in the village of Zurich, Ont., where they will manufacture silk and chamois dressed gloves. They have rented a vacant factory building which will accommodate from 50 to 60 hands. The move is in a sense experimental, but if adequate labor is available, the industry will no doubt be extended. This is the plant which was reported last month as having been established by Mr. H. Gundel, Mr. Gundel being superintendent of the London plants.

New Paint Industry



Winnipeg Wholesale Hardware Dealers Are Building Plant in St. Boniface

A paint factory is being erected in St. Boniface, Man., by Marshall-Wells Co., Limited, Winnipeg. It is a building 80 x 80 feet, four stories high, of reinforced concrete, and will cost approximately $90,000. The Company expect to spend upwards of $300,000 for equipment, purchasing only the most modern machinery, and will manufacture paints and paint specialties, to be sold under the brand of "Mars-Wells." They hope to start manufacturing by January 1.

McClary Enlargements

Quarter of Million Being Spent on Two Additions to Plant in London

Two new buildings are being erected by the McClary Mfg. Co., London. One of these is in connection with the tinware and enamelling departments and consists of a shipping building, being built on York Street, with spur track to facilitate handling of raw materials and manufactured goods. The other is in connection with the foundry department and is a building to be used for woodwork and box

manufacturing, as they cut up a good deal of lumber annually for their own use. The latter building will be 80 x 120 three stories, and will cost about $150,000. The former will cost approximately $100,000. These buildings do not really constitute any addition to the productive capacity of the plant, which for the past year has been worked considerably under capacity, owing to the difficulty of securing skilled help. They have plenty of room for expansion, provided men and materials were available, but the difficulty of procuring materials at present is very acute and the probabilities are that they will be considerably handicapped in this respect for some months to come.

One-Third More Capacity

Hosiers, Limited, Woodstock, Contemplate Making Considerable Enlargement to Their Plant

Though only completed quite recently, the plant of Hosiers, Limited, Woodstock, is about to be enlarged by the addition of an extension, 50 x 60 feet, three storeys high, which will increase present capacity by about one-third. The present mill is 50 x 70 feet, of terra cotta brick and mill construction, three storeys high. About 80 operators are employed, the equipment consisting of 108 machines. This will be increased to 140 machines when the extension is completed. The company are engaged in making hose, the present output representing a turn-over of $350,000. H. W. Austin, of the "P.K." Company, Montreal, is president; K. W. Harvey, of the Harvey Knitting Co., is vice-president and managing-director; James Bassett, secretary-treasurer; and W. A. Shakman, vice-president and managing-director of Julius Kayser & Co., New York, and W. W. Naylor, Toronto, directors.

Complete New Plant Proposed

Renfrew Machinery Co., Limited, Have Ambitious Program of Plant Extension in View

The Renfrew Machinery Company, Limited, Renfrew, Ont., are at the present time considering the further enlargement of their manufacturing facilities, for the purpose of meeting the increase in business in cream separators and scales, as well as to provide space for the manufacture of tractors and stationary engines. They will really build a complete new plant and not extend their present plant. However, as this will be somewhat of an undertaking, they will not likely start on the construction of the new building until the spring of 1921.

Big Flour Mill for Calgary

Work Progressing Satisfactorily on 6,000-Barrel Mill for Alberta Flour Mills, Limited

The work of erecting the 6,000-barrel mill for the Alberta Flour Mills, Limited, in East Calgary, has now reached the second storey stage, and if nothing unforeseen happens the mill will be completed in time to operate on some of the 1920 crop. The work of construction was started in the early summer, and the heavy work is now done. Accompanying the mill is an elevator capable of storing one million bushels of wheat. The mill-site comprises ten acres of ground with a 2,000-foot frontage on the main line of the C.P.R.

Referring to the development, Mr. J. Albert Burgess, financial agent of the company, says: "There is now no question in the mind of the student but that Western Canada has great advantages in the manufacturing and domestic sale and export of flour. The market for the millfeed is in Alberta, and the millfeed is very necessary to the successful building up of the live stock industry. A large mill at Calgary has all the advantages that an eastern mill has for the sale of its products in

All stock offered has been on a straight basis of $100 per share, without any bonus or promotion stock.

Open Branch Plant

Canadian H. W. Gossard Co., Limited, Secure Premises in Town of Drummondville, P.Q.

A factory building in Drummondville, P.Q., has been leased recently by the Canadian H. W. Gossard Co., Limited, Toronto, manufacturers of corsets, etc., and this is now under operation. In the meantime the branch plant in the Wrigley Building, Toronto, has been closed and its organization consolidated with the main plant at 284 King St. West. Reports that both Toronto plants would be closed and that a large new factory would be erected by the company at Drummondville are incorrect. What may ultimately happen is unknown, but there is no likelihood of the Toronto plant being closed for several years and the erection of the new building at Drummondville is contingent upon the labor outlook. The present branch, which is about the same size as the Toronto plant, is intended to try out the situation, and so far the experiment has proved successful.

Varnish Company Extends

Holland Varnish Co., Limited, are Putting Up Addition to Relieve Pressure on their Plant

In order to relieve the congestion in their present plant, the Holland Varnish Co., Limited, Montreal, are putting up an addition which will enable them to handle a much larger volume of business. The plant as originally designed was built to handle a business of a quarter of a million dollars per annum. Although several extensions and alterations have been made during the past three years, the additions have not been sufficient to enable the company to cope with business now running over a million dollars per annum. The present extension is calculated to give the plant this capacity. The company hope to have the building completed within the next few months, but it will take some time to get the machinery installed as deliveries are very slow.

Enlarge Fergus Plants

Beatty Bros., Limited, Carry Out Programme of Extension, Greatly Increasing Capacity

The business of Beatty Bros., Limited, Fergus, Ont., manufacturers of stable equipment, washing machines, pumps, ladders, churns, etc., has grown so rapidly that they have found it necessary to increase their buildings in Fergus considerably. They already have two large factories in Fergus, and extensions are being built to both. To the west of the saw-tooth building they are building an extension, 96 x 144, for increased storage and shipping space. At the other end, to the east, they are adding an extension, 96 x 168, to provide

increased manufacturing facilities. The wood working plant on the Grand River is being enlarged by an addition, 150 x 100, and a large new dry kiln is being erected. All this work is well in hand and will be finished early next year. When these extensions are finished it is expected that the output will be doubled. These additions are quite independent of the recent acquisition by this firm of a plant on Bathurst St., London, Ont., and other alterations and improvements to their factories in London.

Building New Plant

Julius Kayser & Co., Limited, Spending $300,000 on Four Buildings in Sherbrooke

A complete new plant is being erected by Julius Kayser & Co., Limited, at Sherbrooke, P.Q., which will permit of much larger production. The plant consists of a single structure divided into four separate buildings. The main erection is 300 feet long, three storeys and basement, and is divided into two parts, one 135 feet, and the other 165 feet long, the former being 60 feet wide and the latter 50 feet wide. In addition there is a weaving room, 48 x 110 feet, and a room for dressing silk, 40 x 100 feet, these being each one storey high. The floor space is approximately 80,000 square feet, and the cost of construction will run to nearly $300,000. Unless unforeseen conditions arise, the company expect construction to be completed by March 1, though it will be several months after that date before they will be prepared to operate on a large scale.

Oil Cloth Co. Reorganized

Montreal Industry Will Now be known as the Dominion Oilcloth & Linoleum Co., Limited

A reorganization of the Dominion Oil Cloth Co., Limited, took place on October 31, when all the company's undertaking, property and assets were transferred to a new company, known as the Dominion Oilcloth & Linoleum Co., Limited, a company recently incorporated at Ottawa with an authorized capital of $5,000,000. The transfer does not involve any change in either management, organization or control, which all remain as before.

Contracts have recently been let for certain new buildings. Referring to these developments, John Baillie, managing-director, says: "Building operations which we are now making consist of alterations in some of our old buildings, which were out of date and are now being demolished and rebuilt. This, along with the reorganization of our company, is done in the hope that within the next year or two it will be possible to get sufficient raw materials to run our works to capacity, which has not been the case for some years past."

Coke Plant Expansion

By-Product Coke Plant of Algoma Steel Corporation Now a Most Modern Installation

With additions recently made and improvements contemplated next year, the by-product coke plant of the Algoma Steel Corporation at Sault Ste. Marie is now to be regarded as a thoroughly up-to-date plant. A very complete description of the plant written by its superintendent, Wm. Seymour, appears in the November issue of *Iron and Steel of Canada*. The original installation, consisting of two batteries of Koppers regenerative by-product ovens of 55 ovens each, together with the necessary coal handling and by-product recovery apparatus was completed early in 1911. Soon after the coke plant was started, a sulphuric plant was erected to supply the acid necessary to make sulphate. In 1918 the erection of an additional blast furnace made ex-

Foley Traction Rims will Make Your Trucks Travel over Muddy, Spongy, Snowbound Roads

tensions necessary to the coke plant and these consisted of 50 Wilputte ovens, increase of coal storage space and an additional primary cooler. One of the original Koppers ovens is now being rebuilt and modernized and the other will be rebuilt next year.

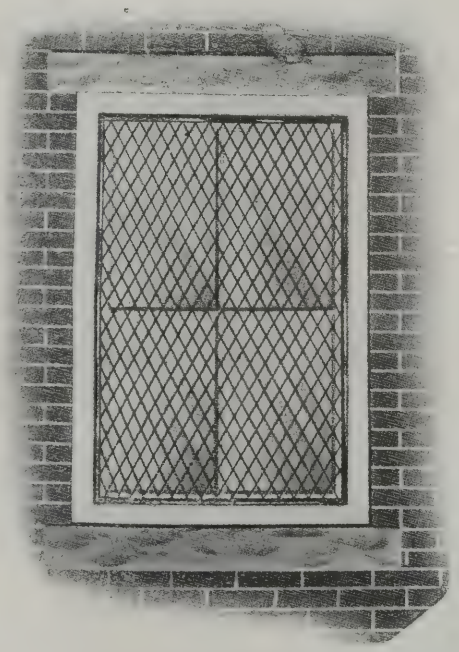
Dougall Varnish Co. Expands

Plant of the Dougall Varnish Co., Limited, at Montreal Will Have Larger Output

The Dougall Varnish Co., Limited, Montreal, who are associated with the Murphy Varnish Co., Newark, N.J., and Chicago, have just completed the erection of an addition to their plant giving increased capacity to the grinding department. They are also arranging for the erection of an additional building for storage and office purposes which will cost from $25,000 to $30,000. The work of construction will not likely be finished until after the beginning of the New Year, and the enlargement will naturally increase the output of the plant and involve the employment of more help.

Tin Plate for Canada

Baldwin's Canadian Corporation will be Producing by Beginning of Next Summer



Substantial progress is being made in the construction of the rolling mills being erected by Baldwin's, Limited, the Welsh manufacturers of tin plate and sheets, in Toronto, and the Company expect to be on producing basis by next summer. It will be recalled that the Company took over the big electric steel plant of the British Forgings Co., which was erected in the Harbor Commissioners' industrial section in 1917 by the Imperial Munitions Board. The British Forgings property consisted of 138 acres, with 5,000 feet of dockage and on it was erected a plant equipped with ten six-ton electric furnaces. For the present Baldwins, Limited, will operate on scrap but eventually they may instal furnaces to produce their own iron from ore. The finishing mill now under erection is 800 x 70 feet and will contain eight mills, which will give a production of 200,000 tons of tin plate, sheets, etc., per annum, which will be sufficient to provide for all present Canadian requirements. Hitherto, of course, no tin plate has been manufactured in Canada. Later on the Company will enlarge their operations as the demand for their product increases.

A Busy Pulp Mill

Whalen Company's Mill at Port Alice, B.C., Ships Sixty-five Tons of Pulp a Day

Writing in the *Vancouver Province*, Lukin Johnston gives some interesting first-hand information about the operations of the Whalen Pulp & Paper Co. at Port Alice, B.C There are more than 600 persons employed in and about the plant and in the adjacent logging camps. Already the export reaches 65 tons of pulp a day, packed in 320-pound bales, in addition to large quantities of lumber. Nearly all of it passes through Vancouver on the way to Tacoma and Seattle, to be loaded on Japanese vessels for Japan. The company's sawmill cuts 250,000 feet per day—practically the whole of which comes to Vancouver. In the process of manufacture 350 tons of sulphur are used per month, and 1,000 tons of coal is consumed in a similar period. Stores to the extent of $25,000 a month are purchased in Vancouver to supply the wants of the settlement.

"Snowhite" pulp—the first grade manufactured by the Whalen firm—is said to be as perfect a product of its sort as can be found. In Japan the pulp is manufactured into paper, a process which it is said can be carried out more economically there than here. Plans are being made for ex-

tensive improvements to the plant. Water-power will be utilized, and a smaller mill will be put into operation, in addition to the present one, to prevent smaller timbers going to waste.

The company's timber limits, containing 2,900,000,000 feet of standing timber, are, so to speak, at its door. The mountains close at hand are being logged off scientifically, and logs from one camp are conveyed to the water by chute within a short distance of the mill. No finer spruce and hemlock exists in the world than that round Quatsino Sound. The townsite includes, besides comfortable quarters for employees, a hospital, poolroom and reading-room, while a moving-picture house is to be installed shortly.

25 Per Cent. More Capacity

Canadian Fertilizer Co., Limited, Chatham, Will Produce About 2,000 tons per Year

Additions which will increase their capacity by about 25 per cent. over present capacity, are being made to their factory by the Canadian Fertilizer Co., Limited, Chatham. An extension 48 feet square is being made to the present main factory building, the cost of building alone being slightly over $3,000. They are also building reinforced concrete storage bins, 60 x 100 feet, with frame and prepared roofing, the cost of which will amount to $5,000 or $6,000. The addition, with the new machinery being installed, will bring the capacity of the plant up to about 2,000 tons per year. Work is being done by the company's own employees, as the season is one of inactivity.

Brantford Industry Grows

Business of Brantford Oven & Rack Co., Limited, is Extending Into Other Lines

Increasing business has made necessary the extension of the plant of the Brantford Oven & Rack Co., Limited. Their main line consists of ovens for bakeries, but they are gradually taking up various kinds of industrial work for factories. They make trucks of all kinds, manufacturing their own castors and, having secured several patents, will increase the number of their products. The addition under erection consists of two storeys and basement. It includes a special assembly room with iron beams, so that they can build any type of low temperature heating oven that is desired. A number of special machines are being installed.

Two Auxiliary Plants

Cluett, Peabody & Co. of Canada, Limited, Are Increasing Their Productive Capacity

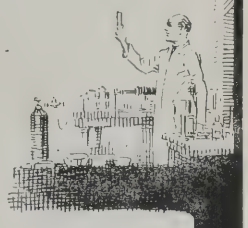
In order to take care of certain operations which they are unable, because of scarcity of operators, to handle in their factory at St. Johns, P.Q., Cluett, Peabody & Co., of Canada, Limited, manufacturers of collars, shirts, undersuits and handkerchiefs, have acquired a building in Sherbrooke, P.Q., 30 x 125 feet, four stories, which they hope to get ready for operation as an auxiliary plant this month. In it they expect to be able to employ from 200 to 300 girls.

As indicating the growth of business, the Company have recently opened an auxiliary plant in St. Johns, which is materially increasing their production of collars, while they are endeavoring to secure premises in Montreal which will enable them to increase production of shirts. It is also their intention as soon as necessary to double the size of the Sherbrooke factory.

Reporting on business conditions in their particular lines, F. W. Stewart, Managing Director, says: "The demand for our product is very strong indeed and, generally speaking, the supplies of collars and shirts throughout the country are

Industrial Chemistry

The Beginning of Greater Things



Canadian Industry emerges from the chaos of the war years a veritable young giant challenging the world.

Yet, great as has been our recent progress we are but on the threshold of an era of development and expansion almost inconceivable.

The yard stick of our future ***Industrial*** greatness will be—Chemistry. And our progress will be in keeping with our appreciation and use of this practical science. Germany surpassed the world industrially because she ***understood*** and ***applied*** industrial chemistry in her manufacturing plants.

To bring home to Canadian manufacturers the inseparable relation of Chemistry to Industrial Progress we will publish in this space, each month, a short, practical paragraph or two on Industrial Chemistry. In the interests of your business read and digest these few words.

Do not hesitate to ask us how Chemistry can help YOU. Our commercial laboratories, the largest and best equipped in Canada, are organized to serve you.

very low. We have recently withdrawn our salesmen from their territories, as our present production is sold up for many months to come, and it is only by securing the additional factories mentioned that we can hope to catch up on the demand for our goods within the next year or two If this demand should continue, which would appear to be very likely, it will be impossible for us to increase our production to a sufficient extent to take care of the demand within the time mentioned."

From Munitions to Tractors

Cluff Ammunition Company Organization Converted Into Tractor Manufacturing Industry

It was one of the problems of the reconstruction period to know what to do with the various munition-making industries which had sprung up here and there throughout Canada. In the case of the Cluff Ammunition Co., the difficulty has been solved by substituting the manufacture of tractors. A company known as the Chase Tractors Corporation was formed and this Company purchased outright the world's manufacturing rights and trademark of the Chase Motor Truck Co. of Syracuse, N.Y., makers of the Chase Tractor. The plant of the Cluff Ammunition Co. has been rearranged to meet the new conditions and the task of reconstruction has now been practically completed. By this arrangement the organization, plant and equipment of the Cluff Ammunition Co. have been conserved for the uses of Canadian industry. Back of the new corporation are Messrs. R. J. and W. J. Cluff, J. W. Norcross, R. M. Wolvin, and James Whalen, all of whom were interested in the munition company.

The Chase Tractor represents nine years of engineering study and practical experience in tractor building. It is a low-riding machine, which can be used under trees in orchards, on hillside work and on rough ground. It has no differential gears—that is, it gets equal driving power on both rear wheels, giving it great power on hilly ground and for overcoming side-draft.

F. R. Bartlett, General Manager, states that from every standpoint business looks very encouraging, both domestic and foreign. The Company are covering Canada pretty thoroughly and have opened a branch in Syracuse, N.Y., to look after American trade. Early in December they will send a representative to London, England, to spend three or four months investigating the whole question of export.

Before the end of the year the Company propose to start the assembling of a motor truck and will therefore turn out both trucks and tractors from the Toronto factory.

The Fish Packing Industry

How Plants on the West Coast of Vancouver Island are Increasing Operations

Information as to the operations of the fish-packing companies on the west coast of Vancouver Island is contained in a contribution to the *Vancouver Province* by Lukin Johnston. Mr. Johnston says that the waters of the west coast probably are more prolific of fish life than those of any portion of Canada or the United States. The products of the coast vary from the mammoth 80-foot sulphur-bottom whale to the tiny pilchard, not much larger than a sardine. Then there are salmon, halibut and herring, and in addition sea lions and several other varieties of whale.

The sockeye does not occupy a conspicuous place in the west coast salmon catch. Springs and cohoes are caught in large numbers, but in chums the west coast leads all other districts. This year, despite the unusual fact that lack of moisture has handicapped some canneries, the pack of

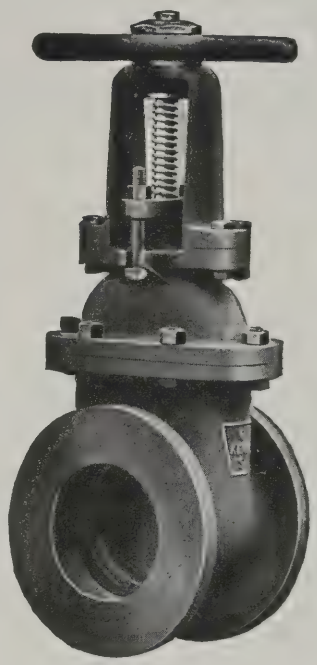
ALCOHOL

Plant of Canadian Industrial Alcohol Company Limited, Corbyville, Ont.

With a capacity of 450,000 (proof) gallons per month we are the largest producers of Alcohol in Canada.

Manufacturers of vinegar, perfumes, essences, pharmaceutical preparations, etc., are invited to write us for prices of Alcohol suitable for their particular line of business.

We make a special feature of contracting for the requirements of manufacturers for the year or season, thus providing not only a uniform cost but also a steady supply as needed.



Those who are using Duty Paid Alcohol in their manufacturing processes would do well to consult us with a view to using it "In Bond," thus avoiding the use of two-year-old Alcohol. Under the rules and regulations of the Department of Inland Revenue, newly made Alcohol may be used "In Bond." This Alcohol is much cheaper than two-year-old.

METHYLATED SPIRITS or Denatured Alcohol is sold only by the Department of Inland Revenue, Ottawa, Ont., but any other kind of Alcohol may be secured from us.

chums will run well up to 250,000 cases. It is late in the season now (Oct. 24), but the fish still are being caught in abundance and are in good condition. One day last week at the Nootka cannery there were landed 18,000 fish—the finished cans passing along at the rate of eighteen a minute all day long.

The output of this plant approximates 70,000 cases a year. Wallace's cannery at Kildonan, on Barkley Sound, put out nearly 100,000 cases last year, but this year, owing to the unwonted dryness of the season, the output will be considerably handicapped So dry has the summer been that insufficient water has been obtainable from the mountain springs to run the boilers of the Kildonan plant to capacity, while, for the same reason, it has been necessary to close down the cold storage plant. It is estimated that this cannery, one of the largest on the west coast, will not pack more than 30,000 cases of salmon this season.

Large additions are almost completed to the plant of Gosse-Millerd at San Mateo Bay, making this one of the biggest canneries on the coast. Grappier Creek cannery, run by returned men, Clayoquot and Quatsino canneries all are having a successful season and just now are hives of industry.

Pilchard has been exported by several canneries during the last two years. The Nootka Packing Company has sold in that time about 100,000 cases. This year so far the company has put up 60,000 cases of this fish.

The herring salting plant of Butterfield and Mackie at Ecoole, on Barkley Sound, is being made ready for the season's work. Last year the company shipped to New York 2,000 tons of herring, more than 14,000 barrels. This plant has been in operation four seasons. Both Newfoundland and Alaska now compete for this trade, but despite the handicap of freight rates, the local products finds a ready sale.

New Steel Products

Algoma Steel Corporation Meets with Success in Manufacture of Alloy Steel

Two important developments in the steel industry are to be recorded this month. One concerns the manufacture of alloy steel, which has been successfully tried out by the Algoma Steel Corporation, the other the rolling of structural shapes up to 15 inches by the same company. The alloy steel has already been used with satisfactory results by Canadian automobile manufacturers and, as this material has hitherto been imported from the United States, a substantial market is opening up for the product. In the matter of structural shapes, these are being rolled in a section of the rail mill equipped for the purpose. The new structural steel mill, which was proposed some time ago, has not yet been erected, but the company hope that an early announcement will be possible regarding its construction. The company have recently booked several good orders for rails and have business on hand to last six months.

West Coast Whales

Various By-Products are Taken from Mammals Caught Off British Columbia Coast

Writing in the *Vancouver Province* under date of October 24, Lukin Johnston tells of the operation of the Kyuquot Whaling Company on Vancouver Island. Up to date, he reports, the station at Kyuquot had handled 157 whales. Two schooners are kept employed, while about seventy-five hands are kept busy at the station.

Four principal varieties of whale are caught—sei, sperm, sulphur bottom (the largest variety), and the humpback, the only really native whale. They run from sixty to ninety feet in length and average one ton in weight to each foot of

SALE OF MILITARY STORES, ETC.

DRY GOODS, HOSPITAL FURNITURE, BEDDING, HARDWARE, LEATHER GOODS, JUNK, ETC.

SALES WILL BE MADE BY SEALED TENDER

Persons desiring to tender are requested to register their names and addresses with the **SECRETARY OF THE WAR PURCHASING COMMISSION, BOOTH BUILDING, OTTAWA,** stating the class of goods in which they are interested, whether new or second-hand or both.

Tender forms with full details of the goods and places at which samples may be seen, will be mailed when ready to those who have registered as requested above.

Special Terms to Hospitals, Etc.

Dominion, Provincial, and Municipal departments, hospitals, charitable, philanthropic, and similar institutions which are conducted for the benefit of the public and not for profit may purchase goods without tender at prices established by the War Purchasing Commission.

Returned Soldiers and Sailors and Widows and Dependents of Soldiers and Sailors killed in the War may obtain supplies, for their own personal use and not for re-sale, through the nearest branch of the Great War Veterans Association who will combine individual orders and forward to the War Purchasing Commission through the Dominion Command of the Great War Veterans Association. These services are rendered by the Great War Veterans Association to all parties in the classes named, whether members of the Great War Veterans Association or not.

All communications should be addressed to the Secretary, War Purchasing Commission, Booth Building, Ottawa, who will be glad to supply lists and further details to those interested.

length. From the blubber of an average whale more than 100 barrels of oil are produced and shipped to soap factories. The bones are treated and sent to corset and comb factories to be manufactured. Part of the meat is canned for food and from the rest of the meat fertilizer is produced. Only the meat of the younger whales is considered fit for food, and in appearance and taste it resembles beef. Thirty thousand cases of whale meat were shipped from the Kyuquot station last year.

Linen Industry Extends

Flax Spinners, Limited, at Guelph Add a Threshing and Cleaning Mill to their Plant

Through the recent completion of a threshing and cleaning mill, Dominion Linens, Limited, Guelph, are in a position to carry through the entire process of manufacturing linens from the growing of flax to the making of the finished article. The mill is a structure 40 x 100 feet and is operated in connection with the Flax Spinners, Limited, organization which looks after all the processes up to the spinning of the thread. The Company are now able to grow their own fibre, produce their own seed for re-seeding purposes and put the flax through all the different processes up to the finished linen. The inclusion of the threshing and cleaning mill will enable them to grade their material for the different classes of work they have in hand and they expect it will mean further extensions in their business.

General Phonograph in Canada

Have Recently Acquired and Are Now Operating a Plant Located in Kitchener

A recent development in the musical instrument industry is the entrance of the General Phonograph Corporation of New York into Canada. They have acquired the plant, at Kitchener, of the Pollock Manufacturing Co. and are now operating it under the name of the General Phonograph Corporation of Canada, Limited. Phonograph motors, tone arms, sound boxes and phonograph accessories are being made both for domestic and export trade, and in order to handle the growing business in these lines an addition is being built, which will bring the floor space up to 41,500 square feet. The Pollock Mfg. Co. were manufacturing motors, etc. for the past twelve years, except during the war period when the factory was devoted to the making of war material. The head office of the General Phonograph Corporation of Canada is at 172 John St., Toronto. Mr. C. J. Pott is Canadian manager, in charge of all the sales for Canada, and Mr. A. B. Pollock is in charge of the Kitchener plant, assisted by Mr. Welker, chief engineer.

Buy Out Little Current Mills

C. Beck Mfg. Co., Limited, Penetanguishene, Take Over Mills and Limits of Little Current Lumber Co.

The C. Beck Mfg. Co., Limited, manufacturers of lumber and bill stuffs, lath, shingles, etc., Pentanguishene, Ont., have taken over the plant of the Little Current Lumber Co., Little Current, Ont., which includes their mills and limits. The capacity of the lumber mill is 140,000 feet in 20 hours with the mill operated night and day. The plant was formerly owned by W. & A. McArthur, Cheboygan, Mich., and was later taken over by George T. Jackson and associates. The number of men employed is from 150 to 200. The C. Beck Mfg. Co. have no intention of enlarging any of their plants, as there is more sawmill capacity on the Georgian Bay now than there is timber to supply them.

Now Making Steel Tanks

St. Lawrence Welding Co., Limited, Enlarge Their Plant to Undertake New Line of Manufacture

The St. Lawrence Welding Co., Limited, of Montreal, have started the manufacture of welded and rivetted steel tanks and to secure space for the new industry have secured 10,000 square feet of floor space immediately behind their present works. By cutting doorways through the wall separating the two premises they have been able to bring the whole plant under the supervision of the one office. It is their intention to manufacture tanks of any size or capacity, and their plant is fully equipped with punches, shears, rolls and the necessary equipment to work up to half-inch plate. The company state that they have been practically forced to go into this business on account of the repeated demands and inquiries for both welded and rivetted tanks. They have secured a lot of new business and their new venture is well on the way towards proving very successful.

New Factory for Files

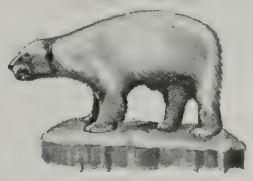
Kerr File & Tool Co., Limited, Are Putting Up a New Plant at West Toronto

The Kerr File & Tool Co., Limited, who have succeeded the old-established Kerr Bros. File Works, Toronto, are erecting a new factory at the corner of Fisher Street and Dundas Street West, where they will undertake the manufacture of files on a large scale. They hope to get started by the new year and for the first few months will concentrate on the production of files only. Later on they expect to extend their industry to include other products. In the meantime they are continuing operations at their old factory at 63 Nelson Street, where they installed additional equipment to increase their output of files. The new property is about 400 x 100 feet and two shops are being erected, one for forging and grinding and the other for cutting and hardening.

Doubling Their Capacity

Perfect Machine Co., Limited, Galt, Must Enlarge to Take Care of Increasing Business

With orders coming in faster than they could handle them, the Perfect Machine Co., Limited, Galt, have found it necessary to more than double the capacity of their moulding shop, while they contemplate the building of an erecting shop, 40 x 132 feet. The business was started in May, 1913, with two men, which comprised the entire staff for the first half-year. After that the staff has grown steadily until now the company have over fifty employees. During the past year they have gone into the manufacture of grey iron and semi-steel castings for the jobbing trade and are meeting with a splendid response. They have also formed a nice connection in Great Britain and are in touch with firms in Central America, France and Switzerland.



Valve Factory for Belleville

H. A. Wood Manufacturing Company, Toronto, are Taking Over Building in Belleville

Arrangements were completed at the first of the month whereby the H. A. Wood Manufacturing Co., of Toronto, who have been operating a small plant on Pearl Street, Toronto, for a short time past, secured possession of a three-storey building on Pinnacle Street, Belleville, formerly used as a cannery but lately as a barracks. The company are putting in a plant for the manufacture of automobile valves and other valves for high pressure work, and about 300 men will be employed. Those interested in the industry include Dr. I. G. Bogart, Kingston; Henry Hangrove, Kingston; S. W.

MONTREAL LOCOMOTIVE WORKS, LIMITED
DOMINION EXPRESS BUILDING MONTREAL, CANADA

Jenckes, Sherbrooke; James R. Ness, Toronto; M. G. Hunt, Toronto; L. Denys, Toronto, and R. J. Graham, Belleville. It is a subsidiary of the Wood Airtight Valve Company, Limited, Canadian rights on whose patents are held. The latter company are also arranging to establish a subsidiary industry in the United States.

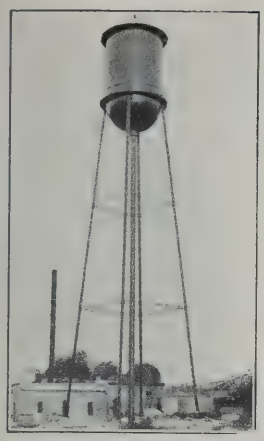
A 50 Per Cent. Increase

Brantford Roofing Co., Limited, Make Additions and Improvements to Their Plant

Fifty per cent. more capacity will be secured from the plant of the Brantford Roofing Co., Limited, when extensions now under way are completed next March. These additions and improvements, which are costing between $40,000 and $50,000, will include new coating tank still house, double the capacity of the present equipment, additional new boiler, new grit storage bin and additional equipment and machinery. Roofs on all buildings are being raised to make plant uniform and fireproof. Contracts have all been let and the work is being rushed as rapidly as possible. The company are making the enlargement in anticipation of a big boom in building next year, when they anticipate that there will be a considerable scarcity of roofing, as well as of the raw material used in its manufacture.

Going Up Ten Storeys

Northern Aluminum Company are Erecting Big Building in Connection with their Toronto Plant



A building ten storeys high of reinforced concrete construction is being erected by the Northern Aluminum Company, Limited, at their works on Sterling Road, Toronto. It is intended for light manufacturing and warehousing purposes. By removing some of the lighter processes from the present plant, more space will be provided for heavy manufacturing, and output will be correspondingly increased. The work of construction is well under way, but it is impossible to tell when the building will be ready for occupancy. The company hope, however, to be using the building some time next spring. The structure is 151 x 64 feet, ten storeys and basement, and the cost is estimated at $358,000.

Protecting Their Forests

Abitibi Power & Paper Co., Limited, Take Steps to Safeguard Their Supply of Wood

It is most gratifying to note that another of Canada's great paper manufacturing companies are taking steps to conserve the forest wealth of the country. The Abitibi Power & Paper Co., Limited, have recently established a Forestry Department, which has already started to work along the lines of nursery, engineering, protection and investigation. The best available site has been selected for a nursery at a point adjacent to Twin Falls, and here ten acres of land have been cleared and prepared ready for operations in the spring. It is proposed to clear and prepare a similar ten acres annually until a maximum of fifty acres is reached, and here will be developed the source of supply for the reforestation branch. The nursery will be placed on such a basis as to give an annual yield of from one to two million four-year-old trees, but as the first stock grown from seed will not be available until the springs of 1922 and 1923, it will be necessary to purchase plantable stock in the meantime.

The location of planting sites, together with detailed data on the exposure, slope, soil, ground cover, percentage of natural reproduction and of species present, drainage, character and amount of timber standing, presence of disease and insects, amount of rainfall and snowfall, fire hazard,

etc., will be determined by the Engineering Branch through an intensive reconnaissance of the limit.

Another branch of the department will be devoted to fire protection. This branch will endeavor to effect the solution to the greatest degree possible of the existing fire hazard problems. Still another branch will devote its energies towards the minimizing of the damages wrought by insects and fungi. Through the silviculture branch will be introduced to a fuller extent the more desirable forest species to the exclusion of the less desirable. This branch will protect valuable watersheds and develop a cutting system which will better the quality of timber, increase its rate of growth, assist and hasten reproduction, reduce windfall to a minimum and produce a maximum final yield by creating the best possible growing conditions.

The Abitibi Company's forestry department is in charge of Mr. H. E. Schanche, Jr., a graduate in forestry of the Pennsylvania State College. He spent some years in forestry work in Quebec prior to the war, served as a lieutenant in the U.S. Air Service, and has now returned to his former line of work.

Additions to Bridgeburg Plant

Pratt & Lambert, Inc., "Varnish Makers 70 Years," to Treble Present Manufacturing Facilities

Extensions which will treble the manufacturing capacity of their present plant in Bridgeburg, Ont., are being made by Pratt & Lambert, Inc., manufacturers of varnish, whose business is now world-wide in extent. The extensions consist of a four-story brick building for the manufacture of enamels, stains and fillers, and similar products; new chimneys, double the size of the old; thinning buildings, filter buildings, and other equipment. These additions are now rapidly nearing completion. Their erection demonstrates how quickly the business has grown, since when the original plant was erected in 1910 it was one of the largest and most up-to-date in Canada.

Added to Woolen Plant

The T. H. Taylor Co., Limited, of Chatham, Have Been Spending Money on Plant Extension

During the past two months the T. H. Taylor Co., Limited, of Chatham, who operate both the Beaver & Daisy Flour Mills and the Chatham Woolen Mills, have been making additions to their scouring plant and installing a large Sargeant wool drier. To accommodate the enlarged plant another storey has been added to the scouring and wool-drying rooms. Altogether some $25,000 or $26,000 have been expended on the additions, which have been necessitated by increased business. The company, who manufacture ladies' friezes, homespuns, blanket cloths, mackinaws, flannels, tweeds, etc., find trade very good just now and their output is sold up for eight months.

Increased Facilities

J. M. Loose and Sons, Limited, Toronto Have a New and Larger Factory Under Erection

A new factory is at present under construction by J. M. Loose & Sons, Limited, Toronto, manufacturers of piano actions and keys. They are at present located at 349 Carlaw Ave. while the new plant is going up at 239-261 Sorauren Ave. It is a brick building of mill construction, 120 x 55 feet, four storeys high, with boiler-house and drying kilns. The new factory is larger than the premises occupied at the present and will give increased and better facilities, which are much needed.

Make Gasoline Engines

Fisher-Wilkie, Limited, Are Making Large Addition to Their Plant at Sandwich, Ont

An addition 50 x 200 feet, in which they will manufacture gasoline engines, is being made to the plant at Sandwich, Ont., of the Fisher-Wilkie, Limited. They are also building a power plant, 40 x 58 feet, which will be completed by January 1. When these additions are finished, they will have a total of 22,000 square feet. The company some months ago took over the factory of the Bishop Fur Co. and have since been getting it in shape. They started production on December 1.

Increasing Output 100 per Cent.

Jenkins Bros., Limited, Adding to Their Valve Manufacturing Plant in Montreal

Through additions now being made to their plant in Montreal, Jenkins Bros., Limited, manufacturers of valves, packing and rubber specialties, anticipate being in a position to increase their output of valves by about 100 per cent. At the present time they are erecting a new machine shop. This is a building, 80 x 192 feet, one storey high, of steel and brick construction, with crane way and monitor. It is costing approximately $40,000 and will probably be completed about the middle of January. The Company had previously extended their present foundry building and built a new core room, and the additions combined will give them the increased capacity.

Branch at Woodstock

De Long Hook and Eye Co. of Canada, Limited, Have Started Manufacturing in Woodstock

A plant for the manufacture of corset and brassiere tape has been located in Woodstock by the De Long Hook & Eye Co. of Canada, Limited, of St. Marys, Ontario. They have leased a flat on Finkle Street and have installed fourteen machines. About twenty hands are being employed at the outset, and operations commenced at the first of the present month. For the present the undertaking is largely of an experimental nature. The company will not remove from St. Marys and the Woodstock plant will be directed from there.

Peterboro's New Industry

Something About the Nashua Gummed & Coated Paper Co. and its Various Products

Supplementing information appearing in the November issue regarding the establishment in Peterboro of a branch plant of the Nashua Gummed & Coated Paper Co., Nashua, N.H., it might be stated that this concern is one of the largest and strongest companies in the United States in the fields of waxed, gummed, glazed and fancy papers. The company employ about 800 hands in their three mills, two at Nashua and one at Middletown, Ohio. They were formerly a manufacturing department of Carter, Rice & Company, Boston, one of the oldest and largest paper jobbing houses in New England, but for the past several years have operated as a completely separate and independent company. Through their president, Mr. James Richard Carter, the Nashua Company control the Sevigne Wrapping Machine, which is a most successful and widely used bread wrapping apparatus, a situation which assures to bakers a supply of papers especially prepared for machine wrapping, together with the best of service.

The Canadian branch will be backed by the full resources of the parent company, and is prepared to take fullest possible advantages of domestic and foreign trade opportunities.

Steel Bridges

Railway and Highway Truss, Girder and Beam Spans of all types.

THE MARITIME BRIDGE COMPANY, LIMITED - New Glasgow, Nova Scotia

The officers of the Nashua Gummed & Coated Paper Company are James Richard Carter, president; Winthrop L. Carter, treasurer; Geo. H. Lowe, secretary. The Canadian business will be managed by Robert A. Brown, who has for some time been identified with the Nashua factories in an executive capacity.

Gummed papers fill a variety of demands. The non-curling grades are used in the manufacture of printed labels, stamps, seals, etc., while heavier, stronger grades are prepared for staying the corners of paper boxes and cartons. Narrow strips of gummed paper, known as binding tapes, are quite generally replacing string in securing small packages and in sealing fibre cartons. Various grades of gummed cloth are used widely in book-binding, in the manufacture of writing tablets, and in the reinforcement of fibre shipping cases. Cloth-lined papers find use where unusual strength is required, as in envelopes, maps, and numerous novelties. Waxed papers are used in increasing volume for wrapping food products, such as meat, bread, butter, candies, and cereals. They are also used largely by manufacturers of tobacco, soap, rubber goods, and small metal parts.

Will Make Parchment Paper

Specialty Paper Mills, Limited, Have Plans for Mill at Camden East, Ont.

A new corporation, known as Specialty Paper Mills, Limited, with American capital behind it, has been formed recently to take over the paper mill at Camden East, Ont. The company, which has a Canadian charter, is capitalized at $325,000. Its president is L. F. Houpt, President of the George Irish Paper Co., Buffalo. Pending arrangements for completing the plant as originally laid out, the company may make a limited quantity of newsprint, but it is intended ultimately to manufacture full vegetable parchment and high-grade specialties, particularly lines that are not now made in Canada. The mill has been operated recently by the Camden Paper Mills Co., a subsidiary of the Bathurst Lumber Co., the product being kraft and wrapping paper.

Additional Floor Space

Fredericton Company Building Annex to Give 20,000 Feet More of Floor Space

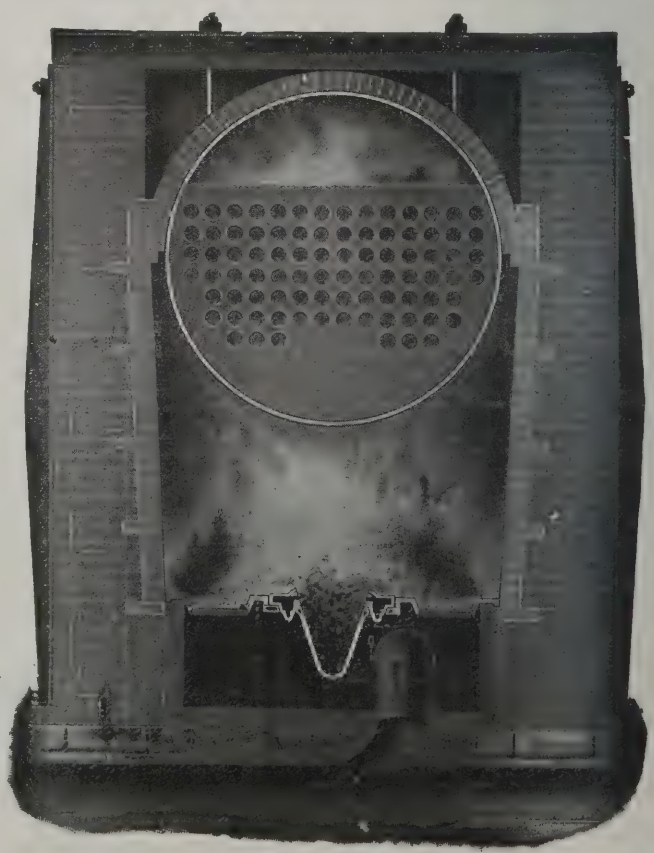
The John Palmer Co., Limited, Fredericton, N.B., are building an annex to their plant to accommodate increasing business in their different lines, particularly summer packs and plow shoes. This company have been manufacturing shoe-packs, moccasins and larrigans for fall and winter use since 1877. Within the last few years they have introduced a moccasin boot or shoe made from oil-tanned leather, with sole leather sole and heel, as a work shoe for farmers, ranchers, woodsmen, trackmen, laborers and all others who need a strong, easy-fitting footwear. The leather used in the manufacture of this boot, as well as all their products, is tanned by a special process in their own tannery. During the last few seasons, trade in this line has developed considerably and more space has been found necessary to handle it.

Erect Big Warehouse

Plymouth Cordage Co. Are Building Five Storey Warehouse at Fort William, Ont.

A warehouse capable of storing around fifteen million pounds of binder twine and rope is at present under erection by the Plymouth Cordage Co. at Fort William. This company, whose Canadian factory is located at Welland, are immense producers of binder twine for use throughout

Increases Power— Saves Fuel



Ordinary methods of firing a boiler are a long way behind the times because it is now well-known that the underfeeding principle gets a far greater amount of heat from the fuel. This principle was pioneered and developed commercially by the

JONES Underfeed Stoker

Savings in fuel cost, varying between 15 and 25 per cent. are everyday accomplishments of the Jones Underfeed Stoker with any grade of coal from dust to run of mine.

It costs you nothing to find out the possible savings to be made in your plant. Write us for illustrated literature which gives all particulars about the Jones and tells you of plants located all over Canada where you can see the Jones working every day and get the opinion of practical men who know the Jones by experience.

Office and Works :
145 Spadina Avenue

Canada, and the location of their warehouse at the head of the Great Lakes is presumably to facilitate the distribution of their product to the farmers of Western Canada. The building is of reinforced concrete construction, 200 feet long, 100 feet wide and five storeys high. It will be electrically equipped throughout with all the most up-to-date apparatus to be installed that will permit of the most efficient handling of the traffic. Located right on the Kam River, direct deliveries from ships and to trains is possible. It is hoped that the building will be completed and ready for use shortly after the opening of navigation in the spring of next year.

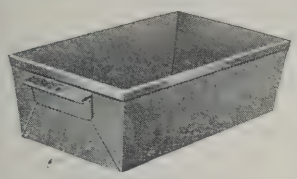
Secure Larger Premises

Greb Shoe Co., Limited, Kitchener Are Transferring Plant to a Larger Building

The plant and factory site of the Gourlay-Fogelberg Shoe Co., Kitchener, have been purchased by the Greb Shoe Co., Limited, of the same place, and moving operations are now going on. The building is practically new, 56 x 100 feet, of red brick, three storeys and basement and has been built with a view to extension. There are 3½ acres of land adjoining it. As the floor space in this building is considerably greater than is the company's present plant, and as the demand for their product is continually increasing, they are naturally preparing for a much larger output, and in addition will venture into such new lines as men's welts and women's and misses' McKay sewed shoes. Up to the present they have specialized in men's and boys' working shoes only. New machinery to take care of the expansion has already been ordered and the United Shoe Machine Co. have been instructed to equip the plant for an output of 1,000 pairs per day.

Make Dyes at Trenton

Mineral Dye Products, Limited, Expect to be Producing by First of the Year



Under the name of the Mineral Dye Products, Limited. a company will shortly be producing mineral dyes at Trenton, Ont. The company have taken over under special exemption arrangements from the town, a building formerly used for cold storage, and are installing an up-to-date plant. They will secure their ore from a property near the Rideau Canal, eighteen miles from Gananoque, and this will be conveyed in barges from the mines to Trenton. It is stated to be high-grade material and the only ore of its kind in North America. The company have been making experiments for over a year and have the necessary formulæ and secret process for making high grade mineral dyes for woollens, serges, tweeds, silks, etc., as well as for use in the paper industry. They expect also to manufacture paints, though this will not be their main product. It is hoped that production will commence about the new year. Ample capital is available and there is said to be no limit to the market for the product.

New Knitting Company

Lennoxville Knitting Mills, Limited, Start Operations in Lennoxville, Que.

The plant of Johnson & Shardlow, Limited, Lennoxville, Que., has recently been taken over by a new company, called the Lennoxville Knitting Mills, Limited, who are continuing the business at the same premises, utilizing the buildings and plant as they were before. The company manufacture worsted and mercerized hose and half-hose. At the present moment no decision has been reached as to possible enlargement. About 35 hands are employed. The President of the Company is Mr. H. V. Haight, a civil engineer connected with the Canadian Ingersoll Rand Co.; Mr. H. L. Allen, the

LARGE STOCK OF STRUCTURAL MATERIAL AT ALL PLANTS

Vice-President, is a jewellery manufacturer in Lennoxville, head of Peerless Jewellery, Limited; the Treasurer is Mr. N. D. Cascadden, wholesale fruit merchant, and Mr. P. G. Newbold, Secretary and Manager, was recently Superintendent of knitting with the Paton Mfg. Co., Sherbrooke.

An extension is being made to the tannery of H. B. Johnston & Co., 774 Dundas St. East, Toronto.

The capacity of the plant of A. J. Reach Company, sporting goods manufacturers, Brantford, is being doubled.

The Montreal Cloak & Suit Mfg. Co., Inc., are opening up a knitting plant under the name of the Fainer Knitting Mills.

The Dunlop Tire & Rubber Goods Co., Limited, Toronto, have a building programme under way which will involve an investment of $250,000.

The Taylor-Forbes Co., Limited, Guelph, are building a new furnace in the core room of their hardware plant and adding an extension, 70 x 100 feet to their hardware foundry.

The Jansen Mfg. Co., Detroit, have purchased the Dale Machine Shop, Walkerville, and will manufacture binding grips for auto upholstery. The plant has about 4,000 square feet of space.

Federal Cement Co. have incorporated to acquire plants at Owen Sound formerly operated by the Union Cement Co. and Imperial Cement Co. These will be remodelled to capacity of 2,000 barrels daily.

The Bon Marche Manufacturing Co. are a new company who have established a small whitewear industry in the old Knights of Pythias Hall, Peterborough, employing from 15 to 20 hands. Prospects are good.

The Provincial Lime Co., Limited, whose plant near Brockville, N.B., was destroyed by fire recently, have completed the greater part of the reconstruction of their works. The capacity will be about 25,000 tons per year.

The Seaman, Kent Co., Limited, manufacturers of hardwood flooring and lumber, are fitting up a plant at West Lorne, Ont., for the production of hardwood flooring. This is their fifth factory specializing in the product.

The Canadian Kron Scale Co., propose to establish a plant at Montreal for the manufacture of Kron automatic industrial scales and Stuebing lift trucks, though it will be some time before all arrangements are completed.

The Buhl Stamping Co., Detroit, have taken a five-year lease of the Hiram Walker Cooperage on Walker Road, Walkerville, and will manufacture their lines in it for the Canadian market. The plant has 15,000 sq. feet. of space.

The extension to the bolt and nut department of the Steel Company of Canada's plant at Montreal, to which reference was made last month, will provide 60,000 square feet additional floor space. The new building will be four stories high, of reinforced concrete construction.

Rice Bros. Knitting Mills, 280 Dufferin Avenue, Winnipeg, who manufacture men's, ladies' and children's sweater coats and all kinds of knitted novelties, have recently enlarged their plant by the addition of three machines and expect to add four more within the next few months.

Because of lack of space to take care of manufactured goods, the International Plow Works of Canada, Limited, Hamilton, have decided to make an extension to the west of their present warehouse. The addition will be 208 feet long by 100 feet wide and will be four storeys high, giving 83,200 feet extra floor space for storage purposes.

General Efficiency Demands the Use of

BERNARD
Wood Split Pulleys

The war is ended so far as a continuation of the bloody combats of the battlefields is connected. But in the war after the war there will be waged lively battles for industrial supremacy wherein the advantage will lie with the plant equipped with the most economical and durable machinery.

Competition will be more intense, and in this connection, keep your eye on the overhead. It has been looming large these past few years and must certainly come down.

BERNARD Wood Split Pulleys will help you eliminate power waste; their cost is low, their efficiency is GREAT.

There's a Famous Five File for Every Kind of Work

And every one is made of high-grade steel, and ground and cut for its particular purpose.

Give your men Famous Five Files to work with and you will get good results.

Also teach them to turn in a file as soon as it becomes dull.

You do not need to be afraid to do this with Famous Five Files, because they will not grow dull quickly.

Specify them when ordering. They are:

R. L. Graham, who owns a large quantity of standing timber on Great La Cloche and Manitoulin Islands, has purchased a factory site on the water-front of Wiarton and will build a mill and wood-working factory on it, probably next spring.

While they have not definitely decided upon the extent of the enlargement, Piano Cases and Phonographs, Limited, Brantford, successors to the Brantford Piano Case Co., Limited, will extend their present factory sufficient to double their output.

The Percival Plow & Stove Co., Limited, Merrickville, Ont., anticipate erecting in the very near future a new moulding shop, with a capacity of at least 35 moulders, and a new machine shop. This will enable them to increase their output at least 200 per cent.

Confirmation is given by Mr. F. G. Daniels, General Manager of Dominion Textile Company, Limited, of the report that contracts have been placed by the Company for buildings to accommodate 3,500 new looms and 120,000 spindles. Details will be forthcoming later.

The Brantford Computing Scale Co., Limited, of Brantford, have recently completed an addition to their plant in which they are installing machinery which should enable them to double their output for 1920. Forty additional hands will be needed for the enlarged plant.

The factory at Roxton Falls, P.Q., lately operated by Mm. Fauteux Hardware, Ltd., of Pointe St. Charles, was recently sold by auction to Adolphe Desmarteaux, of South Roxton, P.Q., for $7,000. It was built originally by Wilfrid Poirier, of Roxton Falls as a casket factory, attached to which was a sawmill. It is understood that the new purchaser will use only the sawmill.

MacKINNON STEEL CO., LTD.

Sherbrooke - - - Quebec

Montreal Office: 404 NEW BIRKS BUILDING

The Toronto Carpet Manufacturing Co., Limited, have recently completed a large building on Mowat Avenue, adjacent to their present plant, and will eventually extend it north to King Street. It has been erected to house the carding and spinning plant, which required extra space to take care of the large demands upon it from the carpet department and the Barrymore Cloth Co.

The Albion Knitting Co have recently begun operations in a building on Park Street, Peterborough, formerly used as a school. Some of their machinery is placed and some fifteen hands are at work. More will be taken on as the machinery arrives. Toronto interests are behind the enterprise.

The Winnipeg Ceiling & Roofing Co., Limited, Winnipeg, are erecting a brick addition to their factory, 100 x 108 feet, with travelling crane, the purpose being for the manufacture of large oil containers, steel gasoline drums and kitchen range boilers. They are also building a distributing warehouse at Regina.

About $300,000 will be spent by the Spectator Printing Co., Hamilton, in building and equipping a new plant for the production and publishing of the *Spectator*. The new building will be a two-storey and basement fireproof structure, with a floor space of 34,000 square feet. The plant will be moved from the present building in July, 1920.

The Frost Steel & Wire Co., Limited, Hamilton, are enlarging their plant by the erection of a reinforced concrete extension, 90 x 60 feet, three storeys above grade, in which they will instal wire-making and fence-weaving machines. They expect to secure an increased production of approximately 25 per cent.

The Elgin Gas Motor Co., reference to whose location in Winnipeg was made in the November issue, are occupying a factory building which they themselves erected at 1424 Whyte Ave., Winnipeg. It is a brick building, 100 x 66 feet, three storeys. Fifty per cent. of the stock of the Canadian company is controlled by the parent company in Elgin, Ill.

The Canadian Tube & Iron Co., Limited, Montreal, are enlarging their wire mill building by an addition 100 x 83 feet, two storeys in height. This will enable them to secure an increased production in their wire and screw departments. They expect the building to be completed early in the New Year, when they will take on a number more men.

A three-story extension, 280 x 80 feet, is being added to their plant in Montreal by the Alaska Bedding, of Montreal, Limited. They are making the addition in the ordinary course of business, as they have been very much cramped for manufacturing space for a long time. The addition will be ready for occupancy early in 1920.

A new machine shop, 50 x 80 feet, is being erected by the Imperial Steel & Wire Co., Limited, Collingwood, and will be completely equipped with machinery. The Company have under consideration the manufacture of several new lines, but have not yet come to any decision. The plant will be capable of handling additional work to present lines.

The Manufacturer's Bookshelf

A Useful Reference Book

Who's Who and Why, 1919-1920. Edited by B. M. Greene. Toronto: International Press, Limited.

This valuable compilation of biographical information about prominent Canadians represents an immense amount of painstaking research work. The volume extends to 1,524 pages, and averaging about three sketches to a page, contains references to some 4,500 persons. The inclusion of photographs of most of the people referred to adds considerably to the interest of the work, while the data about each person is as extended as it is possible to make it in the limited space at command. The editor, Mr. Greene, has done his work carefully and with good judgment and, if mistakes have crept into the book, they are rather to be attributed to the failure of those dealt with to correct proofs than to any shortcomings of the editor. On the whole it is a volume which those who wish to keep posted on personalities of the day cannot afford to be without. An index in the front gives rapid access to the material about any desired person.

A Book of Memoirs

Reminiscences, Political and Personal. By Sir John Willison. Toronto: McClelland & Stewart, Limited. Cloth, $4.00.

From a Canadian standpoint this is undoubtedly the outstanding book of the year. Indeed of its kind, it is one of the most notable volumes yet produced in the Dominion. To few men have the opportunity and the facility been given to write so intimately and entertainingly of the outstanding figures in the public life of the country during the past forty years. A trained journalist and one whose successive positions as member of the Press Gallery at Ottawa, editor of the Toronto *Globe* and editor of the Toronto *News* have brought him into close touch with the currents of political thought and action in Canada, Sir John has combined qualities and experiences which have fitted him admirably for a task to which he must have applied himself with a good deal of pleasure and satisfaction.

The book has been written with every evidence of impartiality. Political bias is absent from its pages and the author deals with the men and events of bygone days just as they appeared to a friendly and deeply interested onlooker. Through a plentiful use of anecdotal matter he has succeeded in imparting a light and vivacious tone to the work, which certainly adds to its charm. One can only regret that more of the scenes and surroundings of those earlier times have not been described. As it is Sir John has confined his effort very largely to sketching personalities and has left to the imagination the picturing of the various settings in which each played his part.

Not unnaturally, Canada's fiscal policy occupies a place in the book, though it is not dealt with in any controversial way. Sir John recalls the inception of the National Policy and reminds his readers that for a time it was doubtful whether it would be the Liberal or the Conservative party that was destined to sponsor protection.

"There is reason to believe," writes Sir John, "that if the Mackenzie Government had committed itself to higher duties, the Conservative Opposition would have adhered to

low tariff. The common story is that when Sir Richard Cartwright arose to deliver the budget speech of 1876 it was not known if he would declare for or against higher duties, while Tupper, who was to follow, knew only that he would not agree with Cartwright." Sir John quotes N. F. Davin, W. F. Maclean, Dalton McCarthy and T. C. Patteson to show that Sir John A. Macdonald and the Conservative party were backward in advocating a policy of protection and only took it up because their opponents failed to do so.

Dealing with Edward Blake's resignation of the Liberal leadership, Sir John attributed his withdrawal in part at least to differences on the tariff question with Sir Richard Cartwright. Blake was not a free trader and Sir John quotes from two of his speeches to show that he held very sensible views on the subject of protection. Speaking at Malvern in 1887, Blake said: "No man, I care not how convinced an advocate of absolute free trade for Canada he may be, has yet suggested a practical plan whereby our great revenue needs can be met otherwise than by the continued imposition of very high duties on goods similar to those we make or can make within our own bounds or on the raw material. I invite the most ardent free trader in public life to present a plausible solution of this problem, and I contend that he is bound to do so before he talks of free trade as practicable in Canada. I have not believed it soluble in my day, and any chance of its solubility, if any chance there were, has been destroyed by the vast increase of our yearly charge, and by the other conditions which have been created. The thing is removed from the domain of practical politics." Surely very pertinent remarks for the present day!

One might continue to quote readable extracts from this new book to considerable length, but it is scarcely necessary to do so in order to demonstrate its value. A word should be added, however, regarding the printed work itself. Sir John, as President of the Canadian Reconstruction Association, may justifiably pride himself on the fact that his book is an all-Canadian production. It has been set up in a Canadian printing office, printed on Canadian-made paper, bound in a Canadian bindery and distributed by a Canadian publisher. And withal, it is a piece of work that compares most favorably with the best book manufacturing practise of other countries.

Work of the Conservation Commission

Conservation in 1918. By James White, F.R.G.S., M.E.I.C., Assistant to Chairman, Deputy Head, Commission of Conservation. Reprinted from Tenth Annual Report of the Commission of Conservation. Ottawa, 1919.

The field covered by the Commission of Conservation is thoroughly set forth in Mr. White's review of the activities of the Commission during 1918. Housing, public health, forests, lands, water-powers, mines, fuel shortage, fire prevention, game and wild life are all subjects in which the Commission is interested and is doing effective work. All good Canadians who are concerned with the conservation of the country's national resources would do well to read through this report, which gives in brief and compact form a good general idea of the problems that are being dealt with.

Under the name of the Kitchener Envelope & Stationery Co., an industry for the manufacture of envelopes and stationery has been established in Kitchener. Floor space has been rented, and as soon as all machinery has been installed, the company will be in a position to make any size envelope and in large quantities. The company has the financial backing of Mr. Arthur Boehmer, who has had many years' experience in the manufacturing of paper boxes.

The Norwegian Market

Opportunities for Trade Between Canada and the Scandinavian Countries Declared Good

That Canadian manufacturers could, with advantage to themselves, pay more attention to Scandinavian markets, especially that of Norway, is the opinion of H. E. Morton, commercial editor of *The Winnipeg Telegram*, who is closely in touch with conditions in Northern European countries.

Although Norway's shipping losses were considerable during the war, says Mr. Morton, these were greatly counterbalanced by the large amount of carrying done in Norwegian bottoms, Norske captains being among the most daring in running the gauntlet of German submarines. Their friendliness to Great Britain also impelled them to throw their lot in on the side of that country, with the result that to-day Norway is one of the most favored nations in Northern Europe.

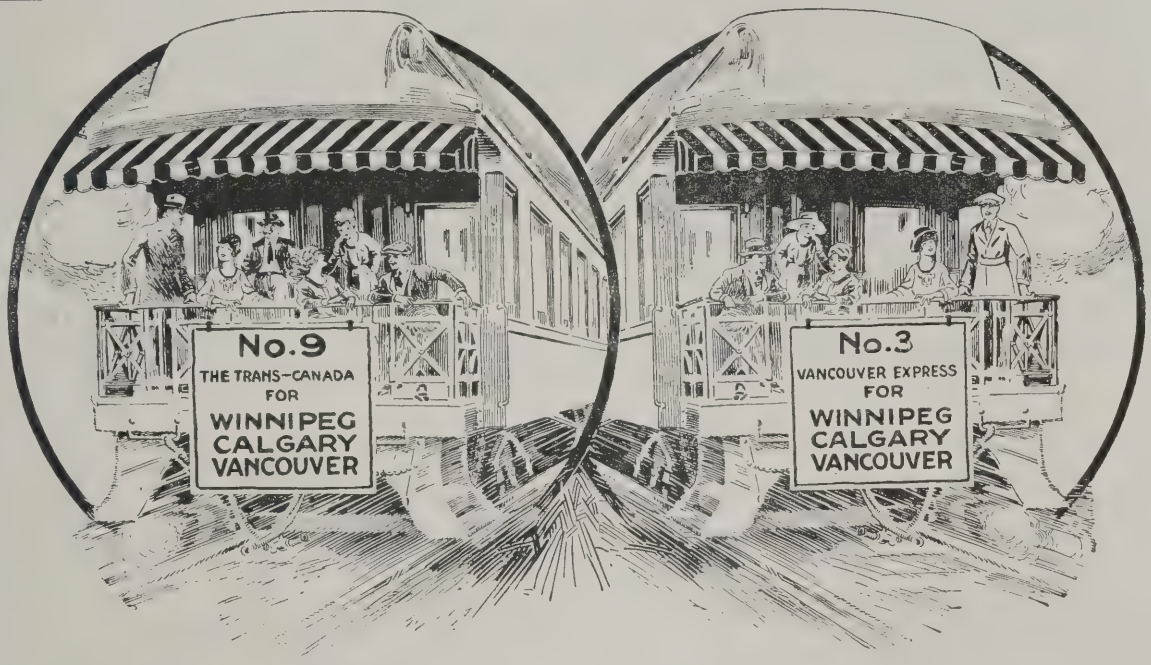
Speaking financially—Norway does not ask for that extended credit which manufacturers are being asked to grant many other European countries, especially those in the Mediterranean. She has the cash for her size, and, if needs be, can pay for goods on the nail; but she wants them and wants them badly.

That the Norwegian Government is alive to the opportunities for trade with Canada is shown by the recent starting of a direct line of ships from Montreal to Norway, the first boat, the *S.S. Ranefjord* sailing on October 26. Unfortunately the season is late for many more sailings this winter; on account of the ice on the St. Lawrence, but next spring will, it is expected, see several large boats on this route, for which the C.P.R. is agent. Later, also a passenger service direct to Norway may also be started.

In the meanwhile, manufacturers wishing to be early in the market can ship via the Norwegian-American line from New York to Bergen or Christiania, or by the Scandinavian Line from New York to Sweden and Denmark.

Exhibition of Timber

Department of Overseas Trade of the British Government Announces Holding of Exhibition



The British Trade Commissioners in Canada have been notified by the Department of Overseas Trade of the British Government that the Department are organizing an exhibition of timbers grown within the British Empire, to take place in London from the 5th July to 17th July, 1920.

The classification embraces: (*a*) Specimens of timber (polished and unpolished); (*b*) Exhibits demonstrating the various uses to which timbers are put, viz., floors, panelling, staircases, furniture, ply wood, and articles of everyday use; (*c*) Wood pulp.

A committee has been formed to arrange all details connected with the exhibition, and includes representatives of Colonial Office, Crown Agents for the Colonies, Government of India, Self-Governing Dominions, Forestry Authority, British Societies interested in the production and utilization of timber.

The main object of the exhibition is to bring prominently before architects, inspectors, firms who have to specify timbers in their contracts, as well as the users and consumers of timbers, the full range of Imperial grown timbers and especially those timbers which up to the present are only very slightly, if at all, known in this country, and at the same time to demonstrate the chief uses for which such timbers are suitable.

Recent Trade Enquiries

A List of Enquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

DOMESTIC TRADE ENQUIRIES.

217a. Quebec.—A correspondent wishes to get in touch with firms in Ontario or the Western Provinces with a view to selling their products in Quebec.

FOREIGN TRADE ENQUIRIES.

218. Cairo.—A commission merchant in Cairo wishes to be connected with Canadian trade. He can sell large quantities of the following: News paper, printing paper, envelopes, flour, copper and iron stoves, agricultural machinery, wood of all sorts, and iron for constructing concrete houses.

219. Wire.—A Liverpool firm asks to be placed in touch with exporters of galvanized annealed mild steel wire, 8 to 24-wire gauge, and galvanized crucible steel wire, 85-90 tons per square inch, 12 to 30-wire gauge.

220. Motor Accessories.—A Liverpool firm wishes to hear from Canadian firms desiring agents for good lines of the above.

221. Motor Accessories.—A Liverpool firm asks to be placed in touch with exporters of the above.

222. Three-Plywood.—A Grimsby firm are prepared to purchase, cash against documents, large quantities of birch or alder plywood, in sheets 40 inches to 60 inches by 30 inches to 50 inches wide, and in thickness 3, 4, 5, 6 and 9 m/m.

223. Kitchen Cabinets.—A Liverpool firm would like to receive offers of kitchen cabinets and household labor-saving devices.

224. Maple Roller Blocks.—A Liverpool firm would like to get into communication with exporters of the above.

225. Pocket Lamp and Torch Batteries.—A London firm of importers of lighting accessories wish to obtain from Canada supplies of pocket lamp and torch batteries and ask for the addresses of manufacturers.

226. Machinery, Etc.—A recently demobilized Canadian officer who proposes to establish himself in business as the representative of Canadian manufacturers in the United Kingdom, would like to secure agencies in any line not requiring expert technical knowledge, but particularly in machinery, in which he possesses experience.

227. Iron and Steel Bars, Gas Pipes, Bolts, Nuts, Screws, Leather and Balata Belting.—A London firm of merchants and manufacturers' representatives seek supplies of iron and steel bars, gas tubes, bolts and nuts, screws, leather and balata belting for the Portuguese, Grecian and Near Eastern markets, and invite offers from Canadian manufacturers. References available at the Department of Trade and Commerce.

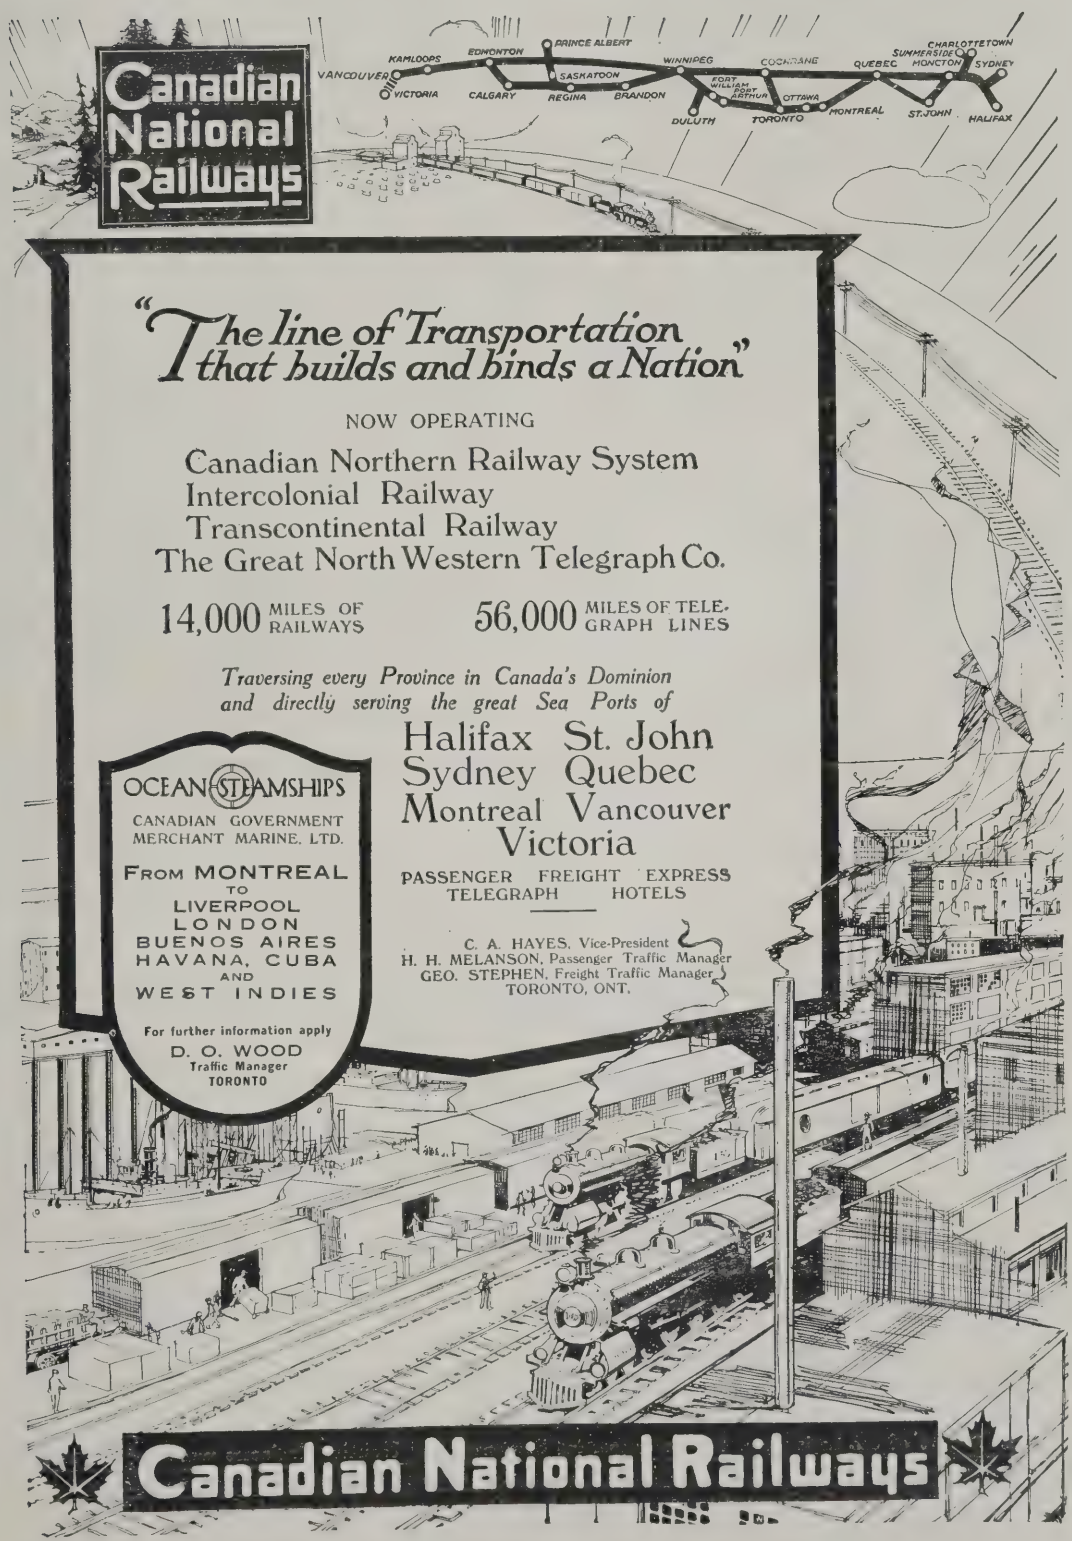
228. Canned Fruits.—The London branch of a company trading in Alsace-Lorraine wish to get into communication with Canadian manufacturers of high quality canned fruits.

229. An Italian firm is interested in the import of the following articles: Food products, metals, nickel ingots, nickel anodes, iron, steel products and pig iron. They desire quotations on the above commodities, C.I.F. Genoa, and are in a position to pay cash against documents.

230. Condensed Milk.—A company in Leeds ask for the addresses of Canadian manufacturers and exporters of condensed milk.

231. Cairo.—A commission merchant in Cairo is desirous of getting in touch with Canadian manufacturers of the following: box calf, patent leather, side leather, tinned goods, Canadian ham and bacon, flour, wood products. He is in a position to export gum, sesame, hides and cotton seed.

232. Leather and Shoe Grindery.—A leather merchant in Belfast is desirous of getting into communication with Canadian tanners, curriers and manufacturers of shoe grindery such as rivets, wood pegs, etc.



233. Maple Roller Blocks.—A Liverpool firm who are large primary distributors of the above, ask to be placed in touch with exporters.

234. Maple Roller Blocks.—A Lancaster firm who are large consumers of the above, ask to be placed in touch with exporters.

235. England.—A manufacturers' agent in London is anxious to secure agencies for Canadian soaps, perfumes, confectionery and essential oils. He already represents several houses in France and Italy.

236. Pharmaceutical Preparations, Chemicals, Surgical Instruments.—A correspondent in Brussels, Belgium, seeks the agency of Canadian manufacturers of pharmaceutical preparations, chemicals and surgical instruments.

237. Synthetic Drugs, Essential Oils, Etc.—A London company, who are manufacturers of, and dealers in, chemicals, report an opening for synthetic drugs, essential oils, etc., and wish to get into touch with Canadian manufacturers.

238. Portable Houses.—A London company ask for the addresses of Canadian manufacturers of portable houses.

239. Vulcanite Dressing Combs.—A London firm enquires for the addresses of Canadian manufacturers of vulcanite rubber dressing combs.

240. Boots and Shoes, Worsteds, Flannels.—A London manufacturers' agent, claiming a connection among buyers in the United Kingdom and also in India, Egypt, and other eastern countries, wishes to get into communication with Canadian manufacturers of boots and shoes, worsted cloth and flannels, wishing to develop trade in these countries.

241. Foodstuffs, Sweets, Leathers.— A manufacturers' agent in Egypt, with good references, wishes to get into communication with Canadian manufacturers of the above who are in a position to start trade with the Middle East.

242. Egg Boxes and Egg Case Fillers.—A London provision agent wishes to get into touch with Canadian manufacturers of egg boxes and also of egg case fillers.

243. Agencies.—A Scotchman, who has been resident in Canada for a number of years and who has been brought up in the manufacturing business, wishes to represent some Canadian manufacturer in England or France. He has a good knowledge of French.

244. Warehouse Keepers and Cargo Supervisors.—As many Canadian houses shipping to England may sometimes require their shipments supervised on landing and distributed inland, a firm in Liverpool are in a position to furnish the following service: raw rubber and general produce experts; warehouse keepers and cargo supervisors; cartage and haulage contractors; general transport agents, etc.

245. Boots and Shoes.—A firm in Paris wishes to get into communication with Canadian manufacturers of boots and shoes. They have a good connection in around Paris, being agents for several well known French manufacturers.

246. A firm of industrial agents, with headquarters in Paris, consider the moment an opportune one to introduce Canadian industrial products in the French and Grecian markets and would like to get in touch with Canadian manufacturers.

247. Chenille Table Covers.—A firm in Sydney, Australia, wishes to get in touch with the Canadian manufacturer of Star Brand Chenille Table Covers.

248. French Olive Oil.—A correspondent in Liverpool wishes to get into communication with Canadian importers of pure olive oil. He represents a premier firm in France and is anxious to trade with Canada.

249. Australia and South Africa.—An import and export house in New York desires the names of some Canadian manufacturers particularly interested in export trade with South Africa and Australia. They have already shipped Canadian goods to those countries, but wish to further develop this trade. Their references are good.

250. England.—A newly-registered company of government contractors and manufacturers is prepared to accept agencies for Canadian firms for the following classes of merchandise: leather belting, engineering supplies, tool and lathe makers, belt lace makers, pulp and paper manufacturers.

251. Canned Salmon and Fruits.—A London firm trading throughout the East wishes to get into touch with Canadian packers of canned salmon, and also of canned fruits (pears, peaches, etc.) interested in the Indian, Egyptian and similar markets.

New Canadian Patents

A Number of Interesting Devices Which Have Lately been Patented in Canada

The following is a list of Canadian patents recently issued through the agency of Messrs. Ridout & Maybee, 156 Yonge Street, Toronto:

John L. H. Blackwood, button stick; Edward B. Killen, vehicle spring suspensions; Gutta Percha & Rubber, Limited, rubber mat; Fred L. Rapson, lifting jacks and the like for use on motor, road, and other vehicles; Woodington & Young, abrasive wheel; Huan A. Matear, internal spring heel seats; J. Stone & Co., Limited, valves for fluid pressure systems adapted for operating bulkhead and like doors; Farm & Dairy Machinery Co., pneumatic valve actuating devices; Edward Manser, acid still; Joseph Mayne, plow; Ewart McLaughlin, sockets for automobile curtain rods; Charles Taylor, dinner carry-alls; Gutta Percha & Rubber, Limited, process of forming rubber fabrics; Henry P. Fletcher, means for the conversion of water pastes into oil pastes by chemical and mechanical action; Thos. W. S. Hutchins, the manufacture of lamp black; Jabez Muskett, hose couplings and hose attaching devices; Diaphone Signal Co., Limited, metal bending and forming machine; Nils Testrup, methods of conducting high temperature reactions; John Forsyth, Limited, reversible cuffs; E. O. Williams, slipways for the construction of reinforced concrete ships, barges, floating structures and the like.

The Western Wheel & Foundries, Limited, St. Boniface, Man., expect to be operating by January 1. Their plant, which is nearing completion, consists of the main shop, 200 x 72 feet; cupola room, 100 x 45 feet, and wheel brake room, 80 x 40 feet, the whole costing approximately $60,000. They will manufacture car wheels and brake shoes for railway equipment.

Administration of:

The Department of Labour Act
The Bureau of Labour Act
The Stationary and Hoisting Engineers Act
The Building Trades Protection Act
The Factory, Shop and Office Building Act
The Steam Boiler Act
Employment Bureaus
Investigation and Research

Employment offices are in operation in 35 cities and towns of the Province, and are the Ontario units of the recently organized "Employment Service of Canada."

Are you getting your help through the medium of the employment service, which you as a taxpayer are helping to support?

The value of these bureaus will increase in proportion to the extent to which they are used by employers.

Notice to Steam Users

At the last Session of the Legislature, the Act respecting Stationary and Hoisting Engineers was amended, said amendment requires that on and after January the 1st, 1920, all stationary steam plants in the Province of Ontario must be registered with the Board of Stationary and Hoisting Engineers. Application forms for this purpose will be forwarded on request. The boiler horsepower and other information contained in these application forms is to be used for statistical purposes.

A Registration Certificate will be issued to each applicant.

Barrett 20-Year Specification Roof on plant of The Paquet Company, Ltd., Quebec City, Que. Roofing Contractor: Eugene Falardeau, Quebec City, Que.

Cover Your Plant with a 20-Year Guaranty Roof—

Of course your plant and its contents are insured.

But did you know that you could have your *roof* insured against maintenance expense for twenty years *without paying a single premium?*

This is how it is done:

On all Barrett Specification Roofs of fifty squares or more, in cities of 25,000 or more, and in smaller places where our Inspection Service is available, we offer a 20-Year Surety Bond issued by one of the largest Fidelity and Guaranty Companies, provided the job is done by a roofing contractor satisfactory to us and constructed under our supervision.

This bond exempts building owners from all repair and maintenance expense to the roof for a period of twenty years.

We know, through long experience, that a roof constructed strictly according to The Barrett Specification will, in most cases, last *nearer thirty years.*

The principal architects, engineers, and roofing contractors throughout the country are familiar with the plan and are cooperating with us.

If you will consult your architect, engineer or roofing contractor about your roofing needs we are sure they will recommend a Barrett Specification Roof, because to-day it is the standard covering for permanent structures of all kinds.

If you wish any further information regarding this Guaranty, a line to our nearest office will bring it

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request.

Editorial Comment

Canadian Industry in 1919

DURING 1919 Canadian industry passed through one of its most critical periods. On the signing of the Armistice in 1918, the manufacture of war material ceased overnight. Almost immediately demobilization of the Canadian Army began, and thousands of men every month were discharged into civilian life. Canadian manufacturers faced a threefold problem: First to re-adjust their plants from a war to a peace basis; second, to replace as far as possible temporary civilian employees by returned soldiers, and, third, to seek new markets or to revive old markets for the sale of goods in order to make the first and second operations financially possible. In other words, they had to change all round and still keep going ahead. Looking back over the past year, we do not quite know how it was done, but the thing was done, and with little check to industry on the whole. Perhaps the human agency after all had not a great deal to do with this happy result. Peculiar economic conditions furnished the greater part of the solution. Astonishing demands from Europe for all kinds of manufactured goods speedily developed. Consequently, our export trade did not suffer as much as might have been expected. At the same time, domestic demands for articles which could not be secured during the war, revived. In other words, the wants of peace in many lines had not been satisfied for nearly five years. These two conditions produced a strong and steady market for nearly all kinds of manufactured articles, and united in the task of stabilizing industry through the most trying period it has ever experienced in Canadian history.

Judge Masten's Report on Insurance

THE Ontario Government assured a deputation from the Ontario Division of this Association on January 7th, that a committee would be appointed at the coming session of the Legislature to study the report of the Insurance Commission by the Honorable Mr. Justice Masten, Commissioner, who investigated very carefully the whole subject of fire insurance as transacted in Ontario. The members of the deputation, in addition to urging for the appointment of the Committee of the Legislature, asked that an opportunity be given to present the views of manufacturers in regard to this report, which contained a great deal of valuable information and suggested much needed reforms in regard to the transaction of insurance.

The investigation before Mr. Justice Masten was most exhaustive, and a great deal of time and money was spent in securing and presenting the information, and therefore it is most important in the interest of manufacturers that action should be taken on the recommendations made by the Commissioner.

Labour Conditions in 1919

AT the beginning of 1919 the labor outlook was very dark indeed. The spectre of unemployment threatened the country. Labor appeared to be caught by sinister undercurrents. Disturbances and threats of strife became common. In the larger centres there was wild talk of revolution, and then, perhaps fortunately for the country as a whole, attempts were made to put into practice certain theories which had been advocated in regard to industrial relations. Immediately public opinion was awakened. It crystalized and decided that these theories would not do. They were rejected. Organized labor saw that if it hoped to keep the confidence of the country, it would have to purge itself of its undesirable elements, and organized labor, to its credit, acted with firmness and promptness in weeding out of its ranks those who advocated the adoption of unconstitutional and unlawful methods of securing their ends.

While illusory and revolutionary ideas seem to have been on the whole discredited, much attention has been given to what might be termed the development of better relations between employers and employees, and there has been a very real desire on the part of both employers and employees to study the conditions and laws governing industry and the special problems of all parties connected

with industry. Certain plans and proposals have been put into effect to give employees a greater responsibility and a more direct interest in industrial operations. It is too soon to decide which of these plans will be successful, but in a general way it would seem that co-operation and understanding appear to be taking the place of unnecessary strife and coercion. The prospect for 1920 is much brighter than it was at this time last year for 1919. In dealing with the subject of relations between employers and employees, it is well to remember that progress is made slowly and that anything really worth while is attained only after careful experiment and the most searching and earnest investigation into those principles that govern its constitution and operation.

The Eight-Hour Day

AT the International Labor Conference held in Washington, D.C., October 29th to November 29th, 1919, three of the Canadian delegates, viz: The Honorable N. W. Rowell, Honorable Senator Robertson and Mr. P. M. Draper, voted for the convention which recommended that the 8-hour day should be put into force by law in those countries stipulated in the convention. Mr. S. R. Parsons, delegate representing the employers, voted against the convention.

There is a misapprehension which has been carefully fostered in the minds of the public that the Peace Treaty made, or would make, the 8-hour day obligatory in the countries which signed the treaty. The treaty, however, only set forth as a principle that the 8-hour day should be a "standard to be aimed at," the inference being that it should be adopted by a country when the economic condition of that country justified such action. Even those who voted for the 8-hour day at the Peace Conference, had to recognize the theory which lay behind this principle to some extent, because certain countries, such as Japan and India, were excluded, or partially excepted, from the covenant.

The position taken by the employers of Canada at the National Industrial Conference in Ottawa in September, 1919, was that a commission should be appointed to undertake investigations as to the adaptability of the hours of labor principles of the Peace Treaty to the different industries of the country. They contended that the question was one which should be settled by economic conditions and not by an arbitrary law. They pointed out further that in a young and undeveloped country such as Canada the crying need was for greater production, especially at the present time, and that if an 8-hour day were enforced by law on all industry, production would inevitably be decreased.

The Government has been urged from various quarters to pass immediately an 8-hour day law. This it obviously cannot do until the constitutional point involved at least is settled. It is not by any means clear whether an 8-hour day law should be passed for all Canada by the Dominion Government, or whether separate legislation should be passed by each of the provinces. It is understood that the Government will first ascertain from competent authority whether or not it has the power to enact such legislation. This is obviously the proper thing to do, as it would be incredible folly to force an 8-hour day law through in the face of strong opposition and then find that it was unconstitutional.

Workmen's Compensation in Ontario

ONTARIO manufacturers are urging the Ontario Government to appoint a neutral Commissioner to the Workmen's Compensation Board, on which there is a vacancy. Members of the deputation from the Ontario Division of the Association pointed out to the Premier that they would prefer that neither the employers nor the employees should have the privilege of nominating a candidate for the vacancy. They stated further that it would not be in the interests of the administration of the Act to give the employees, who were beneficiaries under the Act, the right to name one of the commissioners, if the employers, who paid the assessments, were denied a similar right. The Board should be composed of three neutral commissioners. If the Board were composed, for example, of a representative of the employers and a representative of the employees, with a neutral Chairman, the tendency would be that it would become a one-man board with the other two commissioners acting as special pleaders for their particular interests. Progress could only be made in this case by the Chairman siding with one or other of the opposing factions in case of disagreement. The whole problem of the Board is to administer the Act equitably.

Another point urged by our Ontario members was that there is no necessity for the Board to create such a huge reserve. Manufacturers are deprived of the use of the surplus which has been paid in to the Board, above what is needed to pay current claims. This money should be productively used in industry, and only enough should be collected from employers to satisfy the demands for compensation for a reasonable period in advance.

The Farmers and the Eight-Hour Day

THOSE who advocated an 8-hour day law for all kinds of industry in Canada did not reckon sufficiently with the greatest of all industries, namely the farming industry. When the difficulty of applying the 8-hour day law to farming was brought to their attention, they tried to evade it by saying that farming could be excepted from the operation of the law. This might be all right for other kinds of workers, but it would be very bad for the farmers. For some years farmers have been complaining that their sons, daughters, hired men and domestic servants have been drawn away from the farms to the cities and towns by the attraction of shorter hours and higher pay which the urban communities offered. If

an 8-hour day law were passed which would still further decrease the number of hours in a factory, it is obvious that the attraction to the farmers' families and assistants would be increased. On the other hand, it is inevitable that reduction in hours must increase the cost of production of goods made in the shorter working time, and consequently the selling price of these goods would be also increased. Therefore, shortening the hours of labor in manufacturing presents a double disadvantage to the farmers: first, by drawing away their sons, daughters and domestic help to the cities, and second, by increasing the cost of the manufactured articles which the farmer must buy.

Those who calmly assumed, however, that the farmer would continue to be willing to work ten, twelve or fourteen hours a day, while other classes worked eight, are out in their reckoning.

In his address to the Dominion Grange in Toronto recently, Mr. J. C. Dixon, Master of the Grange, said in effect that if other people are going to have an 8-hour day, the farmers are going to have it also, although it would probably mean that city and town people would pay 30c a quart for milk, $2.00 a peck for potatoes, $5.00 a bushel for wheat and $1.00 a pound for butter. Mr. Dixon's theory of economics is quite sound. He knows that if the hours of labor on the farm are shortened, the quantity of food produced on the farm will be decreased, and consequently the selling price of the smaller amount of food produced will be proportionately increased. Mr. Dixon added that the introduction of an 8-hour day on the farm would probably do more than anything else to jolt city workers back to common sense.

Sane Counsel from a Banker

IN the course of his presidential address at the recent annual meeting of the Canadian Bank of Commerce, Sir Edmund Walker expressed views which will receive the hearty support of Canadian manufacturers. On the question of production, Sir Edmund was emphatic in his condemnation of useless argument when the world was so perilously short of necessities.

"It is not by standing idle while we discuss methods that we can get out of our present troubles," he declared. "If the call is to 'man the lifeboat,' we do not wait for academic discussion before the boat is launched on its life-saving mission, and too much argument between Capital and Labor, just now, is madness in view of what we seek to save. The rising curve of prices cannot be made to turn downward without an increase of production, nor can we face the heavy obligations left by the war except by greatly increased production."

Sir Edmund's comments on foreign trade, on the position of exchange, on the need for making the name "made in Canada" stand for quality, and on the great desirability of developing export business, were right to the point and will repay careful reading. His address is published elsewhere in this issue.

The Association and the Proposed Tariff Board

CERTAIN newspapers and individuals have been misrepresenting the attitude of this Association in regard to the proposal to create a tariff board. The attitude of the Association was set forth in the following resolution which was unanimously adopted at the Annual Meeting held in Toronto in June, 1919:

"Whereas, demands are made at frequent intervals by various sections of the Canadian people for radical changes in the Canadian Customs Tariff, and

"Whereas, such demands prevent the determination of the settled policy that is necessary for the development of industry and trade, and cause depression in business, unemployment and imperil invested capital, and

"Whereas, it is of vital importance that all industry should have reasonable assurance of stable conditions which will not be adversely and suddenly disturbed by unexpected and imperfectly considered tariff legislation.

"Therefore, be it resolved, that the Canadian Manufacturers' Association in annual meeting assembled in Toronto, on June 12th, 1919, respectfully urge the Dominion Government to appoint a permanent tariff board, acting in an advisory capacity to the Government, which will make a scientific study of the Canadian Customs Tariff and the tariffs of other countries with whose products Canadian producers are forced to compete, familiarize itself with costs of production at home and abroad, investigate the nature and probable national effect of all requests for tariff changes, and endeavor to frame a tariff that will serve the best interests of Canada, and thus assure the harmonious and all-round development of the country."

The Association has been recently charged with desiring to take away from the Government the control and fixing of the tariff schedules and to place this control in the hands of the proposed tariff board. The Association never at any time advocated such action. It would be idle to do so, because it would be unconstitutional. The Canadian customs tariff is an instrument of taxation and taxation cannot be vested in any body except Parliament. Parliament must always determine and fix the rates of duty under the customs tariff. The tariff board, as the resolution suggests, would merely act in an advisory capacity to Parliament. In other words, it would be an investigating body. The only reason for its creation is that it should provide a body of competent men who could pursue continuous investigations, not only into Canadian conditions, but also into the conditions of other countries. Members of Parliament have not time to do this, nor will anyone else who is not specially detailed for the task. A great deal of tariff legislation is haphazard and is based upon insufficient information. Proposals are made the subject of acrimonious debate, and the tariff is always floating about on the troubled sea of politics, with the result that through uncertainty of what may happen, business conditions are frequently and unnecessarily disturbed. A tariff board, if properly constituted, should be able to pursue disinterested investigations, and the results of its labours would be available for Parlia-

ment, which could accept or reject them according to its pleasure.

The Tariff Commission of the United States affords a precedent. It was originated by a Republican Government and continued and enlarged by a Democratic Government. It has just issued its third report, which is a very valuable document and contains an immense amount of information which could not have been secured by other means. Is there any good reason why we could not have a similar body in Canada?

National Industrial Conference in the United States

THE second Industrial Conference called by President Wilson published a preliminary statement on December 29th, setting forth a proposed plan for the creation of a National Industrial Tribunal, with twelve Regional Boards of Inquiry and Adjustment, to deal with labor disputes.

It is proposed that this National Industrial Tribunal be composed of nine members chosen by the President and confirmed by the Senate, three to be nominated by the Secretary of Commerce, three by the Secretary of Labor, and three presumably to be nominated by the President, not more than five of whom are to be of the same political party, and to constitute a Board of Appeal.

The Regional Boards of Inquiry and Adjustment are to be created from panels of employers and employees for each region. These panels, it is proposed, shall be prepared by the Secretary of Commerce and the Secretary of Labor, respectively, after conferences with employers and employees of the regions. Panels are to have the approval of the President, who has the power to remove any members of them.

In brief, the proposed plan would create a list of individuals from whom arbitrators or boards of inquiry could be selected. The statement of the Conference says that the objects of the proposed plan are as follows:

"The main objects of the above plan are to secure national co-ordination and to stimulate the formation of bodies for local adjustment. The requirement of unanimity of agreement has by experience in the United States proved remarkably successful and should assure such confidence that neither side can rightfully refuse to submit to adjustment. A precedent condition of such submission is that the interruption of production shall be delayed. The frank meeting of the parties in controversy together with other men skilled in questions at issue always gives promise of settlement. On the other hand, refusal to submit to the Board, not only inaugurates a legal inquiry, but also prejudices the obstinate party or parties in public opinion. Moreover, the fact that membership on the board of inquiry is available to either party to the conflict singly would tend further to weaken the position of the other. When both parties join, the Board at once becomes a Board of Adjustment, and conflict ceases by agreement until a determination is reached."

With respect to public utility industries, the statement says:

"While continuous operation of all utilities is conducive to the general convenience of the people, that of some of them is essential to their very existence. Of the latter class the railways are a conspicuous example and bear the same relation to the body politic as do the arteries to the human body. Suspension produces practical social and economic anarchy, and may impose hardships even to the point of starvation upon large sections of the community. The interruption in such essential public utilities is intolerable."

Respecting Government employees the statement says:

"The right of Government employees to associate for mutual protection, the advancement of their interests, or the presentation of grievances, cannot be denied, but no such employees who are connected with the administration of justice or the maintenance of public safety or public order should be permitted to join or retain membership in any organization which authorizes the use of the strike or which is affiliated with any organization which authorizes the strike."

The Industrial Conference has adjourned until January 12th.

Group Life Insurance

THE Department of Insurance of the Dominion Government has announced that it is now legally possible for Life Insurance Companies to transact Group Life Insurance in Canada; and that a number of American and Canadian companies have filed their rates with the Department and are ready to accept this type of insurance. The Insurance Committee of the Association has been studying this subject for over two years. In April last the results of their investigations were presented to the executive council, which decided to ask the Government to provide facilities for the transaction of this type of insurance.

Group Life Insurance permits the insuring of all the employees of a company under one policy. As a rule, the company pays the premium for all the policies. No medical examination is necessary. Investigation indicates that the only form of insurance which is practicable for an industrial plant is the One Year Renewable Term Insurance. The most popular form of contract appears to provide a preliminary insurance of $500 per employee, with annual increments. As a rule, no employee is insured unless he has been with the firm for six months.

Group Life Insurance as applied to factories has opponents as well as supporters. Although it has been introduced in England, the transactions have not yet reached any considerable volume.

At the last meeting of the National Association of Manufacturers in New York, May 1919, a report was submitted from the Committee on Industrial Betterment, Health and Safety which dealt with the subject of Group Life Insurance. The Committee had made an exhaustive investigation into the question and included testimonials from twenty-three large manufacturing concerns in the United States, all of whom had taken out Group Life Insurance on their employees, and were satisfied with the results.

Since that time a considerable number of manufacturing concerns in the United States have followed their example. On a subject on which the greatest experts are not agreed, it would be rash to hazard any opinion as to the ultimate success of the application of Group Life Insurance to manufacturing plants, but the Executive Council felt that as Group Life Insurance had been tried with

satisfaction by some manufacturers of other countries, and as some members of the Association wished to avail themselves of this type of insurance, the facilities for transacting it should be provided.

The chief arguments used in favor of Group Life Insurance are that it tends to decrease the volume of floating labor, and that it provides insurance for employees who otherwise, on account of physical defects, would not be able to secure it.

Where Will the Revenue Come From?

The Dominion Government needs the immense sum of $500,595,111 to pay its bills for the fiscal year ending March 31st, 1920. The question naturally arises, why does the Government need such a huge sum, and how does it propose to spend it? The following extracts from the official estimates explain how it is proposed to spend the money:

Public Debt, including Sinking Funds	$106,847,443.64
Railways and Canals—Capital	50,896,681.00
Railways and Canals—Income	36,287,394.16
Public Works—Capital—Marine Department	30,546,900.00
Pensions	30,053,646.72
Miscellaneous	26,676,233.00
Soldiers' Land Settlement	45,016,000.00
Soldiers' Civil Re-establishment—Outside Service	62,763,420.00
Post Office	19,701,530.25
Public Works—Income	12,098,883.14
Subsidies to Provinces	11,490,860.48
Civil Government	8,573,357.41
Railways and Canals—Collection of Revenue	7,849,000.00
Customs	4,815,000.00
Arts and Agriculture	4,748,000.00
Public Works—Capital	4,450,000.00
Militia and Defence	4,187,600.00
Dominion Lands—Income	5,683,745.00
Main Subsidies and Steamship Subventions	2,588,787.33
Royal Northwest Mounted Police	2,249,505.08
Lighthouse and Coast Service	2,205,800.00
Indians	1,946,853.00
Trade and Commerce	1,901,095.33
Ocean and River Service	1,812,300.00
Naval Service	1,805,000.00
Legislation	1,881,648.17
Administration of Justice	1,554,083.34
Immigration and Colonization	1,438,000.00
Excise	1,373,681.25
Fisheries	1,305,000.00
Penitentiaries	966,700.00
Public Works—Collection of Revenue	951,000.00
Mines and Geological Survey	765,400.00
Charges of Management	571,850.00
Scientific Institutions	457,785.00
Weights and Measures, Gas and Electric Light Inspection	417,510.00
Superannuation	400,000.00
Labor	427,500.00
Quarantine	241,000.00
Government of the Yukon Territory	215,000.00
Police	187,000.00
Steamboat Inspection	87,827.77
Marine Hospitals	78,000.00
Adulteration of Food, etc.	73,000.00
Government of the Northwest Territories	8,000.00
Total	$500,595,111.07

When we know what the money is needed for, the next question which arises is, where does the Government expect to get it? They realize that it is impossible, under our present system of taxation, to get all of it during the current year. Consequently, the Government has decided to borrow and add to the national debt the huge sum of $148,809,620.

Last year the Dominion Government revenue was $312,946,747.18, and was derived from the following sources:

Canadian Customs Tariff	$113,412,285.67	
Special War Tariff	44,726,091.67	
Total	$158,138,377.34	
Less drawback on Exports	10,969,189.36	
Net		$147,169,187.98
Inland Revenue (Excise)		30,342,034.26
Special War Revenue Act, 1915 (Part 1)		1,969,218.32
Business Profits War Tax Act and Income Tax, 1916		42,319,781.61
Other Special Tax Revenue		11,888.508.40
Other Sources		79,258,016.61
Total Revenue		$312,946,747.18

Briefly then, in round numbers the country's revenue problem is:

Needed this year	500 millions
Last year's revenue	312 millions
Shortage this year	188 millions

How then does the Government hope to make up this huge shortage? They have already decided to borrow 148 millions, so that the problem in regard to the shortage resolves itself into the following form:

Total deficit this year	188 millions
We will borrow	148 millions
We are still short	40 millions

Referring again to the figures above, it will be seen that the tariff provided 147 millions of revenue out of a total revenue of 312 millions. Those who advocate the abolition of or a great reduction in the tariff, are faced with the problem of finding other adequate means of providing revenue lost. Such alternative methods as direct taxes on unimproved land values and natural resources, increased taxation on personal incomes, increased inheritance taxes and increased taxation on corporations, are suggested. We have all these forms of taxation, and no doubt they will have to be increased if we are to pay our debts. At the present time we are not paying as we go. We must not forget that this year we are borrowing 148 millions. Can anyone contend that the forms of taxation suggested above would, for example, secure the 148 millions which we have already borrowed, and also the 40 millions of a deficit, and at the same time provide what was lost through reduction or abolition of the tariff? We cannot go on borrowing indefinitely. Sooner or later we must pay as we go, and the inevitable inference is that we will need the taxation derived through the tariff, in addition to any other legitimate form of taxation which can be devised, if the national expenditures are to be met.

The Organized Farmers and Their Platform

The Policies Enunciated by the Farmers of Canada to Secure the Enactment of which Members of the Canadian Council of Agriculture Declare Their Intention to Elect as Many Representatives as Possible to the Next House of Commons

(Reproduced from Official Sources)

What the Farmers Advocate

On this and the following pages will be found a reproduction of the Farmers' Platform, or, as it has recently been christened, the new National Policy for Canada. It is published in "Industrial Canada" for the information of those Canadian manufacturers who have not, as yet, had an opportunity to secure and study this important document. The avowed intention of the farmers to elect as many members as possible to the next House of Commons in order to secure the enactment of the policies advocated in the platform, makes it highly desirable that manufacturers should know exactly what it is that the farmers are after in their approaching political campaign.

A CONFERENCE of representatives from Western Grain Growers' Associations, and other similar organizations, was held in Winnipeg on January 6th, 1920, to complete plans for action in Federal politics. At the conclusion of the deliberations the following resolution was passed and given to the Press:—

"Whereas the cause of better government in Canada has been ever a principal consideration in the work and aspiration of the organized farmers' movement in all the provinces of the Dominion;

"And whereas this cause has been the dominating feature of our work as organized farmers, during the past twelve months;

"And whereas the need of continued action to bring into effect the reforms recommended in the farmers' platform which has been promulgated by the Canadian Council of Agriculture is most urgent, considered from the broadest national point of view;

"And whereas this platform, which has been described as a new national policy for Canada, is based upon the principle of the greatest good to the greatest number of people living in the Dominion, without regard to race, creed, or occupation; and is in no sense a demand for special legislation to benefit the few at the expense of the many;

"Therefore be it resolved that we, the members of the Canadian Council of Agriculture in conference with the accredited delegates of the Federal electoral districts of Alberta, Saskatchewan, and Manitba, and the representatives of the rural districts of Ontario, here assembled in the City of Winnipeg on this sixth day of January, 1920, do *declare our intention of electing as many representatives as possible to the House of Commons at the next general election, who will endeavour to bring the Farmers' Platform into effect; and to this end invite the support and assistance of all citizens who believe in the principles enunciated in this platform.*

"Whereas the poltical platform advocated by the organized farmers is in no sense a vocational class platform;

"And whereas it is the hope of those advocating this platform that those of all classes who believe in the principles enunciated in it will support candidates at the next federal election who will have been pledged to its support;

"Therefore be it resolved:

"That this platform shall be known in future as the 'New National Policy.'"

A second resolution was passed, embodying the decision of the Conference to continue organization on provincial lines, as follows:—

"Whereas political action amongst the organized farmers of the provinces here represented has been taken in response to the demands formulated in resolutions which were adopted by the provincial associations at their last annual conventions;

"And whereas, whatever political strength that exists at present amongst the organized farmers has been developed on the basis of organization within the provinces;

"And whereas for future action it is necessary to preserve intact that machinery and organization which have already been devised within the provinces;

"Therefore be it resolved that the political activities under the auspices of the organized farmers' movement shall continue for the present to be conducted on the provincial basis, according to any plans which the existing organizations may see fit to adopt.

In the pamphlet containing the "Farmers' Platform," which has been issued officially by the Canadian Council of Agriculture, its history is sketched as follows:—

"The Farmers' Platform first came into existence when it was drafted and published by the Canadian Council of Agriculture in December, 1916. It was subsequently unanimously endorsed at the annual conventions of the United Farmers of Ontario, the Manitoba Grain Growers' Association, the Saskatchewan Grain Growers' Association, and the United Farmers of Alberta. During the past two years several of the planks of the platform, such as woman suffrage, prohibition, income tax, and corporation tax have been adopted in full, and others partially, by the Federal Parliament. This fact, as well as changed conditions arising out of the war, necessitated some revision and extension of the platform. These were made by the Council which met at Winnipeg on November 26 to 29, 1918."

The official text of the "Farmers' Platform," published by the Canadian Council of Agriculture, Winnipeg, the central body with which many farmers' organizations are affiliated, follows:—

1. A League of Nations as an international organization to give permanence to the world's peace by removing old causes of conflict.

2. We believe that the further development of the British Empire should be sought along the lines of partnership between nations free and equal, under the present governmental system of British constitutional authority. We are strongly opposed to any attempt to centralize imperial control. Any attempt to set up an independent authority with power to bind the Dominions, whether this authority be termed parliament, council, or cabinet, would hamper the growth of responsible and informed democracy in the Dominions.

The Tariff

3. Whereas Canada is now confronted with a huge national war debt and other greatly increased financial obligations, which can be most readily and effectively reduced by the development of our natural resources, chief of which is agricultural lands;

"And whereas it is desirable that an agricultural career should be made attractive to our returned soldiers and the large anticipated immigration, and owing to the fact that this can best be accomplished by the development of a national policy which will reduce to a minimum the cost of living and the cost of production;

And whereas the war has revealed the amazing financial strength of Great Britain, which has enabled her to finance

not only her own part in the struggle, but also to assist in financing her Allies to the extent of hundreds of millions of pounds, this enviable position being due to the free trade policy which has enabled her to draw her supplies freely from every quarter of the globe, and consequently to undersell her competitors on the world's market, and because this policy has not only her own part in the struggle, but also to assist in strengthened the bonds of Empire by facilitating trade between the Motherland and her overseas dominions. We believe that the best interests of the Empire and of Canada would be served by reciprocal action on the part of Canada through gradual reductions of the tariff on British imports, having for its objects closer union and a better understanding between Canada and the Motherland, and at the same time bring about a great reduction in the cost of living to our Canadian people;

Fosters Combines

And whereas the Protective Tariff has fostered combines, trusts, and "gentlemen's agreements" in almost every line of Canadian industrial enterprise, by means of which the people of Canada—both urban and rural—have been shamefully exploited through the elimination of competition, the ruination of many of our smaller industries, and the advancement of prices on practically all manufactured goods to the full extent permitted by the tariff:

And whereas agriculture—the basic industry upon which the success of all other industries primarily depends—is unduly handicapped throughout Canada, as shown by the declining rural population in both Eastern and Western Canada, due largely to the greatly increased cost of agricultural implements and machinery, clothing, boots and shoes, building material, and practically everything the farmer has to buy, caused by the Protective Tariff, so that it is becoming impossible for farmers generally, under normal conditions, to carry on farming operations profitably;

And whereas the Protective Tariff is the most wasteful and costly method ever designed for raising national revenue, because for every dollar obtained thereby for the public treasury, at least three dollars pass into the pockets of the protected interests, thereby building up a privileged class at the expense of the masses, thus making the rich richer and the poor poorer;

And whereas the Protective Tariff has been and is a chief corrupting influence in our national life because the protected interests, in order to maintain their unjust privileges, have contributed lavishly to political and campaign funds, thus encouraging both political parties to look to them for support, thereby lowering the standard of public morality.

Definite Tariff Demands

Therefore be it resolved that the Canadian Council of Agriculture, representing the organized farmers of Canada, urges that, as a means of remedying these evils and bringing about much-needed social and economic reforms, our tariff laws should be amended as follows:—

(*a*) By an immediate and substantial all-round reduction of the customs tariff.

(*b*) By reducing the customs duty on goods imported from great Britain to one-half the rates charged under the general tariff, and that further gradual, uniform reductions be made in the remaining tariff on British imports that will ensure complete Free Trade between Great Britain and Canada in five years.

(*c*) That the Reciprocity Agreement of 1911, which still remains on the United States statute books, be accepted by the Parliament of Canada.

(*d*) That all foodstuff not included in the Reciprocity Agreement be placed on the free list.

(*e*) That agricultural implements, farm machinery, vehicles, fertilizers, coal, lumber, cement, illuminating fuel and lubricating oils be placed on the free list, and that all raw materials and machinery used in their manufacture also be placed on the free list.

(*f*) That all tariff concessions granted to other countries be immediately extended to Great Britain.

(*g*) That all corporations engaged in the manufacture of products protected by the customs tariff be obliged to publish annually comprehensive and accurate statements of their earnings.

(*h*) That every claim for tariff protection by any industry should be heard publicly before a special committee of Parliament.

Taxation Proposals

4. As these tariff reductions may very considerably reduce the national revenue from that source, the Canadian Council of Agriculture would recommend that, in order to provide the necessary additional revenue for carrying on the government of the country, and for the bearing of the cost of the war, direct taxation be imposed in the following manner:—

(*a*) By a direct tax on unimproved land values, including all national resources.

(*b*) By a graduated personal income tax.

(*c*) By a graduated inheritance tax on large estates.

(*d*) By a graduated income tax on the profits of corporations.

(*e*) That in levying and collecting the business profits tax the Dominion Government should insist that it be absolutely upon the basis of the actual cash invested in the business, and that no consideration be allowed for what is popularly known as watered stock.

(*f*) That no more natural resources be alienated from the Crown, but brought into use only under short-term leases, in which the interests of the public shall be properly safeguarded, such leases to be granted only by public auction.

The Returned Soldiers

5. With regard to the returned soldier we urge:—

(*a*) That it is the recognized duty of Canada to exercise all due diligence for the future well-being of the returned soldier and his dependents.

(*b*) That demobilization should take place only after return to Canada.

(*c*) That first selection for return and demobilization should be made in the order of length of service of those who have definite occupation awaiting them or have other assured means of support, preference being given first to married men, and then to the relative needs of industries, with care to insure so far as possible the discharge of farmers in time for the opening of spring work upon the land.

(*d*) That general demobilization should be gradual, aiming at the discharge of men only as it is found possible to secure steady employment.

(e) It is highly desirable that, if physically fit, discharged men should endeavor to return to their former occupation, and employers should be uged to reinstate such men in their former positions wherever possible.

(*f*) That vocational training should be confined to those who, while in the service, have become unfitted for their former occupation.

(*g*) That provision should be made for insurance at the public expense of unpensioned men who have become undesirable insurance risks while in the service.

(*h*) That facilities should be provided at the public expense that will enable returned soldiers to settle upon farming land, when by training or experience they are qualified to do so.

6. We recognize the very serious problem confronting labor in urban industry resulting from the cessation of war, and we urge that every means, economically feasible and practicable, should be used by federal, provincial and municipal authorities in relieving unemployment in the cities and towns; and, further, recommend the adoption of the principle of co-operation as the guiding spirit in the future relations between employer and employees—between capital and labor.

Land Settlement

7. A land settlement scheme based on a regulating influence in the selling price of land. Owners of idle areas should be obliged to file a selling price on their lands, that price also to be regarded as an assessable value for purposes of taxation.

8. Extension of co-operative agencies in agriculture to cover the whole field of marketing, including arrangements with consumers' societies for the supplying of foodstuffs at the lowest rates and with the minimum of middleman handling.

9. Public ownership and control of railway, water and aerial transportation, telephone, telegraph and express system, all projects in the development of natural power, and of the coal mining industry.

10. To bring about a greater measure of democracy in government we recommend:—

(*a*) The immediate repeal of the War Time Elections Act.

(*b*) The discontinuance of the practice of conferring titles upon citizens of Canada.

(*c*) The reform of the federal Senate.

(*d*) An immediate check upon the growth of government by order-in-council, and increased responsibility of individual members of Parliament in all legislation.

(*e*) The complete abolition of the patronage system.

(*f*) The publication of contributions and expenditures both before and after election campaigns.

(*g*) The removal of press censorship upon the restoration of peace and the immediate restoration of the rights of free speech.

(*h*) The setting forth by daily newspapers and periodical publications of the facts of their ownership and control.

(*i*) Proportional representation.

(*j*) The establishment of measures of direct legislation through the initiative, referendum and recall.

(*k*) The opening of seats in Parliament to women on the same terms as men.

Amendments to the Platform

The platform as above was officially amended at a meeting of the Canadian Council of Agriculture held in Winnipeg on November 11th—13th, 1919. The amendments are reported as follows in the *Grain Growers' Guide*, the official organ of the Canadian Council of Agriculture, in its issue of November 19th, 1919:—

"The repeal of the Reciprocity Act by the United States Congress made it necessary to revise the paragraphs relating thereto in the platform of the council. Paragraph (*c*) of section 4 was made to read: 'By endeavoring to secure unrestricted reciprocal trade in natural products with the United States, along the lines of the Reciprocity Agreement of 1911.' Paragraph (*d*) was made to read: 'By placing all foodstuffs on the free list.' Paragraph (*e*) was amended to read: 'That agricultural implements, farm and household machinery, vehicles, fertilizers, coal, lumber, cement, gasoline, illuminating fuel and lubricating oils be placed on the free list and that all raw materials and machinery used in their manufacture also be placed on the free list.'

"Under the heading 'Other Democratic Reforms,' the paragraph calling for the immediate repeal of the War-time Elections Act was considered no longer necessary, and was eliminated. New clauses were inserted recommending that the new Dominion Elections Act be based on the principle of establishing the federal electorate on the provincial franchise, and a naturalization act based upon personal naturalization only.

"The prohibition plank was placed in section 10 in the following terms: '(*m*) Prohibition of the manufacture, importation and sale of intoxicating liquors as beverages in Canada'."

Methods of Financing Export Business

By L. D. WILGRESS
Superintendent, Foreign Trade Department, Royal Bank of Canada

THE methods of financing export shipments may be roughly divided into two classes, as follows:

(1) When the responsibility for arranging the financing of the shipment rests with the importer of the goods;

(2) When the responsibility is borne by the exporter.

In the former case the method most usual in the case of exports from North America is for the importer to arrange with his bankers for the opening of a bank credit at the port of shipment in favor of the exporter. In the second case the exporter commonly draws a draft or a bill of exchange on the importer for the value of the shipment, attaching thereto all shipping documents. The exporter usually discounts the bill with his banker or has it forwarded for collection to the bank's branch or correspondent at the place in which the importer is located. The bill would be drawn payable at sight or at so many days after sight according to the terms agreed upon at the time of sale; documents would be surrendered upon payment or acceptance of the bill.

Bank credits are of a variety of different forms and a great deal depends on the customs of the country to which the goods are shipped, the class of goods concerned and the standing of the individual customers. Frequently the credit is a confirmed credit, in which case the bank informs the exporter that the credit has been opened and thereby holds itself responsible for the payment of the money. In an ordinary credit the bank assumes no such responsibility. Sometimes the credit is in the form of an authorization to the bank at port of shipment to accept the time drafts of the exporter under certain conditions. The latter is then able to discount these drafts, when accepted by the bank, in the open market. Bank credits are opened under certain stipulations as to amount, time of draft, and other conditions governing the drawing upon the credit. Credits are opened by the importer approaching his bank and the latter instructs its correspondent at port of shipment to open the credit in favor of the exporter. The matter is arranged between the importer and the bank with which he deals. A great deal, therefore, depends upon the standing of the importer. For arranging the credit the bank charges the importer a certain commission.

In the case of bank credits the exporter receives full payment for his goods upon shipment and compliance with the terms of the credit, which usually provide for the surrender of a full set of shipping documents, etc. The line of credit however, which the importer enjoys at his bank, is encroached upon to the amount of the credit and the length of the time during which it has to run. Where the standing of the customer justifies such a course, competition for trade is rendering more frequently necessary the adoption of the second procedure in the above classification. Bills drawn on foreign customers and covering a shipment of merchandise can nearly always be discounted at the Canadian bank of the exporter and part payment at least received for the goods shipped. The principal Canadian banks have established at head offices and leading branches a foreign department for the purpose of advising customers regarding the financing of export shipments. Particulars are given as to the terms on which drafts are negotiated, and acceptance and other credits established through correspondents or branches in foreign countries. Enquiries can be made through any of the branches of these banks as to the credit standing of prospective purchasers or for other information.

Before the war goods were commonly sold at terms ranging from 30 to 120 days sight; while for machinery and associate lines even longer terms of credit were extended. Changed conditions have restricted the practice of long terms, sight drafts and bank credits have become the most common mode of payment for goods. On the other hand competition for trade will undoubtedly restore to a certain extent the commercial practices prevailing before the war, and Canadian exporters, whenever the standing of the foreign customer justifies it, should extend the same terms as accorded by competitors. The above remarks on the financing of export business will have shown that this can be done with the assistance of the banks, so that payment may usually be received at least in part upon the handing over of documents. Naturally the cost of the service rendered by the bank is collected from the purchaser or else added to the invoice value of the goods.

The Labor Conference at Washington

A Summary of the Proceedings at the First International Labor Conference—The Main Arguments on the Question of the Eight-Hour Day—Recommendations Made by the Conference on Many Important Questions

By E. BLAKE ROBERTSON
Secretary, Ottawa Office, C.M.A.

In the December issue of INDUSTRIAL CANADA *there appeared a preliminary report on the proceedings at the First International Labor Conference at Washington, prepared by Mr. J. T. Stirrett, General Secretary. As this report was written before the Conference had concluded its sessions, it was necessarily incomplete. The following summary of the proceedings, by Mr. Robertson, covers the entire Conference. Part of it duplicates the report appearing in the December issue, but for the sake of giving a complete account of the historic gathering Mr. Robertson's summary is given in its entirety.*

[N accordance with the provisions of the Peace Treaty, the International Labor Conference convened at Washington, D.C., on October 29th, 1919. The agenda submitted by the nternational Organizing Committee covered the following tems:

1. Application of principle of the 8-hour day or of the 48-hours week.
2. Question of preventing or providing against unemployment.
3. Women's Employment:
   (a) Before and after child-birth, including the question of maternity benefit.
   (b) During the night.
   (c) In unhealthy processes.
4. Employment of Children:
   (a) Minimum age of employment.
   (b) During the night.
   (c) In unhealthy processes.
5. Extension and application of the International Conventions adopted t Berne in 1906, on the prohibition of night work for women employed n industry, and the prohibition of the use of white phosphorus in the ıanufacture of matches.

Some of the delegates were late in arriving, but during he latter part of the Conference the Government, employers nd workmen were represented from the following countries: Argentine Republic, Belgium, Canada, Republic of Czecho-Slovaque, Denmark, Finland, France, Great Britain, Greece, ndia, Italy, Japan, Netherlands, Norway, Panama, Peru, Poland, Portugal, Serbe-Croats-Slavenes, South Africa, Spain, Sweden, Switzerland and Jugo-Slav.

The Governments only were represented from Bolivia, Brazil, Chili, China, Colombia, Equador, Guatamela, Haiti, Nicaragua, Paraguay, Persia, Salvador, Siam, Uruguay, San Domingo and Venezuela.

The Government and employers only were represented from Cuba.

The first four days of the Conference were taken up in eneral organization and the appointment of the following ommittees:

ommittee on Credentials.....	5	
ommittee of Selection (arranging daily programme of work).....	24	Senator Robertson representing Canada.
ommittee on Standing Orders (Rules of Procedure)	9	Mr. Draper representing Canada.
ommittee on Applications for Admission	6	Mr. Rowell representing Canada.
ommittee on Unhealthy Processes	21	Mr. Draper representing Canada.
ommittee on Employment of Women	21	Mr. Draper representing Canada.
ommittee on Employment of Children	21	
ommittee on Tropical Countries.	24	
ommittee on Hours of Work....	17	Canadian Government, Employers and Workers represented.
ommittee on Unemployment.....	18	Canadian Government, Employers and Workers represented.

With short breaks for routine proceedings, the fifth, sixth, eventh, eighth and ninth days were devoted to a discussion f the eight-hours day and 48-hours week. Hon. Mr. Barnes introduced the matter in a pro-labor speech, the outstanding sentences of which were:

"Workers throughout the war have kept to their work in the hope and belief that shorter working hours would be made general after the war. They were promised that a shorter working day would be brought in after the war, and the Governments are now expected to fulfil the bond."

"We are after leisure rather than pay."

"My labor colleagues will think I have been somewhat moderate and modest in my proposals. If so, I would say to them that this Conference is not the last Conference; it is the first one. What we cannot do this year, we may do next year or the year after."

At the opening of the Conference on the sixth day Mr. Marjoribanks (Great Britain) submitted an alternative proposal regarding the 48-hours week, to be discussed at the same time as the Draft Convention; this alternative proposal contained the following wording:

"The Conference, while admitting the principle of the limitation of daily work to eight hours, or to a 48-hours week, is of the opinion, etc., etc."

The opinion of the Canadian employers' delegate was not in harmony with the majority of the other employers who sanctioned the alternative proposal, although the alternative proposal was much more satisfactory than the Draft Convention prepared by the organizing committee, in that it was limited to a recommendation only and provided that the enforcement of the proposed recommendation was dependent upon the formal acceptance of the recommendation by Austria, Belgium, Canada, Cuba, Denmark, France, Germany, Great Britain, Holland, India, Italy, Norway, Japan, Poland, Spain, Sweden, Switzerland, Czecho-Slovaque and United States.

Mr. Parsons' remarks on the eighth day of the Conference set forth clearly and concisely the reasons why Canada should not at the present time enact legislation along these lines. In connection with the argument that decreased hours must necessarily mean decreased production, it is interesting to note that the Hon. Mr. Barnes, in speaking of the reduction of hours in Japan, is reported on page 423 of the Provisional Records as saying:

"If you bring Japan down to the same level as other countries, you would be asking Japan to reduce her production by about 60 per cent., and you would be asking other countries to reduce theirs probably by about 10 per cent."

Other motions and propositions advocated the application of the eight-hours day to commerce, agriculture and ocean navigation, and likewise held that eight-hours day should be interpreted as meaning 44-hours week.

On the ninth day the Draft Convention prepared by the organizing committee, together with all suggested amendments thereto, was referred to a special committee of fifteen, which finished its consideration of the subject on November 22nd.

At the employers' caucus, strenuous opposition was offered to Mr. Parsons' proposal to speak against the draft as agreed upon by the committee of fifteen. With or without authority, the chairman of the committee offered to guarantee that Mr.

Rowell would not speak in favor of the eight-hour day but would restrain himself to a silent vote providing Mr. Parsons agreed to do likewise. This Mr. Parsons refused to do, and on the sixteenth day of the Conference submitted his statement or reasons why he was unable to support the Draft Convention. Mr. Barnes, replying, misquoted the Peace Treaty by saying:

"If you will look at Chapter 13 of the Peace Treaty, you will find nine general principles laid down, and one of those nine general principles is that an eight-hour day and a 48-hour week should be adopted by all signatory countries in so far as it had not then been adopted."

Re-written by Borden

It is an open secret that the nine general principles referred to were re-written by Sir Robert Borden, and that the phraseology finally used was much more indefinite and less binding than that in which the principles were originally enunciated. In referring to "right of association," "adequate living wage," and in fact to eight out of nine of the general principles laid down, clear and unequivocal language was used, but in referring to the eight-hours day it was referred to as a "standard to be aimed at."

When we speak of "standards to be aimed at," we usually refer to ideals or aspirations the final accomplishment of which is expected to take place in the dim and distant future rather than almost immediately. Without doubt, Mr. Barnes was aware of the re-writing of the nine principles and of the real reasons why they were re-written, and his remarks and the construction he placed upon the Peace Treaty were dangerously close to deliberate misquotation.

Mr. Rowell, speaking a few moments after Mr. Barnes, said:

"Mr. Parsons has very clearly presented the views of the employers, but in the last analysis the Governments in the different countries concerned must determine what the policy of the country should be, and my colleague and I, representing the Government of Canada, intend voting for this convention. I wish to say further, that while we appreciate the difficulties, Mr. President—and this section raises some of them—of the United States possibly adopting one policy and Canada another, I desire to make our position clear that the action of the Government of Canada does not depend upon the action of the Government of the United States in dealing with these matters. It has not in the past. It will not in the future. I desire to make that position clear because I notice in the press of the city and elsewhere, it has been assumed that Canada would not take any action unless the United States took action also."

These remarks were illogical because, while refusing to be bound by any action of the United States, they presupposed Canada being bound by the decisions reached by China, Persia Siam, and the other powers represented at the Conference.

The general attitude of the European delegates, whether Government or employers, on the question of hours was, by their own private admissions, dictated by a fear of revolution in their countries unless the demands of labor were partially met, and coupled with this there was doubtless a strong desire to place the necks of American nations in the same noose as that now encircling the European nations who have adopted the policy of complying with the demands of organized labor. Of the delegates from South American Republics, some were tinged with Socialistic ideas and the others had the Latin characteristic of adopting the line of least resistance and voted complacently with the majority, although in some cases at least such votes were not in conformity with their own real views as expressed in private conversation.

Each State ratifying the Draft Convention regarding hours of work agrees to bring its provisions into operation not later than July 1st, 1921. Relaxation as to length of hours, as to particular industries, and as to date of application, are married or single, and irrespective of age or nationality. Th made in the cases of Japan, British India, Greece and Rou mania. The Convention does not apply to China, Persia an Siam, whose hours of work shall be considered at a late Conference.

Given briefly, the Convention provides for an eight-hour day and a 48-hours week in all industrial undertakings, bu not in commerce or agriculture, nor to transport by sea o inland waterways, the latter of which is to be dealt with b a special conference. The provisions do not apply to person holding positions of supervision or management, nor to pe sons employed in a confidential capacity. Hours may be e ceeded in case of accident—actual or threatened—or in cas of urgent work to be done to machinery or plant. Where b the nature of the work it must be carried on continuously by a succession of shifts, hours may be lengthened up to bu not exceeding 56 in the week on the average. After consu tation with organizations of employers and workers co cerned, Governments may by regulation determine:

(1) Permanent exceptions that may be allowed in preparatory complementary work.
(2) Permanent exceptions for certain classes of workers whose wo is essentially intermittent.
(3) Temporary exceptions to deal with exceptional cases of pressu of work.

Such regulations shall fix the maximum of addition hours and pay for overtime shall not be less than one an one-quarter times regular rate, and such regulations shall b communicated to the International Labor Office. Employe will be required to keep posted up in conspicuous place notices regarding hours at which work begins and ends, an it shall be an offence against the law to employ perso outside the fixed hours.

The final vote on the Eight-Hour Day Convention was:

For	82—Including 13 votes from countries receiving special treatment.
Against	2—Messrs. Parsons and Paus, Employers' Delegates from Canada and Norway.
Abstention	1—Mr. Baldesi, Workmen's Delegate from Italy.

The Draft Convention concerning Unemployment, the pr visions of which the States ratifying same agree to bring in operation not later than July 1st, 1921, provides:

(1) For the prompt and systematic despatch of statistical inform tion to the International Labor Office by each State ratifying the C vention.
(2) The establishment of free public employment agencies, with co mittees including representatives of employers and workers to adv regarding the manner in which same shall be operated.
(3) States which have established systems of Unemployment Ins ance, shall upon terms agreed upon between the members concern make arrangements whereby workers belonging to one State and worki in the territory of another shall be admitted to the same rate of bene of insurance as those obtained for the workers belonging to the oth State.

Employment of Women

The States ratifying the "Draft Convention Concerni the Employment of Women Before and After Child-birth agree to bring its provisions into force not later than Ju 1st, 1922. The Convention provides that in industrial commercial undertakings no woman shall be permitted work during the six weeks following confinement; she sh have the right to leave her work if she produces a medi certificate stating that her confinement will probably ta place within six weeks; she is entitled, during the six wee period before and after confinement, to benefits sufficient the full and healthy maintenance of herself and child out public funds or by means of a system of insurance; if nursi her child, she shall be allowed half an hour twice a d during her working hours for the purpose; she cannot be d charged during the periods mentioned before or after c finement. These provisions apply to all women whet

benefits for the child apply whether the child is legitimate or illegitimate.

The Draft Convention concerning "Employment of Women during the Night" provides that no woman, without distinction of age, shall be employed during the night in any public or private industrial undertaking other than one in which only members of the same family are employed, and by the term "night" is meant a period of at least eleven consecutive hours, including the interval between ten o'clock in the evening and five o'clock in the morning. The States ratifying the Convention agree to bring the provisions of same into operation not later than July 1st, 1922. Provision is made for the suspension of this Convention in the case of India and Siam and for its non-application where there occurs an interruption of work which it was impossible to foresee and which is not of a recurring character, or where night work is necessary to preserve by course of treatment raw materials subject to rapid deterioration. In sixty days in each year, the night period may be reduced to ten hours in industrial undertakings, which are influenced by the seasons, and in all cases where exceptional circumstances demand it.

Employment of Children

The States ratifying the "Draft Convention Fixing the Minimum Age for Admission of Children to Industrial Employment" agree to bring its provisions into force not later than July 1st, 1922. Special provision is made in this Convention for Japan and India. In other countries no child under the age of 14 years shall be employed in any industrial undertaking except one in which only members of the same family are employed. Employers in industrial undertakings are required to keep registers of all persons under the age of 16 years employed by them, showing dates of birth.

The States ratifying the "Draft Convention Respecting Night Work of Young Persons Employed in Industry," agree to bring the provisions of the Convention into force not later than July 1st, 1922. It provides that young persons under 18 years of age shall not be employed during the night in any industrial undertaking other than one in which only members of the same family are employed, with the exception that those over the age of 16 may be employed on work which by reason of the nature of the process is required to be carried on continuously day and night, in the following industries:

(a) Manufacture of Iron and Steel.
(b) Glass Work.
(c) Manufacture of Paper.
(d) Manufacture of Raw Sugar.
(e) Gold Refining Reduction Work.

The term "night" signifies a period of at least eleven consecutive hours, including the interval between 10 o'clock in the evening and 5 o'clock in the morning. Provision for the relaxation of the restrictions regarding young persons between the ages of 16 and 18 is made in the case of emergency, and there are also special provisions covering lignite mines, the baking industry and work in tropical countries.

In addition to the Draft Convention, the following recommendations were made by the International Labor Conference to the States signatories to the Peace Treaty:

1. That measures be taken to prohibit the establishment of employment agencies which charge fees, and where such already exist to permit their operation under Government license only, and that all practical measures be taken to abolish such fee-charging agencies as soon as possible.
2. That the recruiting of bodies of workers in one country, with a view to their employment in another, should be permitted only by mutual agreement and after consultation with employers and workers in each country concerned.
3. That an effective system of unemployment insurance, operated either by the Government direct or through Government subventions, be established.
4. That the execution of all work undertaken by public authority be co-ordinated with a view to reserving such work as far as possible for periods of unemployment.
5. That reciprocity of treatment, as to the benefit of laws and regulations for the protection of workers and to the right of lawful organization, shall apply to foreign workers the same as to native workers.
6. That arrangement should be made for the disinfection of wool infected with anthrax spores, either in the country exporting such wool, or if that is not practicable, at the port of entry of the country importing such wool.
7. That in view of the danger involved to the function of maternity and to the physical development of children, women and young persons under the age of 18 years be excluded from employment in certain lead and zinc processes, and that the employment of women and young persons under 18 in certain other allied lead industries, be permitted only under certain enumerated and well defined restrictions.
8. That each State, which has not already done so, should establish as soon as possible not only a system of efficient factory inspection, but also in addition thereto a Government service especially charged with the duty of safeguarding the health of the workers, and which will keep in touch with the International Labor Office.
9. That each State that has not already done so should adhere to the International Convention adopted at Berne in 1906, on the Prohibition of the Use of White Phosphorus in the Manufacture of Matches.

Not satisfied with interfering with the private affairs of the countries represented at the Conference, the Conference at its final sitting passed a resolution directing the governing body of the International Labor Office to communicate the texts of the Draft Conventions to all the Governments of the States which are not members of the international labor organization, and to study the possible methods of inducing these States to embody the provisions of these Conventions in their domestic legislation. As a piece of unprecedented gall and impertinence, this resolution stands in a class by itself and ushers in a new era in the field of international relationships.

Of the outstanding subjects brought up at the Conference, which did not materialize into either Draft Convention or recommendations, the following are worthy of special note:

1. Abolition of private ownership of land.
2. International regulation of distribution of raw material.
3. International regulation of ocean freight rates.

(All advanced as cure-alls for unemployment.)

4. The recommendation to all Governments of the necessity of adopting suitable legislation in order to establish universal compulsory labor in keeping with individual attitudes and within the limitations required by a proper regard for health and human life.
5. In the Committee of Unemployment a determined effort was made to submit a draft convention providing that up to the age of 18 years young workers of both sexes would be required by law to receive a compulsory professional, complimentary, or technical education of at least 200 hours per year, times devoted to such courses to be allowed to such workers off their regular hours, without any decrease in pay therefor. This proposal was vigorously opposed by the Employers' Group, who compromised on a recommendation to the various States that measures be taken to provide facilities for technical education to all desiring to avail themselves of such. After the compromised recommendation was approved, the sponsors for a Draft Convention of more extended form asked that the subject be allowed to drop and that it should not be brought before the Conference. The subject was therefore not brought before the Conference and does not appear in the proceedings.

Convention Hurried Through

About the 15th of November it was decided that the Conference was to end November 29th, and it was only by steamroller methods that this was accomplished, and by the taking of votes in such a hurried manner that many did not understand what they were voting on. Even then, it was impossible to complete the work of the Conference and the consideration of next year's agenda was left in the hands of the governing body. Suggestions, however, had been put forward from day to day, and of these the following deserve special mention:

1. Introduction of a legal system of exemption from attachment of workmen's wages.
2. Prohibition of the use of the militia in labor conflicts or strikes.
3. Absolution of trade organizations from all responsibility for acts of individuals belonging to such organizations.
4. Legal recognition of trade unions as the only bodies with which to deal on all questions regarding skilled workers.
5. Application of 8-hour day to agriculture.
6. Appointment in each country of a representative of the International Labor Office to keep in touch with trade unions and see that decisions of the International Labor Conference are efficiently carried out.
7. Establishment of pensions for the aged and incapacitated.
8. The reduction of hours below that decided upon by the 1919 International Labor Conference.
9. Provision for a regular annual vacation for all employees.
10. Prohibition of the use of White Lead in house-painting operations.
11. Prohibition of the use of Mercury in felt hat making.

[A pamphlet containing the full text of the Convention and recommendations adopted by the International Labor Conference has been mailed to all members of the Association.]

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Executive Council Meeting

The December meeting of the Executive Council was held at the Prince George Hotel, Toronto, on the afternoon of Thursday, December 18, with the first vice-president, Mr. J. S. McKinnon in the chair. The meeting was preceded by a luncheon arranged by the Toronto Branch, at which an illuminating address was delivered by Mr. S. R. Parsons, the representative of Canadian employers, on the work of the International Labor Conference at Washington. The large banquet hall of the Prince George was crowded and those present listened with the deepest interest to Mr. Parsons' report on the various aspects of the conference. The January meeting of Council will be held in Hamilton on January 28.

Membership Campaign Results

A short preliminary report on the progress of the National Membership Campaign was presented to the last meeting of the Executive Council on December 18, and this will be followed by a more detailed report at the January meeting, by which time results will be more complete. Up to the date of the report 134 new members had been secured in Ontario Division; 133 in Quebec Division; 54 in the Maritime Division; 28 in the Pacific Division and 10 in the Prairie Division. The campaign was handicapped in the Prairie Provinces owing to the Winnipeg election; the extraordinary coldness of the weather and the illness of the Secretary of the Division. A second campaign will be conducted in the Prairie Provinces early in the spring. At the beginning of the campaign, membership stood at 3,626. Adding the new members obtained up to the date of the council meeting, the total was 3,985.

Return of Information Obligatory

Attention of members to the necessity of furnishing desired information to the Dominion Bureau of Statistics is being directed by the Legal Department. Manufacturers, it is pointed out, have no option but to furnish the figures asked for. The Census and Statistics Act makes this quite clear.

The policy of the C.M.A. is to encourage manufacturers to complete these schedules as fully and accurately as practicable, not simpy because it is the law, but because the statistics compiled from the replies received serve a very useful purpose.

A year hence the same inquiry will be made of manufacturers, and they can simplify their work very greatly by remembering that fact and preparing for it.

All that is required of a manufacturer are answers that are reasonably correct. With respect to some items, there will be some manufacturers who cannot possibly give accurate answers—the error will sometimes be one way, sometimes another, but if all manufacturers give what they consider to be reasonably correct answers, the figures compiled will reflect the situation as regards Canada with sufficient accuracy.

It has come to our notice with respect to some manufacturers who have failed to return the schedules to the Dominion Bureau of Statistics, that the Department of Justice has been instructed to enter prosecutions. Presumably these prosecutions have not yet been commenced, but they will be, unless returns are made immediately.

Window Space in London

It will be of interest to Canadian manufacturers, who have sales representatives in London with samples, to know that Mr. F. G. Salter, European Traffic Manager of the Grand Trunk Railway, has very kindly placed the windows of the Grand Trunk office in Trafalgar Square at the disposal of Canadian manufacturers who may desire to use these windows for the purpose of exhibiting their goods.

The Association is also advised by the Canadian Mission in London that, following this splendid precedent of the Grand Trunk Railway, the Agent-General for the Province of Quebec, now states that he will be pleased to place at the disposal of Canadian manufacturers free of charge for a period of two weeks, one of the large windows in his offices.

In addition to these, it is understood that the Agent-General for British Columbia has made arrangements for British Columbia manufacturers to make exhibitions of their goods in a similar manner.

Specify Canadian Material

On instructions from the Executive Council, a circular was last month issued to the membership urging members to insist that material made in Canada be used as far as possible in all construction work over which they have any control. This is the result of complaints that have been made that architects and engineers, especially those who are citizens of other countries but are employed in Canada, are extending their habit of specifying foreign material in preference to Canadian material in the construction of buildings.

Marking Country of Origin on Imported Goods

Reporting to the last meeting of the Executive Council, the Tariff Committee recommended that the Dominion Government be asked to amend the Customs regulations so as to provide that each and every manufactured article imported into Canada from any other country, including countries of the British Empire, should be clearly marked so as to indicate definitely the country of origin.

It was recommended that the above regulation should be so worded as to strengthen the present Canadian Customs regulations as to "marking," by adding provisions similar to

the following regulation in the United States' Tariff Act of 1913, which deals with the same subject:

"F. Subsection 1. That all articles of foreign manufacture or production, which are capable of being marked, stamped, branded, or labeled, without injury, shall be marked, stamped, branded, or labeled in legible English words, in a conspicuous place that shall not be covered or obscured by any subsequent attachments, so as to indicate the country of origin. Said marking, stamping, branding, or labeling shall be as nearly indelible and permanent as the nature of the article will permit.

All packages containing imported articles shall be marked, stamped, branded, or labeled so as to indicate legibly and plainly, in English words, the country of origin and the quantity of their contents, and until marked in accordance with the directions prescribed in this section no articles or packages shall be delivered to the importer.

Should any article or package of imported merchandise be marked, stamped, branded, or labeled, so as not accurately to indicate the quantity, number, or measurement actually contained in such article or package, no delivery of the same shall be made to the importer until the mark, stamp, brand, or label, as the case may be, shall be changed so as to conform to the facts of the case.

The Secretary of the Treasury shall prescribe the necessary rules and regulations to carry out the foregoing provision."

Greater Production Committee

The Executive Committee has become strongly convinced of the necessity of increasing production throughout all branches of Canadian industry, and in order to determine on ways and means of accomplishing this result, has appointed a special committee to investigate and report. The chairman of this committee is E. Holt Gurney, and associated with him are H. A. Telfer and J. F. Mackay.

Imperial Press Conference

Arrangements are being made by a Committee of Canadian newspapermen, under the chairmanship of Lord Atholstan, of the *Montreal Star*, for the holding in Canada this summer of the Imperial Press Conference. This important gathering was to have been held in Canada in 1915, but the outbreak of war led to the cancellation of all plans and the postponement of the event until after the war was over. Leading journalists from all parts of the Empire will be present, and will tour the country from coast to coast. The Executive Committee, C.M.A., has recommended action by the Association along the lines of bringing information in regard to Canadian industries to the attention of the visitors.

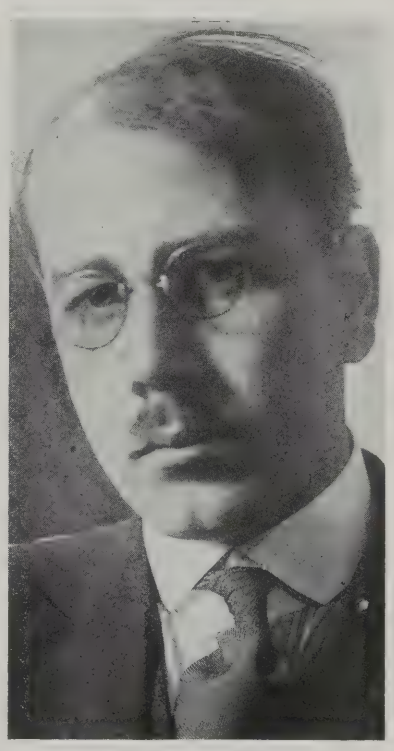
Toronto Branch Membership Campaign

In connection with the National Membership Campaign, launched on December 1st, the Toronto Branch has added 60 new members, making the total membership of the Branch 901.

Niagara Falls Branch

A special meeting of the Niagara Falls Branch was held at the Clifton Hotel, Niagara Falls, on Tuesday, December 2nd. Messrs. J. E. Walsh, General Manager, and H. Macdonald, Secretary of the Division, were present as guests of the branch. Mr. E. R. Blew, the Chairman of the Niagara Falls Branch, welcomed the guests, and there was a large attendance of local manufacturers. Mr. Walsh gave an interesting summary of the revised organization of the Association, explaining that all subjects which are of interest to manufacturers are studied by the various committees, and that the Association is prepared to render advice concerning them. The chief purpose of the Association is to develop and extend the industrial activities of Canada.

H. Macdonald explained the diversity of the services rendered by the Legal Department, and gave striking instances of the development of exports from Canada of domestic products, during the last five years. Comparing 1913 and 1918, the percentage of increase has been:



For Mines	30	per cent.
Fisheries	100	"
Forests	10	"
Animals	300	"
Agriculture	275	"
Manufacturers	1,350	"

The meeting discussed the effect upon the local industries of the shortage of electrical energy, and finally agreed that the situation called for action of some kind on behalf of the Association, and Mr. Walsh promised that the matter would receive prompt attention.

The organization of the Niagara Falls Branch is now thoroughly efficient and representative of the local industries.

New Secretary of Quebec Division

An important change in the staff of the Montreal office of the Association took place during the past month. Mr. W. P. Hughes, who has served as secretary of the Montreal branch since March, 1917, and latterly as secretary of the Quebec Division, has resigned to engage in private business. On the recommendation of the Executive Committee of the Division, the Executive Committee of the General Association has engaged Mr. R. W. Gould as his successor.

R. W. Gould
New Secretary of the Quebec Division

The new secretary is a Nova Scotian, having been born in Guysborough in that province. For the past nine years he has been engaged in newspaper work throughout Canada, working in Halifax, N.S., St. John, N.B., Fort William and Port Arthur, and more recently on the writing staff of the *Montreal Star*. Prior to entering the newspaper game. Mr. Gould was in the passenger department of the Dominion Atlantic Railway and later employed in the Nova Scotia Legislative Council and Crown Lands Office. No Nova Scotian's education is patriotically complete without a taste of the sea, and for a time he was purser on a coastwise freight steamer running out of Halifax. His qualifications for his new position are therefore of the best.

Canadian Materials Should be Specified

Complaints have been made to the Executive Committee and Executive Council that architects and engineers, especially those who are citizens of other countries but who are employed in Canada, are extending their habit of specifying foreign material in preference to Canadian material, in the construction of buildings. The Executive Council has asked

the Special Committee of Toronto Branch, dealing with this subject, to take all necessary steps to counteract this tendency. Conferences are being held with associations representing engineers and architects in Canada, for the purpose of securing their co-operation.

In the meantime the Executive Council has instructed a circular to be sent to all members of the Association asking them to insist that material "Made in Canada" be used as far as possible in all construction work over which they have any control.

Report of the Insurance Department

The following are the various points on which the Department has been consulted during the months of October and November, the figures representing the number of inquiries under each subject:

	October.	November.
Standing of Companies	1	1
Sprinkler Equipments	2	1
Policy Wordings	13	1
Rates	11	9
Building Construction	5	4
Inspection Service	5	7
Co-Insurance Clause	3	..
Examination of Policies	..	1

Group Life Insurance

The Insurance Committee reported on December 18 that final action had been taken in regard to Group Life Insurance. Discussion on this subject was opened with the Government in letter from the Insurance Department of the Association dated September 19th, 1917, arising out of requests from several members for information.

Considerable objection to Group Life Insurance in Canada was raised by the friendly societies and leaders of various trade unions. The Insurance Committee continued to investigate the subject and to gather all possible information and statistics relating to it.

On April 24th, 1919, the following resolution of the committee was approved by the Executive Council:

"That the Insurance Committee proceed to take the necessary steps to have the Insurance Act amended so as to provide more satisfactorily for the transaction of Group Life Insurance in Canada."

In accordance with the above instructions received from council the committee asked the Department of Insurance to provide the necessary facilities for the transaction of Industrial Group Life Insurance in Canada. Various obstacles and objections to Group Life Insurance having now been removed it is possible for life insurance companies to insure groups of employees in this country without examination and at considerably lower rates than have been hitherto available. The Superintendent of Insurance, Department of Insurance, Ottawa, notified us under date of December 5th, 1919, that the following life insurance companies are authorized to transact Group Life Insurance in Canada:

Sun Life Assurance Company. Head Office, Montreal. President, T. B. Macaulay.

Ætna Life Insurance Company. Head Office, Hartford, Conn. Chief Agent in Canada, E. J. Christmas, Montreal.

Equitable Life Assurance Society of the United States. Head Office, New York. Chief Agent in Canada, Gerald F. Brophy.

Metropolitan Life Insurance Company of New York. Head Office, New York. Chief Agent in Canada, Wm. L. Scott, Ottawa.

Travelers Insurance Company of Hartford. Head Office, Hartford, Conn. Chief Agent in Canada, Hon. Geo. G. Foster, Montreal.

The Insurance Committee has also been advised by the General Superintendent of the Canada Life Assurance Company, Toronto, and also by the Life Underwriters' Association of Canada, that the Canada Life Assurance Company is now ready to transact Group Life Insurance. We are also informed unofficially that other Canadian insurance companies will file rates with the Dominion Government Department of Insurance in the near future.

The Insurance Committee believes that the only form of insurance which is practicable on the group plan is the One Year Renewable Term Insurance. All other forms are found to be too expensive to be borne by the employers alone. There is no equity under an annual term policy unless its renewal is maintained, which accounts for the low premiums charged. No medical examination is required of the employees providing a certain percentage, not less than 75 per cent. of the total employees of a single firm, in included in the insurance. The advantages of group insurance have been proved in the United States to be very great. It has the effect of doing away with a great many labor troubles, discouraging strikes and generally improving the morale of the employees. An employer of labor can to a large extent dictate the terms of the contract. He may insure employees for the amount of their annual wages or for an arbitrary amount. A favorite plan in the United States is to start the insurance at say $500 per employee and increase the amount by annual increments, thus providing a reward for continuous service. It is usual not to insure any employee until he has been a certain length of time, say three or six months, in the manufacturer's employment. This has been found to do away to some extent with the problems of casual labor. The rates charged are extremely low, but, of course, increase each year with the age of the individual employees. A great number of manufacturers in Canada are already considering this class of insurance, and it appears likely that before very long the majority of large employers of labor will protect their employees in this manner.

The Insurance Committee recommends that a circular be issued to members containing a synopsis of the information detailed above, drawing their attention to the fact that facilities for the transaction of Group Life Insurance are now available, and without any attempt to discuss the comparative merits of the various types of Group Life Insurance which are being offered by the companies.

Winnipeg Members Hear Report

At a meeting of members held at the Fort Garry Hotel, Winnipeg, on December 16, a report on the International Labor Conference at Washington was presented by Messrs. James G. Merrick and J. B. Hugg, K.C., who had acted as advisers to Mr. S. R. Parsons, the Canadian employers' delegate.

During the month of December the following applications for membership were received by the Prairie Division:—

FIRM	REPRESENTATIVE.
J. Murray & Co.	J. Murray, Winnipeg.
The Record Press	W. R. Thornton, Brandon.
Brandon Mattress Factory	W. A. Qua, Brandon.
Thomas Lewis Arnett	J H. Arnett, Regina.
National Drug and Chemical Co.	D. S. Cunningham, Winnipeg.
Brandon Harness Co.	J. H. Mathews, Brandon.
Thomas Lewis Arnett	Leslie Arnett, Winnipeg.
Anchor Elevator Co.	D. J. McGillivray, Winnipeg.
Currie Mfg. and Lumber Co.	W. J. Currie, Brandon.
Crescent Creamery Co.	Aaron Stoodley, Brandon.
Crescent Creamery Co.	Robert Barbour, Yorkton.
Winnipeg Telegram	M. McCulloch, Winnipeg.
Chevrolet Motor Co.	F. F. Guscott, Winnipeg.
The Humberstone Coal Co., Ltd.	Mrs. Beata Humberstone, Edmonton.

Off to Australia

One of the Association's most active members in Winnipeg, Mr. E. Parnell, left home at the end of November for an extended trip to Australia and the Orient. Prior to leaving he was the guest of the Winnipeg Branch at luncheon at the Royal Alexandra Hotel, at which function he was pre-

nted with a travelling bag. Mr. Parnell was elected chairan of the Winnipeg Branch at the annual meeting in May st, but resigned when he was named to represent the emoyers on the Industrial Disputes Board. He has been a ember of the executive and chairman of the Legislative ommittee of the Branch for some years.

mples Are Invited

The Commercial Intelligence Department has received the llowing announcement, which may prove of interest to the embership:

"The Penang Chinese Chamber of Commerce, Penang, raits Settlements, having a membership of nearly 600, is esirous of fostering trade between this port and countries broad, and with this object in view, a separate room in the premises of the Chamber is being prepared for the display of samples and catalogues, which manufacturers abroad may send for the inspection of the Chinese merchants here. There is a tendency among the local capitalists to promote industries to which our local raw materials are adapted, and samples and catalogues of all kinds of manufactured goods may prove interesting and lead to business."

British Industries Fair

It is announced by F. W. Field, British Trade Commissioner, Toronto, that admission to the British Industries Fair to be held at London, Birmingham and Glasgow in February next, is by invitation only. Canadian buyers who propose to visit the Fair can obtain invitations from the British Trade Commissioners in Canada at Montreal, Toronto, and Winnipeg, respectively.

New Members Admitted During December

NAMES, ADDRESSES, AND PRODUCTS

THE following comprises a list of 121 applications for membership passed upon favorably at the December eeting of the Executive Council:

Alberta.

Activities of the British Columbia Division

By H. DALTON
Secretary, British Columbia Division

THROUGH recent additions, the membership of the British Columbia Division now comprises 147 manufacturers in all parts of the province. The services and policies of the Association are gradually becoming better known and appreciated, and manufacturers are showing an increasing willingness to support the Association. The following is a list of new members recently admitted:—

British Columbia Box Co., Ltd., Vancouver.
Dominion Rubber System, Ltd., Vancouver.
Pacific Box Co., Ltd., Vancouver.
Northern B.C. Fisheries, Ltd., Vancouver.
Beaver Cove Lumber & Pulp Co., Vancouver.
Stanley Watson Glove Co., Vancouver.
W. H. Malkin Co., Ltd., Vancouver.
Mrs. Haine, Ltd., Vancouver.
Timms, A. H., Vancouver.
Almonds, Ltd., Vancouver.
McClary Manufacturing Co., Ltd., Vancouver.
Kelly Douglas & Co., Ltd., Vancouver.
Robertson & Hackett, Ltd., Vancouver.
Canadian Bag Co., Ltd., Vancouver.
Vancouver Lumber Co., Ltd., Vancouver.
Kelowna Saw Mills Co., Ltd., Kelowna.
Summerland Lumber Co., Summerland.
Dalziel Box Co., Victoria.
Diggon Printing Co., Victoria.
Lemon Gonnason Co., Ltd., Victoria.
Moore-Whittington Lumber Co., Victoria.
Sidney Rubber Roofing Co., Ltd., Sidney.
Crawford Bros., Kelowna.

Fuel Oil Supplies for Fisheries

For a number of years it has been a matter of great inconvenience to British Columbia fishing companies having certain vessels acting as tenders to their fishing fleets, being unable to ex-warehouse from customs bonds, gasoline and distillate for the use of the ships actually engaged in the catching of fish, as it was necessary for these latter vessels, working sometimes at great distances from customs ports, to lose considerable time in proceeding to one of these ports to obtain fuel supplies.

The Tariff Department of the Association, acting on representations made recently by this Division, have procured from the Department of Customs an order permitting masters of vessels acting as tenders to carry these fuel supplies for the fishing boats. The fishing interests of British Columbia express themselves as extremely gratified with this action on the part of the Association, as numerous representations to the Department of Customs from other sources have heretofore been unproductive of results.

Canadian Mercantile Marine

Messrs. R. C. Vaughan and D. O. Wood, vice-president and traffic manager respectively of the Canadian National Railways, were recently visitors to the Vancouver office. While in Vancouver, interviews were arranged for them with representatives of the fish and fruit industries of British Columbia, and with various prominent shippers. As a result of these interviews, it was settled that the four steamers to be placed on the Canadian-Australian route will be equipped with adequate refrigerator space, to handle various perishable commodities from British Columbia, for which there is a large market in the Antipodes, but from which the shippers here have been almost entirely excluded owing to their being unable to secure adequate space on the present line of steamers.

Canadian Trade Commissioners

Messrs. Egan, Ross and Beddoe, while in Vancouver, recently made their headquarters at the Association's offices. Many interviews were arranged for them with various gentlemen interested in trade with the countries in which Messrs. Egan, Ross and Beddoe are the Canadian representatives. Before their departure they expressed themselves as highly gratified with the facilities placed at their disposal, and the great amount of information they had gathered as to the possibilities of trade from this coast to Australia and New Zealand.

British Columbia Box Manufacturers

The box manufacturers of British Columbia, at a meeting held recently in Vancouver, decided to form a Section of this Division, and this Section has now been organized, comprising the following firms:—

Armstrong Saw Mill, Armstrong.
B.C. Box Co., Ltd., Vancouver.
B.C. Manufacturing Co., Ltd., New Westminster.
Brunette Saw Mills Co., Ltd., New Westminster.
Cameron Lumber Co., Ltd., Victoria.
Crawford Bros., Kelowna.
The Dalziel Box Co., Victoria.
Kelowna Saw Mills Co., Ltd., Kelowna.
Lemon Gonnason Co., Ltd., Victoria.
Northern B.C. Fisheries, Ltd., Vancouver.
Pacific Box Co., Ltd., Vancouver.
Summerland Lumber Co., Ltd., Summerland.

The chairman of the Section is Mr. R. B. Sharpe of the Pacific Box Co., and the vice-chairmen, Mr. D. Lloyd-Jones of the Kelowna Saw Mills Co., and Mr. W. B. Mitchell of the Cameron Lumber Co., Victoria. The chairman of the Local Committee is Mr. P. J. McMurphy of the B.C. Manufacturing Co., New Westminster, and of the Export Committee, Mr. H. C. Airth of the Brunette Saw Mills Co.; Mr. J. H. McDonald of the B.C. Manufacturing Co. acts as treasurer.

Maximum Wage Regulations for Fruit and Fish Industries

The Minimum Wage Board of British Columbia held sittings during December to fix minimum wages, hours of labor, working conditions, etc., in connection with the fruit and fish industries of this province. Following the hearing of evidence from representatives of fishing concerns and cannery plants a minimum wage scale was fixed for women over 18 years of age employed in fish-curing plants of $15.50 per week. New employees are to receive $12.75 for the first four months

13.75 for the second four months, and $14.75 for the third our months, after which the $15.50 minimum will apply. These rates are for an eight-hour day or forty-eight hour week.

Owing to the uncertainty of conditions, also because of he shortness of the season in the canning branch of the fish ndustry, no minimum wage or restrictions as to hours are et for that class of work.

The Minimum Wage Board held two sessions in regard to he fruit industry, one at Kelowna on December 12th, and nother in Vancouver on December 19th, as a result of which minimum wage of $14.00 for females engaged in this industry, 18 years of age and over, based on an eight-hour day or forty-eight hour week. Beginners will be paid at the rate of $10.00 for the first month, $11.00 for the second, and $12.00 for the third, after which the minimum wage must be paid. This ruling applies to all classes of female labor in the fruit industry except fruit-pickers.

An important concession obtained by representatives of employers was permission from the Minimum Wage Board to work for a period of ninety days in any one season a maximum of sixty hours per week, for which female employees will be paid $18.00 per week. Employers are allowed to select the portion of the season in which they prefer to work these extended hours; this being necessary owing to fruit-packing establishments in different parts of the province having to deal with different classes of fruit, some of which come on the market much earlier than others.

Ontario Division's Organization is Completed

BY H. MACDONALD

Secretary Ontario Division, C.M.A.

THE Ontario Division Executive convened in the Association's offices on the 18th current and completed the organization, the officers and committees being:

Chairman.

Geo. H. Douglas.....Thornton & Douglas, Ltd., Hamilton.

Vice-Chairman.

J. R. Shaw.....Canada Furniture Mfrs., Ltd., Woodstock.

Executive Committee.

George Brigden .....Brigdens, Ltd., Toronto.
C. H. Carlisle .....Goodyear Tire & Rubber Co., Ltd., Toronto.
Gordon C. Cockshutt...Slingsby Mfg. Co., Ltd., Brantford.
W. Cowan .....Cowan & Co., Ltd., Galt.
T. J. Dillon .....Canada Foundries & Forgings, Welland.
H. W. Fleury .....J. Fleury's Sons, Aurora.
E. J. Freyseng.....Freyseng Cork Co., Ltd., Toronto.
Robert Gray .....Wm. Gray & Sons Co., Ltd., Chatham.
Sam Harris .....Harris Lithographing Co., Ltd., Toronto.
Fred Hatch .....The Hatch Mfg. Co., Whitby.
Wm. Inglis .....John Inglis Co., Ltd., Toronto.
G. M. McGregor .....Ford Motor Co. of Can., Ltd., Ford.
John Millar .....Lever Bros., Ltd., Toronto.

134 New Members Added

The Secretary reported that in the National Membership Campaign, the Division played a creditable part—134 members being added to the list and the campaign is being continued. The executive took up consideration of a report received from the Niagara Falls Branch, with respect to a decrease of the supply of electrical power to manufacturers in the Niagara Falls district, causing considerable changes of manufacturing methods and inconvenience to employers. It was moved by Mr. W. C. Coulter, seconded by Mr. Arthur White, and carried:

"That the Secretary issue a circular and questionnaire to the members in the Ontario Division to ascertain the extent to which they are affected by decreased supply of power and for suggestions, and further, that a representation be made to the Hydro Commission suggesting that no further contracts be entered into, until the present situation is relieved."

The matter was then referred to the Divisional Transportation and Power Committee, with powers.

The Executive resolved to make appropriate representations to Premier Drury and the Attorney-General, urging the claims of the employers to representation on the Ontario Workmen's Compensation Board.

Some Canadian Reconstruction Problems

Progress of Canada Both Agriculturally and Industrially Has Been Marvelous, but the Great Underlying Principle of Reconstruction Should Be the Creation of a Better and Improved State of Society

By SIR HENRY DRAYTON
Minister of Finance, Dominion of Canada

THE reconstruction problems of every country are diverse and many. To attempt to deal with them generally within the compass of a brief paper would be entirely impossible unless the treatment given were indeed superficial. Viewed from many aspects, the problems of reconstruction are moral rather than material. In so far as the material resources are concerned, Canada has no need for concern. Over and above all present agricultural, mining, lumbering, and fishing activities the untouched natural resources of the country remain in volume and indeed in greater volume than they have up to the present been utilized. While it is true that Canada's debt to-day stands approximately at a total of two billions of dollars with heavy resultant interest charges; while it is true that the claims of the returned soldier, costs of pensions and disability claims are heavy, and will all in the nature of things continue for many years to come, it is also true that the country and the people as a whole are infinitely better off than they ever were before.

Significance of Victory Loan

You know we have just finished in Canada our final Victory Loan drive. Our Victory Loan drives are something very similar to your Liberty Loan drives. We have had altogether six war loans. The first three we called war loans, and then we got the idea that the name Victory Loan was the proper thing, for we were almost sure it was going to be a victory, anyway, and so we started calling them the Victory Loans, and I think that perhaps what has happened in connection with this last drive is something which gives you the most recent and best evidence of what I am telling you as to Canada's position in this paper, because the success of our loans, the amount of popular support, the support from the people generally, not merely the support of the financial interests but the support of all the people to these loans has constantly increased. The first loan was a comparatively small loan. It was a new thing for Canada to try and raise money within her shores, absolutely new. She had to get money in England or in New York, chiefly in England. She was a borrowing country, and our first loan was a small one, $100,000,000, and it was approached with a great deal of fear and trembling, and now at the wind-up of the war, now that the war fervor is entirely over, at the time of the peak with a popular loan last year netting $610,000,000, this year the Canadian people have subscribed the sum of $673,000,000 for the purpose of wiping up and cleaning up Canada's war obligations, and to provide a national working capital. So I think I am safe in claiming that the country as a whole is better off than it ever was before.

It took the war to discover for us just what could be done and to realize to some extent, perhaps only to a small extent, the possibilities and greatness of the country.

To illustrate, in the year 1913 our export of foodstuffs and fodders amounted to $194,930,254, and at the close of the last fiscal year to $467,625,311. Our manufactured exports in 1913 amounted to $43,692,708, and at the end of the last fiscal year to $549,284,268.

The progress of Canada, both agriculturally and industrially, has been marvellous. But the great underlying principle of reconstruction as it appeals to us generally is rather that reconstruction which will make for a better and improved state of society as such, a reconstruction which while preserving the right of initiative and proper incentive for effort, will at the same time to the fullest extent possible afford equality of opportunity for everybody.

There is, however, a material question which in the conduct of our public business of the future I venture to think you, firstly, as presidents of life insurance companies and secondly, as American citizens, are interested in. In the first instance, as life insurance presidents I would confidently claim that you have a real interest in Canada and a constantly increasing interest. I note that in 1898 your insurance companies had in force in Canada $105,708,154; in 1908 the amount of business in force was increased to $193,087,126 and the extent of that business of later years has been much more rapidly increased, as your business in force in Canada in 1918 amounted to the large sum of $619,261,713. I think Mr. Chairman, that is an increase you would look upon with a good deal of satisfaction. Out of a total insurance in force at that time of $1,785,061,273 your companies had over one third of the total business.

Canadian Investments Sound

But not only are you interested in the volume of business but you are also interested in your Canadian assets which have grown with the growth of the business and which I am pleased to understand have formed remunerative investments. These assets in 1898 were $23,563,824; in 1908, $46,762,534; and in 1918, $98,607,188. So as insurance presidents you have a very real interest in Canada. One of the greatest aids to sound national status is that each and every citizen to the fullest extent possible should have a personal direct property interest in his country. Outside of a Canadian 5½% Victory Bond, which of course I place higher than any other security—a security of greater value not only to the citizens but to the country than any other—there is no way in which our average citizen can make his first investment easier than by investing twenty or thirty dollars in a thousand dollar policy. Life insurance indeed tends to stabilize financial and industrial conditions. It tends to, and where adopted in large measure, prevents distress and suffering and constitutes a real protection to the worker and to his dependents.

I feel that to-day we require the fullest extension, the fullest production, the greatest amount of useful work and the practice of economy and thrift everywhere. Life insurance agents are particularly at home in preaching thrift—that essential pre-requisite to national reconstruction. Personally, I well recollect that the first money I ever saved was that rendered necessary by a twenty-pay life insurance

* An address delivered at the Thirteenth Annual Meeting of the Association of Life Insurance Presidents in New York City.

policy. May your endeavors to make Canadian people money-savers be most successful.

Very intimately connected with the problem of reconstruction is the bettering of conditions of public health. This is a matter in which the insurance companies are particularly interested, and as I understand it many of you have already commenced an educational compaign amongst your policy-holders. You are in a position, with your efficient organizations, to aid very largely in propaganda for better health conditions, of which both our countries are in need. Your efforts in this regard will be doubly pleasing to you, as while bettering and aiding the living conditions generally to great national benefit you will also be securing a greater longevity in the lives insured, bettering your risks, and increasing the profits of the policy-holders and of your shareholders.

Canadians Under-Insured

There is much room for a great advance in insurance in Canada. Assuming a population of eight millions, I think it is a little under at the present moment, the life insurance in force in Canada to-day is but approximately $225 per capita. Canadians are under-insured and life insurance companies have a most useful public task ahead of them in bringing up the average protection for the families of the workers of Canada, but increased insurance like every other good thing depends upon ability to pay premiums, depends upon prosperity. I was just talking about reconstruction. I had an idea, you know—it is not altogether remiss, and I hope you won't think it is—we have done so many things together, we have had so many common undertakings in the last few years, our job has so often been a mutual job, that I do not think it will be taken amiss if I refer to something which it seems to me is not altogether a Canadian question of reconstruction, but one in which you are also interested. It, I think, can be solved properly by mutual action. While Canada is prosperous, the question of the matter of exchange between our respective countries is something that I am sure you do not view with complacency. Your insurance premiums are paid in Canadian dollars, and as a result of the trade balance existing between the countries the Canadian dollar is at the moment at a discount, and a serious discount when the value of the Canadian dollar, the prosperity and assets of the country are considered. The depreciation, while very real, is merely the effect of present trade balances and does not reflect in the slightest upon the intrinsic value of Canada's obligations. The depreciation of the Canadian currency in New York funds is simply owing to the fact that we do too much business with you and you do too little business with us.

I wonder if the extent of Canada's purchases in the United States are realized. In South America you have a whole continent, you have been doing business with that continent for many years, you have there operating trade commissions and trade representatives and, I think I may fairly say, have covered that field with characteristic American energy. Your statistics show that your total trade with all South American countries amounted for the year 1918 to the sum of $881,977,051, with a trade balance against your country of $252,859,463. In the same year your business with Canada amounted to $1,216,744,389, and it resulted in a favorable trade balance of $344,235,455 to your country. In 1919 the United States business with all South American countries was $969,276,605, the balance of trade against you again being $167,473,303. On the other hand, for the same year with Canada your total trade amounted to $1,282,677,849 and the balance of trade in your favor amounted to a sum no less than $344,768,213. With such a balance against us and with the further fact that Canada is doing some business overseas, settlement of which is ordinarily made in New York in credit instead of for cash, the reason why your Canadian premiums only net you approximately 95 cents on the dollar in New York funds is very readily apparent. While our respective countries have always very largely traded one with the other the adverse balance of trade used not to tell so heavily upon Canada. In 1910 the adverse balance was $106,888,088 and in 1915 it was $110,289,650 and at these times, of course, Canada instead of selling abroad for credit was selling overseas for cash, and the amounts of those adverse balances with your country were much more than made up by the exchange coming from overseas countries, payable to New York and going on to Canada.

That Canada is a very large purchaser in the United States and that the tendency to purchase is increasing is made very clear by the exhibit of the percentage of imports in comparison with Canada's total imports. During the fiscal year ending March 31, 1913, before the war, our imports from the United States amounted to 65,03% of the whole, but during the fiscal year ending March 31, 1919, that percentage had grown to 81.50. On the other hand, the percentage of purchases made by the United States in Canada in comparison with our total exports not only has not increased in a like ratio but has declined, as the percentage of Canadian exports to the United States in comparison with our total exports for the year ending—take the same year—March 31, 1913, was 39.27, and for the year ending March 31, 1919, while ours had increased as I stated from 65 to 81, yours dropped for the same year from the 39 plus I have given you to 37.

It may be suggested that the best way of restoring the full value to your Canadian premium would be for Canada to do less purchasing in the United States, but I have the idea that this solution of the subject is not one which would commend itself to you as American citizens. We want to do as much business as possible with you and I further have an idea you want to do as much business as possible with us. I think we all realize that two of the very necessary essentials in any proper re-establishment are firm currencies and standard exchanges. I am quite sure that you would much sooner see the exchange situation righted by additional American purchases in Canada rather than decreased Canadian purchases in the United States. Temporarily, and from time to time, these adverse balances may be easily rectified by the investment of America's large surplus reserves in Canada, and this solution is one which is probably as much in the hands of the presidents of great American companies as in anybody's. The field for investment in Canada is very large. There is still great room in Canada for development.

Reconstruction a Big Problem

You have been so kind as to ask me to speak on some Canadian problems. The problem that I am leaving with you is not alone a Canadian problem. It is a problem in which both of our countries are interested. It is a problem further which is one of the most urgent ones confronting us and one which I am confident your Association with its tremendous resources can do much in assisting to remedy. My apology for introducing it, if any apology is needed, is that it is a problem in which you as insurers of Canadian lives as well as all sellers of American goods to Canadian purchasers are deeply and vitally interested.

The problems of the North American continent will have to be worked out by our respective countries, and to an ever-increasing degree the problems of the world will be solved by your great Republic and the confederated nations of the British Empire. With a history, with laws, interests, traditions and aspirations so largely common, the essential combined effort for civilization and humanity ought to be, and I am confident will be, harmonious and effective.

Canadian Bankers Discuss Financial Aspects

Caution Needed in Approaching the Uncertainties Lying Ahead—A Testing Time is Coming, which will Try Out the Strength of Canadian Business—Ability of the Country to Meet the Situation is Assured

A SYMPOSIUM

FINANCIAL aspects of the present industrial situation are touched upon by several leading Canadian bankers in the following symposium of opinion. Running through practically all their comments is a note of caution. Up to the present time, with the strong demand for all commodities and with resultant high prices, it has been possible to conduct business along profitable lines. Inevitably, however, there must come a time when prices will begin to recede and then the strength of Canada's business and industrial undertakings will be tested. Some bankers believe that this testing time is getting near and so they urge the exercise of caution.

More than one reference is made to the immense debt which the Canadian people are now bearing, a debt exceeding two billions of dollars. To meet the interest charges on this debt as well as to provide for other obligations, which must be shouldered by the country, a very large sum of money must be provided annually. The advice proferred by the bankers is the building up of a great export trade, coupled with such extensive production at home that the necessity for importing goods will be reduced.

INEVITABLE DECLINE IN PRICES NEARER

By Sir F. Williams-Taylor

General Manager, Bank of Montreal

The economic and financial difficulties that confronted the country during the war have since changed in nature, but have not disappeared by any means. There is an aftermath of problems which Canada must face and in which bankers are vitally concerned. At present there is great trade activity; yet our national debt grows apace, with attendant ills. Therefore, even with a full measure of faith in our country, I find the near future difficult to visualize. We derive a measure of consolation in comparing our lot with that of countries worse off than our own, but contiguity and ambition direct our eyes towards that country to the south which has benefited so vastly by the war.

It is no reassuring reflection that the United States has already reduced its war debt by some $800,000,000, while we confront an increase of $600,000,000. for the current year. It seems obvious, however, that though fate has treated the two countries differently, any prosperity experienced in the United States must be reflected in Canada. Our true comfort, as well as our pride, is that the Dominion did its duty in the great war as a part of the British Empire. No Canadian would have it otherwise, and therefore we face the cost with stout hearts and the future with a watchful serenity.

The practical evidence of Canada's fortunate trade conditions lies in the fact that commercial failures for the twelve months ended 31st of October were 766, as compared with 904 for the previous corresponding period, and with 1,669 in 1912-1913.

On that outstanding subject, the high cost of living, I might state my belief that the inevitable decline in prices is at least nearer, and it is to be hoped that the delay meanwhile is not lulling dealers into the erroneous belief that the standards of these last few years will continue indefinitely. Misconception on this point would constitute a menace alike to borrower and banker. It seems certain that food prices will drop presently and that all commodities must decline in price; therefore, great care and scrutiny of credits on the part of bankers and other business men are imperative.

FUTURE OF CANADA BRIGHT WITH PROMISE

By D. C. Macarow

General Manager, Merchants Bank of Canada

He would be a pessimist, indeed, who regarded the future of Canada as otherwise than bright beyond that of almost any other country. In saying this, however, I am not unmindful of the fact that a high degree of co-operative effort will be called for if solid and enduring results are to be gained in the fullest measure. We are confronted with many and perplexing problems in the solution of which, let us hope, broad-minded counsels will avail against narrow sectionalism. The character and spirit of the Canadian people may, I believe, be depended upon with confidence in this connection.

The natural resources of the country are well-night limitless, requiring only population and capital to develop them. A rich reward awaits energy and enterprise. The country affords every enticement for American industries to establish branch plants here with all promise of satisfactory results along permanent lines.

Our rich, extensive and still low-priced farm lands in the West afford at once the opportunity and inducement for American farmers to settle upon Canada's fertile prairies. It is noted already that the tide of immigration thence, interrupted by the war, has again been resumed in large volume.

Sufficient wheat can be raised in Canada's golden West to feed not only ourselves and Great Britain, but to supply, later on, the additional quantity that the United States may, it is within the range of probability, require to import.

The banks of Canada will be found ready at every stage of the country's progress to extend the utmost support and assistance towards the fostering and development of all legitimate undertakings, whether of the forest, the field or the factory.

TOO MUCH TALK AND TOO LITTLE ACTION

By George Wilson

Assistant General Manager, Union Bank of Canada

Our two billion dollars national debt and its attendant burdens, our two hundred million dollars annual obligation for interest upon our securities and investments held abroad, our gradually waning exports, our depreciated exchange, our inflated currency and our profligate expenditures at home have been continuously dinned into our ears to the accompaniment of frenzied exhortations to produce more and consume less, to save more and to spend less, and to export more and to import less, but it cannot be gainsaid that there is not one man in a hundred who gives the slightest heed to these admonitions or warnings. What does the average wage-earner care about the H. C. L. as long as he gets 365 days' pay for 165 days' work? What concern has he in the inflation of

the currency so long as his own pockets are inflated with it? With high wages, abundant money, little unemployment, and prosperity and plenty abounding throughout the land, it is a case of "sufficient unto the day is the evil thereof," and not until the pinch of hard times comes, as it surely will if remedial measures are not soon applied, will the nation at large be brought to a proper sense of its responsibilities. The gist of it all is, that there has been too much talk and too little action, and it is really up to the captains of industry, the leaders of finance and economic experts to get together and endeavor to put into practice some of the theories they preach so eloquently. For instance, why should the splendid work performed abroad by the Trade Commission go by the board?

It has been amply demonstrated that there are markets in all the four quarters of the globe for Canadian products, but, notwithstanding that, it is universally admitted that the development of our export trade is the surest guarantee for relief from our future financial burdens, the present grand opportunity is being allowed to slip from our grasp. What was the $70,000,000 spent on our 60 ships of the Canadian mercantile marine for? Surely there must be some relation between this appropriation and our export trade!

Foreign trade credits of $100,000,000 were established by the Government for 1919 in favor of France, Belgium, Greece and Roumania, of which it is announced only $40,000,000 was availed of, not because those countries refused or did not require our goods, but, presumably, because we were too busy at home to supply them. It is true that there are divergent opinions respecting the desirability of granting foreign long-term credits, but if Canada waits until the universal shortage of essential commodities is overtaken by increased production before she reaches out for foreign markets, she will probably find that other nations have forestalled her and that the opportunity has been lost.

The present is the time to establish our goods in foreign markets, and, once established there, a permanent outlet for our surplus products is assured. A nation which shouldered the colossal financial burdens of the war should surely not be daunted by the establishment of one or two hundred million dollars of foreign credits, and securities issued against such credits with the underlying guarantees of the Dominion and foreign governments could probably be partially or wholly disposed of in the United States, where our credit stands highest of any of the foreign nations, but even if not marketable there, they could undoubtedly be absorbed at home.

If the manufacturers of Canada would emulate the example of their contemporaries in Great Britain and bring their scattered groups of industries under a co-ordinated working organization for the promotion of foreign trade, production far in excess of domestic needs would result. Under such conditions, with foreign markets waiting, the necessary financial machinery would undoubtedly soon be set in motion.

WOULD STRONGLY ADVISE CAUTION

By J. P. Pell
General Manager, Bank of Hamilton

It is with considerable hesitation that I express any opinion on the outlook in the industrial field, as there are so many abnormal factors in existence.

However, I am convinced that it is a time for caution. For several years the failures throughout Canada have been much below normal. This means that the rising prices and great demand for goods have made it possible for many who are incompetent and lacking in sufficient capital to remain in business. The time is rapidly approaching when it will require great skill in managing business to avoid heavy losses. It is a time to think twice before building extensions to plant, and enlarging facilities to take care of the more or less artificial demand.

Reports that reach us from authorities on the other side of the water show that Great Britain is settling down to her normal activities, and will soon be again sending her goods all over the world; and with the European countries like Belgium getting back into production, great changes must be expected in the business outlook; and without being unduly pessimistic, I would strongly advise caution.

THE FINANCIAL OUTLOOK AND CANADIAN INDUSTRIES

By L. D. Wilgress
Supt., Foreign Trade Department, Royal Bank of Canada

The commencement of the New Year is an opportune time to review the financial position of the country and the future outlook as related principally to the manufacturing industry.

Canadian industrial firms can assist the readjustment of the country's finances by increasing the production of articles hitherto imported from abroad and by enlarging the export trade in Canadian products. Both of these are necessary if the decrease of imports and increases of exports are to be attained, which are required to maintain a favorable balance of trade, proportionate to the annual payment of interest on the public debt and other charges which we must henceforth be prepared to meet.

The national debt of Canada has increased ever six-fold since the outbreak of the war and now exceeds $2,000,000,000. During the current year the annual interest payment on this debt will be not less than $115,000,000. In addition there are interest and deficit charges for railways taken over by the Government and increased expenses of governing, so that the total expenditure incurred during the fiscal year ending March, 1920, will probably approximate $669,000,000.

Having these circumstances in view, it is imperative that we should buy as little as possible from foreign countries of the articles which we can get along without or which can be produced in Canada. The existing premium on American funds acts as so much protection to the Canadian manufacturer and should warrant the home production in larger quantities of lines hitherto chiefly imported from the United States. Export trade should also receive careful study and energetic efforts should be put forth by Canadian manufacturers to increase the sale of our goods in the principal export markets.

Our manufacturers are at present enjoying a period of after-war prosperity. It is important that the underlying causes of this prosperity should be properly understood and that the future be gauged correctly. Otherwise the evil effects of any falling off in the home demand will be much more far-reaching.

The backbone of the country's economic fabric is agriculture, or the production of foodstuffs. The reduction of supplies from Russia and other European countries has resulted in Canadian producers of foodstuffs receiving high prices for their products. This is reflected in increased buying power and a great demand for manufactured goods. This demand is augmented by the reconstruction needs of countries more directly affected by the war and the disorganization of industry of the leading manufacturing nations of Europe. Moreover, there is a scarcity of raw mterials throughout the world. The result is that in nearly all lines of industrial products the demand greatly exceeds the available supply.

On the other hand Canadian manufacturers should anticipate a gradual recovery from the varying degrees of economic stagnation now prevailing throughout Europe. The revival of agriculture and of manufacturing industries in these countries will bring about a readjustment and a levelling of prices for which our manufacturers should be prepared.

Canada's Merchant Marine and Its Services

One of the Most Important Developments of the Past Year, the Inauguration of Ocean Services by the Government's New Merchant Marine—Reasons Why These Services Should Receive the Loyal Support of Canadian Shippers

By W. A. C.

OF prime importance among the developments of 1919 from the standpoint of the Canadian manufacturer has been the inauguration of ocean freight services by the new Canadian Government Merchant Marine. With the commissioning of the first of the vessels built for the purpose—an event which took place last May—a new era dawned for Canadian commerce. Hitherto, with but limited exceptions, the overseas trade of Canada was carried in bottoms of British or foreign register, and the growth of business was circumscribed by the obstacles imposed by such conditions. To-day the country has its own ships, manned as far as possible by Canadians, outfitted in Canadian ports and operated with the single object of developing direct trade connection between Canada and the markets of the world. In a word, the instrument is being provided by means of which Canadian manufacturers can ship their products to export markets by the most direct routes and under the most favorable conditions and, if they are to profit by the opportunity, it simply devolves upon them to take action.

In the Cuban Service

The "Canadian Trader", 3,400 tons, sailing from Halifax to Havana, Cuba

Between May and the end of the year about twenty-two of the sixty vessels ordered by the Government were handed over by the builders to the Merchant Marine, and during this year the balance will be completed. As rapidly as they are commissioned these boats are put into service on routes which have been selected as offering the best opportunities. Up to December 9th forty-six voyages were made—ten to the West Indies and Cuba; eleven to Barbadoes, Trinidad and Demerara; three to Buenos Aires; four to London; eight to Liverpool; two to other British ports; one to Bordeaux; one to Havre, and six to St. John's Nfld.

Other services have been decided upon and still others are the subject of investigation. Among the former is the service to Australia and New Zealand from Vancouver and Victoria, which was inaugurated on January 15th with the sailing of *The Canadian Importer*, a fine vessel of 8,100 tons, launched at Vancouver in December. This antipodean service will be maintained on a monthly basis, the vessels to be used on the run being the *Canadian Importer*, *Canadian Exporter*, *Canadian Inventor* and *Canadian Prospector*, all products of the Coughlan Shipyards at Vancouver. With the exception of the *Importer*, all of the vessels operating in the Australian service will be equipped with refrigerator space of 50 tons capacity, which will enable British Columbia exporters to ship fruit and fish. Those in charge of the operations of the Canadian Government Merchant Marine express themselves as being very well pleased with results to date and hopeful of the complete success of the Government's venture into the building and operating of a fleet of public-owned merchant ships. The South American service is developing nicely. At present there is a monthly service in effect between Canadian Atlantic ports and the ports of Brazil and the Argentine, the ships in commission being of 8,300 tons. As yet it has been found impossible to get full return cargoes for the Canadian market so that the ships have had to fill up goods for American ports and stop at these ports on the way north. However, in time enough business should materialize to obviate this procedure.
